In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF DARREN JOHN POBAR

I, **Darren John Pobar,** of 200 Roma Street, Brisbane, Queensland, 4000 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

Current position

1. I am the Forensic Manager of the Scientific Section in the Forensic Services Group (FSG) of the Queensland Police Service (QPS) which is based at Police Headquarters (PHQ) at 200 Roma Street, Brisbane.

Qualifications and experience

2. I am the holder of the following tertiary qualifications:

   (a) Bachelor of Applied Science – Medical Laboratory Science from Queensland University of Technology in 1987;

   (b) Masters of Science – Forensic Science from Griffith University in 1996; and

   (c) Masters of Business Administration from the University of Southern Qld in 2005.

3. I was sworn into the QPS in 1990 as a Constable of Police. Whilst working for the QPS I have held the following positions:

   (a) Between 1990 and 2001, I worked in the Major Crime Unit (previously the Physical Evidence Unit), Scientific Section at PHQ. During that time, I progressed in rank from Constable to Senior Constable and then Sergeant of Police;

   (b) Between 2001 and 2007, I was promoted and worked in roles as a Senior Sergeant

in the Major Crime Unit (previously the Physical Evidence Unit) and Senior Sergeant in Quality and Training, Scientific Section, PHQ;

(c) Between 2007 and 2013, I was promoted and worked as an Inspector of Police as the Regional Forensic Services Coordinator for the Metropolitan South Region based at Upper Mt Gravatt;

(d) Between 2013 and 2016, I worked as an Inspector of Police as the State Forensic Services Coordinator based at PHQ where my central function role was responsibility for the Forensic Services Group staff in Southern, Northern and Far Northern Regions;

(e) Since 2016, I have worked as an Inspector of Police in the Scientific Section located at PHQ.

4. Since joining the QPS, I have completed numerous policing and management related workshops and courses including:

(a) 1994 FBI Post Blast Course; FBI Footwear Impressions Evidence Course and the Criminal Investigative Analysis Course;

(b) 1997 Selection Panel Course;

(c) 1998 Australia New Zealand Counter-Terrorism Committee (ANZCTC) National Blast Courts;

(d) 2000 Crime Scene Proficiency – Train the Trainer Course;

(e) 2001 National Association of Testing Authorities (NATA) Internal Audit Course;

(f) 2002 NATA Lead Auditor Course;

(g) 2004 ANZCTC Exercise Management Course;

(h) 2006 CBR Scene Management Workshops; and

(i) 2005 Panel Convenors Course;

(j) 1997-2003 Management Development Program – Legal Studies 1, 2 and 3 and Management Studies 1, 2 and 3.

5. I also have obtained the following awards or formal recognition during my service:

(a) 1990 Dux Award C and D Squads - Qld Police Academy;

(b) 2002 Queensland Police Service Medal (QPSM) (awarded to recognise diligent and ethical service by QPS members and is not granted as of right by virtue of long service); then 2006 – 15 Year Clasp; 2010 – 20 year Clasp; 2015 – 25 year clasp and 2020 – 30 year clasp;

(c) 2006 National Medal (recognising ethical and diligent service as a sworn member of an Australian Police service) then 2016 – 1st Clasp;

(d) 2014 National Police Service Medal

6. I do not have a curriculum vitae (CV) document available. Responses to questions 1 to 5 above form the basis of the contents of a CV.

Forensic Manager role

7. I am currently the substantive Forensic Manager of the Scientific Section, FSG which provides a range of forensic services to police investigators in specialisations of major crime scene, ballistics, documents, chemical criminalistics and vehicle inspections.

8. My position supervises and manages staff in six forensic service units namely:

(a) Major Crime Unit (MCU);

(b) Ballistics unit (BU);

(c) Documents Examination Unit (DEU);

(d) Analytical Services Unit (ASU);

(e) Vehicle Inspection Unit (VIU); and

(f) Quality and Training Unit.

9. My duties as the Forensic Manager of the Scientific Section (as cited in IN004 Position Description Inspector Forensics) include:

(a) Provide leadership and manage staff and laboratory authorisations to ensure the maintenance of NATA accreditation;

(b) Manage the functions and resources in an efficient and effective manner that is consistent with strategic organisational and operational policing objectives;

(c) Develop, implement and evaluate appropriate strategies, plans, and procedures to enable continuous improvement and enhance forensic outcomes;

(d) Consult, liaise and network with appropriate Service, government and non-government organisations and represent the Service in various internal and

external forums;

(e) Provide high quality advice on forensic issues;

(f) Coordinate or conduct investigations regarding issues of performance and conduct of work units and employees of the Service; and

(g) Maintain a work environment committed to professional standards, ethical practices and discipline.

Attached and marked '**Exhibit 2**' is a copy of that position description.

10. I report to my substantive supervisor who is Superintendent Bruce McNab, Forensic Commander FSG. The current relieving Superintendent is Acting Superintendent Duncan McCarthy.

11. The following people report to me:

(a) Senior Sergeant [redacted], Quality and Training;

(b) Senior Sergeant [redacted] Ballistics Unit;

(c) Senior Sergeant [redacted], Vehicle Inspection Unit;

(d) Acting Senior Sergeant [redacted], Major Crime Unit (position currently vacant);

(e) Professional officer 5 [redacted] Analytical Services Unit; and

(f) Professional officer 5 [redacted], Document Examination Unit.

12. A scientific officer in the context of a non-ballistics forensic officer is a highly qualified sworn member of the QPS trained in a number of forensic disciplines. Scientific officers undertake scene and laboratory examinations and provide opinion evidence in the areas of:

(a) fire/explosion scene examination;

(b) crime scene examination;

(c) shoe/tyre impression evidence;

[redacted]

Darren John Pobar Witness

(d) blood pattern analysis;

(e) presumptive screening tests;

(f) hair examinations; and

(g) Cannabis examinations.

13. Scientific officers compile reports and statements on their findings and present expert testimony in courts of law. Scientific officers have a Bachelor of Science degree and complete postgraduate qualifications as part of the internal training program.

14. The Inspector Scientific Section, FSG supervises 15 sworn scientific officers who are based at PHQ and 7 officers who are located in the forensic facility at Coomera Police Station. The Coomera based scientific officers report to the PHQ Scientific Section and operate with MCU as a single service delivery model.

15. I do not supervise the following scientific officers employed by the QPS:

(a) 6 officers who are based in Cairns and 3 officers who are based in Townsville. These officers are supervised by Inspector [redacted], Forensic Manager Far Northern Region and Northern Region; and

(b) 2 officers who are based in Rockhampton who are supervised by Acting Inspector [redacted], Forensic Manager Central Region (this position is currently vacant).

Typical circumstances in which a Scientific Officer attends a crime scene or location

16. Scientific officers conduct forensic examinations related to biological evidence at crime scenes and in the laboratory. Although assessed on a case by case basis, requests for service are predominantly for more serious crime scenes such as homicides, attempted murders, rapes and sexual assaults requiring additional physical and chemical detection techniques and/or bloodstain pattern analysis examinations. Scientific officers have a range of techniques at their disposal in addition to those used by scenes of crime officers to comprehensively screen for blood, seminal fluid and other biological material.

17. In general terms, first response police attend crime scenes and secure the scene. For

serious crime, plain clothes investigators will attend to take over the investigation and further assess investigative needs. A Forensic Coordinator will be contacted by investigators who then request assistance of forensic officers including scientific officers if they believe additional skill sets are required for the case.

18. In regional centres such as Cairns, Townsville and Rockhampton requests for scientific officer services will also generally be made via the local Forensic Coordinator or investigator.

19. Laboratory examination requests in the PHQ laboratory are usually submitted by investigating officers when lodging exhibits at the Forensic Reception Centre in the building. Cases are then tasked to individuals by the Major Crime Unit Team Leader. For regionally based scientific staff, laboratory examination requests are usually made via a Queensland Police Records and Information Management Exchange (QPRIME) task with the property lodged at a QPS property point. Scientific officers may also seize items direct from a crime scene and further examine these exhibits later in the laboratory.

20. Outside of business hours which, in South East Queensland (SEQ), is generally before 0700hrs or after 2200hrs, an on-call service is available. Requests for scene attendance are made via phone to the Inspector Scientific Section who will then contact the on-call officer. I cannot advise on the local call out arrangements for regional scientific officers.

Units within the Scientific Section

21. The Scientific Section comprises the following units:

    (a) Major Crime Unit (MCU) – The MCU comprises of sworn staff who conduct major crime scene and laboratory examinations and provide opinion evidence in the disciplines of crime scene examinations, biological presumptive screening tests and hair examinations, bloodstain pattern analysis, fire/explosion scenes, Cannabis examinations and shoe/tyre impression evidence. MCU includes Coomera based scientific officers on the roster as a single service delivery model to directly support Southern, South-East, North Coast and Brisbane Regions. MCU/Coomera staff also provide backup support

to the remainder of the state.

(b) Ballistics Unit (BU) – The BU comprises sworn and unsworn staff who conduct ballistic crime scene and laboratory examinations and provide opinion evidence on firearms and toolmark certifications and examinations and shooting scene examinations and reconstructions. The BU provides a statewide service.

(c) Document Examination Unit (DEU) – The DEU comprises unsworn staff who conduct forensic examinations and provide opinion evidence in relation to handwriting/signatures, machine generated documents, indentation and ink examinations and other document examinations. The DEU provides a statewide service.

(d) Analytical Services Unit (ASU) – The ASU comprises unsworn staff who conduct forensic examinations and provide opinion evidence in relation to chemical criminalistic disciplines of ignitable liquid residues, paint/polymers, glass, gun-shot residues, capsicum spray and light bulbs. ASU staff also conduct Cannabis examinations. The ASU provides a statewide service.

(e) Vehicle Inspection Unit (VIU) – The VIU comprises sworn and unsworn staff who conduct forensic examinations and provide opinion evidence on the mechanical condition of vehicles including trucks and motorbikes to assess any causal contribution to a traffic incident. The VIU provides a statewide service.

(f) Quality and Training Unit – The Quality and Training Unit conducts monitoring and maintenance of the quality systems across the Scientific Section including proficiency testing, auditing, corrective and improvement actions and other quality system compliance. This Unit also directly manages the training requirements of the MCU and provides some oversight of training delivered to the other Units. This Unit comprises of one Senior Sergeant, one temporary technical officer level 2 (TO2) and one administrative officer 3 (AO3) whose main role is general admin support for the entire Scientific Section.

22. The Senior Sergeant Quality and Training role, similar to that which exists within the Quality Management Section, is responsible for the Scientific Section quality systems in place under NATA accreditation. The role is a locally based function to manage proficiency testing performed across 16 of the 22 specialised Scientific Section disciplines, maintain internal auditing processes, corrective and improvement actions and other quality system compliance. Continual liaison and reporting is maintained with the Quality Management Section.

Forensic Managers and Forensic Coordinators

23. 'Forensic Manager' is a term to designate FSG regional Inspectors and PHQ Section Inspectors. Forensic Managers are responsible for the strategic and operational management and coordination of forensic service delivery in their area of responsibility. There are nine Inspectors (5 regional and 4 PHQ based) that have the designation of Forensic Manager. The Inspector Scientific Section position interacts regularly with Forensic Managers based in South East Queensland to deliver forensic services and less frequently with North Queensland Forensic Managers.

24. 'Forensic Coordinators' are at the rank of Senior Sergeant and responsible for planning, coordinating and supervising forensic service delivery to major incidents including multidiscipline involvement from Scenes of Crime Scientific, Fingerprint, Forensic Imaging and Electronic Evidence areas. They oversee the ongoing forensic casework, sampling and exhibit prioritisation for protracted complex matters and provide briefings and advice to investigators. They also liaise with supervising and stakeholder Forensic Managers on service delivery matters in their area of responsibility. There are 8 Senior Sergeant Forensic Coordinator positions statewide.

25. Outside shift hours the Inspector Scientific Section interacts directly with SEQ based Forensic Coordinators for calls for service and as required in normal shift hours. The position interacts intermittently with non-SEQ (Cairns, Townsville, Rockhampton) Forensic Coordinators that have their own scientific officers under local control. Interaction may occur for example as a result of a request for forensic support from Brisbane.

Darren John Pobar Witness

Quality management in collecting biological material

26. The procedure used by scientific staff to collect biological material is CSE 101 Biological Evidence.

27. Proficiency testing for scientific officers in collecting biological material is undertaken through scene assessments and technical reviews of case files.

28. A scene assessment is a review by another forensic officer authorised in the type of examination being conducted i.e. crime scene examination, to assess the ongoing competence of the officer under test. The review assesses compliance to procedures, examination techniques and general competence in the examination. Scientific officers must have a scene assessment completed every two years.

29. A technical review is a review conducted on either a hard copy or electronic case file to ensure the examinations and findings contained in the file have been based on appropriate procedures and techniques, observations sufficiently recorded, and conclusions are sound and justifiable. Technical reviews are conducted by forensic officers who hold the same authorisation/s as the case file under assessment. Scientific officers have 100% of their case files technically reviewed. Technical reviews do not involve re-examination of exhibits.

30. A verification review is undertaken where non-biometric identifications take place such as firearms and shoesole identifications (matches). This type of review is performed by an authorised person and involves undertaking an independent full examination of the actual comparison exhibits.

31. An administrative review is a review conducted on either a hard copy or electronic case file to ensure the file complies with quality system case file procedures. It ensures the administrative requirements to finalise a case file are completed. Any trained forensic officer or administrative officer can undertake administrative reviews.

Forensic Services Group

Darren John Pobar Witness

32. FSG management meetings occur generally monthly – two monthly in person and/or video link depending on location, The meetings are usually attended by the FSG Superintendent, Inspectors, Superintendent office staff and any guest attendees. Minutes of FSG Management meetings are held by the Superintendent's Office FSG. A copy of the minutes of meetings I am recorded as having attended from July 2017 to date, are attached and marked **'Exhibits 3 to 8'.**

33. I do not recall any reoccurring or systemic issues with the collection of biological material having been raised at FSG management meetings.

34. I do recall an issue with tapelift sample kits around 2008 when FSG moved to subsampling. There was an issue with the adhesiveness of the tapelift used to sample surfaces and the lift was overly 'sticky' and challenging to handle. I believe Quality Management Section took action to change the lift provided in the kits to a less adhesive option to rectify the issue.

Other issues

35. There have been no systemic issues/problems raised to me regarding the collection techniques of biological samples by Scientific staff.

36. In relation to the QPS staff member DNA elimination database, due to confidentiality of the limited elimination DNA database I am not advised on any contamination events. Scientific officers provide personal permission to the DNA Management Unit, to be advised if a contamination event has occurred with a sample but there is no obligation for staff to report any further. I do not recall any scientific officer advising me of any contamination event associated with their sampling.

37. Scientific officers can view DNA results on the Forensic Register. From my experience the officers are interested in the results of their sampling as it may contribute to probative evidence for an investigation and/or also influence if further items are submitted or requests are made for items to be resampled/tested.

38. In relation to the terminology, 'no DNA detected' and 'insufficient DNA for further processing' I do not recall any detailed explanation or training given to scientific officers regarding the terminology. I am unaware of any training given to other police. I do recall

there being an explanation on options available as part of the reporting data on the Forensic Register.

My understanding of the term 'no DNA detected' was it indicated no DNA was present at the first stage of the extraction process. My understanding of the term 'Insufficient DNA for further processing' was gleaned only in recent times possibly March 2022 and I believed it indicated the amount of DNA extracted fell between a set threshold and would not be further progressed as a matter of routine. Prior to 2018 I do not recall the

Darren John Pobar Witness

phrase 'Insufficient DNA for further processing' being used to report DNA results.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this day of August 2022

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Darren Pobar

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Thursday 11 August 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 29th day of July 2022

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 000 60

Schedule of topics for statement

Inspector Darren Pobar

1. State your current position in the QPS.

Qualifications and experience

2. List your post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Identify any courses or diplomas you have completed since joining the QPS.

5. Identify any awards or formal recognition you have been given since joining the QPS.

6. Attach a current CV.

Current role

7. State the duties of your current position. If you are temporarily acting in a position different to your current substantive position, include the duties of both your substantive position and the acting position.

8. Identify the person or people (name, rank and position) who you report to.

9. Identify the person or people (name, rank and position) who report to you.

10. Explain what a Scientific Officer is and the role of a Scientific Officer.

11. Identify how many Scientific Officers you supervise, including where they are geographically located. Explain if those Scientific Officers are a part of the Scientific Section of the Forensic Services Group (**FSG**).

12. Identify if there are Scientific Officers employed by the QPS that you do not supervise. Identify where they are located and who they are supervised by.

13. Explain the typical circumstances in which a Scientific Officer attends a crime scene or other location to collect biological material for forensic DNA testing. Explain the processes and circumstances which lead to a Scientific Officer being contacted and attending a crime scene, starting with the actions of a first responder to a crime scene. As part of your answer:

(a) explain how the process varies, if at all, between incidents that occur within business hours and incidents that occur outside of business hours; and

(b) explain if the process is different for Scientific Officers outside of South East Queensland compared to those within South East Queensland.

Scientific Section

14. Identify how many QPS units are in the Scientific Section, the name of each unit, and the functions of each unit. As part of your answer, explain and expand upon how the work of the Quality and Training Unit within the Scientific Section compares with the functions of the Quality Management Section. As part of your answer, identify what staff make up the Quality and Training Unit.

Forensic Managers and Forensic Coordinators

15. Explain the role and duties of a Forensic Manager. Identify, as part of your answer, the rank of a Forensic Manager and how many Forensic Managers there are in Queensland. Identify how closely you work with Forensic Managers, if at all.

16. Explain the role and duties of a Forensic Coordinator. Identify, as part of your answer, the rank of a Forensic Manager and how many Forensic Managers there are in Queensland. Identify how closely you work with Forensic Coordinators, if at all.

Quality management in collecting biological material

17. Name the policies and procedures concerning the collection of biological material by the QPS.

18. Identify what proficiency testing (if any) is undertaken by police officers who collect biological material for DNA testing.

19. Explain what a scene assessment is and what it involves. Identify which staff members must be subjected to a scene assessment, and how often scene assessments occur. Identify who conducts scene assessments.

20. Explain what a technical review is – its purpose and what it involves – and whether there are different types of technical review. Identify who conducts technical reviews.

21. Explain what an administrative review is – its purpose and what it involves – and whether there are different types of administrative review. Identify who conducts administrative reviews.

Forensic Services Group

22. Are there FSG management meetings? If yes, how often do they occur, by what means (e.g. in person or by video-link), and who typically attends?

23. For as long as you have been attending those meetings, have any reoccurring or systemic issues/problems with the collection of biological samples for forensic DNA testing been raised or discussed at those meetings?

24. Are you aware of any issues concerning the tape lifts used by the QPS around the time when the QPS started sub-sampling in about 2008? If yes, please provide full details of the problem. Explain how you became aware of the issue, and what was done in response (if anything).

25. Are minutes kept of FSG management meetings? If yes, provide the minutes for any meetings you have attended since July 2017.

Other issues

26. Have you ever observed, or has anyone ever raised with you, any other reoccurring or systemic issues/problems with the collection of biological samples for forensic DNA testing, for example that the methods, systems, processes, protocols, guidelines, or standards are not being followed, or that there are systemic problems with the collection processes, systems or methods? If so, provides details of the communication(s) raising the issue(s). If not, please confirm that you are not aware that there have been any issues raised.

27. If QHFSS determine that a sample has matched with the DNA of a staff member at the QPS who has contributed to the elimination database, are you or anyone in the Scientific Section notified of this? If yes, how? Has anyone ever raised with you this issue of contamination from a QPS Scientific Officer occurring?

28. Do Scientific Officers get notified of the results or matches of the DNA testing of biological material which they collect? From your observations, are Scientific Officers interested in the DNA results or matches of the material which they collect?

29. Are you aware if the terminology introduced in around 2018 of 'No DNA detected', 'DNA insufficient for further processing', and any similar worded results, were explained to police officers such as investigators, SOCOs and SOs? If yes, how? Was any training about the terms used and the options available delivered to police officers such as investigators, SOCOs and SOs? Was any training or explanation given to other staff in the Scientific Section?

30. What is your own understanding of the terminology referred in the first sentence of paragraph 28, above? Has that understanding changed since 2018? If yes, how?

Queensland Police Service

Position Description

With Honour We Serve

Rank	Inspector	Role Code	IN004	Function	Forensics
Role Scope	The Inspector role is responsible for the management and coordination of forensic service delivery within the area of responsibility.				

Selection Criteria

Are you the right person for the job?	All members are expected to espouse, practice and fulfil their duties in a manner consistent with the: ▪ QPS Values of Integrity, Professionalism, Community and Respect and Fairness; ▪ QPS Purpose to Prevent, Disrupt, Respond and Investigate; and ▪ Leadership Competencies for Queensland (LC4Q). Your application will be assessed against the Selection Criteria and Rank Profile Criteria.		
Integrity Criteria	1	A standard of personal integrity as required by the Commissioner of the Queensland Police Service.	
Qualification Criteria	2	Successful completion of Management Development Program (MDP) Level 3; or Successful completion of Leadership Capability Program (LCP), Level 3.	
Role Specific Criteria	3	Holds/has held a Forensic authorisation in Crime Scene examination; or Is/has been certified as an expert practitioner in a recognised Forensic discipline.	
Rank Profile Criteria *These criteria reflect the LC4Q and are consistent for each rank.* *Your response should address the Leadership LC4Q competencies in the context of the Key Accountabilities for this position and with regard to the associated Position Profile.* *The LC4Q stream for* ***Inspector*** *is* ***Program Leader.*** *For assistance with the QPS context for these criteria please refer to the link below to the Leadership Centre.*	4	**Vision:**	▪ Leads strategically ▪ Stimulates ideas and innovation ▪ Leads change in complex environments ▪ Makes insightful decisions
	5	**Results:**	▪ Develops and mobilises talent ▪ Builds enduring relationships ▪ Inspires others ▪ Drives accountability and outcomes
	6	**Accountability:**	▪ Fosters healthy and inclusive workplaces ▪ Pursues continuous growth ▪ Demonstrates sound governance

Key Accountabilities	
Role Context Key Accountabilities outline specific roles and responsibilities for this position	▪ Provide quality leadership of a forensic area, including the management of staff and laboratory authorisations to ensure the maintenance of NATA accreditation. ▪ Manage the functions and resources to ensure efficiency and effectiveness consistent with strategic organisational and operational policing objectives. ▪ Develop, implement and evaluate appropriate strategies, plans, and procedures to enable continuous improvement and enhance forensic outcomes. ▪ Consult, liaise and network with appropriate Service, government and non-government organisations and represent the Service in various internal and external forums. ▪ Provide high quality advice on forensic issues. ▪ Coordinate or conduct investigations regarding issues of performance and conduct of work units and employees of the Service. ▪ Maintain a work environment committed to professional standards, ethical practices and discipline.

Additional Information	
Notes	Nil.
Supporting Documentation	In preparing your application it is essential you consider: ▪ The LC4Q in the QPS context is outlined in a document hosted by the Leadership Centre titled 'QPS Leadership Competencies' and is available at: ▪ Please refer to the notes section for this vacancy to access Position Profile information. Copy and paste the link into a browser to access the Position Profile relevant to this vacancy.

Privacy Collection Statement

The Queensland Police Service (QPS) is collecting information for the purpose of processing your application for an advertised internal QPS vacancy. The collection of this information is authorised by the Police Service Administration Act 1990.

Apologies	[redacted]			

Item #	**Item Description**	**Officer**
1.	**OPEN MEETING** – Welcome, introductions and apologies	Chair

[redacted]

[redacted]

8.	**QUALITY MANAGEMENT** • [redacted] audit to be carried out • [redacted] audit has been delayed due to no assessor being available Correct Produce for exhibit labelling/photographs of labels • Insp Neville advised that a number of crime scene envelopes have been received with no data, so FFS will not accept the sample • Necessary information required on the exhibit labels has been limited to barcode/FR number and brief description • Number of examples (photographs) of poor labelling were provided and procedures not being followed. [redacted] advised that errors had been discussed with members responsible, OIC apologised, no explanation provided for error • Discussion around correct procedures being followed and FFS requirements • A/Supt McLaren advised that acronyms will not be acceptable, full descriptions required • Discussion around suitable solutions. 1) OIC/FM to ensure compliance with procedures prior to sending the FFS. 2) FSG to accept that FFS will send back whole exhibit if discrepancy is found • SCI advised that they use printed labels generated from information uploaded to the FR and then photographs are taken	All

- QMS advised that they would prefer SCI stop using printed labels as they have no second check identifier. SCI advised that they do use item numbers and therefore second check is accounted for

FR "Go live"

- FTU advised that FFS "Go Live" with the FR has had no significant issues
- All new cases will be processed through the FR. Existing cases will stay with AUSLAB until completion.
- 291 samples have been submitted through the FR, 80 of these were major crime
- FFS are developing KPI's around the volume/duration allowed for the processing of samples. These will be visible on the FR as they become available
- 11 samples on hold due to errors regarding sample envelopes. Majority of errors revolve around mislabelling. These errors will be recorded by FFS as a requirement of their NADA certification
- FFS brought on 77 extra staff for DNA
- Priority 1 samples are highlighted in the FR, NBA enquired if OIC's can have visibility of priority 1's status
- **Action:** FTU to follow up and confirm possibility of OIC having status of P1 visible
- [redacted]
- Discussion around other states and their access to FR or similar systems [redacted]
- Discussion around allowing access of Forensic Medical Officers to the FR. Priority has been given to their access
- Discussion around pathologist current access to the FR.
- **Action:** FTU to look into providing suitable devices to FFS in order to allow afterhours access to FR
- Discussion around importance of operational officers attending joint meeting of FSG and FFS. Issues around Forensic Officers being on a course for the period in which the meeting was scheduled.
- **Action:** Support Officer to organised amended date for joint meeting to allow

[redacted]

	• A/Supt McLaren advised that 3rd July will result in newly christened Superintendents. New Superintendent of FSG should be appointment from this pool SOC Course: • QMS raised discussion regarding SOC course and proposed changes to the level of requirements. • Proposed that current course be amended to an advanced SOC examination course. Access to course will be merit based • Discussion around raising the number of vacancies within current course and running an addition refresher course for Sgt and SSgt already acting in the positions • A/Supt McLaren advised that course needs to be redirected/marketed as a refresher and not as an advancement. Course does not release members as MC's for FM's

Item #	**Item Description**	**Officer**
1.	**OPEN MEETING** – Welcome, introductions and apologies 1030hrs	Chair

[redacted]

8.	**QUALITY MANAGEMENT**
	• Statement and exhibits are still an issue.
	• Management Review Report Discussion
	
	Management Review Report
	1st half of 2017.
	4th July 2017
	
	The suitability of policies and procedures;
	There are a number of policies and procedures that have been identified as requiring improvement:
	-CSE101 requires updating to include use of dual and single DNA laboratories.
	-Use of statement generator and labelling of photographs to be discussed today to improve quality of statements.
	
	The outcome of recent internal audits;
	• The most significant issue identified has been with the quality of statements. This includes poor spelling, grammar, use of jargon, lack of structure or chronology and inclusion of observations that are not within the case record. Corrective actions have been issued. The QMS is undertaking a state-wide review of statements post peer review to monitor quality.
	• Issues with exhibits identified including:
	  o Failure to complete label
	  o Failure to update QPrime with location of exhibit
	• Relevant corrective actions issued.
	
	Assessments by external bodies;
	• There have been no external assessments during this reporting period.
	• Next external audits are:
		Inspector QMS

	○ 25/7/17 Toowoomba ○ 26/7/17 Warwick ○ 31/7/17 Sunshine Coast ○ 1/8/17 Bundaberg ○ 2/8/17 Gladstone ○ 3/8/17 Rockhampton ○ 22/8/17 Mackay ○ 23/8/17 Whitsunday ○ 24/8/18 Ayr ○ 25/8/17 Townsville ○ 28/8/17 Coomera ○ 29/8/17 Logan or Gold Coast ○ November FSG ○ December Cairns	

	• External audits – discussion regarding external audits and the extent of the audit. A full assessment will be completed. Every testing site (technical) will be tested every 18 months and a full assessment completed every 5 years. • Testing of blood – discussion were held regarding the job in [redacted] (SOC officer asked to take a photograph of blood on the floor from a DV incident). If an officer is reporting something to be blood, evidence should be taken at the time to justify statement ie blood sample. This will be an issue when hearing the matter in court. Suggestion is that the SOC officer should make a note ie. SOC officer asked if testing was required (additional services) and if the investigator has declined, ensure that is included. It was suggested this topic be added to Advance Scenes of Crime Course next year. • QPRIME Summaries – notes for causes of death. Add notes that will assist the experts ie. Markings appear to be injections marks. • Statements – review statements for consistency. Statements appear to be too complex for what they are trying to say. Senior Sergeants to review statements for consistency. Suggestions for a statement builder. It was noted that this issue should form part of the Risk Management Plans. A list should be placed together of those officers who can conduct statement reviews. Insp Neville will send out an email for statement and what is expected as a base line. OIC's need to communicate with staff to ensure statements are completed. • **Action:** Insp QMS to provide stats to Supt for statements generated across the state. • **Action:** Forensic Managers and Coordinators to conduct monthly audits on statements. • Minimal standard for photo descriptions. Label photos

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF CASSIE THOMPSON

I, **Cassie Thompson,** of 5 Sheridan Street, Cairns, Queensland, 4870 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

Current Employment

1. I am the Far Northern Region Forensic Coordinator at the rank of Senior Sergeant stationed in the Cairns Forensic Facility.

Qualifications and experience

2. I am the holder of the following tertiary qualifications:

   (a) Bachelor of Science from Griffith University in 1993

   (b) Bachelor of Science with Honours Class 1 in Anatomy from the University of Queensland in 1994

   (c) Master of Science in Forensic Science from Griffith University in 2014

3. Prior to joining the Queensland Police Service (QPS), my work history included the following:

   (a) [redacted]

(b) [redacted]

4. I commenced at the QPS Academy in October 1997 and was sworn into the QPS in April 1998. I have worked in the following areas since that time:

(a) In April 1998, I commenced work in General Duties at Mackay Police Station.

(b) In August 1999, I transferred to General Duties at Airlie Beach Police Station.

(c) In October 2001, I transferred to General Duties at Mossman Police Station. During my time at Mossman, I progressed to Senior Constable.

(d) In July 2005, I obtained a position as a Forensic Scientist (Scientific Officer) in Cairns Scientific Section, and immediately transferred to Brisbane Scientific Section to undertake training.

(e) In December 2007, I returned to Cairns Scientific Section as a Scientific Officer.

(f) In July 2010, I transferred to Gold Coast Scientific Section. During my time at Gold Coast Scientific Section I progressed to Sergeant, Senior Forensic Scientist, after completing my Master of Science in Forensic Science.

(g) In April 2021, I was promoted to the Far Northern Area as the Forensic Coordinator.

Forensic Coordinator role

5. The current qualifications required to obtain a Forensic Coordinator position is the successful completion of the Scenes of Crime Officer training course or a level of knowledge and skill which, in the opinion of the Superintendent, Forensic Services Branch is equivalent.

6. I am the Forensic Coordinator for the Far Northern Area (also called Far Northern Region). This area covers from Cardwell in the south, north to the Islands of the Torres Strait, all of Cape York including down to Kowanyama on the west coast, and west to Croydon.

7. My duties as the Forensic Coordinator are primarily to plan and coordinate the multidisciplinary forensic response to major incidents to meet investigative priorities in compliance with the Forensic Services Quality System. Major incidents include homicides, unusual deaths, and serious violence against the person. This includes consulting with investigators and specialists to coordinate forensic evidence examinations, provide investigator briefings, including explaining significance of conclusions and findings from crime scene and laboratory examinations, and to coordinate and review the forensic brief of evidence for complex multidisciplinary cases when required.

8. Additionally, I form a role in advising the Inspector, Forensic Manager in my area on issues which might affect the Forensic Services Quality System that cannot be rectified.

9. The Forensic Manager responsible for the Far Northern Area is Inspector [redacted]

10. I report directly to Inspector [redacted]

11. I have one person who directly reports to me, the AO3 Admin & Review Administration Officer.

12. In the Far Northern Area, there are four Scenes of Crime (SOC) units, as listed below. Scenes of Crime Officers (SOCO) in Far Northern Region report to their respective Officer in Charge (OIC). Those OICs report directly to Inspector [redacted].

    (a) Cairns Scenes of Crime, housed in the Cairns Forensic Facility with Cairns Scientific Section;

    (b) Mareeba Scenes of Crime;

    (c) Innisfail Scenes of Crime; and

(d) Thursday Island Scenes of Crime.

13. There is one Scientific Unit that is responsible for the Far Northern Region, the Cairns Scientific Section. Scientific Officers report to their respective OIC who reports directly to Inspector [redacted].

14. Attached and marked as '**Exhibit 2**' to this statement is a copy the Far Northern Area Forensic Services Organisational Chart.

Crime Scenes

15. The Forensic Coordinator is typically contacted to be involved in managing a crime scene in relation to major incidents where consideration is being given to a multidisciplinary response or when the attending officer is seeking support and advice in relation to a scene.

16. The process that leads the Forensic Coordinator to be contacted typically commences with the first responding police requesting attendance of a SOCO unit via Police Communications, who subsequently will contact the SOC unit for deployment. Dependent on the job, the SOCO will either immediately contact the Forensic Coordinator, such as for overt suspicious death scenes, or may attend the scene to obtain further information and then contact the Forensic Coordinator. For overt scenes requiring a multidisciplinary or protracted response, the local Investigators may also directly contact the Forensic Coordinator.

17. Information is obtained from the SOCO, and further information gathering from the Investigators occurs to obtain situational awareness. Upon consideration of the information and circumstances, additional resources such as Scientific Section in Cairns, or other forensic support units in Brisbane, are contacted for deployment as required.

18. As a single officer function, I am required to manage my workload and therefore my attendance at the scene depends on several factors. I will typically attend the scene for multidisciplinary matters, overt suspicious death scenes or protracted person offences

that are within an achievable travel distance. For other matters, several factors are considered to determine the value in my scene attendance, including the following:

(a) The nature and complexity of the incident (further explained in next question);

(b) The level of experience of the attending forensic officer/s;

(c) Limitations in the ability to travel to the area by transport options such as small planes, and the priority of other forensic officers or equipment;

(d) Limitations in arriving at the scene whilst the scene is active, and any delays that might be attributed to waiting for Forensic Coordinator attendance for limited or no benefit;

(e) Confidence in the capabilities of the officers at the scene, including having other experienced SOCO or Scientific Officers who can undertake scene coordination duties as they arise;

(f) If the on-scene supervision and coordination requirements of the matter can / are being suitably undertaken by staff at the scene;

(g) The capability to maintain regular distal contact with scene examiners;

(h) The value of my presence at the scene versus the value to other functions and responsibilities;

(i) Conflicting priorities including provision of statements with court timeframes, evidence in court or related training exercises to maintain my experience;

(j) Fatigue management of the single officer role of the Forensic Coordinator

19. If the Forensic Coordinator is not at the scene, regular contact is maintained with all parties to provide advice, supervision, feedback and direction.

20. The determination as to the deployment of Scientific Officers at a crime scene is a multi-factorial consideration that is heavily dependent on the specific circumstances of each incident. This consideration occurs in the initial stages of the incident, however,

can reoccur at any stage throughout an incident if new information arises or circumstances change.

21. For incidents of a complex and protracted nature, such as a suspicious-death investigation, and / or incidents that require utilisation of scientific specific skill sets at the scene, a Scientific Officer will be deployed.

22. For other matters that may not specifically require a scientific specific skill set, a number of factors are taken into consideration, including the following:

    (a) The nature and complexity of the incident, this includes considerations such as the number and extent of scenes, the relationships of the people involved, the type/amount of evidentially valuable items in a scene and the work required on those items, the amount and complexity of the bloodstaining, the availability of background information and time required to complete examinations;

    (b) The level of experience of the attending forensic officer/s. Experienced SOCOs often hold naturally higher levels of skill and knowledge that are suitable to undertake examinations, whilst less experienced staff may require assistance of either experienced SOCOs or Scientific Officers;

    (c) Logistical considerations including the amount of time for staff to arrive at a location, the needs of the examination such as daylight, the environmental conditions and the ability of local police to appropriately secure the area;

    (d) The Cairns Scientific Unit comprises six staff, covering the entire region. Considering leave, days off and other factors there are generally less than 6 staff deployable at any time. Therefore, consideration is also given to resourcing and fatigue management to ensure the health and wellbeing of staff is maintained, and ensuring they are capable of responding to matters they will be required to attend rather than matters that can be suitably undertaken by attending Scenes of Crime Staff.

23. Since I commenced as a Forensic Coordinator, I am not aware of any occasion in which no Scientific Officer has attended a crime scene even though, normally they would attend.

24. The process I undertake when attending a crime scene in the Far Northern Area, or when I undertake the Forensic Coordinator role distally, involves:

    (a) I obtain information from First Responding officers, First Responding Scenes of Crime Officers and Investigators. I establish with the Investigators the investigative priorities at that time.

    (b) I then brief the attending Forensic Officers, relaying the investigative information known at that time. In collaboration with the attending Forensic Officers / Specialists, I establish a forensic plan for the examination of the scene. This includes consideration of known circumstances to establish the boundary of the scene and the level of examination required, including the level of trace DNA and fingerprint examination required.

    (c) The primary Scientific Officer then typically leads the examination of the primary area of interest, assisted by other Scientific Officers and Scenes of Crime Officer/s. As further information becomes apparent/available to the forensic officers at the scene throughout their examination they relay that information to the Forensic Coordinator.

    (d) The Forensic Coordinator remains the conduit for information flow between Forensic Officers and Investigators. I remain in contact, either in person or by phone, with Investigators and Forensic Officers to relay information between both areas and maintain situational awareness.

    (e) The Forensic Manager in Far Northern Region does not have a forensic background. I advise the Forensic Manager of the deployment but typically he is not involved in scene examination processes.

25. In consideration of the initial forensic briefing and plan, the examining Forensic Officer, either Scientific Officer or SOCO, who has direct scene exposure and

knowledge, typically determines the type of forensic evidence to test for, where to sample from and the method of sampling. When uncertain, clarification is sought from the Forensic Coordinator or Scientific Officer and a collaborative decision is made considering information known at the time.

26. The Forensic Officer examining the item/area takes possession and responsibility of any samples collected by them or at their direction. That officer transports those items back to the Forensic Property Point within the Scenes of Crime facility where the items are lodged. The OIC of each unit and the Forensic Manager are responsible for the Forensic Property Point where the samples are initially kept.

27. Samples for DNA analysis are either sent by registered post or are hand delivered to Queensland Health Forensic and Scientific Services (QHFSS).

28. Samples for biological evidence are collected via variety of methods as outlines in procedure CSE 101 Biological Evidence. The location from which each sample is collected is identified and recorded in-situ with a Forensic Exhibit Number (FEN) depicted on a sticky label. Most subsamples result in in-tube samples which are placed inside a white crime scene envelope. A matching FEN label is attached on the side of the tube and also on the exterior of the envelope. The exterior of the envelope also records the Forensic Register number and a brief description of the item. This process is photographed.

29. Within the SOC property point, subsampled items are stored either in the designated QHFSS mailing box or individually on a shelf in the property point. Whole items collected for further subsampling are packaged in brown paper, bearing the same style of labelling as the crime scene envelope, and stored on the shelves of the property point. Items for long term storage are transferred to the Police Station Property Point.

30. The training, procedures and manuals that I am aware of that regulate the matters discussed in paragraphs 15 to 29, above are:

    (a) *The Scenes of Crime Development Program;*

    (b) *The Scientific Training Program;*

(c) *CSE 100 Crime Scene Examination;*

(d) *CSE 101 Biological Evidence;*

(e) *LFD 100 Latent Fingerprint Identification;*

(f) *PFS 100 Quality Manual;*

(g) *CSM 100 Crime Scene Management; and*

(h) *OPM s 2.25.17 DNA.*

Sub-sampling

31. Most items are subsampled by Forensic Officers and in-tube sub-samples sent to QHFSS. Some whole items such as cigarette butts, condoms and female sanitary items are submitted as whole items for analysis. I am not aware of every circumstance in which other whole items would be sent to QHFSS for DNA analysis, however the below are two instances I would consider:

    (a) When dual examinations are required and the performance of one would affect the outcomes of another. For example, requiring both urine testing and saliva testing of larger areas of a garment. The whole item would be submitted for Forensic Biology and Forensic Chemistry to work together in a laboratory at QHFSS to undertake best testing; or

    (b) When information is received of a specific area of seminal fluid deposition, however a garment has been washed limiting police screening techniques. The item would be submitted for microscopic testing by QHFSS.

32. My understanding of sub-sampling is it is the taking of small samples from stains or areas of interest on an item. This process produces an in-tube exhibit suitable for analysis at QHFSS without further handling. Forensic Officers who hold the Crime Scene Examination authorisation perform sub-sampling. Sub-sampling is undertaken either in-situ at a scene or in DNA Laboratories within the Scenes of Crime / Forensic Facilities.

33. The procedures and manuals I am aware of that relate to the matters referred to in the two paragraphs immediately above are:

    (a) *OPM s 2.25.17 DNA;*

    (b) *CSE 101 Biological Evidence; and*

    (c) *PST 104 Seminal Fluid Screening and Sampling Protocols.*

34. The only disadvantage to police conducting sub-sampling that I am aware of is the inability of QHFSS to readily re-sample an area if required or the knowledge of sample locations to allow pooling of samples if required.

The Forensic Register

35. I have access to the Forensic Register (FR). However, I am not aware of the naming of levels of access and am not in a position to provide that advice.

36. The FR is used by Forensic Officers. To my knowledge, Investigators do not have access to the FR.

37. Forensic Officers can undertake either electronic notes or hard copy (paper) notes. When Forensic Officers do electronic notes, all notes pertaining to their examination, including information, observations, examinations and exhibits collected are contained on the FR.

38. Forensic Officers utilising hard-copy paper notes record all the information within their hard copy paper casefile and provide a summary of the notes and a list of exhibits collected on the FR.

39. If photographs are taken at the scene by a Forensic Officer, these are in a digital format and are also uploaded to the FR examination summary.

40. All officers can utilise the Case Management Entry section of the FR to record job-related conversations, emails and non-examination matters. The Case Management

section is also utilised to upload a copy of the forensic officer's statement and record technical and administrative reviews.

41. I typically utilise the Case Management Entry of the FR to record my involvement with a matter including information received, conversations had, and briefing provided.

42. My awareness of the communication of the results of DNA testing is based solely on my learned experience. I am not in a position to provide specific advice as to all the processes that may be available.

43. My experience is that the communication of DNA results depends on the nature of the result.

    (a) Within Far Northern Region, links from Crime Scene Samples to the National DNA database (NCIDD), termed Cold links, are reported to the Forensic Coordinator, collecting Forensic Officer, OIC of collecting Forensic Officer and specified investigative/intelligence units via an email notification.

    (b) My understanding is that DNA results relating to comparisons of Crime Scene Samples to DNA Evidence samples, are added to the FR on the exhibit screen and later uploaded directly to QPRIME. There is no specific notification to the Forensic Coordinator. I am not in a position to provide advice as to if any other Forensic Officer or Investigating Officer receives any specific notifications.

    (c) My understanding is that the DNA unit review and check results before they are released to QPRIME.

    (d) As QHFSS also utilise the FR, I can see their results on the FR occurrence sheet as they are added, which I understand can be prior to any checking by DNA Unit. I am however not conversant with that part of the FR and cannot provide definite advice as to the processes involved.

44. SOCO and Scientific officers can access results by manual interrogation of the FR, similar to the Forensic Coordinator. I am not in a position to provide advice as to the

levels of access and visibility of those officers to areas of the FR. Investigating officers cannot access the FR.

Quality management

45. As a Forensic Coordinator, I overview in-scene examinations undertaken for major incidents, but do not directly observe/supervise the examination and sampling. As the sole Forensic Coordinator for the region, my workload at the time and the point of the investigation will determine when I overview each examination. During the initial active stages of an investigation, I overview results as soon as possible. I continue to overview examinations/results and speak with Forensic Officers and Investigators periodically until the examinations are completed. Overviewing includes specifically checking a case on the FR and reviewing the daily FR occurrence sheet for my area.

46. I undertake a yearly Internal Audit of each Forensic Unit. This includes having authorised officers review casefiles and provide feedback of procedure compliance. Any issues detected in any part of these processes are relayed to the officer and/or their OIC and the Quality Management Section.

47. My involvement in supervision of in-laboratory sampling is the same as described for in-scene above.

48. My involvement in the supervision of information entered into the FR in relation to biological material obtained from a crime scene is the same as described for in-scene above.

49. The procedures I am aware of that relate to the role a Forensic Coordinator is to have in quality management are:

    (a) *PFS 100 Quality Manual*; and

    (b) *QMS 100 Internal Audits.*

Technical reviews, administrative reviews, scene assessments

50. My understanding is a technical review is the review of an examination by another appropriately qualified officer. It involves checking notes, information, examination processes and sampling to ensure appropriate forensic practice. The review checks procedures are followed, and conclusions reached are supported by the observations and result documented.

51. I am not aware of any different types of technical review.

52. My understanding of an administrative review is an administrative process to ensure compliance with the relevant casefile procedure. It can be conducted by any QPS officer authorised to perform the procedure or administration officers after appropriate instruction. Administrative reviews do not hold any technical review capacity and are an administrative capacity only.

53. My understanding of a Scene Assessment is it is an assessment conducted every two years on every officer authorised to undertake Crime Scene Examination. The assessment is typically conducted in-person by the assessing officer at the scene with the subject officer. A *PFS 51 Scene Assessment* form is completed.

Issues in quality management

54. An error in sampling biological or transporting biological matter would typically be identified by the examining forensic officer, the officer conducting a technical review of the casefile or by any officer overviewing the examination. The matter may not be raised to the Forensic Coordinator if it does not significantly compromise results and may be dealt with in each section.

55. If I was made aware of the issue, I would make inquiries to establish the root cause of the error and ensure a process was put in place to rectify the root cause. Consideration would also be given to if the examination or sample needed to be retaken, if possible. If the issue compromises the result, the Investigating Officer would be advised by either the subject officer, the OIC of the subject officer or the Forensic Coordinator.

Significant issues that affect the FSG Quality System would be raised to the Forensic Manager and the Quality Management Section.

56. I have not had experience of an error in biological evidence being disclosed once the evidence has been provided to Police Prosecutions and/or the Office of the Director of Public Prosecutions (DPP). If the matter were to occur, in addition to the above steps, I would take steps including ensuring the subject officer, or myself, directly contact the investigating officer, discussing the impact of the issue and if further examination or samples are required and that DPP was informed and if statements required withdrawal or addendums. If the matter required a detailed forensic explanation, I would ensure the subject officer, their OIC or myself (or a combination of those people) communicated with the DPP to ensure clarity.

57. During my time as a Scientific Officer and Forensic Coordinator, the only issue I can recall encountering regarding biological matter is the transportation of exhibits from Cairns to QHFSS by hand. This process is controlled by Cairns District. Due to the large physical distance, my understanding is that the exhibit transport process, termed an exhibit run, is scheduled to occur monthly by QGAir aircraft transport. This is subject to the availability of QGAir who can cancel flights, placing a delay in the delivery of samples. Cairns District is currently in discussion meetings to achieve work around processes to maintain consistent delivery of samples to QHFSS.

Forensic medical examinations

58. I do not have substantial involvement in Forensic Medical Examinations other than to have discussions with investigators about any value in obtaining them.

59. In the Far Northern Region, Forensic Medical Examinations are conducted by the Government Medical Officer.

60. Once a biological sample is taken during a Forensic Medical Examination, the Investigating Officer takes possession and responsibility for the sample and they lodge the sample at the Police Station Property Point, with the Police Station OIC responsible for that property point. If samples are taken during a non-intimate Forensic Procedure,

such as fingernail scrapings, the attending forensic officer takes possession of the samples, and they are lodged at the Station Property Point until analysis is required.

61. Depending on the matter under investigation, samples are either delivered via registered post or hand delivered via an exhibit run utilising QGAir transport.

62. I am not aware of any issues in the availability or conduct of Forensic Medical Examinations.

Issues with the withdrawal of results

63. I cannot recall experiencing any issues whereby QHFSS have provided a positive DNA result/profile, and then, upon a request for a statement about that result/profile, have asked to withdraw the result.

64. I cannot recall having ever directly received any information from the DNA Management Section about the retraction of results by QHFSS.

65. The potential consequences for an investigation, where there is a withdrawal of results by QHFSS after first reporting that there was a DNA result/profile, depend on how vital the sample is, the stage of the investigation and the other evidence.

66. If the sample is a central/vital sample, a falsely higher or lower level of association of a person to an offence could be implied. This could enhance investigators charging the wrong person or stall an investigation as evidence conflicts leaving an offender at large.

Forensic reviews

67. I am not aware of an official definition of 'Forensic Review'. My general understanding is that it is the review of all examinations previously undertaken in a matter to ascertain if examinations were appropriate and sufficient at that time.

68. I have had limited experience with Forensic Reviews and am unaware of any official roles of the Forensic Coordinator. Other than to be the reviewing officer, I am unaware if there are other roles the Forensic Coordinator may be required to undertake. In that reviewing role, I would obtain the background information in relation to the matter

known at the time, review the forensic examinations conducted and results obtained and view the matter objectively to identify if the examinations were appropriate and suitable at the time and if there were /are other forensic avenues that could be explored.

69. I have limited experience with Forensic Reviews. I am unsure who typically requests a Forensic Review other than a requesting Investigating Officer, with the results returned to the Investigating Officers. If the matter reviewed obtained outcomes significant to the involved units, that advice would be provided to the OIC of the unit. If the outcomes were significant enough to warrant improved forensic processes, that advice would be provided to the Forensic Manager and the Quality Management Section.

Property points

70. In QPS stations, I am aware of only Scenes of Crime Property points, Vehicle Examination Area Property Point and general Police Station Property Points.

71. I do not hold sufficient knowledge to any detail of Station Property Points or any other type of property point to comment on those areas.

72. Scenes of Crime Property Points and Vehicle Examination Areas are temporary property points for the storage of items undergoing examination. These are accessible only by Forensic Officers. These property points are not for long term storage of items.

73. Procedure *PFS100 Quality Manual* outlines accommodation security, exhibit packaging and storage guidelines for storage of exhibits. I am not aware of the building requirements needed for Forensic Property Points.

74. In relation to the audit processes required for Scenes of Crime Property Points, I am aware only of the yearly Internal Audit process required in which exhibits held in the property point are selected to ensure packaging and continuity compliance with procedures. I am not able to comment on any further audits that may be required to be undertaken outside these times.

75. Scenes of Crime Property Points are maintained and managed by the OICs associated with the attached SOCO / Scientific sections, with overall responsibility by the Forensic Manager. I do not audit any property points other than during above mentioned yearly Internal Audits.

76. I do not hold sufficient knowledge to discuss any other Police Property Points.

77. I am not directly aware of any reoccurring problems, or failures to follow policy, in the management of property points containing biological material in my area.

78. I am not aware of any issues in conducting the yearly Internal Audit of forensic sections. I am not in a position to provide advice on any other regular, or otherwise, audits in my area.

79. The results of the audit of property as part of the yearly internal audit are documented on audit documentation QMS 06 (page 4 Property) and QMS 05. Those documents are returned to the Quality Management Section. I am unable to provide advice on any other Property Point audit processes.

80. The yearly internal audit process that relates to Scenes of Crime Property Points addresses the exhibits contained within that Property Point, rather than the layout or structure of the room. The audit of exhibits held in Scenes of Crime Property Point is a broad approach relating to continuity and packaging of all exhibits and does not specifically address biological exhibits independently. Results of the audits I have conducted are recorded on QMS 05 and QMS 06 (page 4 section 'Property') forms completed during the audits of Cairns Forensic Facility (2021; 2022); Mareeba SOC (2021, 2022) and Innisfail SOC (2021). Those documents are available if required, however the results of my inspection of Scenes of Crime Property Points conducted during those yearly Internal Audits have not raised any specific ongoing concerns in relation to biological exhibits in FNR Scenes of Crime Property Points.

DNA testing results and communication

81. I do not hold sufficient knowledge to outline all methods of communication of DNA results to all parties. This information would be available through the DNA unit.

82. Other than Cold Link results sent by email (as previously discussed), I obtain DNA analysis results through extended manual interrogation of the Forensic Register. Results of note I forward to the Investigating Officer and Scientific Officer via email or phone call. For prioritized results, I maintain contact with the DNA Unit who will verbally advise when a result is available.

83. I am generally aware of various result lines used to categorise results, with accompanying explanatory paragraphs, through self-learning. I have not received specific training on the meaning of result lines and I do not hold sufficient knowledge to comment on the correct use and interpretation of those lines by other officers.

84. I am aware results are issued for several stages in the analysis of a single sample, which can become overwhelming to understand, particularly in large cases. I am aware some results have advice to consider further testing. I am aware other results lines provide advice that conflicts with its outcome. For example 'ITEM HAS BEEN EXAMINED/SUB-SAMPLED' in the explanatory paragraph indicating a subsample has been taken, however the explanation I have received from DNA Management Unit is that that is not always the case. This causes confusion as results are expected that may never arrive.

85. I am not aware of if/how Investigators are educated about the terms used, other than through general conversation with Forensic Officers. I am aware that Scientific and Scenes of Crime officers receive some DNA training during their training program, however I am not aware of the exact nature of that training.

86. I cannot recall being directly advised of any errors made by the QHFSS laboratory. I am aware that result lines are at times present in some results stating words to the effect of 'Incorrect result issued' and another result subsequently issued. I cannot specifically provide an example of these.

Backlogs

87. Over the 17 years I have been a forensic officer, I have vague recollection of mention of backlogs at QHFSS. However, I cannot specifically identify any particular point in time or communication.

88. My understanding is the current typical wait time for sampling processing is 6-8 weeks. My experience is that this relates to a crime scene sample being compared to the NCIDD database and providing a cold link.

89. My experience is that timeframes for formal comparison of results to DNA Evidence Samples is longer, and can vary depending on the complexity of the sample and if a statement has been requested of QHFSS. I cannot provide specific timeframe examples.

90. Delays in issuing DNA results, for any reason, has impacted my ability as a Scientific Officer to meet court mandated statement timeframes. Scientific statements frequently rely on DNA analysis results to subsequently undertake expert analysis and reconstruction. Forensic Coordinators can at times provide summary reports, collating all the forensic evidence. This further cannot be completed until completion of the Scientific Officers statement. Delays in releasing DNA results prevents those officers from providing statements to the courts in required timeframes.

Issues raised about collection

91. I do not recollect ever having any issues regarding QPS' collection of samples for DNA testing raised directly with me.

TAKEN AND DECLARED before me at Cairns in the State of Queensland this 4th day of August 2022.

... [redacted] .....

Cassie Thompson Witness

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF DAVID JAMES KEATINGE

I, **David James Keatinge,** of 200 Roma Street, Brisbane, Queensland 4001 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

Current employment

1. I am currently the Inspector, Quality Manager, Quality Management Section (QMS), Forensic Services Group (FSG), Operations Support Command.

Qualifications and experience

2. My qualifications include: -
   (a) Bachelor of Science 1986, University of Queensland, St Lucia Campus
   (b) Graduate Diploma in Education 1987, University of Queensland, St Lucia Campus
   (c) Master of Business Administration 1996, University of Queensland, St Lucia Campus
   (d) Master of Science in Forensic Science 1999, Griffith University.

3. My work history since commencing with the Queensland Police Service (QPS) is: -
   (a) Constable - Brisbane City Station 1994-1995
   (b) Scientific Officer Constable, Scientific Section, Police Headquarters 1995- 1997
   (c) Scientific Officer Senior Constable Scientific Section, Forensic Services Branch 1997-1999
   (d) Scientific Officer Sergeant Scientific Section, Forensic Services Branch 1999-2002
   (e) Officer In Charge Senior Sergeant, Forensic Standards Unit, Forensic Services Branch 2002 – 2009

(f) Inspector, Scientific Section, Forensic Services Group 2009 – 2016

(g) Inspector, Forensic Manager, North Brisbane and Southern Area, Forensic Services Group 2016 -2017

(h) Inspector, Quality Manager, Quality Management Section, Forensic Services Group 2017- current.

4. The Forensic Standards Unit was part of the NATA Project Unit. The NATA Project Unit was responsible for the accreditation of forensic facilities and the implementation of a quality system to meet the requirements of the International standard ISO 17025. The unit comprised of 5 staff members. Once QPS forensic facilities received accreditation, the name of the NATA Project Unit changed to become what is now referred to as the Quality Management Section.

5. The Scientific Section is an operational support section within FSG. The specialised areas with the in the section are:

(a) Analytical Services Unit – paint/polymer analysis, glass examinations, guns shot residue analysis, ignitable liquid residue analysis, cannabis analysis

(b) Ballistics Unit – weapon certification/examination and tool mark examinations

(c) Document Examination Unit – handwriting/signature examinations

(d) Major Crime Unit - major crime examination and reconstruction, bloodstain pattern analysis, fire and explosive scene examinations and impression evidence comparison

(e) Vehicle Inspection Unit - vehicle and component identification, mechanical examinations relating to serious crashes.

6. I was the forensic manager/forensic coordinator for North Brisbane and Southern Area FSG from 2016-2017. I was responsible for the management of 12 Scenes of Crime Sections. These sections provided both a major crime and volume crime forensic response to the North Brisbane and Southern Areas. I was also responsible for the management of major crime cases where multidisciplinary forensic teams were deployed.

7. A Forensic Services Group Organisational Chart details the sections and units and how they interact in the overall structure. This chart is attached and marked **'Exhibit 2'.**

Quality Management Unit

8. As the Quality Manager, I am responsible for maintaining the overall quality management system for QPS forensic services statewide. I report directly to the Laboratory Director, Superintendent, Forensic Services Group. The functions of the QMS include -

(a) Development and management of forensic technical procedures
(b) Development and management of administrative procedures associated with forensic services, i.e. case information management and document control
(c) Ensuring procedures keep in step with scientific advances and reflect world best practice by conducting and managing appropriate research
(d) Training and developing forensic officers and maintaining training records to meet the Standards of a Registered Training Organisation (2015)
(e) Determining standards for equipment and consumables to be used for forensic purposes
(f) Ensuring compliance with ISO/IEC 17025 & AS 5388 in consultation with Regional Forensic Managers
(g) Ensuring that forensic officers maintain competencies and undergo regular competency tests
(h) Ensuring that the court testimony of forensic officers is regularly assessed
(i) Coordinating an internal auditing program that monitors compliance with all NATA requirements and maintains accreditation
(j) Ensuring that all non-compliances and opportunities for improvement are appropriately addressed
(k) Consulting with regional managers in relation to the quality of forensic services and the technical activities of forensic officers within their regions, and
(l) Providing advice to the Superintendent, FSG, in relation to the quality of forensic services and the technical activities of forensic officers within the regions.

9. 10 staff work within QMS.

10. The staff roles within the QMS include: -

(a) Senior Sergeant Jamie Cook, Quality Management Officer responsible for compliance, proficiency, and maintenance of FSG procedures

(b) Senior Sergeant Asha Haxton, Quality Management Officer responsible for the management of SOC training statewide

(c) Sergeant – currently vacant, SOC training facilitator

(d) Principal Research Officer (PO5) Dr Matt Krosch responsible for coordinating and undertaking forensic related research projects both internal and external to the QPS

(e) Technical Officer (AO4) [redacted] responsible for the Forensic Register system administration

(f) Administration Officer (AO5) [redacted], Team Leader, Forensic Reception Centre responsible for the supervision of Forensic Reception Centre staff that perform property duties of forensic exhibits that come into Police Headquarters. Administration Officer (AO5) [redacted], Team Leader, Forensic Reception Centre responsible for the supervision of Forensic Reception Centre staff that perform property duties of forensic exhibits that come into Police Headquarters.

(g) Administration Officer (AO4) [redacted] Property Officer, Forensic Reception Centre responsible for the property duties

(h) Administration Officer (AO3) [redacted], Forensic Reception Centre responsible for admin duties associated with property

(i) Administration Officer (AO3) [redacted], Forensic Reception Centre responsible for admin duties associated with property

(j) Administration Officer (AO3) [redacted], Forensic Reception Centre responsible for admin duties associated with property.

QPS Scenes of Crime Officers and Scientific Officers

11. I am not in a position to accurately or comprehensively explain the role and typical duties of a Scenes of Crime Officer (SOCO). Senior Sergeant Asha Haxton, QMS holds a better understanding and knowledge of the roles and duties of SOCOs.

12. I am not in a position to accurately or comprehensively explain how SOCOs are trained or instructed in policies concerning the collection and sampling of biological material. Senior Sergeant Asha Haxton, QMS holds a better understanding and knowledge of the training of SOCOs.

[redacted]

13. I am not in a position to accurately or comprehensively explain the typical duties of a Scientific Officer. Senior Sergeant Letitia Everist, Scientific Section holds a better understanding and knowledge regarding the duties of a Scientific Officer.

14. I am not in a position to accurately or comprehensively explain how Scientific Officers are trained or instructed in policies concerning the collection and sampling of biological material. Senior Sergeant Letitia Everist, Scientific Section holds a better understanding and knowledge regarding the training of a Scientific Officer.

15. I am not in a position to accurately or comprehensively explain what external standards the training program for SOCOs and Scientific Officers comply with. Senior Sergeant Asha Haxton, QMS and Senior Sergeant Letitia Everist, Scientific Section hold a better understanding and knowledge of the training programs for both SOCOs and Scientific Officers.

16. The FSG Organisational Chart at marked as **'Exhibit 2'** assists with understanding the sections and units within the QPS that contain the SOCOs and Scientific Officers.

National Association of Testing Authorities (NATA)

17. FSG received NATA accreditation in accordance with ISO/IEC 17025 (General requirements for the competence of testing and calibration laboratories) in 2005 and with AS 5388 (Forensic analysis) in 2014.

18. NATA is the only third-party accreditation body that assesses FSG's technical compliance to operate in accordance with ISO/IEC 17025 and AS 5388.

19. NATA conducts a surveillance audit of all accredited FSG sections every 18 months and conducts a technical audit of all accredited FSG sections every 3 years. The purpose of these assessments is to monitor FSG's continuing fulfilment of ISO/IEC 17025 and AS 5388 for its scope of accreditation.

20. I am currently a technical assessor and assist with NATA assessments of other police jurisdictions forensic facilities.

21. To ensure maintenance of accreditation with NATA, FSG is required to have an internal audit program in place. This program involves conducting internal audits of each forensic facility within FSG. These audits include a review of the facility, exhibits, personal records and the technical assessment of casework completed by FSG practitioners. The relevant Forensic Manager or Forensic Coordinator is responsible for conducting these audits every 12 months.

DNA Collection

22. I am not in a position to accurately or comprehensively explain in what circumstances physical items suspected to contain DNA are sent to QHFSS and in what circumstances QPS officers take samples and send a vial with the sample to QHFSS. Scientific Officers are trained or instructed in policies concerning the collection and sampling of biological material.

23. Senior Sergeant Asha Haxton, QMS holds a better understanding and knowledge regarding items tested for biological material at crime scenes.

24. Crime Scene Examination Procedure CSE 101 – Collection of Biological Evidence regulates the collection protocols for biological material that may yield DNA or other information of potential value.

25. I understand that some police jurisdictions sub sample from physical items. I cannot comment on whether sending a sample in a vial instead of sending the physical item has affected the quality of DNA results that are returned.

26. I am not aware of any departures from policy concerning the collection of biological material.

27. I am not able to comprehensively explain how and by whom biological materials are transported from a crime scene, or where they are taken to and stored and how they are

then provided to QHFSS. Senior Sergeant Asha Haxton, QMS, holds a better understanding and knowledge regarding transportation of biological materials.

28. The Forensic Reception Centre (FRC) is located on [redacted], Police Headquarters. The FRC is responsible for the receipt, storage and disposal of items received for forensic examination at Police Headquarters. I supervise the five staff at the FRC.

29. I am not able to comprehensively explain the audit and quality management processes associated with QPS station property points. Senior Sergeant Asha Haxton, QMS, holds a better understanding and knowledge regarding the audit and quality management processes associated with QPS station property points. FSG designated exhibit storage rooms are not considered part of QPS station property points.

30. FSG designated exhibit storage rooms are audited annually as part of the FSG internal audit process and are also audited as part of the NATA external audit process. I am not aware of any failures in relation to the auditing of FSG exhibit storage rooms.

31. I am not aware of any reoccurring problems, or failure to follow policy in the management of FSG designated storage rooms.

32. There have been only minor administrative issues that QHFSS have raised with me with respect to the collection and submission of biological material to QHFSS. In some cases, FSG have been requested by QHFSS to adjust FR records to reflect that the exhibit category type correlates to the physical exhibit received by QHFSS staff. These have occurred infrequently since I commenced as the Quality Manager in 2017.

33. I am aware that in the report by the Queensland Audit Office (QAO) entitled *Delivering forensic services Report 21: 2018-19* at pages 37 to 38, it is observed that only one of eight property facilities that were visited could provide evidence that it had completed the annual property audit each year. The report also observed that the QPS 'has limited assurance that all crime scene exhibits, including forensic exhibits, are stored securely and accounted for'.

34. These findings relate to QPS station property points only. No issues were raised by the QAO in relation to any FSG designated exhibit rooms. QMS is not responsible for

auditing QPS station property points other than FSG designated exhibit storage rooms. I am not aware of any FSG sections or QMS taking any action in response to the observations raised in the QAO report.

Technical reviews, Scene assessments, 'Train the Trainer'

35. The technical review examines the process by which conclusions or opinions are reported in individual case records. Working notes and technical information including sampling, examination and testing information are checked against the relevant operational procedures and acceptable forensic practice. Technical reviews may only be performed by staff who are qualified in the relevant discipline/s.

36. The technical review process is located in PFS 100 Quality Manual, Section 13.5 Technical Reviews.

37. For scenes of crime officers, a technical review must be performed on all examinations pertaining to major crime. A technical review of the case file must be performed prior to the release of a statement or report for both major and volume crime examinations.

38. Senior Sergeant Asha Haxton, QMS, can provide further details regarding technical review of trainees.

39. I am not aware of any reoccurring departure from policies and guidelines with respect to the FSG technical review process.

40. Results of technical reviews are maintained by individual FSG sections. I do not have access to these results. I can only see that an entry has been added to the Forensic Register (FR) case file indicating a technical review had been completed. If there is an ongoing issue which has been identified – then a corrective action or improvement action may need to be initiated and QMS will oversee this process. Since performing the role of Quality Manager, I do not recall any ongoing issues relating to the collection of biological evidence of a technical nature. Many of the issues that have been identified through the corrective/improvement process have been usually administrative related.

41. A scene assessment is the independent assessment of work undertaken. Scenes of Crime officers are required to undertake a scene assessment every two years and be assessed by another officer authorised in that discipline.

42. The relevant QPS policy regarding scene assessments can be found in PFS 100 Quality Manual and PFS51 Scene Assessments.

43. I am not aware of any departures from policies and guidelines with respect to scene assessments.

44. The FR stores data relating to the completion of scene assessments, and this is audited as part of the internal and external audit processes.

45. I am not able to comprehensively explain the detail around the 'Train the Trainer' program. Senior Sergeant Asha Haxton, QMS, holds a better understanding and knowledge regarding that program.

46. The QMS staff are responsible for overviewing the annual internal audits conducted of FSG facilities which includes assessing the work performance for each officer within each facility.

Equipment for DNA collection

47. The QMS is responsible for determining standards for equipment and consumables used for the sampling and collecting of biological/forensic material for DNA testing. This involves consultation with relevant staff both within FSG and QHFSS.

48. The DNA collection kits utilised by QPS FSG are highly customised based on research, development and validation testing to ensure the viability of DNA analysis processes with our partner QHFSS, DNA Analysis Unit.

49. The QMS staff are responsible for overviewing the annual internal audits conducted of FSG facilities which includes checking compliance of equipment.

50. The procedure relevant to DNA testing equipment is the QMS 06 – Facility Audit checklist. NATA can check for compliance with ISO17025/AS5388 when undertaking external assessments of accredited FSG facilities.

51. I do not know of any reoccurring problems, or failures to follow policy, in the selection, use and maintenance of equipment for the collection, storage and transportation of biological material.

Forensic Medical Examinations

52. The QMS does not undertake any role with respect to practices, policies and procedures relating to Forensic Medical Examinations. The development of policy in relation to FSG involvement in Forensic Medical Examination is legislatively based and covered in OPM (s.2.23- Forensic Procedures) and PPRA (Chapter 17, Part 2 ss.448-456).

53. I am not aware of any reoccurring problems in the conduct of forensic medical examinations.

54. I do not have any involvement with any of the processes surrounding intimate forensic examinations. Sexual Assault kits are not conducted by FSG officers. External packaging is barcoded by FSG for recording on the FR prior to being transferred to QHFSS.

The Forensic Register

55. QMS staff including myself use the FR for a variety of purposes i.e., searching and/or modifying personal records including authorisations and training records, equipment records, relevant case files, status of corrective/improvement actions.

56. The FSG internal audit process involves the auditing of FR data. NATA surveillance and technical assessments also review FR data for all FSG accredited sites.

57. Results of FSG internal audits involving checking relevant aspects of FR data are held electronically within the QMS file server.

58. The FR will prompt staff to undertake an internal check of biological material prior to it being sent to QHFSS for analysis. This check involves checking relevant QPrime entries, FR entries and checking packaging of the exhibit being submitted. All biological evidence consumables are recorded on the FR. There is a requirement to record batch numbers in relation to the receipt of consumables. This can be audited for quality control purposes.

59. I am not involved with DNA results coming back from QHFSS on the FR.

60. The QMS staff are not involved with training for general QPS officers to understand and interpret the results of a forensic analysis of biological material. I understand that staff from the DNA Management Section can provide this training.

Dr Matthew Krosch Report

61. In 2019, Dr Matt Krosch had a discussion with Inspector David Neville and me about the possibility of evaluating FR data to see if there was any correlation between different sampling techniques used on various surfaces and DNA success rates from the samples analysed. Both Inspector Neville and I supported the initiative. I reviewed the findings documented by Dr Krosch and recall making no further comment to the draft paper.

62. I was hoping that the project findings would provide FSG with relevant information on the success rates for different types of sampling methods of biological evidence taken from a variety of surface types.

63. As a result of the findings, an aid memoire was developed by FSG staff and is in the process of being distributed to forensic officers. This guide provides forensic officers with the suggested sampling technique to use for different types of biological evidence taken from certain types of surfaces and/or targeted areas (i.e., steering wheels).

64. I was interested in seeing if the results were able to indicate which collection method should be adopted for different types of surfaces to maximise the best chance of obtaining a DNA profile.

65. I did not seek or receive any feedback or commentary from QHFSS in relation to the results of the paper.

66. I did not seek any advice from other law enforcement agencies in other jurisdictions regarding any of the results published in the paper.

Sampling consumables and equipment

67. The sampling consumables used by the QPS currently, and since 1 July 2017, include:

(a) DNA Tapelift Kit

(b) Forensic Swab

(c) Fingernail Scraping Kit.

68. Since July 2017 the forensic swab kit contains a [redacted] swab with [redacted].

69. I have limited knowledge of sampling consumables used by QPS during 2003-2008. I understand that the DNA tapelift kit, forensic swab and fingernail scraping kit have been utilised by FSG since 2009/2010.

70. The QMS is responsible for determining standards for equipment and consumables used for the sampling and collecting of biological/forensic material for DNA testing. This involves consultation with relevant staff both within FSG and QHFSS.

71. The DNA collection kits utilised by QPS FSG are highly customised based on research, development and validation testing to ensure the viability of DNA analysis processes with our partner QHFSS, DNA Analysis Unit. These have been used by FSG since 2009/2010.

72. Dr Matt Krosch, QMS, can provide further response as to the processes and methods involved when deciding on what equipment/consumables to use for the sampling and collection of biological material.

Other matters

73. The QMS is not involved with a forensic review of a particular investigation.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 18th day of August 2022

2.	Forensic Services Group organisational chart

EXHIBIT 1

Notice number: 2022/ 00080

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: David Keatinge

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement prepared either in affidavit form or verified as a statutory declaration under the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Friday 29 July 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted], with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 15th day of July 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00030

Schedule of topics for statement

Inspector David Keatinge

Current employment

1. State your current rank and position in the QPS.

Qualifications and experience

2. List your post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held. In providing the work history:

   (a) Explain the purpose of the NATA Project Unit and how many staff were employed in that unit.

   (b) Explain the function of the Scientific Section and what units comprised the Scientific Section, and what each of those sections did while you were in that role.

   (c) Explain how the role of Forensic Manager, when you held it, was different (if at all) to the role of Forensic Coordinator, and identify what staff you supervised in that position.

4. Attach a current CV.

5. Explain the structure of the Forensic Services Group (**FSG**), and where the sections/units you worked in fit into the structure.

Quality Management Unit

6. Explain your current role, including what staff you supervise and who you report to. Detail the purpose and functions of the Quality Management Unit (**QMU**).

7. Identify how many people work in the QMU.

8. Detail each of the staff roles within the QMU, and who currently holds those roles.

QPS Scenes of Crime Officers and Scientific Officers

9. Explain the role and typical duties of a Scenes of Crime Officer (**SOCO**). Explain the qualifications (if any) and training required for that role. Identify what organisation or unit conducts the training.

10. Outline how, if at all, SOCOs are trained or instructed in policies concerning the collection and sampling of biological material.

11. Explain the role and typical duties of a Scientific Officer. Explain the qualifications (if any) and training required for that role. Identify what organisation or unit conducts the training.

12. Outline how, if at all, Scientific Officers are trained or instructed in policies concerning the collection and sampling of biological material.

13. Identify what external standards the training programs for SOCOs and Scientific Officers comply with.

14. Explain what group, sections and/or units within the QPS contain SOCOs and Scientific Officers.

National Association of Testing Authorities (NATA)

15. Identify each NATA administered standard related to the collection, storage and/or testing of biological material for which QPS maintains accreditation. Advise what year each accreditation was initially obtained.

16. Explain the frequency and nature of each occasion NATA checks the QPS accreditation of each of those standards.

17. Identify any other standards related to the collection, storage and/or testing of biological material for which QPS maintains accreditation from a body other than NATA.

18. Identify your role at NATA what it involves and when you were appointed to the role.

DNA collection

19. Explain how, when dealing with a crime scene, items are tested for biological material. Explain in what circumstances physical items suspected to contain DNA are sent to QHFSS, and in what circumstances QPS officers take samples and send a vial with the sample to QHFSS.

20. Identify which QPS policy or policies (if any) regulate the matters in the paragraph immediately above, and which policy or policies regulate the collection of DNA evidence more broadly.

21. Based on your knowledge, explain how the practices described in paragraph 19 compare to the practices in other Australian states and territories. Has the practice of sending a sample in a vial instead of sending the physical item to QHFSS affected the quality of DNA results that are returned?

22. Outline any departures from policy or policies concerning the collection of biological material that have occurred on more than one occasion.

23. Explain how and by whom biological materials are transported from a crime scene, and where they are taken to and stored. Explain how and by whom biological materials are taken from that storage point and provided to QHFSS.

24. Explain what the Forensic Reception Centre is, and your role with respect to the Forensic Reception Centre.

25. Explain the different types of property points at QPS stations. Explain the audit and quality management processes for property points managed by FSG.

26. Have there been any failures to regularly audit FSG property points? If so, provide details.

27. Have there been any reoccurring problems, or failure to follow policy, in the management of the FSG property points? If so, provide details.

28. Outline what issues or problems, if any, QHFSS have raised with you with respect to the collection of biological material and/or the submission of biological material to QHFSS.

29. In the report by the Queensland Audit Office entitled *Delivering forensic services Report 21: 2018-19* at pages 37 to 38, it is observed that only one of eight property facilities that were visited could provide evidence that it had completed the annual property audit each year. The report also observed that the QPS 'has limited assurance that all crime scene exhibits, including forensic exhibits, are stored securely and accounted for'. Outline what actions, if any, have been taken by the Quality Management Unit in relation to these and similar observations about property facilities in the report. Outline what actions, if any, other units or sections of the FSG have taken in response to these observations. Provide details of any change in policy or procedure.

Technical reviews, Scene assessments, 'Train the Trainer'

30. Explain what a technical review is – its purpose and what it involves – and whether there are different types of technical review. Identify who conducts a technical review and the minimum rank a police officer must hold in order to conduct a technical review.

31. Identify which QPS policies, guidelines or similar documents (if any) concern technical reviews.

32. Outline how often technical reviews are conducted for major crimes, and any further detail about technical reviews specific to major crimes.

33. Outline how often technical reviews are conducted for volume crimes, and any further detail about technical reviews specific to volume crimes.

34. Outline any departures from policies and guidelines you are aware of with respect to how technical reviews are conducted, who participates and completes a technical review, and how often they are conducted.

35. Provide any data concerning the conduct of technical reviews and aggregate results of technical reviews since 2003.

36. Explain what a scene assessment is and what it involves. Identify which staff members must be subjected to a scene assessment, and how often scene assessments occur. Identify who conducts a scene assessment and the minimum rank a police officer must hold in order to conduct a scene assessment.

37. Identify which QPS policies, guidelines or similar documents (if any) concern scene assessments.

38. Outline any departures from policies and guidelines you are aware of with respect to how scene assessments are conducted, who participates and completes a scene assessment, and how often they are conducted.

39. Provide any data concerning the conduct of scene assessments and the aggregate results of scene assessments since 2003.

40. Explain what the 'Train the Trainer' program is and what it involves. Explain which staff members conduct and which staff members participate in the 'Train the Trainer' program, and how often it occurs.

41. Identify any further type of oversight that the Quality Management Unit has over the work of SOCOs and Scientific Officers.

Equipment for DNA collection

42. Explain what role the Quality Management Unit has in the selection and purchase of equipment used in the collection, storage and transportation of biological material?

43. Explain what role the Quality Management Unit has in the auditing and/or quality management of the equipment referred to in the paragraph immediately above.

44. Identify any policies, guidelines or similar documents relevant to the matters discussed in the two paragraphs immediately above. Identify any NATA administered standard related to such equipment for which QPS maintains accreditation.

45. Have there been any reoccurring problems, or failures to follow policy, in the selection, use and maintenance of equipment for the collection, storage and transportation of

biological material? If so, provide details and any available data about those problems or failures.

Forensic Medical Examinations

46. Identify what role, if any, the Quality Management Unit has in devising, implementing and/or monitoring the practices, policies and procedures related to forensic medical examinations.

47. If the Quality Management Unit does have some role, have there been any reoccurring problems, or failures to follow policy, in the conduct of forensic medical examinations? If so, provide details.

48. Do you have any overview/involvement from a DNA collection quality management perspective regarding the training, policies, methods, systems, or processes surrounding intimate forensic examinations, forensic orders insofar as they relate to the taking of a DNA sample by court order, sexual assault kits or the taking of DNA samples from people charged with indictable offences? If yes, please detail. Attach any relevant policy or guideline covering the topics touching on collecting DNA in such circumstances, including training and auditing.

The Forensic Register

49. Explain the ways in which you use the Forensic Register in your position.

50. Explain the main ways staff in the Quality Management Unit use the Forensic Register.

51. What audits or quality management processes does the Quality Management Unit conduct of data held in the Forensic Register, including the frequency of those audits or quality management processes.

52. Where and how are the results of those audits and/or quality management processes stored? Provide any data concerning the results and of those audits and/or quality management processes.

53. Does the Forensic Register prompt other staff within QPS to conduct audits or quality management processes in relation to any process or item that is related to the collection of biological materials? If so, provide details.

54. Do you consider or look at DNA results coming back from QHFSS on the Forensic Register?

55. Is the Quality Management Unit involved in any training for general QPS officers to understand and interpret the results of a forensic analysis of biological material?

Dr Matthew Krosch Report

56. Explain your role in the initiation, continuation and finalisation of Dr Matthew Krosch's data collection and analysis project which led to the paper entitled *Variation in forensic DNA profiling success among sampled items and collection methods: a Queensland perspective*.

57. Explain what you considered may result from the project, in terms of analysis of police and/or laboratory procedures.

58. In terms of the results that were reported in Tables 2 and 4 in the paper, were there any results which:

    (a) you considered to be unexpected or concerning;

    (b) that you considered significant for police procedures in terms of collection of DNA samples;

    (c) that you considered significant for the operation of the Forensic DNA Analysis Unit at QHFSS.

59. Did you seek or receive any feedback or commentary from the QHFSS in relation to the results of the paper? If so, provide details of any conversations and attach file notes, if taken, and attach any correspondence.

60. Did you seek expert or other advice, including advice from law enforcement agencies in other jurisdictions, regarding any of the results published in the paper? If so, provide details of any conversations and attach file notes, if taken, and attach any correspondence.

Sampling consumables and equipment

61. What sampling consumables are used by the QPS currently, and since 1 July 2017 (for example, brand and type of swab used)?

62. List the sampling consumables used by the QPS between 2003 and 2017.

63. What role – including research – does the Quality Management Unit have in the decision of what consumables and equipment used for the sampling and collecting of biological/forensic material for DNA testing?

64. Outline the processes, systems, and methods for electing what equipment and consumables to use for the collection of samples for DNA testing.

Other matters

65. If a Forensic Review occurs in a particular investigation, is the Quality Management Unit involved in any way in the Forensic Review? If so, outline the nature of that role.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF JAMES BRUCE COOK

I, **Senior Sergeant James Bruce Cook**, of the Quality Management Section, Forensic Services Group, [redacted] QPS Headquarters, 200 Roma St, Brisbane state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

1. I am currently employed by the QPS as a Quality Management Officer within the Quality Management Section (QMS), Forensic Services Group (FSG).

Qualifications and experience

2. My post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained, are as follows:

   (a) Bachelor of Applied Science (Human Movement Studies) – 1992 – University of Queensland.

   (b) Diploma of Public Safety (Policing) – 2004 – Queensland Police Service.

   (c) Diploma of Fire Investigation – 2006 – Queensland Fire and Rescue Service.

   (d) Master of Science (Forensic Science) – 2008 – Griffith University.

3. My work history since commencement of employment with the QPS is as follows:

   (a) May 1998 to December 1998 – Commenced employment with QPS and completed training as a QPS Recruit at the QPS Academy, Oxley.

[redacted] ..... [redacted] .....
James Bruce Cook Witness

(b) December 1998 to May 2003 – Sworn in as a Constable of Police 04/12/1998 and then performed General Duties in the Oxley District, Metro South Region, Brisbane (majority of this period based within Moorooka Division).

(c) May 2003 – transferred to the Scientific Section, FSG (then Forensic Services Branch) on the 4th Floor QPS Headquarters – commenced training and duties as a Scientific Officer, Brisbane.

(d) May 2004 – promoted to the rank of Senior Constable as a Scientific Officer at the Scientific Section, Brisbane.

(e) May 2008 – promoted to the rank of Sergeant as a Scientific Officer at the Scientific Section, Brisbane.

(f) December 2009 to March 2013 – promoted to the rank of Senior Sergeant as a Senior Forensic Scientist at the Scientific Section, Brisbane and performed duties as the Unit Head, Major Crime Unit, Scientific Section, Brisbane.

(g) March 2013 to September 2016 – performed duties as Senior Forensic Scientist responsible for Quality Assurance, Training, and supervision of the Analytical Services Unit, Document Examination Unit and Administration Officers at the Scientific Section, Brisbane.

(h) September 2016 to Current – transferred to QMS, FSG, located on the Ground Floor QPS Headquarters – performing duties as a Quality Management Officer.

4. Courses and diplomas I have completed since joining the QPS are as follows:

(a) Diploma of Public Safety (Policing) – 2004 – Queensland Police Service.

(b) Diploma of Fire Investigation – 2006 – Queensland Fire and Rescue Service.

(c) National Bomb Scene Examination Course (Melbourne) – 2007 – Australia-New Zealand Counter-Terrorism Committee.

[redacted] [redacted]

James Bruce Cook Witness

(d) Chemical / Biological / Radiological Crime Scene Investigation Course (Melbourne) – 2008 – Emergency Management Australia.

(e) Master of Science (Forensic Science) – 2008 – Griffith University.

(f) QPS Management Development Program Levels 2 and 3 – 2008-2011 – QPS.

(g) Internal Audits Course – 2012 – National Association of Testing Authorities (NATA).

5. Awards or formal recognition I have received since joining the QPS are as follows:

(a) Accredited as an Expert in Crime Scene Investigation – 2014 – Australian Forensic Field Sciences Accreditation Board (AFFSAB).

(b) Accredited as a National Assessor in Crime Scene Investigation – 2014 – Australian Forensic Field Sciences Accreditation Board (AFFSAB).

6. Attached as **'Exhibit 2'** to this statement is a copy of my CV.

Current Role

7. The duties of my current position include:

(a) Coordination of the internal audit program within FSG to ensure maintenance of accreditation with NATA.

(b) Coordination of the Quality Improvement System within FSG to ensure that any nonconformities identified are documented and appropriate action is taken to correct the issue.

(c) Assist NATA with the requirements of their external audit program of forensic facilities within FSG to ensure maintenance of accreditation with NATA.

(d) Coordinate the proficiency testing program for facilities and practitioners within FSG.

(e) Update FSG forms and procedures as required to maintain their currency.

(f) Assist with projects within FSG as required by the Inspector QMS.

(g) Provide advice to the FSG Management Group as required.

Prior to 2020, the duties of my position included only (e) to (g) above, but the duties listed (a) to (d) were added in October 2020 when my position was amalgamated with another Senior Sergeant position within QMS.

8. My position reports to the Inspector QMS, also known as the Quality Manager, a position currently occupied by Inspector David Keatinge.

9. There aren't any positions which currently report to me.

10. QMS currently comprises five positions, and is structured as follows:

(a) Inspector QMS (Quality Manager).

(b) S/Sgt (Quality Management Officer – Compliance & Standards) – my position, reports to the Inspector QMS.

(c) S/Sgt (Quality Management Officer – Training) – S/Sgt Asha Haxton, reports to the Inspector QMS.

(d) Sgt (Quality Officer – Training) – Position currently vacant, reports to the S/Sgt (Quality Management Officer – Training).

(e) Principal Research Officer – PO5 Dr Matt Krosch, reports to the Inspector QMS.

Policies and standards

11. Policies, procedures, manuals and similar documents relevant to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing, including documents relevant to presumptive testing for biological material, include:

(a) AS ISO/IEC 17025 'General requirements for the competence of testing and calibration laboratories' (Standard)

(b) AS 5388 'Forensic analysis' (Standard)

(c) QPS 'Operational Procedures Manual' (Service Manual)

(d) PFS 100 'Quality Manual' (FSG Administrative Procedure)

(e) CSE 100 'Crime Scene Examination' (FSG Technical Procedure)

(f) CSE 101 'Biological Evidence' (FSG Technical Procedure)

(g) CSE 104 'Fingernail Scrapings' (FSG Technical Procedure)

(h) CSE 105 'Leuco Crystal Violet (LCV) Detection and Enhancement of Bloodstains' (FSG Technical Procedure)

(i) CSE 111 'Hair and Fibre Detection and Collection' (FSG Technical Procedure)

(j) CSE 115 'Use of Combur Test Strips' (FSG Technical Procedure)

(k) CSE 119 'ABAcard Hema-Trace' (FSG Technical Procedure)

(l) HEX 100 'Hair Examination and Comparison' (FSG Technical Procedure)

(m) PST 100 'Tetramethylbenzidine (TMB) Screening Test for Blood' (FSG Technical Procedure)

(n) PST 101 'ABAcard P30 Test for Seminal Fluid' (FSG Technical Procedure)

(o) PST 102 'Luminol Detection and Enhancement of Bloodstains' (FSG Technical Procedure)

(p) PST 104 'Seminal Fluid Screening and Sampling Protocols' (FSG Technical Procedure)

(q) PST 105 'Forensic Light Sources' (FSG Technical Procedure)

(r) PST 106 'Enhancement of Impression Evidence' (FSG Technical Procedure).

[redacted] [redacted]

James Bruce Cook Witness

12. There are many roles within the QPS which share responsibility for considering whether QPS policies, procedures and manuals relevant to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing reflect national best practice and/or international best practice. The Standards listed above, AS ISO/IEC 17025 and AS 5388, outline best practice as agreed upon by groups of international and national experts, respectively. FSG Administrative and Technical Procedures incorporate the requirements of these Standards into more detailed instructions for trained and authorised forensic practitioners. Subject matter experts from specialist sections within FSG, for example the Scientific Section, also provide input to ensure FSG procedures represent best current practice. Subject matter experts are frequently members of national advisory groups, which include members from each Australian jurisdiction, to ensure that information is shared between jurisdictions so that each maintains currency with national best practice. The QMS Research Officer, Dr Matt Krosch, advises FSG members of research results in current published literature, across the spectrum of forensic disciplines in which QPS provides services, to ensure members are made aware of new developments in these disciplines. In addition, the FSG Management Group provides strategic direction which is reflected in policies and procedures. My role within QMS includes liaison with Dr Krosch, the FSG Management Group and subject matter experts to ensure FSG Administrative and Technical Procedures remain consistent with best practice.

13. From my own knowledge, I can offer the following explanation of the function, structure and relationships between the following organisations, and the personnel who make up these organisations:

    (a) Australia New Zealand Policing Advisory Agency (ANZPAA) – Group comprising the Commissioners, or equivalent, of each Australian and New Zealand policing jurisdiction, responsible for sharing ideas between jurisdictions and determining policy for the jurisdictions as a collective, where appropriate.

    (b) ANZPAA National Institute of Forensic Science (ANZPAA NIFS) – A directorate of ANZPAA, comprising a group of personnel recruited to research,

project and administrative positions, responsible for coordinating forensic research between the jurisdictions and coordinating provision of proficiency testing services to each of the jurisdictions.

(c) Australia New Zealand Forensic Executive Committee (ANZFEC) – Group comprising the Forensic Laboratory Directors from each of the Australian and New Zealand policing jurisdictions, responsible for sharing of information between the jurisdictions, and determining policy for the Forensic Laboratories as a collective, where appropriate.

(d) Australian Forensic Science Assessment Body (AFSAB), formerly Australian Forensic Field Sciences Accreditation Board (AFFSAB), is a professional body, which reports to ANZPAA NIFS, comprising representatives from Forensic Laboratories within the Australian policing jurisdictions, which is responsible for accreditation and reaccreditation of forensic experts within the fields of Crime Scene, Fingerprints and Firearms.

14. I am not aware of any significant role played by any of the organisations listed above in setting standards used by the QPS in the collection, transportation, storage and/or sampling of biological material for forensic DNA testing.

15. I am not aware of any significant role played by any of the organisations listed above in setting and auditing standards used by the QPS in the collection, transportation, storage and/or sampling of biological material for forensic DNA testing.

16. FSG maintains accreditation by the National Association of Testing Authorities (NATA) against the following standards:

(a) AS ISO/IEC 17025 'General requirements for the competence of testing and calibration laboratories' (accreditation obtained 2005)

(b) AS 5388 'Forensic Analysis' (accreditation obtained 2014/15)

(i) AS 5388.1 'Forensic analysis Part 1: Recognition, recording, recovery, transport and storage of material'

(ii) AS 5388.2 'Forensic analysis Part 2: Analysis and examination of material'

(iii) AS 5388.3 'Forensic analysis Part 3: Interpretation'

(iv) AS 5388.4 'Forensic analysis Part 4: Reporting'

17. NATA conducts full reaccreditation assessments, also known as external audits, of FSG facilities every 3 years. These assessments include a review of facilities, exhibits and personnel records by NATA auditors, and also technical assessment of casework completed by FSG practitioners. The audits of casework are completed by technical auditors sourced by NATA from other Australian and New Zealand jurisdictions. A surveillance assessment is conducted by NATA 18 months after the preceding reaccreditation assessment, whereby facilities, exhibits and personnel records are assessed by NATA auditors only. My role includes provision of assistance to NATA auditors during the audit process, including supply of information and documentation prior to the audit, physical assistance during the conduct of audits, and provision of a response to the results of the audit, including undertaking any action required by NATA.

18. Internal audits are conducted within all FSG facilities every 12 months. These audits include a review of compliance relating to Management Records (including Proficiency Testing), Document Control, Accommodation requirements, Case Review and Reporting, Training Records, Exhibits, Supplies and Consumables, Equipment (including Calibration and Servicing), Vehicles, past Corrective Action required due to nonconformities identified, and Case Files. I disseminate the requirements for each audit to local Forensic Managers and Coordinators, who physically conduct the audits at each location and then return the necessary documentation to me for review. I provide a written summary of the results of the audit to the Quality Manager and local managers, including identification of any specific Corrective or Improvement Actions to be undertaken which have arisen from the audit results.

19. The following FSG documents are completed during the internal audit at each FSG facility as described above:

(a) Form QMS 06 'Facility Audit Checklist' – One of these forms is completed for each FSG facility during the annual internal audit (i.e., one facility is a work unit at a particular location, e.g., Warwick Scenes of Crime). The checklist is completed by the local Forensic Manager or Forensic Coordinator (or alternative member approved by the Quality Manager). The checklist includes a variety of checks which relate to each of the categories listed above in Paragraph 18.

(b) Form QMS 05 'Exhibit Audit Checklist' – One of these forms is completed for each FSG facility during the annual internal audit. The checklist is completed by the local Forensic Manager or Forensic Coordinator (or alternative member approved by the Quality Manager). The checklist includes a variety of more detailed checks which relate to four randomly chosen exhibits held within the facility. These checks include appropriateness of labelling, packaging, recording of exhibit continuity and recording of details on the Forensic Register (QPS Forensic Case Management Information System).

(c) Form QMS 09 'Case File Audit Checklist – Scenes of Crime' – One of these forms is completed to assess casework for each practitioner at each FSG Scenes of Crime facility during the annual internal audit (i.e., one checklist completed for each practitioner). The checklist is completed by an experienced and similarly authorised practitioner from a different FSG facility. These checks include appropriateness of notes, photos, exhibits, statement and hardcopy case files.

(d) Form QMS 07 'Case File Audit Checklist – Scientific Section' – One of these forms is completed to assess casework for each practitioner at each FSG Scientific Section during the annual internal audit (i.e., one checklist completed for each practitioner). The checklist is completed by an experienced and similarly authorised practitioner from a different FSG Scientific Section. These checks include appropriateness of notes, photos, exhibits, statement and hardcopy case files.

James Bruce Cook Witness

Proficiency testing

20. A 'Forensic Authorisation' is analogous to a 'licence' to undertake examinations, or casework, within a specific forensic discipline. Once a practitioner within FSG has received sufficient training in a particular forensic discipline (e.g., crime scene examination, bloodstain pattern analysis or fingerprint identification), and successfully completed any required assessments and/or other prerequisites such as mentored casework, they may be issued with a 'Forensic Authorisation' by the Laboratory Director (Superintendent FSG). This means they are deemed competent and are 'licenced' to undertake and report on casework in that forensic discipline.

21. The following proficiency testing related to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing is undertaken by members of FSG:

    (a) 'After the Fact' (ATF) online crime scene examination assessment is undertaken by one representative from each Scenes of Crime (SOC) facility and one representative from each Scientific Section every 12 months. The ATF assessment comprises an online mock crime scene and requires the participant to navigate their way through the online scene as they would examine a real crime scene. Notes are recorded, images are captured, and exhibits are nominally collected. The participant must then successfully complete an online assessment, usually comprising 21 multi-choice questions.

    (b) A 'Scene Assessment' is completed every 2 years for each Scenes of Crime Officer (SOCO) and Scientific Officer (SO). These assessments are conducted at a real crime scene by another officer who also holds the Forensic Authorisations which must be held by the subject officer to conduct the scene examination. This is an assessment of the subject officer's individual competence as demonstrated during completion of the forensic examination.

    (c) 'Court Witness Monitoring' is an appraisal of an FSG member's performance when giving evidence in Court, and is sought on any occasion a SOCO or SO attends Court and provides witness testimony. This assessment may be

completed by the Prosecutor, Investigating Officer or a senior colleague from FSG.

(d) SOs who are authorised in 'Hair Examination' (i.e., determination whether hair exhibits are of human origin and whether they are suitable for DNA analysis) also participate in an annual proficiency test in this discipline. This proficiency test is manufactured by a commercial proficiency testing service provider based in the USA and draws participants from all over the world. In Australia, the participating jurisdictions purchase this test from ANZPAA NIFS.

Technical and administrative reviews

22. A technical review is a review of casework completed by a SOCO or SO to ensure that appropriate technical procedures have been followed, and that the results of examinations conducted support any opinions or conclusions formed. A technical review may only be conducted by another member who has completed the forensic training required by the case officer to complete their examinations. An administrative review is a review of casework to ensure compliance with relevant administrative case file procedures. These reviews may be completed by any FSG member authorised to conduct casework and also by suitably trained administrative officers. Completion of technical and administrative reviews, as required by procedures, are overseen by Officers in Charge at each FSG facility and also by responsible Forensic Managers. The Forensic Register has the capacity for supervisors to run compliance audits which list examinations that require technical or administrative review, designed to assist with compliance. Requirements for completion of both technical and administrative reviews are contained within FSG Administrative Procedure PFS 100 'Quality Manual', and these requirements reflect the relevant requirements in the Standards AS ISO/IEC 17025 'General requirements for the competence of testing and calibration laboratories' and AS 5388 'Forensic Analysis'.

Equipment for DNA collection

23. QMS has an important role in the selection and purchase of equipment used in the collection, storage, transportation or sampling of biological material, in conjunction

with Queensland Health Forensic and Scientific Services (QHFSS), QPS Procurements Section and subject matter experts within FSG. Any changes to equipment and consumables used to collect biological material are overseen by the QMS Research Officer and the Quality Manager. Whilst it was before my time in QMS I understand that, historically, many trials have been conducted within FSG, and through collaborative research with QHFSS, to determine the effectiveness of equipment and consumables used in the DNA collection and sampling processes. Equipment and consumables must be compatible with the QHFSS DNA analysis process, comply with relevant Standards, and be practical for use by SOCOs and SOs. Contract negotiations with suppliers of these goods are conducted through engagement between QMS and the QPS Procurements Section.

24. It is the responsibility of supervisors, Officers in Charge and Forensic Managers responsible for the various Scenes of Crime and Scientific facilities to ensure that the approved equipment and consumables are used by their practitioners. These items are centrally supplied by the QPS Logistics Section to the various forensic facilities, hence compliance with this requirement is not difficult to achieve. The FSG internal audit process, conducted by local Forensic Managers and overseen by QMS as described previously, ensures that forensic facilities and vehicles contain the approved equipment and consumables, and that these items are within their expiry date.

25. QMS ensures that any equipment and consumable items used in the collection, storage, transportation or sampling of biological material are compliant with the requirements of the Standards AS ISO/IEC 17025 'General requirements for the competence of testing and calibration laboratories' and AS 5388 'Forensic Analysis'. I am aware of the existence of an additional Standard ISO 18385 'Minimizing the risk of human DNA contamination in products used to collect, store and analyze biological material for forensic purposes – Requirements', and also aware that it is the preference of QPS for any supplier of relevant equipment and consumable items to be accredited against this Standard. (The Quality Manager, Inspector David Keatinge, and the QMS Research Officer, Dr Matt Krosch, would be able to provide greater detail about current arrangements for supply of these items, and accreditation of suppliers.)

[redacted] [redacted]

James Bruce Cook Witness

26. I am not aware of any reoccurring problems, systemic issues, or failures to follow policy, in the selection, use and maintenance of equipment for the collection, storage and transportation of biological material involving FSG members.

27. As outlined in Paragraph 24, changes in equipment or procedures relating to the collection of biological material most commonly occur through collaboration between members of QMS, FSG subject matter experts, QPS Procurements Section and QHFSS. Changes in equipment or procedures may result from any combination of advice from QHFSS, advice from expert advisory groups, results of published literature, experimental trials conducted, and practicalities associated with production and supply of items. FSG members are advised of changes in equipment or procedures, and if these changes are significant, they are provided with instruction and training in the use of the new equipment or change in procedures. FSG procedures, both administrative and technical, are published on the QPS intranet as a reference for all members.

Property points

28. The QPS has 'Property Points' for storage of exhibits, and these property points are at locations designated by a member of the QPS Executive, usually the Assistant Commissioner responsible for that QPS region or command. The nature and operations of any given property point are dependent upon local structure. Typically, a QPS district may have a large property point for centralised exhibit holdings, and may have smaller property points at some stations, whether for long term exhibit holdings, or temporary storage of exhibits until they can be transferred to a larger property point with responsibility for long term exhibit storage. FSG facilities do not have property points responsible for long term exhibit storage, and some FSG facilities do not have a designated property point at all, relying on use of other local property points. FSG property points are responsible for the temporary storage of exhibits after collection, or while waiting for examination following collection by a forensic officer or submission for examination by a QPS member outside FSG. Exhibits are then forwarded to an external provider of analytical services (e.g., QHFSS for the vast majority of DNA analysis from biological samples) when required, or are transferred to a property point responsible for long term exhibit storage, usually in the area where the Investigating

Officer is located. As described in Paragraph 18, internal forensic audits are conducted of property points located within FSG facilities annually, completed by the responsible Forensic Manager or their delegate. This process examines a selection of up to eight exhibits, including the physical exhibits themselves and data entry on the Forensic Register and QPRIME (QPS databases), to ensure compliance with requirements. The internal audit process is overseen by QMS; specifically my role within QMS. In addition to FSG requirements, the Ethical Standards Command (ESC) requires annual auditing of a variety of areas of risk management within all QPS facilities, including property points. These audits are completed by the responsible Inspector/Manager. I am not aware of the specific requirements of these audits with respect to property points as QMS is not involved in the process, whether within or outside FSG. I have no knowledge of ESC's audit requirements with respect to property points within or outside FSG facilities.

29. My role assumed responsibility for coordination of the internal forensic audit process within FSG facilities in late 2020. Since that time, I can confirm there have not been any failures to regularly audit FSG property points.

30. My role has oversight of the internal forensic audit process within FSG facilities, including their property points, but does not have direct involvement with the management of FSG property points. I can confirm that I am not aware of any reoccurring problems, or failure to follow policy, in the management of FSG property points.

31. I have not been privy to details contained within the report by the Queensland Audit Office (QAO) entitled *Delivering forensic services Report 21: 2018-19*. To the best of my knowledge, the results of this report were provided to the FSG Management Group (i.e., Superintendent and Inspectors). I do recall discussion at that time which related to QAO findings with respect to exhibits and property points, however I also recall being assured that any negative findings related to property points outside FSG, not FSG property points. I can't specifically recall who provided this information, but it was most likely the Quality Manager, Inspector David Keatinge. I'm not aware of any

actions taken by QMS, or any other unit or section within FSG, in response to the QAO report.

Other issues

32. I have never observed, nor has anyone ever raised with me, any reoccurring or systemic issues/problems with the collection of biological samples for forensic DNA testing.

33. I have coordinated the internal forensic audit program within FSG facilities since late 2020, and have not observed, nor has anyone raised with me, any problems in complying with the auditing standards and policies of FSG, including the timeframes by which those audits must be completed.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 19 day of August 2022

STATEMENT OF JAMES BRUCE COOK
INDEX TO EXHIBITS

Exhibit no.	Description
1.	2022-00061 notice to provide statement (Cook QPS)
2.	CV of James Bruce Cook

EXHIBIT 1

Notice number: 2022/ 00061

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Jamie Cook

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Thursday 11 August 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted], with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

[redacted] **29th day of July 2022**

Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00061

Schedule of topics for statement

Senior Sergeant Jamie Cook

1. State your current position in the QPS.

Qualifications and experience

2. List your post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Identify any courses or diplomas you have completed since joining the QPS.

5. Identify any awards or formal recognition you have been given since joining the QPS.

6. Attach a current CV.

Current role

7. State the duties of your current position. Explain the differences, if any, with the position you held immediately prior to 2020.

8. Identify the person or people (name, rank and position) who you report to.

9. Identify the person or people (name, rank and position), if any, who report to you.

10. Explain the structure of the Quality Management Section and where your position sits within that structure. As part of your answer, identify if there are separate units that make up the Quality Management Section, and if there are, name each unit and identify which unit you work in.

Policies and standards

11. Identify each policy, procedure, manual and similar document you are aware of that is relevant to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing, including those documents relevant to presumptive testing for biological material.

12. Identify whose role it is, if anyone's, to consider whether QPS policies, procedures and manuals relevant to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing reflect national best practice and/or international best practice?

13. For the following organisations, explain, from your own knowledge, the function of that organisation, how those organisations are structured and related to each other, and what personnel make up those organisations:

    (a) Australia New Zealand Policing Advisory Agency (**ANZPAA**);

    (b) ANZPAA National Institute of Forensic Science (**ANZPAA NIFS**);

    (c) Australia New Zealand Forensic Executive Committee (**ANZFEC**); and

    (d) Australasian Forensic Science Assessment Body.

14. Explain what role, if any, each of those organisations have in setting standards used by the QPS in the collection, transportation, storage or sampling of biological material for forensic DNA testing.

15. Explain what role, if any, each of those organisations have in setting and auditing standards used by the QPS in the collection, transportation, storage and/or sampling of biological material for forensic DNA testing. Explain what your role is with respect to any such audits.

16. Identify each National Association of Testing Authorities (**NATA**) administered standard related to the collection, transportation, storage and/or sampling of biological material for which the QPS maintains accreditation. Advise what year each accreditation was initially obtained.

17. Explain the frequency and nature of each occasion NATA checks the QPS' accreditation of each of those standards. Explain what your role is with respect to NATA checks and audits.

18. What standards, processes, equipment and facilities related to either crime scene examination or the collection, transportation, storage and sampling of biological material for forensic DNA testing are you or your unit involved in auditing? For each, explain the auditing procedure and how often auditing occurs.

19. Provide an explanation of each of the following documents, including when each document is used, and who uses each document (and confirm the correct name and number for each document):

    (a) Facility audit checklist;

    (b) Exhibit audit checklist;

    (c) Case file audit checklist – Scenes of Crime Officer;

    (d) Case file audit checklist – Scientific Officer.

Proficiency testing

20. Identify and explain what a forensic authorisation is.

21. Identify what proficiency testing related to the collection, transportation, storage and/or sampling of biological material for forensic DNA testing must be undertaken by Scenes of Crime Officers (**SOCOs**), Scientific Officer (**SOs**), and any other police officers involved in the collection, transportation, storage and/or sampling of such material.

22. If not already part of your answer to paragraph 21, explain 'After the Fact' proficiency testing, scene assessments, and court witness monitoring. For each of those three matters:

    (a) identify what the testing/assessment/monitoring involves;

    (b) explain how often the testing/assessment/monitoring occurs, and

    (c) identify who conducts and who is subjected to the testing/assessment/monitoring.

Technical and administrative reviews

23. Explain, to your knowledge, what a technical review is and what an administrative review is. Do you, or anyone in the Quality Management Section, oversee or check compliance with any requirements to conduct technical reviews and administrative reviews? Identify if the conduct of those reviews are relevant to complying with any external standards or accreditations.

Equipment for DNA collection

24. Explain what role the Quality Management Section has in the selection and purchase of equipment used in the collection, storage, transportation or sampling of biological material?

25. Explain what role the Quality Management Section has in the auditing and/or quality management of the equipment referred to in the paragraph immediately above.

26. Identify any policies, guidelines or similar documents relevant to the matters discussed in the two paragraphs immediately above. Identify any standard from an external organisation related to such equipment for which QPS maintains accreditation.

27. Have there been any reoccurring problems, or failures to follow policy, in the selection, use and maintenance of equipment for the collection, storage and transportation of biological material? If so, provide details and any available data about those problems or failures.

28. How are changes in equipment or procedures relating to the collection of biological material implemented in the QPS?

Property points

29. Explain the different types of property points at QPS stations. Explain the audit and quality management processes for property points managed by the Forensic Services Group (**the FSG**), and if and how you are involved with those processes.

30. Have there been any failures to regularly audit FSG property points? If so, provide details.

31. Have there been any reoccurring problems, or failure to follow policy, in the management of the FSG property points? If so, provide details.

32. In the report by the Queensland Audit Office entitled *Delivering forensic services Report 21: 2018-19* at pages 37 to 38, it is observed that only one of eight property facilities that were visited could provide evidence that it had completed the annual property audit each year. The report also observed that the QPS 'has limited assurance that all crime scene exhibits, including forensic exhibits, are stored securely and accounted for'. Outline what actions, if any, have been taken by the Quality Management Section in relation to these and similar observations about property facilities in the report. Outline what actions, if any, other units or sections of the FSG have taken in response to these observations. Provide details of any change in policy or procedure.

Other issues

33. Have you ever observed, or has anyone ever raised with you, any reoccurring or systemic issues/problems with the collection of biological samples for forensic DNA testing, for example that the methods, systems, processes, protocols, guidelines, or standards are not being followed, or that there are systemic problems with the collection processes, systems or methods? If so, provides details of the communication(s) raising the issue(s). If not, please confirm that you are not aware that there have been any issues raised.

34. Have you ever observed, or has anyone raised with you, problems in complying with the auditing standards and policies of the QPS, including the timeframes by which those audits must be completed? If so, provide details of the problem. If not, please confirm you are not aware of any problem.

EXHIBIT 2

7. Qualifications

Please list any internal, tertiary or other courses undertaken or currently being attempted (latest first).
Insert the appropriate course, year(s) and results (if applicable) in the corresponding cell.

[redacted]

Relevant tertiary course or qualifications (incl. external institutions)

Course	Year(s)	Institution
Accredited National Assessor in Crime Scene Investigation	**2014**	**Australian Forensic Field Sciences Accreditation Board (AFFSAB)**
Accredited Expert in Crime Scene Investigation	**2014**	**AFFSAB**
Internal Audits Course	**2012**	**National Association of Testing Authorities (NATA)**
Master of Science in Forensic Science	**2003-2008**	**Griffith University, Brisbane**
CBR Crime Scene Investigation Course (Melbourne)	**2008**	**Emergency Management Australia**
National Bomb Scene Examination Course (Melbourne)	**2007**	**Australia-New Zealand Counter-Terrorism Committee (ANZCTC)**
Diploma of Fire Investigation	**2006**	**Queensland Fire & Emergency Services (QFES)**
Diploma of Public Safety (Policing)	**2004**	**Queensland Police Service Academy**
Bachelor of Applied Science	**1989-1992**	**University of Queensland, Brisbane**

8. Service History

Date of induction: **04/12/1998** Current tenure expiration date*: **N/A**

Please provide BRIEF details of your service history. You may include substantial periods of relieving and secondment where relevant to the key selection criteria. Abbreviate where necessary.
Insert the appropriate period, rank, function and location (latest first) in the corresponding cell.
*This is a mandatory field. If not applicable, please enter 'N/A'.

Period (latest first)	Rank	Function	Location
12/09/2016 - Current	**S/Sgt**	**Quality Management Officer**	**Quality Management Section, FSG**
28/12/2009 - 11/09/2016	**S/Sgt**	**Senior Forensic Scientist**	**Brisbane Scientific Section, FSG**
14/04/2008 - 27/12/2009	**Sergeant**	**Scientific Officer**	**Brisbane Scientific Section, FSG**
31/05/2004 - 13/04/2008	**Senior Constable**	**Scientific Officer**	**Brisbane Scientific Section, FSG**
31/05/2003 - 30/05/2004	**Constable**	**Scientific Officer**	**Brisbane Scientific Section, FSG**
01/01/2000 - 30/05/2003	**Constable**	**General Duties Officer**	**Moorooka Division, Oxley District, Metro South Region**
04/12/1999 - 31/12/1999	**Constable**	**General Duties Officer**	**Acacia Ridge Division, Oxley District, Metro South Region**
04/12/1998 - 03/12/1999	**Constable**	**General Duties Officer (FYC)**	**Oxley District, Metro South Region**

[redacted]

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF OLIVIA MCINTYRE

I, **Olivia McIntyre,** of 200 Roma Street, Brisbane, Queensland 4001 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

1. I am an AO4, DNA Management Officer.

Qualifications and experience.

2. I have not completed any post graduate education.

3. In the year 2000 I commenced with the Queensland Police Service (QPS) as a trainee within the Traffic Adjudication Section, Metropolitan North Region. This position was based at Regional Office, Brisbane City. I held this position for 1 year.

4. In the year 2002 I transferred at level to AO2, administration officer, DNA Management Section, Police Headquarters. I held this position for 3 years.

5. In the year 2005 I was promoted to AO3, administration officer, DNA Management Section, Police Headquarters. I held this position for 14 years.

6. In the year 2019 I was promoted to AO4, DNA Management Officer, DNA Management Section, Police Headquarters. This is my current position.

7. During my time with the QPS, I have completed the following training:

   (a) Introduction to Project Management

   (b) Phase 1 of Diploma of Public Safety (Police Intelligence Training)

(c) Justice of the Peace (Qualified)

(d) Certificate III in Business (Office Administration)

(e) I 2022, I was presented with the award for Most Outstanding Administrator, Women in Policing Awards.

8. I have attached a copy of my CV marked **'Exhibit 2'.**

Current role

9. My duties currently overlap across both the Results Management Unit and the DNA Liaison and Major Crime Unit, both of which sit within the DNA Management Section. I act as a key point of contact for investigators and Forensic Coordinators providing advice on DNA testing and results returned for major incidents which are mostly homicides. These are generally 'hot jobs' (i.e. contemporary high profile unsolved matters) or 'cold cases' (historical unsolved cases that are being reviewed in an attempt to find new evidence). I collate the information in relation to evidence collected and results returned. I am the conduit for ordering additional testing for these matters.

10. I report to Sergeant [redacted] who supervises the DNA Liaison and Major Crime Unit.

11. I have no direct reports.

12. The DNA Management Section consisted of the following units:

(a) The Sample Management Unit. This unit undertakes checks of reference samples taken from persons to ensure their collection was lawful according to the provisions of the *Police Powers and Responsibilities Act 2000* (the PPRA), prior to submission to Queensland Health Forensic and Scientific Services (QHFSS) for analysis.

(b) The Results Management Unit. This unit receives the results of DNA testing from QHFSS, assigns the names of the individuals identified, and reports these results to QPRIME.

(c) The DNA Liaison and Major Crime Unit. This unit acts as a point of liaison between QHFSS and investigators.

(d) The Profile Management Unit. This unit coordinates the exchange of DNA information with other states, monitors court outcomes and manages the destruction of profiles from the database in accordance with the Act.

13. I am aware that DNA samples taken from persons are received in the mail or are hand delivered to the DNA Management Section. The Sample Management Unit are responsible for quality assuring all person samples prior to submission to QHFSS for analysis.

14. I am aware that the majority of samples, referred to as intelligence samples, are from persons where proceedings for an indictable offence have commenced or continued by arrest for inclusion on the National Criminal Investigation DNA Database (NCIDD). All evidence and intelligence samples are checked to ensure that the offence the DNA was taken for was in fact indictable, the charged person is an adult, the sampler is an authorised DNA sampler, and that the identity of the person has been verified through the taking of fingerprints either at the same time or whilst in Police custody for this offence. Any samples taken using a DNA Sample Notice are checked to ensure it is collected within 7 days.

15. I am aware that reference samples are often taken by consent and checks are made to ensure that consent is properly documented. If a reference sample is taken by court order, checks are made to ensure the court order documentation is signed or verbally authorized by a Magistrate.

16. I am aware that the Profile Management Unit monitors court outcomes and requests the destruction of the samples and results of testing (the profile) if a person is found not guilty or if the proceedings are discontinued. I undertake the destruction of the profiles by removal of identifying information from NCIDD and the local DNA database on the Forensic Register (FR). In order to comply with the PPRA regarding the destruction of a DNA sample, I also request that QHFSS destroy any residual sample materials.

Olivia McIntyre Witness

17. I am aware that results of DNA testing are received from QHFSS via a worklist on the FR. Staff within the DNA Results Management Unit undertake a number of checks of each result including ensuring the relevant person reference samples were lawfully collected and confirming that the crime scene exhibit that the person sample has linked to is relevant to the crime that the result has been reported against. The processes followed by the Results Management Unit are in accordance with the current procedures and fall generally into the categories of: intelligence result (cold link); evidence result (warm link) which can include comparison to offender evidence reference samples, victim/elimination reference samples or autopsy reference samples; and negative results which can include person exclusions, no comparable profiles, or no DNA profile.

(a) I am aware that cold link is a term used to describe when an unknown profile is identified by comparison to the NCIDD. Where the result involves a hit against NCIDD, the information provided by QHFSS includes the unique barcode number of the person identified. Results Management Unit staff identify who the barcode number belongs to and inserts their name into the result. The information is then reported to QPRIME with expanded information to assist investigators to interpret the result. Cold links linking a Queensland DNA profile to a DNA profile from another state require further action by the Results Management Unit. A nationally approved form is used to request further information from the other state to enable us to release the intelligence information to QPRIME for the investigators.

(b) I am aware that when a result is reported, the expanded wording of the result is reported to QPRIME as a 'Person DNA Scene Link' report or 'Forensic Supplementary' report which is viewable by the investigating officer. This result is assigned via a task report on QPRIME to the applicable Senior Sergeant Crime Manager who is responsible for reviewing all tasks and forwarding them on to the applicable police for further investigation where appropriate. The information, for cold links or Priority 1 jobs only, is also emailed to the relevant Scenes of Crime Officer who collected the exhibit, their supervisor, and the Forensic Coordinator / Manager.

Olivia McIntyre Witness

(c) I am aware that there is proforma result wording that is used for all DNA results that are reported to QPRIME, which has previously been agreed upon between QPS / QHFSS. For identifications, this can be identified as results for single source profile results, and results relating to mixed DNA profiles.

No simplification of DNA results provided by QHFSS is conducted by the DNA Management Section.

The positive identification reports that are created on QPRIME have a one-line result header to allow an 'at a glance' review of all reports. Each report also contains on the Narrative tab, the full expanded wording provided and agreed upon by QHFSS.

There has been a substantial body of work put into simplifying results to be used and published to make DNA results clearer for investigators. This combined effort has tried to find a balance between conveying accurate scientific information and using language that can be readily understood by investigators and the courts. The current resource of DNA result lines has been reviewed and discussed between QHFSS and QPS and a new volume of result lines has been agreed upon. This new, reduced and simplified volume of result lines is almost ready for implementation.

18. I am aware that the task that is sent to Crime Managers - to advise that a new DNA result has been created ready for review - identifies the information within as either a person identification or an unidentified profile that is linked to another crime scene sample. No specific information regarding the DNA result is included in that task itself. The email that is sent to Forensic Coordinators etc for cold links/hot jobs is a direct transcribing of the wording of the Person DNA Scene Link report on QPRIME (expanded wording). The title of that email would detail the QPRIME number, FR number and possibly the operation name if applicable. This email template has been used since May 2022. Attached and marked as **'Exhibit 3'** is a copy of the email advice that is sent when cold link and priority 1 results are released.

Olivia McIntyre Witness

19. My role relating to hot jobs involves being a liaison point between the forensic coordinator and the allocated case scientist in relation to all DNA testing that is being conducted, and the results that have been returned. I review all the results that have been returned for the applicable case, and provide regular updates to the forensic coordinator on the current status of DNA testing.

20. I provide advice in relation to exhibits that may benefit from further testing (dependent on the result that has initially been returned). I provide detailed exhibit lists, which includes all forensic exhibits that have been collected for the applicable matter, which I have grouped to show each scene that the exhibits have been collected from. When required, I have attended case conference meetings organised by the forensic coordinator relating to the status update of the investigation.

21. My role in relation to cold cases involves being the liaison point between the cold case forensic coordinator and QHFSS. I review all requests for testing, prior to allocating the requests to QHFSS. I attend quarterly meetings held relating to the overview / status of all cold cases currently active at QHFSS.

22. The process involved in starting a hot job, involves the Forensic Coordinator contacting Senior Sergeant Stephan Foxover, DNA Management Section, and requesting assistance from our office.

23. A permanent liaison point was created in June 20202 to be a conduit between QHFSS and the forensic coordinator for both hot jobs and cold cases. I have been in this position since June 2020. This work takes up approximately 70% of my workload.

Involvement in specific investigations

24. I completed an initial forensic review of the [redacted] job in July / August 2021. I was asked to complete a forensic exhibit spreadsheet in relation to this matter in July / August 2021.

25. I was asked to be involved in the [redacted] and [redacted]) investigations from the commencement of these operations. This included completing a regular forensic exhibit / result review, requesting further testing on

exhibits, briefing the forensic coordinator / manager on DNA results received, and in the case of [redacted] attending a case conference with forensic personnel and investigating officers.

26. I was not involved in a 'hot job' in relation to the [redacted] investigation.

[redacted] *investigation*

27. My involvement was identifying exhibits that returned the result of 'DNA Insufficient' and forwarding an email to Senior Sergeant Gerard Simpfendorfer asking him to organize reworks of the four samples.

28. I was aware of the results of the retesting. However this was not through reporting the results relating to the investigation, but from compiling a spreadsheet of exhibits from 2018 that underwent further analysis after initially returning the result of 'DNA insufficient'. This is the data that is referred to in paragraphs 51 and 52 of this statement. I advised the DNA management team, which included Inspector David Neville on 14 November 2018, specially in relation to the result that was obtained from FEN [redacted]

[redacted] *investigation*

29. I became involved in Operation [redacted]. That was within a couple of days of the deceased being located. My involvement was at the

request of the Forensic Coordinator for the investigation Senior Sergeant [redacted]. I am unable to confirm whom within DNA Management Section provided approval for me to work on this operation. I have been unable to locate any written request in relation to the initial request for my involvement.

30. My initial role involved compiling a forensic exhibit spreadsheet, grouping exhibits within the spreadsheet to show the parent exhibit (where applicable) and scene that each exhibit was collected from. I provide regular updates of the exhibit spreadsheet to the forensic coordinator, which included the addition of any further exhibits that are collected, the addition of fingerprint identifications, and all DNA results. In the initial stages of the investigation, I provided regular briefings to the Forensic Coordinator of all DNA results that had been received and reported to QPRIME. I identified exhibits that returned the initial result of 'DNA insufficient' and submitted a request to QHFSS requesting further testing via the forensic register. [redacted] Attached and marked as **'Exhibit 4'** is a spreadsheet of exhibits that were submitted for further testing, and the results of the further analysis.

[redacted]

31. I became involved in Operation [redacted] the day after the operation commenced. My involvement was at the request of the Forensic Manager for this investigation Inspector Duncan McCarthy. I believe it was Sergeant Libby Harris who provided approval for me to be involved in this matter. Attached and marked as **'Exhibit 5'** is the request I received from Inspector McCarthy requesting my assistance.

32. My initial role involved compiling a forensic exhibit spreadsheet, grouping exhibits within the spreadsheet to show the parent exhibit (where applicable) and scene that each exhibit was collected from. I provide regular updates of the exhibit spreadsheet to the Forensic Manager, which included the addition of any further exhibits that are collected, the addition of fingerprint identifications, and all DNA results. In the initial stages of the investigation, I provided regular briefings to the Forensic Manager of all DNA results that had been received and reported to QPRIME. I identified exhibits that

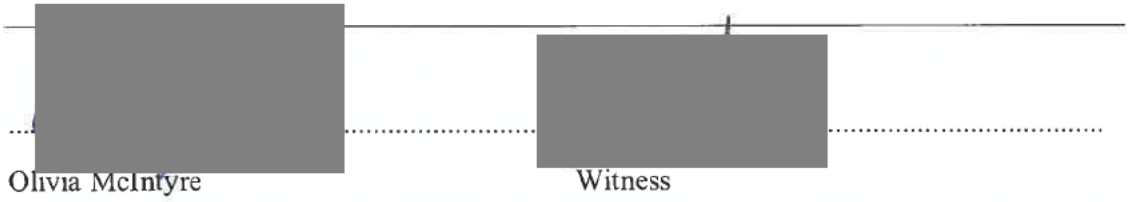
returned the initial result of 'DNA insufficient' and liaised with the Forensic Manager to identify exhibits that were critical and required further testing by QHFSS. I submitted the request for any further testing via the forensic register. There were 23 exhibits that returned the initial result of 'DNA insufficient' Fourteen exhibits were submitted for further analysis. Attached and marked as **'Exhibit 6'** is a spreadsheet of exhibits that were submitted for further testing, and the results of the further analysis.

33. I recall a conversation that I had with Kylie Rika of QHFSS which occurred between January – June 2021. I cannot remember the context of the original phone call, however as part of the conversation, I discussed with Kylie the success I had been seeing on results returned from exhibits that originally returned the result of 'DNA insufficient'. Kylie indicated that she had also noticed profiles successfully being obtained. Kylie indicated that she thought it might have something to do with some new machine that QHFSS had. Kylie indicated that she thought it might be worthwhile reviewing the current threshold that they currently stop testing at (0.08). She indicated that she intended to speak to other people at a higher level than herself.

34. When required, I brief senior officers within the DNA Management Section on all information that I believe to be relevant to my position and anything that is potentially contentious. This could be to a Sergeant, Senior Sergeant or Inspector level, depending on who the appropriate audience is. I do recollect discussing my conversation with other people within the DNA Management Section, however I am unable to specifically recall to whom I provided the information. I have no written notes or emails about this conversation.

The Options Paper

35. In January 2018, Acting Inspector Ewen Taylor emailed myself, and three other staff within DNA Management, a copy of a report issued by QHFSS titled 'A review of the automatic concentration of DNA extracts using Microcon Centrifugal Filter Devices: Options for QPS consideration (The Options Paper)'.



Olivia McIntyre Witness

36. I was an AO3 administration officer at the time of becoming aware of The Options Paper. My substantive position was within the DNA Profile Management Unit, however I was assisting the DNA Results Management Unit at this time.

37. I am aware that the email was sent to a number of staff including Senior Sergeant Ruben Collopen, Acting Senior Sergeant Ken Gee Kee, Sergeant Libby Harris, and myself. It requested feedback on the report.

38. I have attached and marked **'Exhibits 7, 8 and 9'**, all emails that I was a party to regarding the Options Paper.

39. I did not attend any meetings with QHFSS or have any communications with QHFSS regarding the Options Paper.

40. I have no notes relating to the Options Paper.

41. All of the staff included in the email were senior to me. Given no one else replied, I read the report and replied to Ewen that it seemed reasonable given the statistics that were provided by QHFSS.

42. This was my lay person view of The Options Paper. My understanding of it was that QHFSS exhibits that were tested through the auto-microcon process were returning very limited successful results. My understanding of the consequences was that QHFSS scientists would order reworks on critical / priority 1 exhibits. QHFSS would have more time to focus on other results, thus resulting in faster turn-around times of results.

43. I am aware that the changes that were proposed in The Options Paper were put into practice in February 2018. I have no knowledge of how the changes were communicated to investigators and forensic personnel.

44. I am aware that after the implementation of the new process, if contact was received within our office about the result, we were all able to provide advice on how to request further testing of the relevant sample/s.

45. I have been asked by DNA management to compile data on the success rate of samples that originally returned the result of 'DNA insufficient' that have been further processed

and returned a useable profile. I have observed that exhibits that have proceeded through further testing have returned a useable profile on more occasions than the statistics that were initially provided within The Options Paper by QHFSS.

46. I am unaware of any training being provided to investigators, Scenes of Crime Officers and Scientific Officers. I have however provided advice to forensic officers relating to the 'hot jobs' that I manage that additional testing may be beneficial on exhibits that returned the initial result of 'DNA insufficient'.

Result of 'DNA insufficient'

47. I have implemented the process of automatically requesting further testing of exhibits that initially returned the results of 'DNA insufficient' at the request of Inspector David Neville for hot jobs. From memory this was implemented approximately 12 months ago. This was implemented due to the success rate that was observed when other exhibits from unrelated cases were retested.

48. My original understanding of the result 'DNA insufficient for further processing', was that a profile was obtained only a small percentage of the time. This was based on the information that was contained within The Options Paper.

49. My opinion changed once I commenced managing 'hot jobs' and was more involved in viewing the results that were being returned for these investigations. I was observing that a useable profile was being obtained approximately 30% of the time, which differed to the advice that was provided within The Options Paper.

Data from instances of retesting 'DNA insufficient' results

50. I am aware that Senior Sergeant Gerard Simpfendorfer managed the Sample Management, Liaison, and Results Management Units within the DNA Management Section. Within the first half of 2018, Gerard was on an Expression of Interest, and did not return to the DNA Management Section until approximately May-June 2018. Gerard was not my manager; however, he did occasionally ask me to compile data for him.

Olivia McIntyre Witness

51. I was asked to compile a dataset of all exhibits that originally returned the result of 'Insufficient DNA' that were submitted for further testing. I was to show on this dataset what the result was after the further testing had been conducted. I commenced compiling this data in June 2018, so I assume I received the request to compile the data at approximately this time. I am unable to locate an email request, therefore I assume the request was verbal.

52. I compiled a spreadsheet of all exhibits that originally returned the result of 'DNA Insufficient' that were submitted for further testing. Information included was the date of the original result, the date that a request was submitted to QHFSS for further testing, the applicable exhibit number, the exhibit category, the date of the new result, and details of the new result. The data collected was from March – December 2018. The data showed that there was an approximate 16% success rate in obtaining a useable profile. The data was provided to Senior Sergeant Gerard Simpfendorfer. I have no knowledge of how the data was used. I was advised by Senior Sergeant Gerard Simpfendorfer in December 2018 that I was no longer required to collate the data.

2021 — 2022 retesting data

53. In 2021 and 2022 I collected data regarding the retesting of DNA samples. In December 2021, Inspector David Neville requested the data. Sergeant Libby Harris and I were involved in collating this initial dataset.

54. I collated data relating to exhibits that returned the initial result of 'DNA insufficient' that were submitted for further testing. The dataset showed the Exhibit Number; Offence type; Exhibit Description; Exhibit Category; the date the request was submitted to QHFSS for further testing; and the result that was returned after the further analysis was completed. As a result of the information entered, I added pivot tables to the spreadsheet which provided an analysis of the results that were obtained. The data was initially requested in December 2021. The data included on the spreadsheet was from January 2021 – June 2022.

55. The data was provided to Inspector David Neville. I am unaware of how the results were used.

[redacted] ..... [redacted] .....

Olivia McIntyre Witness

Sexual assault matters since February 2018

56. I collected data relating to sexual offences that initially returned the result of 'DNA insufficient that had been submitted for further testing between January 2021 and the time of the request. I was asked to collect this data by Inspector David Neville in March 2022.

57. I am involved in a further review that has been conducted of all exhibits from sexual offences that returned the initial result of 'DNA insufficient'. This review was requested by Inspector David Neville in April 2022.

58. The initial data that I collected was a subset of the data that was collected between January 2021 and the time of the request for all crime types. I filtered out all crime types excluding sexual offences. The data that was provided in March 2022, showed that there was an approximate 50% success rate in obtaining a useable profile from a sample that was initially tested 'DNA insufficient'. This data was provided to Inspector David Neville. I am unaware of how the data was used.

59. I provided specifications in relation to a data extract that was obtained from BDNA of all sexual offences that returned the result of DNA insufficient. This review was to determine if there were exhibits that required further analysis at QHFSS that may assist in the investigation of the offence for which they were collected.

60. I am aware that the cases that were initially reviewed included unsolved occurrence. The review has now been expanded to include the review of withdrawn matters.

61. I am aware that the in-depth review of these occurrences was conducted by Detective Sergeant John Saunders. This included reviewing the circumstances surrounding the offence on QPRIME and making a recommendation on whether further testing was required.

Retraction of results

62. I am aware of QHFSS retracting / withdrawing results that were originally reported to the QPS. This could occur when a request for a statement was received, and upon further review the initial interpretation was deemed to be incorrect.

63. I am aware that the QPS started to see more withdrawal of results after the implementation of PowerPlex 21 and interpretation of profiles using the STRmix statistics package. This change occurred in 2013.

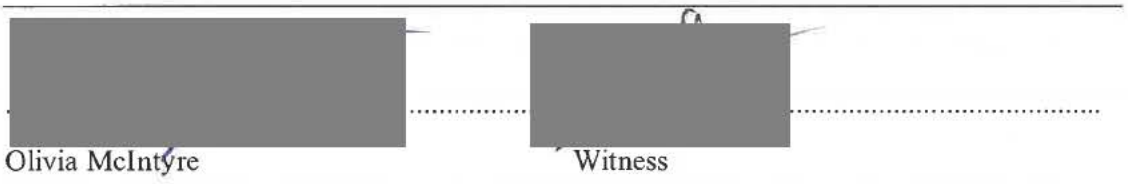
64. I am aware that between 2013 and 2022 there have been approximately 440 results that have changed. This includes the complete withdrawal of an identification, as well as a significant change in the likelihood ratio that a person has contributed to a profile.

65. I am aware that the QPS are now advised of the complete withdrawal of a result via an intelligence report, and by the electronic correction of results within the Forensic Register. Prior to the implementation of the receipt of intelligence reports, written advice used to be provided via email notification to a nominated QPS business email account.

66. I have previously collected data in relation to the retraction of results. The data collected provided information about the applicable exhibit number, the original result obtained, and the new result after the initial result was retracted. The initial data collected was between November 2019 and October 2020. I have since expanded this dataset to include data from 2013 to now. The data was provided to Inspector David Neville. I am unaware of how this data was used. I have attached a copy of this data marked **'Exhibit 10'**

67. I personally did not conduct a review into the likely effect that such retractions have had on investigations and prosecutions.

68. I am unable to provide any data relating to the likely effect that such retractions have had on investigations and prosecutions.



Olivia McIntyre Witness

The Forensic Register

69. I am aware that the FR was implemented in October 2003. The FR is a case management system, used by all QPS forensic personnel from the initial forensic crime scene, through to review of all results obtained, including fingerprints, DNA, and other forensic results. From memory, QHFSS commenced using the FR in mid-2017. The FR has not significantly changed in its purpose since its initial implementation.

70. I do not hold sufficient knowledge or understanding in relation to the permissions within the FR that allow different visibility for QHFSS and QPS.

71. The additional access I remember viewing included quantification data. I do not believe QPS had the ability to alter this data. The access was provided by Tim Middleton who was employed as a contractor within the Forensic Technology work unit. The people that had this access were attached to the 'Results Management' work unit on the FR. This information did have value to our work unit, in particular for providing information to the Homicide Investigation Unit Cold Case Unit (HIU CCIT) in relation to Cold Case investigations. This was for when HIU CCIT were trying to make a determination if further testing outside QHFSS would be beneficial.

72. I am aware that Justin Howes, who is a Team leader at QHFSS, became aware of the access within a couple of months of QPS obtaining it. QHFSS described QPS having this access as a data breach.

73. To my knowledge, the FR was developed by Troy O'Malley and his support IT people. Troy and his staff worked within the Forensic Technology Unit at QPS. I am unable to provide details of when the FR was developed. I do know that the FR went live in October 2003.

Buccal swabs

74. I identified that there were a significant number of DNA person samples that were failing to obtain a DNA profile. This issue existed between 2008 and 2015. From my understanding, QHFSS changed their processes in approximately 2008, whereby for intelligence samples they would only run a sample once, and if it did not obtain a

sufficient profile after that run, they would provide advice that the sample had failed to profile.

75. I provided advice to Inspector Tony Carstensen, who was the inspector who managed the DNA Management Unit at the time, that the issue was identified. I believe Inspector Tony Carstensen negotiated with QHFSS to change their processes, so that a sample was run twice before the sample was reported as failing to profile.

76. Regarding the current collection and testing processes for buccal swabs, I do not hold sufficient knowledge or understanding in relation to this matter.

77. I have attached and marked **'Exhibit 11'** statistics relating to the number of samples processed by QHFSS, and the number of samples that failed to obtain a profile. Included in this data are statistics relating to person samples that were reprocessed at the request of QPS.

Intelligence reports, quality control flags, other issues

78. I have no recollection of QHFSS raising any issues surrounding the collection of samples for DNA testing.

79. I am aware that an intelligence report contains information provided by QHFSS which falls outside the realm of normal result validation. Information that could be received via intelligence report could include information relating to the withdrawal / correction of results, paternity results, advice regarding quality events that have occurred at QHFSS, and QPS relating quality issues. All intelligence reports are emailed to the DNA Management QPS business account. The intelligence report is then allocated to the appropriate area to deal with.

80. A QHFSS quality event is when an issue has occurred in the processing of crime scene sample/s at QHFSS which may have affected the final results that are released to the QPS. A QPS quality issue is reported when QHFSS analyse a crime scene sample and detect the presence of a profile that is recorded in the QPS DNA Elimination Data Base. This indicates a QPS employee has inadvertently captured their own DNA. A QPS quality issue report may also include the detection of a DNA profile from an

environmental DNA sample from a QPS DNA laboratory.

81. A quality control flag relates to when a quality issue is identified relating to a crime scene exhibit. The quality issue with the crime scene exhibit could have originated at QHFSS or QPS. The notification of the quality issue is provided by QHFSS and is sent electronically on the Forensic Register and via intelligence report which is received via email. The intelligence report and validated result on the FR, relating to QPS related quality issues, is managed by Inspector David Neville.

82. I am aware that the QPS is notified by way of electronic result on the FR, and via intelligence report. Inspector David Neville is notified of these results.

83. I am aware that a modification is made to the original result that was released to QPRIME to indicate that that result is no longer valid. The new result is reported to QPRIME indicating that all previous results for that exhibit are no longer valid, and that the new result information should be treated as the correct information. A Mandatory Disclosure of Forensic Results Report which includes the intelligence report received from QHFSS is generated and reported to QPRIME and email to the action / arresting officers. If the result relates to a hot job, the report is also emailed to the applicable forensic coordinator.

84. I am aware that it is an identified issue whereby a sample / swab is being collected from an intimate area of the body as a part of the SAIK is returning a result of either 'No DNA Detected' or 'DNA insufficient for further processing'. As indicated in my response to questions 40-43, a review is currently being conducted in relation to these samples.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 30th day of August 2022

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Olivia McIntyre

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Wednesday 10 August 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 27th day of July 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00055

Schedule of topics for statement

Ms Olivia McIntyre

1. State your current position in the QPS (job title and AO level).

Qualifications and experience

2. List your post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Identify any courses or diplomas you have completed since joining the QPS.

5. Identify any awards or formal recognition you have been given since joining the QPS.

6. Attach a current CV.

Current role

7. State the duties of your current position.

8. Identify the person or people (name, rank and position) who you report to.

9. Identify the person or people (name, rank and position) who report to you.

Functions of the DNA Management Section

10. Identify how many units are in the DNA Management Section, the name of each unit, and the functions of each unit.

11. Within the DNA Management Section, explain what steps are taken to check that samples of biological material are lawfully taken, and to ensure that DNA samples are retained and destroyed in accordance with legislative requirements.

12. Explain what the staff in the DNA Management Section do once they receive a DNA result from Queensland Health Forensic and Scientific Services (**QHFSS**). Identify which unit of the DNA Management Section those staff work in. Explain if and how the processes of the relevant unit change depending on the type of result reported.

13. As part of your response to paragraph 12, above:

    (a) explain what a 'cold-link' or 'cold-linked' sample or result is;

    (b) explain which police officers the results are communicated to, and whether or not the results are communicated via QPRIME;

(c) explain whether the relevant unit(s) of the DNA Management Section simplifies the results, and if so, how those results are simplified; and

(d) identify what wording is used to communicate results to crime managers/investigating officers, how that wording was agreed upon, and how long that wording has been used. Identify any procedure/policy document regarding the language used to express results.

14. If not already discussed in response to any of the paragraphs above, explain what a 'hot job' is and what a 'cold case' is. Explain your role and duties in relation to 'hot jobs' and 'cold cases', including the process of opening a 'hot job' matter. Estimate how long you have had roles and duties with respect to 'hot jobs' and 'cold cases', and estimate what proportion of your work comprises dealing with 'hot jobs' and 'cold cases'.

Involvement in specific investigations

15. Identify if you completed a hot job or some other tasks in relation to an investigation into the death of any of the following persons: [redacted] and [redacted]

[redacted] *investigation*

16. Explain what role you had in requesting further testing of four samples that initially returned results stating 'DNA insufficient for further processing' or something similar (hereinafter, **'DNA insufficient'**) in the investigation into the death of [redacted]

17. Were you aware of the results of that further testing? If yes, what were they? What role did you have in dealing with the results of the retesting? Include details of who you communicated with about those results, and when.

[redacted] *investigation*

18. Explain when you became involved in the investigation into the death of [redacted] and what your role was. Identify who requested, directed and/or approved that you be involved with the matter. Provide details of any such request, direction and/or approval.

19. Explain what work you have been conducting in relation to the [redacted] investigation. Include, in your answer, how many DNA results have come back with the result 'DNA insufficient', how many of those results of 'DNA insufficient' have been submitted for retesting, and what are the results of the retesting. Identify who sends requests for retesting to QHFSS.

[redacted]

20. Explain when you became involved in the investigation into the murder of [redacted] and what your role was. Identify who requested, directed and/or approved that you be involved with the matter. Provide details of any such request, direction and/or approval.

21. Explain what work you conducted in the matter. Include, in your answer, how many DNA results came back with the result 'DNA insufficient', how many of those results of 'DNA insufficient' were submitted for retesting, and the results of the retesting.

22. Provide your recollection of a conversation or conversations you had with Kylie Rika about the results of retesting you were experiencing, including what was said during that conversation and approximately when the conversation was had.

23. Explain what you did with the information you learned from those conversations, including, potentially, briefing-up a supervisor. Provide any records or notes of any such briefing-up.

The Options Paper

24. Explain how you first became aware of the report entitled *A review of the automatic concentration of DNA extracts using Microcon Centrifugal Filter Devices: Options for QPS consideration* (January 2018) (**the Options Paper**).

25. At the time you first became aware of the Options Paper, what was your position and in which unit(s) of the DNA Management Section were you working?

26. Explain what you were asked to do with the Options Paper, by whom you were asked, and what you did in relation to that request.

27. Attach any correspondence you were party to regarding the Options Paper.

28. Did you attend any meetings with QHFSS regarding the Options Paper, or have any communications with staff from QHFSS regarding the Options Paper? If yes, provide details about those meetings and/or conversations.

29. Attach any notes you made/have/possess relating to the Options Paper or meetings about the Options Paper.

30. At the time you considered the Options Paper, what was your understanding of the Options Paper? What was your understanding of the consequences (positives and/or negatives) of accepting the options presented to QPS/QHFSS and that the QPS/QHFSS accepted?

31. When were the changes proposed by the Options Paper put into practice and how were they put into practice? Are you aware of any internal QPS communication surrounding the implementation of the Options Paper/changes in testing (i.e. to investigators, scenes of crime officers, scientific officers)? If so, to who, by who, in what format (email, QPRIME entries) and when?

32. What consequences (positive and negative) of the QPS having accepted the Options Paper have you observed?

33. Was the terminology introduced by the Options Paper (e.g. *No DNA detected* or *DNA insufficient for further processing*) explained to police officers such as investigators, SOCOs and SOs? If yes, how? Was any training about the terms used and the options available delivered to other police officers such as investigators, SOCOs and SOs?

Result of 'DNA insufficient'

34. Have you/the QPS adopted a process of automatically requesting that DNA results reported as 'DNA insufficient for further processing', or something similar, be reworked/further worked? If yes, when did you/the QPS implement the approach? Was it at someone's direction? If yes, who? And why was it implemented?

35. What is your understanding of the result 'DNA insufficient for further processing' and any similarly worded results? Has your understanding always been the same? If not, what was it previously, when did it change and why did it change?

Data from instances of retesting 'DNA insufficient' results

May to December 2018 retesting data

36. Who is Senior Sergeant Gerard Simpfendorfer? In the first half of 2018, what was his role and what relation did it have to your role at that time?

37. What did Senior Sergeant Simpfendorfer ask you to do in about May 2018 in relation to the retesting of items that initially produced a result of 'DNA insufficient' (and clarify if the request was in May 2018 or at some other time)? What method of communication did he use in making that request?

38. What did you do in response to that request? Detail the data you collected in response to that request, what time period you collected that data, what the data showed (if anything), who the data was given to, and, if you know, how the data/results were used.

2021 – 2022 retesting data

39. Identify if you were involved, in 2021 and/or 2022, in collecting data about the retesting of DNA results that initially returned results of 'DNA insufficient'. If yes, identify who asked you to collect the data and when you were asked.

40. Detail the data you collected, what time period you collected that data, what time period the data came from, what the data showed (if anything), who the data was given to, and, if you know, how the data/results were used.

Sexual assault matters since February 2018

41. Identify if you have been involved in collecting data about the retesting of DNA results that initially returned results of 'DNA insufficient' in investigations about sexual offences. If yes, identify who asked you to collect the data and when you were asked.

42. Detail the data you obtained/collected, how you obtained it, what time period the data came from, what the data showed (if anything), who the data was given to, and, if you know, how the data/results were used.

43. In your answer to the question in the above paragraph:

    (a) identify if you included or excluded: cases where a complaint was withdrawn, cases where the charge did not proceed or the defendant was found not guilty, or cases where a conviction has already been obtained; and

    (b) whether you and/or the DNA Management Section considered other circumstances of the cases, such as information on QPRIME and/or unsolved crime reports, and then made any recommendations about further action to other police officers, such as investigators.

Retraction of results

44. Explain your awareness of an issue whereby QHFSS provide a positive DNA result/profile, and then, upon a request for a statement about that result/profile, QHFSS seek to retract the result. If you are not aware of any such issue, please confirm.

45. Assuming you are aware of such an issue, when do you recall it first occurring or becoming an issue? Do you know why it was not an issue before then, and why it then became an issue at around that time?

46. Are you aware of how often, approximately, this occurred? If yes, provide an estimate?

47. When this occurs, in what form are the QPS notified of the retraction of results? Are you or the QPS advised of the reason for the retraction?

48. Have you collected data in relation to how often the retraction of results has occurred? If yes, detail the data you collected, what period is covered by the data you collected, what the data showed (if anything), who the data was given to, and, if you know, how the data/results were used.

49. Have you conducted any further studies or analyses into the likely effect that such retractions have had on investigations and prosecutions? If yes, provide full details of those studies or analyses, including who asked you to conduct them, when they were conducted, and what period of data was analysed.

50. Attach copies of those studies or analyses, including any tables or schedules of data.

The Forensic Register

51. Outline, from your memory, when the Forensic Register (**FR**) was created and implemented by the QPS. Also outline what it did when it was first implemented – i.e. when just QPS were using it – and what it does now and how it works. Identify, from your memory, at what point QHFSS started using the FR.

52. Explain how the FR is divided: whether QHFSS have access to a certain interface, and the QPS have access to a difference interface.

53. Explain during what time period some staff in the QPS had additional access to certain information within the FR, which, once such access was discovered by QHFSS, was revoked by QHFSS. Explain what type of further information the QPS had access to during this period, whether the QPS could alter or manipulate that information, and whether that information was peer-reviewed. Identify, if you know, how such access came about, and what person (if any) caused or organised QPS staff to have such access. Identify which people gained such access. Explain if that information had any value or use in your work.

54. Identify at what point in time QHFSS staff became aware of the access described in the above paragraph, and who at QHFSS first became aware of the information. Identify how QHFSS reacted to learning of the access.

55. To your knowledge, who developed the FR? In what unit/section did the person(s) who developed the FR work at the time they developed the FR?

Buccal swabs

56. Provide an account of the problems that QPS were encountering with the DNA testing of buccal swabs, including the time period of that problem.

57. Explain what was done in response to that problem, and outline the current QPS processes and procedures for the collection and testing of buccal swabs.

58. Provide any statistics or data you compiled, or were involved in gathering, which concerns the collection or testing of buccal swabs, or which concerns results from samples obtained by buccal swabs.

Intelligence reports, quality control flags, other issues

59. Has QHFSS ever raised with you any issues/problems surrounding the QPS' collection of samples for DNA testing, for example that the methods, systems, processes, protocols, guidelines, or standards are not being followed, or that there are systemic problems with the collection processes, systems or methods for the collection of samples for DNA testing? If so, provides details of the communication(s) raising the issue(s). If not, please confirm that you are not aware that there have been any issues raised.

60. Explain what an intelligence report is, and what it usually covers. Identify who typically sends an intelligence report, who typically receives an intelligence report, and by what means an intelligence report is sent.

61. Explain what a 'quality control flag' is, and what it usually covers. Identify who typically sends a quality control flag, who typically receives the quality control flag, and by what means a quality control flag is sent.

62. If QHFSS determined that a sample had matched with the DNA of a staff member at the QPS who has contributed to the elimination database, how is the QPS notified of this? Is it by an intelligence report and/or some other means? Who in the QPS is notified of that result?

63. If QHFSS advise of a problem with a DNA result that has already been issued to the QPS on an earlier occasion and that the DNA Management Section have already pushed through to QPRIME, what steps do you/the DNA Management Section take in response to that advice. Include full details of what you would communicate to police officers and/or prosecution lawyers (if anything).

64. Identify if you have encountered, or had communicated to you, any reoccurring or systemic issues concerning the use of, or results from, sexual assault identification kits. If yes, provide details of those issues, when they were raised/occurred, and how they have been dealt with (if at all).

EXHIBIT 2

Olivia McIntyre

Experience

2019 - Current
DNA Management Officer (AO4), DNA Management Section

- Retained responsibilities for AO3 role as detailed below following position reassessment
- Produce exhibit matrices in relation to homicide/complex investigations
- Manage Hot job and Cold Case investigations on behalf of the DNA Management Section providing proactive forensic assessment and advice to the Investigations team
- Responsible for Beta-testing the new Forensic Register system, and subsequently testing and managing issues with the released version to ensure accurate and timely release of DNA information

2005 - 2019
Administration Officer (AO3), DNA Management Section

- Provide advice regarding DNA collection and results to external clients including Investigating Officers, Detectives and Forensic Coordinators
- Provide advice to forensic scientists of the Dept. of Health regarding QPS processes and change management
- Advise senior management in relation to DNA testing based on legislation and QPS policies
- Provide advice to DNA Management Section staff on the release of DNA result information via the Forensic Register online system
- Manage and maintain current skills and up-to-date knowledge of the team
- Resolve complex problems relating to the release of DNA result information
- Provide information, advice and submissions to senior management on quality management and complex results management issues
- Analyse, evaluate and interpret statistics, reporting the findings to management
- Identify and coordinate administrative tasks to staff based on team goals and workloads
- Prioritise and allocate work tasks across my team, monitor workflows and provide staff guidance
- Represent the DNA Management Section at forums and committee meetings regarding cold cases, major incidents, operations
- Advise committee meeting attendees on collection of DNA samples and DNA testing available at other laboratories nationally
- Coordinate and perform quality management and compliance audits
- Strong skills in the use of QPRIME, Forensic Register, National Criminal Investigation DNA Database (NCIDD) and QWIC (Justice court result system)
- Staff training

Training

Introduction to Project Management
2017

Phase 1 of Diploma of Public Safety (Police Intelligence Training) 2007/2008

Justice of the Peace (Qualified)
2001

Certificate III in Business (Office Administration)
2000

Key Strengths

- Hardworking and highly motivated
- Proven ability to lead, supervise and train staff
- Ability to manage complex tasks that require in-depth research
- Over 20 years' experience in administration
- Strong attention to detail
- Self-motivated and highly process driven

Referees

2002 - 2005

Administration Officer (AO2), DNA Management Section

- Analysis and quality assurance audits of forensic results data
- Liaise with QPS officers and Dept of Health personnel
- Updating CRISP with DNA link and suspect information
- Association link charting (Analyst Notebook)
- Quality assurance audits of DNA related paperwork
- Collate reporting of DNA statistics
- Train staff on forensic results reporting
- Prepare meeting minutes
- Prepare returns (lost time, overtime, personnel movements)
- Index of inward and outward correspondence and maintaining the QPS correspondence registers

2000 - 2002

Administration Officer (AO2), Traffic Adjudication Section

- Answer telephone enquiries from internal and external clients
- Prepare and post traffic summonses
- Index incoming correspondence and Traffic Breach Reports
- Data entry using Polaris (QPS) and Trails (Qld Transport system) IT systems

Olivia,

I'm commencing discussions this morning with the IC / Homicide on the early prioritisation of our current forensic exhibits from yesterdays murder scenes. Could I request that you commence creating one of your wonderful exhibit matrix products for this operation under [redacted] please? We are currently at 120 exhibits today, which I'll work through on its clunky format, but your pivot tables etc will be invaluable in the coming weeks.

If there are any issues / concerns with this request please let me know.

Cheers

Duncan.

Duncan McCarthy
Inspector, Forensic Manager - South East Region, Queensland Police Service.
Adjunct Fellow of the University of Queensland.

1. Abstract

All casework DNA extracts that underwent a concentration step using the Microcon® process were evaluated and categorised into whether there was meaningful information obtained or not. This evaluation primarily focussed on samples that underwent an 'auto-microcon' process in 2016.

The findings of this evaluation are presented for the Queensland Police Service to advise on whether they would prefer their Priority 2 samples to continue with the 'auto-microcon' process, or to cease this automatic step and notify the laboratory if particular samples are requested to be reworked.

These options relate to Priority 2 (Major Crime) samples only, as the process developed in 2012 for Priority 3 (Volume Crime) samples will be reinstated with the operationally-required move to process these samples using PowerPlex® 21 system (PP21).

2. Definitions

DNA Profile Intelligence: DNA profile information available for interpretation by Forensic DNA practitioners that is able to be provided to clients.

Fail: In this report, this is DNA profile information that was not suitable for comparing to reference DNA profiles and other casework samples. This word was used to filter the data into two possible outcomes (fail/success).

NCIDD: National Criminal Investigation DNA Database.

QPS: Queensland Police Service.

Success: In this report, this is DNA profile information that was obtained that was suitable for comparing to reference DNA profiles and other casework samples. This word was used to filter the data into two possible outcomes (fail/success).

3. Introduction

Microcon® Centrifugal Filter Devices desalt and concentrate macromolecular solutions such as DNA-containing solutions. They employ Amicon's low binding, anisotropic, hydrophilic regenerated cellulose membrane [1].

The use of Microcon® filters to concentrate extract has been a standard post-extraction process within Forensic DNA Analysis to reduce the volume of

extract from approximately 100uL to ≤35µL for amplification with PowerPlex® 21 system.

Since the implementation of PP21 amplification kit within Forensic DNA Analysis for casework samples in December 2012, extracts with low Quantification values were recommended to be concentrated. Templates of <0.132ng (Quantification <0.0088ng/uL) were found to exhibit marked stochastic effects after amplification [2]. Consequently, a workflow that directed extracts automatically to a concentration step based on Quantification value was implemented ('auto-microcon' process) for Priority 2 samples.

A workflow for Priority 3 samples remained within active Standard Operating Procedures to have the DNA extracts not amplified, nor automatically concentrated with Microcon® filters, but to be held after Quantification and QPS informed that low levels of DNA were obtained that were insufficient for further processing at that stage [3][4].

Anecdotally, the suitability to provide QPS with DNA profile Intelligence from extracts that have been concentrated has been noted to be limited, and added to scientist's time and availability to direct resources to samples with more DNA detected.

4. Data interrogation

The 'auto-microcon' data was interrogated by assessing the DNA profile outcome results reported as Exhibit Report lines as a function of the Quantification value.

The Exhibit lines were interrogated and grouped into two interpretation outcomes as follows:

1. 'Fail': DNA profile interpretation outcomes of 'Complex unsuitable for interpretation', 'No DNA profile', 'Partial unsuitable for interpretation', 'No DNA Detected';

2. 'Success': All other DNA profile outcomes including single source DNA profiles matching assumed known contributors or different reference DNA profiles, mixtures that were suitable for comparison to reference DNA profiles, DNA profiles that were suitable for loading to NCIDD.

NB. These descriptions were used to filter the data. A 'fail' does not mean there was a Quality failure in the process; a 'success' does not necessarily mean a DNA match.

~~5.1.~~5. Assessment of 'auto-microcon' results

Formatted: Bullets and Numbering

Intent
Evaluate the 'success' or 'fail' outcomes for PP21 samples that were processed in 2016 through the 'auto-microcon' workflow.

Data Analysis
The samples applicable to this experiment had Quantification values in the range 0.001ng/µL to 0.0088ng/µL, and a total number of samples that were processed this way was determined. This total number excluded environmental samples, samples without Quantification values, samples not requested for further work, samples where quality flags were raised, and samples that had not returned results at the time of data collection.

DNA profile interpretation outcomes were grouped into either 'success' or 'fail' as a function of the Quantification value. A percentage of samples that fell into these categories was determined.

The 'auto-microcon' data could be expressed as a function of Quantification value.

The percentage of samples that had an 'auto-microcon' process and led to an NCIDD upload was obtained. This data could be filtered further into the outcome from the NCIDD load, at the time of data collection.

6. Datamine of the difference in pre- and post- Microcon® Quantification values

Intent
Evaluate the difference between the Quantification values obtained for samples prior to the 'auto-microcon' step, and then after the 'auto-microcon' process. This is to assess, through the Quantification data, the effectiveness of the Microcon® step in concentrating the DNA extract.

As this is purely a datamining experiment, only the samples that yielded a result of 'success' were examined.

Data Analysis

The samples applicable to this experiment had Quantification values above 0.001ng/µL and less than 0.015ng/µL where the final result was 'success'.

This range was considered by the author to be able to provide a sufficient demonstration of the trend of the data (N=278 samples).

~~6.~~7. Results and Discussion

Formatted: Bullets and Numbering

7.1 Assessment of 'auto-microcon' results

There were N=1449 samples in the 'auto-microcon' Quantification range, excluding certain samples as per Section 5.

The percentage of samples that resulted in a determination of 'fail' was 89.4% (Fig 1). As expected, the number of 'fails' increased when the Quantification decreased and approached the Limit of Detection of Quantification ie. 0.001ng/µL (Fig 2). This was considered to be due to there being less DNA detected in the extract, and therefore less DNA to concentrate.

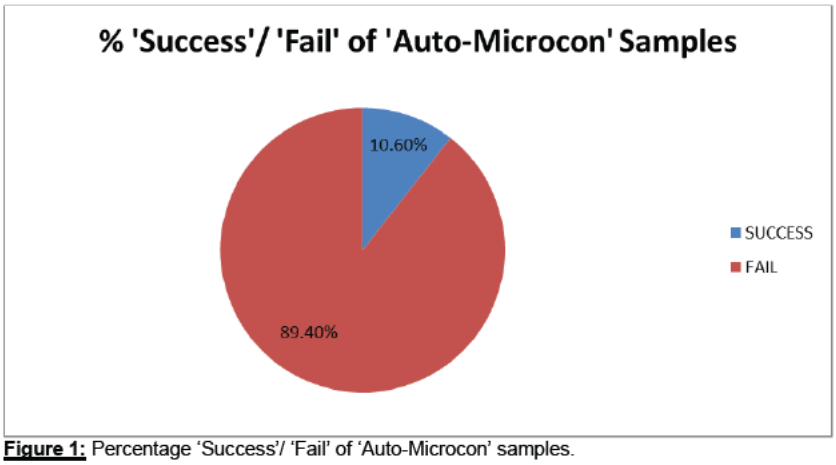

Figure 1: Percentage 'Success'/ 'Fail' of 'Auto-Microcon' samples.

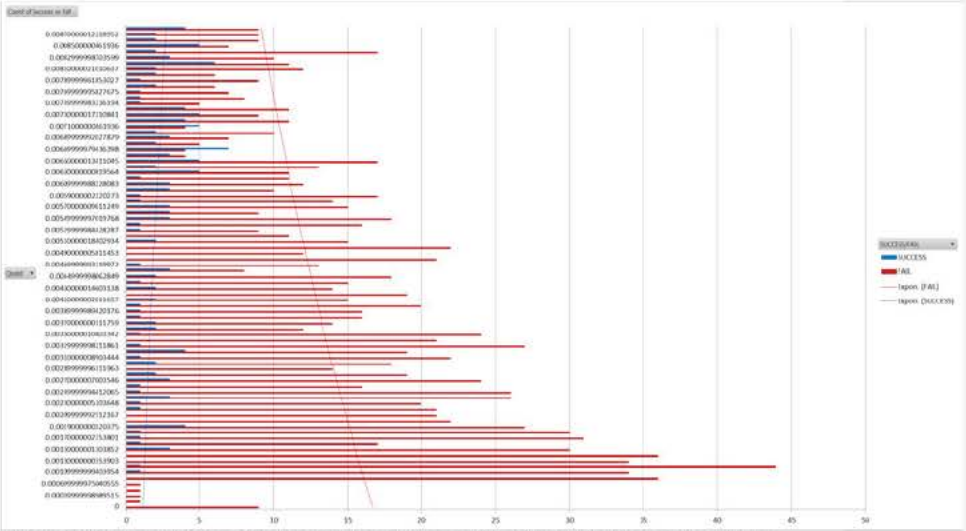

Figure 2: Spread of data and categorised as 'Success'/ 'Fail' for 'Auto-Microcon' samples.

If samples were not processed through the 'auto-microcon' process, what DNA Intelligence would the client miss out on? To evaluate this, the 'success' data was drilled down to the samples that had some NCIDD interaction and in particular, where they were the only samples in the case that were NCIDD-suitable for that particular profile. This represented 1.86% of all 'auto-microcon' samples. In looking at samples that provide *new* Intelligence, that is DNA information available for future linking, or has provided a cold-link, this equated to 1.45% of all 'auto-microcon' samples (Fig 3)..

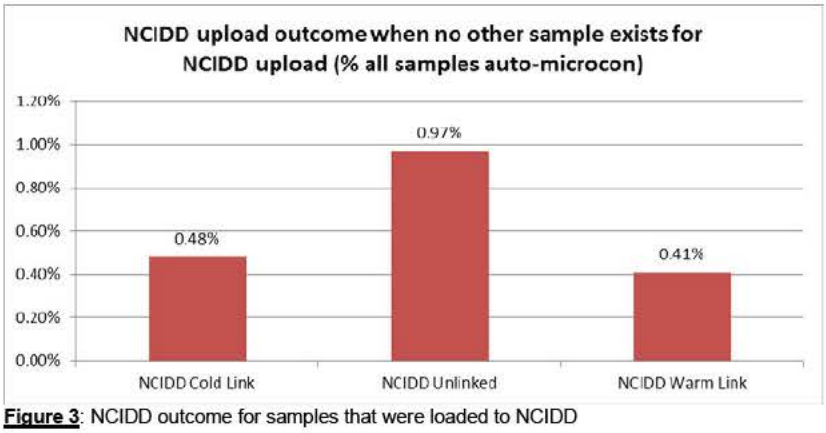

Figure 3: NCIDD outcome for samples that were loaded to NCIDD

This 1.45% of 'auto-microcon' samples is considered to be the pertinent value for the client to assess if the 'auto-microcon' process was not performed.

7.2 Datamine of the difference in pre- and post- Microcon® Quantification values

The samples applicable to this experiment had Quantification values above 0.001ng/µL where the final result was 'success'.

As the Microcon® process concentrates the DNA extract from approximately 100uL to approximately 35µL, in theory it would be a reasonable expectation to obtain approximately two to three-fold increases in DNA Quantification after concentration. Figure 4 shows the plot of the differences found for samples that resulted in 'success'.

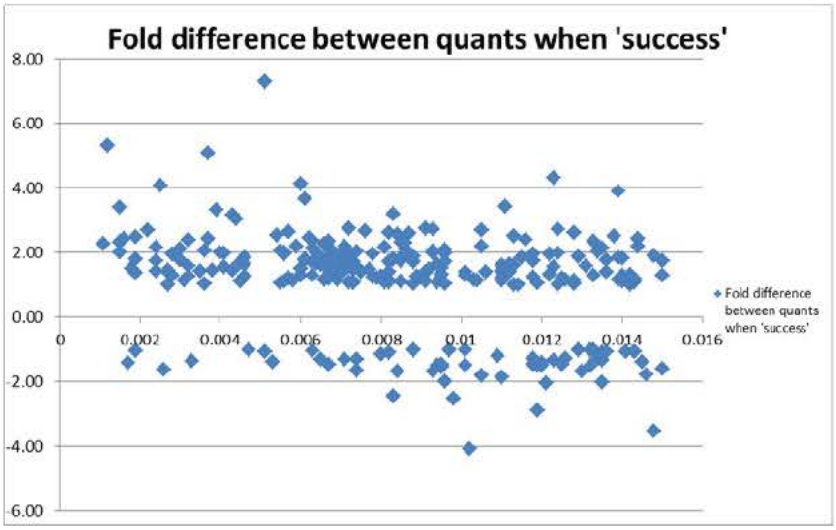

Figure 4: Quantification differences pre and post concentration

The findings are not unexpected as the scatter focusses mostly around two-fold increases in Quantification. It was also not unexpected to observe the variable results. Anecdotally, variability in success rates is found at profile management stage when assessing results of samples that have had this concentration step.

DNA can be lost in the process as seen in Fig 4 where the Quantification values decreased after concentration (below the horizontal axis). Variability in results could be attributed to a number of things, including but not limited to the slight

differences between operators and instrumentation, the differences in substrate type and level of degradation, and the variability in Quantification result.

8. Options for consideration

The options to consider are:

1. Continue with 'auto-microcon' process for Priority 2 (Major Crime) casework; or,

2. Cease the 'auto-microcon' process for Priority 2 (Major Crime) casework and report the exhibit result of 'DNA insufficient for further processing' based on Quantification result.

    a. Priority 1 samples could proceed with the 'auto-microcon' process. If a DNA concentration rework is required, the Microcon® process can be ordered manually by the scientist.

In considering continuing or discontinuing the automatic concentration of DNA extracts for Priority 2 (Major Crime) samples, some key elements to consider include, but are not limited to:

- The opportunity to link DNA profiles on NCIDD would not be initially possible (without automatic concentration) for approximately 1.45% of samples that would qualify for this process. Of the 'auto-microcon' data set (N=1449 samples) evaluated, 1.45% equates to 21 samples;

- Time and cost for processing all samples in the 'auto-microcon' range, including batch preparation, Quality checking and control;

- Time and cost for processing these samples further with additional rework options, as one would expect with low levels of DNA detected initially;

- The ability to potentially reallocate staff time currently allocated to processing, interpreting and reporting 'auto-microcon' samples, to samples with higher DNA yield, thus improving the turnaround time for results on these samples;

- The opportunity to conserve DNA extract for further processing with other technologies should that be considered (eg. Y-STR analysis, Low Copy Number analysis);

- The improved ability to provide quick results to QPS (using the Forensic Register at Quantification stage) indicating low levels of DNA detected, thus enabling QPS to employ further strategies at their discretion (eg. further sampling of items, request the rework);

- The continued ability to process the DNA extract upon client request or depending on priority (eg Priority 1 – Critical Priority).

Subject: RE: FSS Options paper

Good morning Ewen,

Further to our conversation, based on the statistics provided by FSS, it would appear it is not worthwhile continuing with the 'auto-microcon' process for Priority 2 samples.

If FSS ceases continuing with the 'auto-microcon' process for Priority 2 samples, I would imagine QPS can still request certain samples that are pertinent to an investigation be submitted through the 'auto-microcon' case, if it is required.

To identify these samples, I would imagine one of the following scenarios would apply:

1. If investigating police contact the DNA Management Section to inquire about testing, DMS staff can facilitate the 'auto-microcon' process on results that have been validated as ''DNA insufficient for further processing', or
2. Results that are 'DNA insufficient for further processing', from unsolved occurrences are sent to a worklist for assessment by staff from DMS to determine whether further testing should be initiated.

Given the statistics provided by FSS, in relation to 'success' rates for these samples, I would imagine that Management may want to go with option 1.

Forwarded for your information.

Thanks Olivia,

As discussed, I am in agreement. The 'auto-microcon' process would appear inefficient in this context, with time and resources appearing to be better spent in more worthwhile endeavours.

I am inclined to recommend your option 1, with an additional line added to the Q-prime update advising investigators of their option to request this additional process if required.

Does anyone have any further comment before I reply?

Sexual offences	15/04/2016	Three person mixed DNA profile 3 person mix - support for contrib 1 million - 1 billion	Evidence	22/06/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Drug offences	14/06/2016	Three person mixed DNA profile 3 person mix - support for contrib 100 000 to 1 million	Evidence	14/06/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
Murder	10/06/2014	Two person mixed DNA profile 2 person mix - supports non contribution	Evidence	26/02/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Sexual offences	18/04/2016	Three person mixed DNA profile 3 person mix - support for contribution 100 to 1000 NCIDD upload - mixed DNA profile UKF1	Evidence / Unknown Profile	03/06/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
Robbery	15/04/2016	Three person mixed DNA profile 3 person mix - support for contrib 1 million - 1 billion	Evidence	19/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Assault	03/05/2013	Three person mixed DNA profile No statistical interpretation performed	No statistic interp	08/04/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Assault	08/05/2013	Three person mixed DNA profile No statistical interpretation performed 3 person mix - supports non contribution	Evidence	02/02/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Rape	25/11/2015	Three person mixed DNA profile 3 person mixed profile - conditioned on	Evidence	18/05/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
Robbery	25/01/2016	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion 3 person mix - support for contrib 100 000 to 1 million	Evidence	18/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Wounding	29/07/2015	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	18/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Murder	07/11/2013	Three person mixed DNA profile 3 person mix - support for contribution 100 to 1000 3 person mix profile - support for contrib > 100 billion	Evidence	13/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Assault	24/03/2016	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	10/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Murder	19/01/2016	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	05/05/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
Rape	07/01/2016	Three person mixed DNA profile 3 person mixed profile - conditioned on	Evidence	04/05/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Murder (inc attempts)	09/10/2013	Three person mixed DNA profile NCIDD upload - Intel mixed DNA profile UKM2	Intelligence result	27/04/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Assault	12/09/2014	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion 3 person mix- support for contrib 1 billion - 100 billion	Evidence	21/04/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Wounding	18/01/2016	Three person mixed DNA profile 3 person mixed profile - conditioned on 3 person mix rem - support for contribut on > 100 bill on	Evidence	14/04/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Assault	22/03/2016	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 bill on	Evidence	22/03/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
iberty offences	08/12/2015	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	04/03/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
Robbery	15/02/2016	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	15/02/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result

	Robbery		19/11/2015	Three person mixed DNA profile NCIDD upload - Intel mixed DNA profile UKM2 3 person mix - support for contrib 1 million - 1 billion	Evidence / Unknown Profile	15/02/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Wounding		05/06/2015	Two person mixed DNA profile 2 person mixed profile - conditioned on 2 person mix rem - support for contribution > 100 billion	Evidence	12/02/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Sexual offences		02/10/2015	Three person mixed DNA profile 3 person mixed profile - conditioned on 3 person mix rem - support for contribution > 100 billion	Evidence	03/02/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Rape		23/11/2015	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	11/01/2016	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		27/03/2013	Three person mixed DNA profile 3 person mix - support for contrib 1 million - 1 billion	Evidence	17/12/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Wounding		28/07/2015	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion 3 person mix- support for contrib 1 billion - 100 billion	Evidence	20/10/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		29/06/2013	Three person mixed DNA profile 3 person mix - support for contrib 100 000 to 1 million	Evidence	18/09/2015	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Child offences		17/08/2015	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion 3 person mix profile - support for contrib > 100 billion	Evidence	02/09/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Drug offences		08/09/2016	Three person mixed DNA profile NCIDD upload - mixed DNA profile UKM4	Unknown Profile	07/10/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Drug offences		09/09/2016	Three person mixed DNA profile Excluded from mixed DNA profile	No statistic interp	07/10/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Murder		03/07/2013	Three person mixed DNA profile 3 person mix - support for contrib 100 000 to 1 million	Evidence	18/08/2015	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Rape		07/05/2015	Single source DNA profile Possible sub-threshold information	Evidence	24/06/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		20/03/2015	Two person mixed DNA profile 2 person mixed profile - conditioned on 2 person mix rem - support for contribution > 100 billion	Evidence	22/06/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		20/03/2015	Two person mixed DNA profile 2 person mix profile - support for contrib > 100 billion 2 person mix profile - support for contrib > 100 billion	Evidence	10/06/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		14/08/2014	Three person mixed DNA profile 3 person mixed profile - conditioned on 3 person mix rem - support for contribution > 100 billion	Evidence	05/06/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Murder		06/03/2015	Two person mixed DNA profile 2 person mix profile - support for contrib > 100 billion	Evidence	26/05/2015	Complex mixed profile unsuitable for interp or comparison	Updated	Complete withdrawal of original result
	Robbery		19/11/2013	Three person mixed DNA profile 3 person mixed profile - conditioned on 3 person mix rem - support for contribution > 100 billion	Evidence	08/04/2015	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Robbery		27/07/2013	Three person mixed DNA profile 3 person mix profile - support for contrib > 100 billion	Evidence	02/04/2015	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result
	Robbery		11/02/2016	Single source DNA profile UKM1 NCIDD upload single source DNA profile	Unknown Profile	22/02/2016	Complex mixed profile unsuitable for interp or comparison	Incorrect	Complete withdrawal of original result

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF DUNCAN MCCARTHY

I, **Duncan McCarthy,** of 200 Roma Street, Brisbane, Queensland 4001 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

Current Employment

1. I commenced duties as Acting Superintendent of the Queensland Police Service (QPS) Forensic Services Group (FSG) on 25 July 2022. However, I substantively hold the rank of Inspector and am ordinarily the Forensic Manager for South Eastern Region in the QPS).

2. As a Forensic Manager, I am responsible for the standards of the technical examinations conducted by my Scenes of Crime Officers (SOCOs), the correct laboratory authorisations and accreditation of facilities under my leadership. I maintain strong working relationships with the frontline police districts and forensic officers around Queensland and overview examinations conducted for serious crime scenes. I work closely with Criminal Investigators to provide advice on forensic examination results and assist to guide further examinations of sampling needed for QPS investigations.

3. Attached and marked **'Exhibit 2'** is a copy of my CV.

Tertiary Qualifications.

4. I completed a Bachelor of Applied Science, Forensic Investigation, issued by the Canberra Institute of Technology, ACT in 2010.

5. I was awarded a Certificate of Expertise in the Science of Fingerprints by the Australasian Forensic Field Sciences Accreditation Board in 2003.

Courses and/or diplomas

8. I have also completed a Certificate IV in Workplace Training and Assessment in 2010 issued by the QPS, a NATA Technical Assessors Program, delivered by the National Association of Testing Authorities in Brisbane QLD 2012 and a Diploma of Public Safety, Forensic Investigation (Crime Scene Investigation), issued by the Canberra Institute of Technology, ACT in 2006.

Board/Association Appointments

10. In 2018 I was conferred the title of Adjunct Fellow of the University of QLD for my contribution to research in the School of Psychology, this position remains current.

11. During 2018 – 2020 I held a position on the national Board of the Australian Forensic Science Assessment Body. I withdrew from that position on my appointment as an Inspector, Forensic Manager.

12. From 2016 – 2020 I held the position as QPS representative on the National Institute of Forensic Science (NIFS) Scientific Advisory Group for Fingerprint Specialists. I withdrew from that position on my appointment as an Inspector, Forensic Manager.

Employment Chronology

13. I joined the New South Wales Police Force (NSWPF) and commenced recruit training at the Goulburn Police Academy in February 1995. I completed recruit training in August 1995, where I was assigned as a general duties probationary Constable to Parramatta Police Station. My next stations included postings at Windsor, Mt Druitt and Cabramatta Police Stations in general duties and a special operations role. In July 1998, I commenced duties as a Fingerprint Technician in the NSWPF Fingerprint Section. I continued training to achieve fingerprint experts accreditation and commenced duties in Wagga Wagga Crime Scene Section in February 2001. I performed the role of a scenes of crime officer and fingerprint technician and achieved Fingerprint Experts accreditation in 2003.

14. In late 2004, I applied for a position as a Fingerprint Expert, and Sergeant in the QPS. I commenced duties with the QPS Fingerprint Bureau (FPB) in December 2004. Whilst performing duties in the QPS FPB, I conducted comparisons of fingerprints, reviewed identification decisions, conducted examinations developing latent fingerprints, prepared

and presented expert evidence and examined deceased persons to capture fingerprint impressions.

15. I performed duties as a part of Disaster Victim Identification (DVI) operations, including the Boxing Day Tsunami DVI in Thailand in 2004, and the Lockhart River Air crash in 2005. I performed the role of acting quality manager in the QPS FPB and moved into a training officer's role in 2010. During my duties as a training officer and later promotion to Senior Sergeant Training Manager in 2016, I introduced a Diploma of Forensic Investigation qualification with the QPS Academy and later introduced a Graduate Certificate in Forensic Fingerprint Investigation with Griffith University. I was and remain, a partner investigator with the University of QLD School of Psychology on two Australian Research Council linkage grants, researching the expertise that existed in fingerprint examiners.

16. I was promoted to the position of Forensic Manager, South East Region in February 2020. It was at this time that I assumed the responsibilities for the operations, laboratories and accreditation of the Scenes of Crime (SOC) functions of FSG in my assigned region. My manager is the Superintendent, Commander of Forensic Services group, Bruce McNab. I have two Scenes of Crime (SOC) Officer in Charge (OIC) Senior Sergeants that report to me and one Forensic Coordinator (FC) Senior Sergeant that also reports to me.

Forensic Managers

17. Whilst a Forensic Manager (FM) is not required to hold any formal qualifications such as a bachelors or post graduate degree in science, they are required to hold a crime scene examination authorisation or a certification in a recognised forensic discipline such as fingerprint identification. In addition, officers who return to the FSG after a period working in other areas and previously held a crime scene examination authorisation or certification in a recognised forensic discipline would also be qualified to hold the position as a FM.

18. As a FM, I am responsible for the standards of the technical examinations conducted by my Scenes of Crime Officers (SOCOs), the correct laboratory authorisations and accreditation of facilities under my leadership. This includes the first forensic response by SOC team members at crime scenes, where evidence is preserved, examined and collected for criminal investigations. Our laboratories are used to conduct examinations

on exhibit items which cannot be conducted at crime scenes. This includes both fingerprint evidence and biological sampling for DNA. Maintaining accreditation and correct standards in each laboratory ensures the quality and integrity of the results provided to investigators.

19. As a FM, I maintain strong working relationships with the frontline police districts and forensic officers around Queensland and overview examinations conducted for serious crime scenes. This is necessary as the focus and priorities at scenes can change depending upon the information received and external factors such as the weather. I work closely with Criminal Investigators to provide advice on forensic examination results and assist to guide further examinations of sampling needed for QPS investigations. As results can be complex or difficult to interpret, I assist in the understanding of how a result could impact a criminal investigation.

Forensic Coordinators

20. A Forensic Coordinator (FC) assists and reports to their respective FM. FC's are not responsible for managing a team of SOCS's in a work unit. Rather, their primary functions are to provide advice, leadership and coordination of a FSG response at scenes. Whilst the FM also performs part of this role, many scenes are complex and protracted. This role assists in maintaining high standards of practice both in the response to crime scenes, but also in the management of day-to-day business and examinations conducted by SOCOs in FSG.

21. Forensic Coordinators are required to have successfully completed a Scenes of Crime Officer training course or equivalent, but many also hold formal qualifications such as a bachelors or post graduate degrees in science.

22. At present, there are eight Forensic Coordinators in the QPS being:

    (a) Senior Sergeant [redacted] who is responsible for the South East Region and reports to me;

    (b) Senior Sergeant [redacted] who is responsible for the South Brisbane Region and reports to Inspector [redacted];

    (c) Acting Senior Sergeant [redacted] who is responsible for the Southern Region and reports to Inspector [redacted];

(d) Senior Sergeant [redacted] who is responsible for the North Brisbane District Region and reports to Inspector [redacted];

(e) Senior Sergeant [redacted] is responsible for the North Coast Region and reports to Inspector [redacted];

(f) Acting Senior Sergeant [redacted] who is responsible for the Central Region and reports to Acting Inspector [redacted];

(g) Senior Sergeant [redacted] is responsible for the Northern Region and reports to Inspector [redacted]; and

(h) Senior Sergeant [redacted] is responsible for the Far Northern Region and reports to Inspector [redacted].

Scenes of Crime Officers and Scientific Officers

23. The role of a SOCO requires the preservation, recording, collection and examination of items of interest, both at a crime scene, or in a laboratory for forensic evidence. This evidence could be trace DNA, biological samples, fingerprints, shoe impressions or other evidence types. Detailed photographic methods are used to record crime scenes and evidence, appropriate protective equipment and handling methods are employed by SOCOs to avoid contamination and loss of evidence. These skills and methods are used across all crime scene responses from stolen vehicle examinations, up to performing examinations in homicide scenes. SOCOs are authorised to perform crime scene examinations of a broader, or general nature.

24. My experience in the specific nature of the duties performed by Scientific Officers (SOs) is limited. From my knowledge, they perform more specialised and complex examinations in serious crimes and can hold more specific certifications and authorisations in defined forensic disciplines, for example fire scene examination. SOs are also trained and authorised to collect samples from more complex chemical examination methods and can provide more detailed evidence on crime scene reconstruction and blood spatter analysis.

25. As such, SO's perform more complex sampling, examination and interpretation functions than SOCOs. In addition, SOs are not called upon to perform examinations on routine crimes that do not relate to complex investigations, such as stolen vehicles.

Crime categories and priority categories

26. FSG are required to respond to two broad categories of offences being Major Crime Offences and Volume Crime Offences.

27. Major crime offences are serious personal violence offences, including homicide, sexual assault and armed robbery crimes. They are also categorized by the longer possible terms of imprisonment that conviction of these crimes could hold for an accused person.

28. Volume crime offences are those linked to property and lesser violent acts, such as break and enter, vehicle theft and common assault offences.

29. The distinction between these types of offences allows FSG to assign appropriate effort and resources to investigations. This allows for a more detailed and prioritised approach to serious crime and resolutions for aggrieved persons.

30. As to the prioritisation of DNA sampling requests, I personally have only ever worked under two DNA sampling request categories being Priority 1 (P1) sampling requests and Priority 2 (P2) sampling requests.

31. Priority 1 (P1) sampling requests related to exhibits that are prioritised for analysis by Queensland Health Forensic and Scientific Services (QHFSS). From my 2020 to 2021 experience, P1 requests were reserved for major crimes being the most serious offences such as homicides or related crimes. These sampling requests typically concerned either trace DNA swabs, blood or tapelift exhibits. QHFSS usually advised QPS DNA Management Unit (DMU) of a result of P1 sampling requests in approximately 7 days.

32. Priority 2 (P2) sampling requests were routine sample requests without any additional priority placed on their analysis. From my 2020 to2021 experience, P2 requests did not have to be specifically requested and related to all crime types not covered by P1 sampling requests such as volume crime matters.

33. It could be many weeks or months before QHFSS advised QPS DMU of a result of P2 sampling requests

34. As a result of a conversation I had with David Neville, who was the Inspector of the DMU in or about April 2020, I understand that:

(a) P1 sample limits for homicide requests were capped and sent in tranches. A 'first 25' would be determined between the FM or FC and the investigators. Then, further tranches of 25 would be determined based on the samples collected from the crime scene, the circumstances of the investigation and the results of the first 25; and

(b) Request for analysis of additional P2 samples were only sent to QHFSS if approved by the Inspector of the DMU following a recommendation from a FM.

(c) P3 samples for volume crime offences were limited to one trace DNA sample per case.

35. I am unaware of any specific guidelines in relation to DNA processing limits.

36. My personal use of the sampling prioritisation process involved sending a request through the FSG DMU, and their Inspector in charge. I have no personal knowledge of by who or when the system was created, however I understand the need to manage the volumes of DNA sample requests on an analysis process.

37. From anecdotal information, QHFSS DNA has processing capabilities based on limitations of sampling through puts and exceeding these would put additional strain on turn-around times. To my knowledge, expected turn-around times were non defined but were based on the number of samples that were submitted for processing.

38. The process by which I requested additional testing on DNA samples was through direct request with the FSG DMU. I sought advice from the DMU in situations where results were confusing or on samples that perhaps could have returned a result, for example a negative or inconclusive result on a presumed blood sample. This process was through email request and gaining further information via conversations on what could potentially be reworked if a particular result was returned on important exhibits. This was also performed on an ad hoc, case-by-case basis for serious investigations such as active homicides.

QPRIME and the Forensic Register

39. The Forensic Register (FR) was introduced to the QPS in around 2003. It was created by a FSG member at the time, Troy O'Malley. This system created greater visibility of forensic results, allowed for image storage and enabled greater accountability and audit

trails, especially for necessary administrative and technical review processes needed for NATA accreditation.

40. The Queensland Police Records Information Management Exchange (QPRIME) system was introduced, to my knowledge, in 2006. It is the storage location for police reports of crime occurrences, intelligence reports, task generation for document and statement creation and a source of information on many police activities.

41. Whilst the FR and QPRIME are separate systems, I understand software links enable the information between the two systems to automatically synchronise. This enables SOCOs to receive daily taskings from host investigators through QPRIME and upload details of their forensic examination in the FR so as to provide investigators with a summary of their forensic examinations.

42. All members of FSG have an appropriate level of access to the FR. Access to the FR is linked to a defined organizational position number, as assigned by the QPS Human Resources unit. Some members of QPS District Intelligence units have been provided with access to the FR in order to review forensic identification data. This access is required to be supported by a regional FM and training provided in the use of the FR by local FCs or Scenes of Crime Officers in Charge (SOC OIC) prior to being granted access. Each officer's access is defined by the rank they hold, the technical functions they perform and the authorisations they possess. A higher-level manager is needed to approve access levels in conjunction with the Inspector of the Quality Management Section (QMS).

43. In my view, the present limits upon persons who have access to the FR are sufficient and appropriate because they reduce the need for unnecessary reviews to ensure compliance with audit trails and processes needed for NATA accreditation. These limitations also ensure that only a discrete number of people are exposed to sensitive and graphic content.

Provision of photographs to QHFSS

44. The method of photographing and collecting biological samples for SOCOs is governed by procedures maintained by the FSG QMS. Dependent upon the nature of the sample, SOCOs could use a presumptive test for possible blood stains prior to swabbing or use either tape lifts or swabs for trace DNA. This decision is often determined by the nature of the surface the target material is located on and the nature of the sample material.

45. These items are then packaged, sealed and photographed as forensic exhibits, with their unique barcode and added to the FR. Details of the SOCOs examination are then updated in QPRIME and the items are assigned property reference numbers within QPRIME within the relevant QPRIME occurrence.

46. I do not know whether or how such processes may have differed from 2008 onwards when AUSLAB was in operation. I am not aware of process changes influenced by AUSLAB operations.

47. I understand that QHFSS started using the FR in 2017 whilst I was working with the Fingerprint Bureau (FPB) within FSG. I am not, and was not, authorised to collect biological samples. As such, I did not receive and training regarding QHFSS processes at that time.

48. Since performing my role as a Forensic Manager, I am aware that photographs of DNA sample packaging are required by QHFSS and FSG. I am aware that these images were reviewed by members of QHFSS for quality assurance as I had been involved in conversations where SOCOs in my team had been required to correct errors with regard to 'incomplete' or 'insufficient' photography of their packaging. Errors of 'incomplete' or 'insufficient' imaging included instances where corners of an exhibit envelope were not visible in the image.

Crime scenes

49. Police communications will alert frontline police crews to an incident. After initial attendance by these police, investigators will determine whether a forensic response is needed. If a crime scene requires a forensic examination, an on call or rostered duty SOCO will attend the scene.

50. Upon that initial contact to a SOCO, and often after a SOCO has responded on scene, they will make contact with the FC to advise them if the matter is serious and assistance in managing aspects of the scene examination are required.

51. If the crime scene involves a major crime such as a homicide, sexual assault or armed robbery or is likely to require a protracted forensic examination, a FM may be called in to assist the FC. In those situations, a FM will also share some on call duties with FCs to assist with fatigue management. The FM or FC cover the role of making contact with

other FSG specialist services such as Forensic Imaging or SO's. These decisions are made based on the best practice for preserving and recording evidence and in consideration of local factors such as inclement weather.

52. Detectives or investigators will view aspects of the scene, both in person and through the images captured by SOCOs in their examinations. SO's will attend and conduct examinations only in circumstances where their skills are needed over and above the skills of a SOCO. For the interpretation of complex blood spatter, ballistics reconstruction or fire scene examinations, SOs will lead their examination process assisted by SOCOs.

53. A decision is made on whether a SO attends a scene in consultation with the relevant FC or FM at the scene, and the OIC Senior Sergeant of the Major Crime Unit (MCU), who manages the response of SOs state-wide.

54. In my time as a FM, there have only been a small number of occasions where a SO has not attended as expected at scenes. These instances have been due to staff unavailability or situations where a difference of opinion has arisen between an SO and the FC. In those situations, the FM (or FC) and the Inspector of the Scientific Section FSG will decide whether an SO would attend and examine a scene.

55. Once at the scene, an important task is to check the scene cordon and boundaries, based on the circumstances or information about the offence available at that time. This ensures that the integrity of evidence is not lost due to a larger than expected area of interest around a primary or secondary scene. This is done in consultation with the lead criminal investigator assigned to the investigation. SOCOs will continue with the recording of key areas of interest in the scene and an order of examination will be made, usually with Forensic Imaging conducting their scanning of the scene, followed by SOs conducting their recording and sampling.

56. As additional information comes to light from investigators, areas of interest and items of significance are recorded and collected for further examination. An FC will make decisions on the best location for evidence examinations or the collection of items for later sampling. Samples are taken from surfaces and items at the scene where possible and the fingerprint examination of the scene is often conducted after evidence has been sampled and recorded due to the impact of examination methods on items of evidence.

In these circumstances, a FC will make decisions on the best location for evidence examinations or the collection of items for later sampling.

57. The decision to take either a DNA sample or latent fingerprint from an item or surface is often a collaborative one made between the FM/FC, the SO, SOCO and criminal investigators. This decision is based on the most appropriate evidence sought and a sequence will be chosen that allows for both DNA, fingerprints and other sampling to be conducted in a non-destructive manner, that minimises the risk of contamination. At times an FM will assist an FC taking over the scene control duties, and often a SOCO will assume responsibility for examinations once an SO has completed their examinations. For these reasons there are often a number of forensic officers that can make and inform these decisions.

58. Once a biological sample is collected from the scene, it is immediately entered into the FR and QPRIME as an exhibit.

59. SOCOs and SOs will generally be in charge of their own sample transport from the scene to their respective forensic units and property storage locations. The samples are stored in appropriate conditions according to procedure and secured in an approved property point, awaiting transport to QHFSS for analysis. The forensic property points in use within SOCO offices in each FSG location are the responsibility of the respective FMs.

60. Based on my experience in South East Queensland, when a decision is made on each sample's priority for analysis a SOCO from that work unit will sign out the exhibits on the FR and QPRIME and transport the samples in person to QHFSS and sign them into the QFHSS property point.

61. Each exhibit item collected has a unique Forensic Exhibit Number (FEN) barcode label assigned to it. It is also given an QPRIME property reference number and these numbers are clearly displayed on the item packaging, along with a seal that is signed by the collecting officer.

62. The training material that governs the examination of scenes for SOCOs and broader forensic operations are maintained by the Inspector for QMS in the FSG. This program is delivered as a Diploma of Forensic Investigation qualification, with the QPS Academy as the registered training organisation of the qualification. This program delivers the

training needed for SOCOs so they can perform duties in compliance with the following procedures:

(a) CSE 100 'Crime Scene Examination';

(b) CSE 101 'Biological Evidence';

(c) CSE 104 'Fingernail Scrapings';

(d) CSE 111 'Hair and Fibre Detection and Collection';

(e) CSE 115 'Use of Combur Test Strips';

(f) PFS 100 'Quality Manual';

(g) PST 104 'Seminal Fluid Screening and Sampling Protocols'; and

(h) PST 106 'Enhancement of Impression Evidence'.

63. The specific training material that relates to SOs is regulated by the Inspector, Scientific Section FSG and this training program is managed by the Senior Sergeant, Quality Assurance and Training, Major Crime Unit.

Quality Management

64. A technical review is a check to ensure the correct methods were used by a forensic officer in conducting their examinations and in the conclusions they report. This review ensures that the results reported from these examinations can be relied upon to support investigative actions and decisions.

65. A forensic officer with a minimum of the same level of authorisation is needed to complete a technical review. Not all technical reviews need an officer of a higher rank to complete the reviews as the check of the correct methods used is based on the skills of the reviewer involved.

66. Each forensic unit, such as the Fingerprint Bureau (FPB) and the Major Crime Unit (MCU), have different requirements for technical reviews based on the different skills employed. They have specific procedures also managed by the QMS, that regulate these practices.

67. The FSG Quality Manual, document PFS100, is the overarching procedure that defines the processes of review in FSG.

68. For SOCO examinations in major crime cases, all examinations are required to be technically reviewed. For volume crime cases, a dip sample of five (5) examinations are reviewed across a year for fully qualified and authorised SOCOs.

69. All first year SOCO trainees require all their examinations regardless of crime type, to be technically reviewed. In each case where a statement is needed from a SOCO examination, these case files and examinations also require technical review to ensure accuracy.

70. I am not aware of any departure from the procedures and requirements of technical reviews for SOCOs. A technical review is conducted by a qualified SOCO with the same level of authorisation as the SOCO completing the examination under review. No SOCO or FSG officer is to review their own work.

71. Since I commenced in the role of FM for the South East Region in February 2020, my SOC work units have completed 5805 case file technical reviews on the FR.

72. An Administrative (Admin) Review is a check on the detail of the information recorded within an examination summary. All examination summaries, regardless of crime type need an Admin Review completed. For example, this includes the correct related QPRIME reference numbers, the time images were captured at a scene, related exhibit numbers and the correct type of exhibit category.

73. Admin Reviews are routinely completed by appropriately trained SOC office staff members, and SOCOs. No level of authorisation is needed, only training in the process.

74. Since I commenced in the role of FM for the South East Region in February 2020, my SOC work units have completed 21783 case file admin reviews on the FR.

75. A scene assessment is the review of a forensic officer's practical examination skills at scene via observation. An officer with the same level of technical authorisation is needed to observe another officer conduct their examination and make an assessment on the use of required procedures and methods.

76. For SOCOs, a scene assessment is needed every two (2) years.

77. The requirements to undertake scene assessments, or ongoing assessments of competency is contained within the FSG Quality Manual, document PFS100.

78. I am unaware of any departures from the procedures and guidelines related to scene assessments in SOC.

79. Since my commencement as FM for the South East Region in February 2020, all SOCOs within my teams have completed a scene assessment, as a period greater than two (2) years has elapsed. All of these assessments have been conducted according to the requirements of PFS100, and number approximately 52.

80. I am unable to find specific data on the FR in relation to these records.

81. A FM can access the examination records of each SOCO and SO on the FR. If additional review is needed it can be readily accessed at any time. Regular assessments for SOCOs in relation to the collection of DNA or biological samples occur within the same framework as the scene assessment process.

82. I have no specific knowledge of the assessment process for SOs.

Backlogs and background to the priority system

83. My exposure to backlogs in DNA testing has been limited to the period where I commenced duties as the FM for the South East Region. I have been aware that routine processing of DNA samples takes numerous weeks, and when Priority 1 samples were requested for serious crimes, these results were returned in approximately one week.

84. My knowledge of DNA testing thresholds is limited. I am not aware of the nature of the threshold changes to DNA testing in 2018.

85. I have not made enquiries as to the current DNA processing backlog.

Communication between the QPS and QHFSS

86. The only occasion where I have met with QHFSS members has been when I requested a meeting to discuss large scale operations with large volume of samples for DNA testing. During February and March 2020, I contacted Senior Sergeant Ruben Collopen from the QPS DMU to assist in arranging meetings with QHFSS.

87. In early 2020 a meeting I requested involved the sampling needed for Operation [redacted] and related operations [redacted] This meeting took place at QHFSS conference rooms [redacted] Thomas Nurthen from the QHFSS DNA Analysis

team attended the meeting, along with members from QPS Scientific Unit and QPS criminal investigators. I was made aware of the process of micro concentration, and the practice of 'pooling' related samples together in order to increase the volumes of DNA material and meet the necessary processing thresholds. A process of 'quantification and hold' was also discussed where samples were analysed for the amount of DNA material present and a decision then made for further processing based on the volume of cells present. I don't recall the details of what was discussed in terms of the processing threshold needed at that time.

88. I don't recall any minutes being kept of this meeting but I took notes in my official notebook number J 001984 during the meeting. I have noted in these records instances where Thomas Nurthen made contact with me to indicate samples previously noted as 'insufficient DNA' would be recommended further sample amplification. A copy of those notes is attached and marked '**Exhibit 3**'.

89. This is the only occasion where I have called a meeting with QHFSS team members. On other occasions where I needed to discuss DNA sampling submissions, I liaised with the FSG DNA Management Unit (DMU). If any errors have occurred with respect to DNA sampling or results, these issues are communicated through the FSG DMU. Such instances include times where contamination of samples has occurred or results have been returned to FSG personnel who have been nominated as the source of a biological sample.

Issues with "insufficient DNA" results

90. My understanding of the QHFSS quantitation testing stage is that, at this point, analysis is conducted to determine whether there is sufficient DNA in the sample to proceed with further testing. I have gained this knowledge through the activities I have undertaken as part of my role, and meeting I have had with QHFSS, and other discussions had with the FSG DMU. I have never been made aware of values related to 'cut off' amounts and what options existed with these sample results.

91. To my knowledge, the term 'No DNA' described a result where there was no DNA at all detected in a sample.

92. The term 'Insufficient DNA' related to a result where there was not enough DNA present to yield a profile; yet some DNA was found in the sample.

93. Until I had conversations in February and March 2020 with FSG DMU and QHFSS team members, I didn't understand the options available with the 'Insufficient DNA' samples. After conversations in [redacted] 2020, if such a result was returned, I would contact the FSG DMU and discuss what potential existed for further processing. Prior to these dates I was not in a role that had regular interaction with QHFSS DNA results or the need to consider what other options existed with samples.

94. My understanding of concentration or micro concentration of a DNA sample was that it was a method of increasing the level of DNA within a sample to improve the chances of obtaining a profile.

95. After a sample is processed and a profile obtained, the results that I have observed included as described above, a 'single contributor match' with a specific likelihood reporting the match. A 'mixed profile' with two or three defined contributors, has been reported, and 'complex mixed profiles' have been reported with many potential contributors. I have also had sample results return an 'exclusion' result, where a contributor's profile has been eliminated or excluded as a potential source.

96. I am not aware of a date when results reporting or practices for 'Insufficient DNA' changed for the QPS. I have not commenced a process of revisiting DNA results from scene examinations under my supervision as yet. There have been approximately 20 instances since 2020 where I have requested samples be either reworked or concentrated, based on the advice of the FSG DMU team.

Issues with the withdrawal of results

97. I cannot recall a situation where QHFSS has provided a result from a sample that was later withdrawn. I have not received advice from the FSG DMU regarding the withdrawal of results. The potential consequence of a withdrawn result could be extreme. Depending on whatever other evidence might exist in any given case, it has the potential to lead investigators to incorrectly arrest and charge a person unrelated to a crime. A further severe consequence could include the wrongful conviction of an innocent person of a serious offence.

Communication and training

98. I am not aware of any form of training provided by QHFSS as to terminology used in the reporting of their results such as 'no DNA detected' or 'insufficient DNA detected'. All the terms that I came to know were introduced to me through the course of my duties as a FM, through the meeting I held with QHFSS and through conversations with QHFSS team members. The staff from the QPS DMU were also a good source of information to clarify what results and particular wording meant.

99. I am unaware of any QPS training provided to investigators on QHFSS DNA results or terminology. When results have become available, it has been my role, and that of the FC, to let investigators know what their options could be with respect to further DNA processing.

100. I am not aware of any instances where errors or mistakes have occurred with QHFSS processing. I am also unaware as to whether the process of reporting of such errors or mistakes would differ from the ordinary process of reporting results through the FR to QPRIME and sending an email to the relevant investigators.

Communication by the QPS with the ODPP

101. I am unaware of any communication requirements between the QPS and the ODPP in relation to DNA results. I do not know how the QPS communicates with the ODPP about errors or mistakes in the QHFSS laboratory.

Forensic medical examinations

102. SOCOs from my work units are called upon to assist in the collection of samples from forensic medical examinations. With the exception of intimate sample collection, the process for recording, collecting and packaging samples follows the same process as required by procedure CSE 100 Crime Scene Examination and CSE 101 Collection of Biological Evidence.

103. In the case of intimate sample collection, particularly sexual assault victim samples, SOCOs assist a Doctor or approved medical examiner collect these samples.

Property points

104. Property points in QPS stations are designated by the respective Assistant Commissioner of that Region. They can be physical offices staffed by designated property officers or large exhibit facilities or 'drop safes'.

105. Drop safes are secure storage locations that are available for after-hours deposits of exhibits, after they are entered onto QPRIME. FSG and SOCOs do not use Drop Safes for exhibits. FSG maintain our own property points within SOC offices and their hosted facilities.

106. It is my responsibility to oversee the audit processes of the FSG facilities in my area as part of our NATA accreditation requirements. An audit is also completed of our facilities exhibits as a part of the Ethical Standards Command (ESC) inspections program. These audits are independent of each other and take place at different times of the year. They are completed by different teams. A NATA technical audit is conducted by QPS SOCOs at an authorised practitioner level, overviewed by the regional FM. The focus of these audits is the technical examinations and case file details recorded in relation to approved procedures, laboratory equipment and authorised FSG officers.

107. The ESC inspection audit is completed by the FM or delegated FC in the respective region. These audits are not focussed on technical forensic procedural matters. Examples of the focus of this audit process include the correct storage of QPS firearms, operational equipment such as ballistic vests and official notebook retention. A common element of these audits is property, where exhibit holdings from forensic examinations are checked under both inspection programs.

108. As a part of our NATA Technical audit processes, at times some minor issues are raised with the method in which some SOCOs have completed their exhibit entries or packaging. Examples of these issues include an incorrectly transcribed reference number or an incomplete description of the exhibit item. As I overview a regular audit process requiring checks of exhibit holdings, I am able to confirm that instances of non-compliance are infrequent and minor. There have been no failures to regularly monitor and audit FSG property points in my area of responsibility.

Issues raised by QHFSS about collection

109. I have not received information regarding issues on the QPS sample collection for DNA testing. To my knowledge, the processes followed by QPS FSG were heavily informed by the requirements of the QHFSS analysis process to ensure we have minimal instances of contamination and lost evidence.

Sampling consumables

110. I am unaware of the brand name and types of the DNA consumables used by the QPS FSG. I understand that they are recommended by the FSG QMS and my team members that are responsible for ordering DNA consumables comply with these requirements.

111. I am not aware of the historic consumables used by the QPS for DNA sampling between 2015 and 2017.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 13th day of September 2022

Notice number: 2022/ 00040

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Duncan McCarthy

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement prepared either in affidavit form or verified as a statutory declaration under the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Monday 1 August 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 19th day of July 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00040

Schedule of topics for statement

Inspector Duncan McCarthy

Current Employment

1. What is your full name?
2. What is your current rank?
3. What is your current position with the QPS?
4. Outline the job description for your current position.
5. Attach a current CV.

Tertiary Qualifications

6. What are your tertiary qualifications?
7. Where and when did you obtain your tertiary qualifications?

Courses and/or diplomas

8. What courses and/or diplomas have you completed?
9. Where and when did you complete the courses and/or diplomas?

Board/Association Appointments

10. What board positions and/or appointments outside of the QPS have you held?
11. When did you first hold them?
12. When did you cease to hold them?

Employment Chronology

13. When did you first join the NSW Police Force and the QPS?
14. When did you start recruitment training?
15. When did you finish recruitment training?
16. When and where were you first posted/stationed?
17. To what position were you first posted/stationed?
18. Outline your career progression through the NSW Police Force and then the QPS.

19. Outline your current position, your responsibilities, who you report to and the staff that report to you.

Forensic Managers

20. What is the role of a Forensic Manager?

21. What qualifications are required to hold the position of Forensic Manager?

22. Outline the chain of command for each Forensic Manager.

23. How many Forensic Managers are there in Queensland, who are they, what rank are they, and what is their respective geographical jurisdiction/region?

Forensic Coordinators

24. What is the role of a Forensic Coordinator?

25. What qualifications are required to hold the position of a Forensic Coordinator?

26. Outline the chain of command for each Forensic Coordinator.

27. How many Forensic Coordinators are there in Queensland, who are they, what rank are they, and what is their respective geographical jurisdiction/region?

Scenes of Crime Officers and Scientific Officers

28. Explain the role and typical duties of a Scenes of Crime Officer (**SOCO**).

29. Explain the role and typical duties of a Scientific Officer (**SO**).

30. In your explanation, outline the fundamental differences between a SOCO and SO.

Crime categories and priority categories

31. Provide the definitions, and the purposes of the definitions, of *Major Crime* and *Volume Crime*.

32. Outline what the three DNA sample priority categories are, how the priority system works, what the expected turnaround times are, who introduced the system, when it came into operation, why it came into operation, and whether the system is still in operation.

33. Outline the DNA sample submission limits – if any – for *Major Crime* and *Volume Crime*, how the system works, the nature of the system (as a rule, principle, policy, law or guideline), how the system relates to the priority system, when the system was introduced and who introduced the system.

34. Outline the options for further testing and retesting for DNA, and the process by which that is requested and achieved.

QPRIME and the Forensic Register

35. Outline what the Queensland Police Records and Information Management Exchange (**QPRIME**) is, its purpose and how it works. Include when it came into operation and what, if any, use you have for it in your current role.

36. Outline when the Forensic Register (**FR**) was created and implemented by the QPS, what it did when it was first implemented – i.e. when just QPS were using it, and what it does now and how it works. Explain how it interacts with QPRIME.

37. Outline who has access to the FR, and who does not have access to the FR. Provide your opinion as to whether this access is sufficient and appropriate, or if it should be expanded or reduced. Explain how the FR is divided within the QPS (between SOCOs, SOs, Forensic Managers, Forensic Coordinators, Investigators etc…). Explain the interfaces.

Provision of photographs to QHFSS

38. Explain the process/method of collecting and photographing samples of biological material. Include what information is then uploaded to QPRIME and the FR and what is pushed across to the QHFSS FR interface. Include information about how this occurred from around 2008 when AUSLAB was in operation. Explain how you know this information.

39. After QHFSS started using the FR in 2017, identify what instructions, advice, training and/or guidelines you received from the QPS about providing photographs, related to biological samples, to QHFSS via the FR. If you were involved in providing such photographs prior to QHFSS using the FR, please identify what similar instructions, advice, training and/or guidelines you received at that time.

40. Explain whether you understood that QHFSS staff looked at the photographs.

Crime scenes

41. Explain the circumstances in which you are contacted to be involved with managing a crime scene.

42. Explain the process or chain of contact, starting with the first responding officer, that leads to you being contacted about a new crime scene. Explain what steps you will take once you are contacted. Include an explanation of the circumstances in which

you will typically attend the crime scene, and the circumstances in which you will not attend.

43. In what circumstances does a SO attend a crime scene, and in what circumstances do they not attend a crime scene? Include an explanation of who decides whether a SO attends, and at what stage they make that decision.

44. Since you commenced as a Forensic Manager, has there been an occasion or occasions in which no SO has attended a crime scene even though, normally, one or more SOs would attend such a crime scene?

45. Explain what you do once you attend a crime scene, and the role of SOCOs, SOs and the Forensic Coordinator.

46. Who determines what type of forensic samples to test for (eg DNA, fingerprint etc), where to take those samples from, and what method of sampling to use?

47. Once a sample is taken from the scene, who takes possession and/or responsibility for that sample? Who is responsible for transporting the sample away from the scene? In the area you manage, where are the samples first transported to once taken from a crime scene? Who has responsibility for the facility where the samples are then kept?

48. How are the samples then ultimately transported to Queensland Health Forensic and Scientific Services (**QHFSS**)?

49. How are samples of biological material, or pieces of evidence which will be tested for biological material, labelled and identified when collected and stored?

50. Identify all training policies, procedures and manuals that you are aware of that regulate the matters discussed in paragraphs 41 to 49, above.

Quality Management

51. Explain what a technical review is – its purpose and what it involves – and whether there are different types of technical review. Identify who conducts a technical review and the minimum rank a police officer must hold to conduct a technical review.

52. Identify which QPS policies, guidelines or similar documents (if any) concern technical reviews.

53. Outline how often technical reviews are conducted for major crimes, and any further detail about technical reviews specific to major crimes.

54. Outline how often technical reviews are conducted for volume crimes, and any further detail about technical reviews specific to volume crimes.

55. Outline any departures from policies and guidelines you are aware of with respect to how technical reviews are conducted, and who participates and completes a technical review.

56. Provide any data concerning the conduct of technical reviews and aggregate results of technical reviews since commencing in your role as Forensic Manager.

57. Explain what an administrative review is. Provide the same level of information and details about administrative reviews as is requested in relation to technical reviews at paragraphs 51 to 56, above.

58. Explain what a scene assessment is and what it involves. Identify which staff members must be subjected to a scene assessment, and how often scene assessments occur. Identify who conducts a scene assessment and the minimum rank a police officer must hold to conduct a scene assessment.

59. Identify which QPS policies, guidelines or similar documents (if any) concern scene assessments.

60. Outline any departures from policies and guidelines you are aware of with respect to how scene assessments are conducted, who participates and completes a scene assessment, and how often they are conducted.

61. Provide any data concerning the conduct of scene assessments and the aggregate results of scene assessments since your commencement as Forensic Manager.

62. Identify any further type of oversight that the Forensic Manager has over the work of SOCOs and SOs, if any.

63. Outline any training, proficiency testing, education and/or field assessments that regularly occur for SOCOs and SOs in relation to forensic biological sample collection. Who conducts it and how often is it conducted?

Backlogs and background to the priority system

64. Explain what backlogs in DNA testing you have experienced while in the QPS. Detail when the backlogs were, the causes of the backlogs and what was done to resolve the backlogs.

65. Are you aware of a change in thresholds for DNA testing that was implemented in 2018? If yes, explain your understanding of the change.

66. Has the backlog in DNA testing changed since 2018, and what is the length of the backlog currently?

Communication between the QPS and QHFSS

67. Outline how often do you meet with QHFSS representatives in a formal and regular way. What are these meetings called? What is discussed at these meetings? Who attends these meetings? Are minutes kept? Who keeps these minutes? Provide copies of these minutes for the meetings you have attended.

68. How are problems or errors that arise at QHFSS with respect to testing, analysis or results communicated to the you? Provide detail as to what type of matters are raised with you.

69. Provide an example of an issue raised with you.

Issues with "insufficient DNA" results

70. What is your understanding of the QHFSS' process at the quantitation stage of testing, and how do you have this understanding? Detail options for retesting and further testing and any changes in cut-off amounts (including when those changes were made). Explain the terms *No DNA* and *Insufficient DNA* and what options are available when presented with such results. Include how those options are exercised. Also detail you understanding of what concentration/micro-concentration is and when it was used.

71. Explain, broadly, the different types of results that are reported once the full testing occurs – eg full DNA match, mixed match, complex mixed profile etc.

72. Explain if, and how, the practice of QPS has changed regarding results that are reported as *insufficient DNA*. Identify when (month and year) this change was implemented.

73. Are you revisiting any *insufficient DNA* results that were received on or after February 2018 and were not submitted for retesting? If so, advise how are you revisiting those results and which (if any) samples are you submitting for further testing?

Issues with the withdrawal of results

74. Have you experienced a situation whereby QHFSS provide a positive DNA result/profile, and then, upon a request for a statement about that result/profile, QHFSS seek to withdraw the result?

    (a) If yes, please provide full details including when it first started and how many times it has occurred in cases you have been involved.

    (b) If no, please confirm.

75. Have you received any information from the DNA Management Unit about the retraction of results? If yes, attach a copy of the communication.

76. Outline the consequences (or potential consequences) for an investigation where there is a withdrawal of results by QHFSS after first reporting that there was a DNA result/profile.

Communication and training

77. Outline the methods of internal QPS communication surrounding DNA analysis and results. In particular, explain how the terms used (e.g. *No DNA detected* or *Insufficient DNA detected*) and the options available for further testing and/or re-testing are communicated to police officers such as investigators, SOCOs and SOs? How are the investigators, SOCOs and SOs advised and educated about the terms used and the options available to them when receiving such a result? Was any training about the terms used and the options available delivered to other police officers such as investigators, SOCOs and SOs?

78. Have you been advised of any errors or mistakes made in the QHFSS laboratory? How was this information communicated to you and other police officers such as investigators, SOCOs and SOs?

Communication by the QPS with the ODPP

79. How does the QPS communicate with the ODPP about issues raised by the DNA Management Unit or QHFSS about errors or mistakes in the QHFSS laboratory?

Forensic medical examinations

80. Identify the role, if any, you, or your staff, have in collecting, monitoring or dealing with DNA collection and results obtained from forensic medical examinations.

81. Have you observed any reoccurring problems or issues with the collection, processing or provision of DNA results obtained from forensic medical examinations?

82. Explain if DNA samples and/or results obtained from forensic medical examinations are treated any differently to other DNA samples and/or results

Property points

83. Explain the different types of property points at QPS stations. Explain the audit and quality management processes for property points managed by the FSG.

84. Explain your duties with respect to auditing property points in the geographic area which you supervise.

85. Have there been any reoccurring problems, or failures to follow policy, in the management of property points containing biological material in the geographic area which you supervise? If so, provide details.

86. Have there been any failures to regularly audit property points containing biological material in the geographic area which you supervise? If so, provide details.

Issues raised by QHFSS about collection

87. Have any issues been raised with you regarding the QPS' collection of samples for DNA testing, for example that the methods, systems, processes, protocols, guidelines, or standards are not being followed, or that there are systemic problems with the collection processes, systems or methods for the collection of samples for DNA testing? If so, provide details of the communication(s) raising the issue(s). If not, please confirm that there have not been any issues raised.

Sampling consumables

88. What sampling consumables are used by the QPS currently, and since 1 July 2017 (for example, brand and type of swab used, tape etc…)?

89. List the sampling consumables used by the QPS between 2015 and 2017.

EXHIBIT 2

Curriculum Vitae - Duncan McCarthy

Current position:
Inspector, Forensic Manager
South East Region, Forensic Services Group
Queensland Police Service

[redacted]

QUALIFICATIONS AND COURSES

Bachelor of Applied Science, Forensic Investigation, 2010
Canberra Institute of Technology, ACT
Certificate IV in Workplace Training and Assessment, 2010
Queensland Police Service (QPS)
Diploma of Public Safety, Forensic Investigation (Crime Scene Investigation), 2006 Canberra Institute of Technology, ACT
Certificate of Expertise in the Science of Fingerprints, 2003
AFFSAB & NSW Police, Australian Fingerprint Bureau
NATA Technical Assessors Program, 2012
National Association of Testing Authorities, Brisbane QLD

AWARDS

Australian Federal Police Operations Medal, Cawdor Clasp, Operation Cawdor, Thai Tsunami DVI Operation 2005
Queensland Police Commissioners Certificate (Operational) for diligent service in Operation Cawdor, Thai Tsunami DVI Operation 2005
Allan Hodda Memorial Award (research activity award)
Australian and New Zealand Forensic Science Society 2007

In the matter of the *Commissions of Inquiry Act 1950*

Commissions of Inquiry Order (No. 3) 2022

Commission of Inquiry into Forensic DNA Testing in Queensland

I, **Sean Michael LOUGHRAN,** of [redacted] Crime Unit, [redacted] state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

Background

1. I am a Detective Senior Constable presently attached to the [redacted] Crime Unit, [redacted] District Criminal Investigation Branch.

2. In [redacted], I was assigned to [redacted] Criminal Investigation Branch, [redacted]. I was the lead investigator and arresting officer in relation to the rape [redacted] of [redacted]

The rape complaint

3. On [redacted] I was working from 12:00pm till 8:00pm. Shortly after the commencement of this shift I was notified of a rape complaint that had been received by other officers [redacted].

4. [redacted]

5. [redacted]

[redacted]

....

Sean Michael Loughran Witness

PEACE (MAGISTRATES COURT) DEPARTMENT OF JUSTICE QUEENSLAND

The SAIK Procedure

6. Rape investigations that are recent and have no 'historic' element, such as this one, are relatively resource intensive in terms of the need to rapidly gather fresh evidence before it can be compromised or lost.

7. At the time of this investigation [redacted] it was standard procedure to transport sexual assault victims to the Royal Brisbane and Women's Hospital (RBWH) to meet with a forensic medical officer (FMO) to undergo the gathering of forensic medical evidence.

8. [redacted] Detective Senior Constable [redacted] transported her to the RBWH for the purposes of completing SAIK procedures, before returning to [redacted] complete a formal, typed statement.

9. [redacted] GP, [redacted] had also taken various medical samples during his initial medical investigation. These items were seized by police to support the investigation.

10. [redacted]

11. The SAIK was lodged as evidence at [redacted] Station at around 7pm [redacted] The following morning, at around 7am, it was transported b[redacted] to QHFSS for scientific examination.

DNA Results

12. [redacted], a forensic report was added to the QPRIME occurrence in relation to the samples taken by Dr [redacted] This advised that swabs taken by him were negative in relation to locating spermatozoa.

13. [redacted] a Forensic report was added to QPRIME in relation to swabs taken from the underwear by the FMO. These had the same result (negative).

[redacted]

....

Sean Michael Loughran Witness

PEACE (MAGISTRATES COURT) DEPARTMENT OF JUSTICE QLD

14. [redacted], a Forensic report was added to QPRIME in relation to high vaginal swabs taken by the FMO. These swabs indicated the presence of DNA and were uploaded into their system (referred to in the report as NCIDD).

15. Forensic reports continued to flow into QPRIME in this sporadic fashion in relation to evidence obtained from [redacted] and from the crime scene examinations [redacted]

16. Typically, DNA matches generate a 'TASK' attached to the crime report number [redacted] which is then forwarded the 'Case Officer' (me) and appears on their task list. In this way investigators are notified of results received.

17. The final forensic outcome-based report for this investigation was received on QPRIME [redacted]

18. As far as I recall, I have no recollection of being advised that any DNA results had 'changed' in status. Since receiving the request to provide information to this Commission, I have checked the forensic reports for this matter and note that several have added details regarding the 'Result being incorrectly reported'.

19. Those reports contain the same information that I recall during the investigation but now have added text, in red, stating '**Please note: FSS have advised the QPS that the result for this exhibit was incorrectly reported and is no longer valid'.** In addition, the following appears in the summary text field **INCORRECT RESULT**.

20. I have not been advised as to what had changed, other than that the results were incorrect.

21. I don't recall having any direct contact with the DNA Management Unit.

22. I don't recall any contact from QHFSS in relation to these results other than what had been uploaded to the QPRIME occurrence. The only other communications received was during the compilation of the brief of evidence when I sent out 'statement tasks' via QPRIME and subsequently received those statements for adding to the brief.

[redacted]

....

Sean Michael Loughran Witness

[redacted]

Impact of DNA results

23. I was aware, whilst conducting this investigation, that results received from QHFSS indicated the presence of a potential 'third contributor'. The following samples yielded this result:

(a) [redacted] Blood stain [redacted]t - POSSIBLE SUB-THRESHOLD INFORMATION "The presence of possible additional DNA was observed within the DNA profile obtained from this item. This possible DNA was not present at a sufficient level to be used for comparison purposes, as it was below QHFSS standard reporting thresholds. This sub-threshold information did not interfere with the interpretation of the reportable DNA components in the DNA profile obtained from this item"

(b) [redacted] Pillowcase - THREE PERSON MIXED DNA PROFILE

(c) [redacted] fitted sheet - THREE PERSON MIXED DNA PROFILE "This item/sample provided a mixed DNA profile that indicated the presence of DNA from two or three contributors. All of the reference DNA profiles associated with this case have been compared with this DNA profile separately. The statistical interpretation shows that some or all of the donors of the reference DNA profiles associated with this case are excluded as having contributed to this mixed DNA profile.

DNA samples seized by investigators was compared against these complex profiles. [redacted] a previous associate of [redacted] was compared, and his DNA was found to have not been contained within that mix. The report was however marked as 'incorrectly reported and is no longer valid'. Both [redacted] and [redacted] also had their DNA compared against the sample and found to have more likely to have contributed rather than not. Again however, these results were both marked as 'incorrectly reported and is no longer valid'

24. This had a significant impact on the direction of the investigation. [redacted] My thinking at the time was to cover off the possibility that the defendant had drugged [redacted] and raped her or that a third, unknown person had potentially been involved in the sexual assault.

[redacted]

Sean Michael Loughran

[redacted]

Witness

25. The defendant was initially charged with rape. The results suggested there may have been a potential 'third contributor' to the DNA located. That introduced the possibility that another person 'could' have been involved and meant there was sufficient doubt, from an evidentiary standpoint. On that basis, a guilty plea was accepted in relation to charges laid by the Director of Public Prosecutions (DPP) under the Criminal Code: s218(1)(c) Administer Drug etc for purpose of sexual act and s352(1)(a) sexual assault. The 'sexual assault' charge was essentially a substitute for the original 'rape' charge.

26. At the time of the trial the ODPP were in possession of all the investigative material including statements from forensic officers. Though I was overseas at the time, and the matter was being managed [redacted] in my absence, I understand the DPP expressed the view that the more successful outcome would be a plea to the substitute charge (of sexual assault) with the administer drug charge to remain as per the indictment.

Prior police investigation

27. [redacted]

TAKEN AND DECLARED before me at [redacted] in the State of Queensland this 15 day of September 2022

EXHIBIT 1

Notice number: 2022/00162

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Sean Loughran, Detective Senior Constable

Of: Queensland Police Service

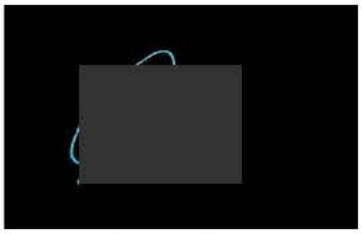
I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5:00pm on 16 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at admin@dnainquiry.qld.gov.au, with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.



12 day of September 2022

Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Commission of Inquiry into Forensic DNA Testing in Queensland

Ph 07 3003 9722 | enquiries@dnainquiry.qld.gov.au | PO Box 12028, George St Qld 4003 | www.dnainquiry.qld.gov.au

Notice number: 2022/00162

Schedule of topics for statement

Sean Loughran, Detective Senior Constable

1. Please explain your role in the investigation of the rape complaint made by [redacted].
2. How did [redacted] complaint first come to the attention of Police?
3. Please explain how [redacted] came to undergo a SAIK.
4. Please explain what you did with the SAIK once she had undergone that testing.
5. Please explain how the results of that testing were first reported to you.
6. Please explain how those results impacted on your investigation.
7. Please explain what the defendant was originally charged with.
8. When did you become aware that there had been a change in the DNA results?
9. What was the change in results?
10. What contact, if any, did you have with the DNA Management Unit and/or the DNA Analysis Unit of Forensic Scientific Services?
11. What, if any, impact did the change of results have on the outcome of this matter?
12. What, if any, contact did you have with the Office of the Director of Public Prosecutions about the DNA evidence in this case?
13. Had the defendant in this case previously been investigated by Police for other, unrelated, sexual offences? If so, please explain your understanding of what occurred in that case, and the basis for that understanding.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF ASHA LOUANN HAXTON

I, **Asha Louann Haxton,** of 200 Roma Street, Brisbane, Queensland 4001 state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

Current Employment

1. I am a Quality Officer of the rank of Senior Sergeant stationed at the Quality Management Section. I have over 13 years' experience in forensic examinations.

Qualifications and experience

2. I have the following tertiary education qualifications:

   (a) Bachelor of Exercise Science - Griffith University (1999);

   (b) Advanced Diploma of Forensic Investigations - Canberra Institute of Technology (2017);

   (c) Diploma of Forensic Investigations - QPS (2009);

   (d) Cert IV in Training and Assessment - Plenty training (2021).

3. I commenced duty with the Queensland Police Service (QPS) on the 13th of January 2003.

4. I completed my recruit training and was confirmed as a First Year Constable (FYC) on the 30th of July 2004.

5. I completed my FYC training in the Gold Coast District and was transferred to Broadbeach station at the conclusion of my first year, on the 29th of July 2004, for a three year tenure.

6. From February 2007 to November 2007, I undertook a secondment to the Gold Coast Forensic Crash Unit, where I undertook investigations into serious and/or fatal traffic crashes and industrial accidents.

7. On the 30th of July 2008, I was promoted to Senior Constable.

8. On the 25th of August 2008, I commenced working as a Scenes of Crime Officer (SOCO) at the Gold Coast Scenes of Crime (SOC) office, based at Nerang.

9. On the 28th of July 2014, I was promoted to Sergeant, Senior Scenes of Crime Officer, to undertake duties at the Logan Scenes of Crime office.

10. In April 2019, I commenced a secondment period at Training Strategy in Oxley. I was involved in the review of selected Competency Acquisition Program modules.

11. On the 27th of May 2019 I undertook a 3-month expression of interest at the Quality Management Section in Police Headquarters (HQ), undertaking duties relating to policy and procedure in the Forensic Services Group (FSG), as well as an involvement in the auditing processes for the NATA accreditation.

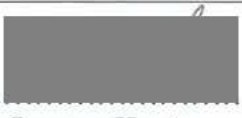
12. I remained at the Quality Management Section from this point, working in the training section, delivering training to Scenes of Crime students and Scenes of Crime Officers.

13. On the 23rd of May 2022, I was promoted to the position of Senior Sergeant, Quality Officer, to undertake the facilitation of the Scenes of Crime training. I am currently undertaking this role.

14. Attached and marked **'Exhibit 2'** is my CV (QP0073).

15. The structure of the Forensic Services Group (FSG) is best explained via the organisational chart.

16. Attached and marked '**Exhibit 3**' is the FSG organisational Chart.



....

Asha Louann Haxton Witness

17. The organisational chart is a visual representation of where each unit in FSG sits. The FSG falls under the Operations Support Command. The FSG comprises several units, undertaking Forensic Support for the QPS.

18. The Superintendent of FSG is the manager of the group. The Superintendent has numerous support staff that report to him/her directly.

19. There are 5 regions in the FSG:

    (a) Central Region;

    (b) Far Northern and Northern regions;

    (c) North Brisbane Regions;

    (d) South Brisbane and Southern Regions;

    (e) South East Regions.

20. Each of these regions has a Forensic Manager (Inspector) and Forensic Coordinator (Senior Sergeant), along with a Senior Sergeant or Sergeant OIC of each section.

21. There are 36 Scenes of Crime Sections, responsible for the examination of volume crime and major crime scenes. All Scenes of Crime officers work within a Scenes of Crime section.

22. From August 2008 through to November 2018, I was part of the Scenes of Crime section of the FSG. Each of these sections fall into one of the above listed regions. The specifics of this are visible in the Organisational Chart marked '**Exhibit 3**'.

23. Further sections falling under FSG include:

    (a) Coronial Support Unit;

    (b) Biometrics Unit;

    (c) Forensic Imaging and Electronic recording sections and Electronic Evidence Unit;

    (d) Quality Management Section;

(e) Scientific Section - There are 4 regional Scientific Sections, in addition to the Brisbane Section. Scientific are responsible for the examination of scenes and exhibits, generally relating to major crime, including homicide and sexual assault. These also placed throughout the regions, however, are managed by an Inspector based within Police HQ.

24. My current role is in the Quality Management Section.

Quality Management Section

25. The structure of the Quality Management Section is currently staffed as follows: -

Inspector Quality Manager- David Keatinge

(a) Senior Sergeant Quality Officer- Audits, Policy and Procedure- Jamie Cook

(i) AO3 Administrative Officer- I am not aware

(b) Senior Sergeant Quality Officer- Training- Asha Haxton

(i) Sergeant Quality Officer- training- Vacant

(c) Principal Research Officer- Matt Krosch

(d) Technical Support Officer (Forensic Register)- [redacted]

(e) AO5 - Team Leader Forensic Reception Centre- [redacted]

(i) AO4- Property Officer- I am not aware

(ii) AO3- Administrative Officer Forensic Reception Centre- I am not aware

(iii) AO3- Administrative Officer Forensic Reception Centre- I am not aware

(iv) AO3- Administrative Officer Forensic Reception Centre- I am not aware.

26. My current role in QMS is the continued development and delivery of the SOC development program. This includes the requirement to meet the standards of the QPS,

and those of the Diploma of Forensic Investigations - under the Registered Training Organisation (RTO) of the QPS.

27. My role description is as follows:

(a) Overview forensic examinations including monitoring of compliance with procedure to ensure the accuracy and reliability of reported results;

(b) Manage and maintain the administrative, financial, strategic planning and quality management activities and processes within the area of responsibility;

(c) Coordinate, monitor and review the education, training and development of staff, participate in performance assessments and ensure subordinates comply with the Service Code of Conduct;

(d) Participate in and/or coordinate multidisciplinary teams involved in ongoing monitoring of forensic services NATA compliance practices (where applicable);

(e) Provide advice including submissions and briefings on administrative and operational activities, relevant legislation, policies, practices and procedures;

(f) Establish and maintain communication channels with internal and external clients and stakeholders and represent the Service on various committees and advisory bodies;

(g) Initiate and promote the development, research and implementation of innovative processes and practices.

28. I report to the Inspector, QMS, currently Inspector David Keatinge. I have one sergeant who is to report to me, however this position is currently vacant.

29. The QMS is tasked with maintaining the quality management system for QPS forensic services, including:

(a) Development and management of forensic technical procedures;

(b) Development and management of administrative procedures associated with forensic services, i.e. case information management and document control;

(c) Ensuring procedures keep in step with scientific advances and reflect world best practice by conducting and managing appropriate research;

(d) Training and developing forensic officers and maintaining training records to meet the Standards of a Registered Training Organisation (2015);

(e) Determining standards for equipment and consumables to be used for forensic purposes;

(f) Ensuring compliance with ISO/IEC 17025 & AS 5388 in consultation with Regional Forensic Managers;

(g) Ensuring that forensic officers maintain competencies and undergo regular competency tests;

(h) Ensuring that the court testimony of forensic officers is regularly assessed;

(i) Coordinating an internal auditing program that monitors compliance with all NATA requirements and maintains accreditation;

(j) Ensuring that all non-compliances and opportunities for improvement are appropriately addressed;

(k) Consulting with regional managers in relation to the quality of forensic services and the technical activities of forensic officers within their regions; and

(l) Providing advice to the Superintendent, Forensic Services Group, in relation to the quality of forensic services and the technical activities of forensic officers within the regions.

QPS Scenes of Crime Officers and Scientific Officers.

30. The role of Scenes of Crime Officers is described in the current position description key accountabilities as follows:

(a) Perform forensic procedures and examinations as authorised by the Superintendent, Forensic Services Group;

(b) Examine incident scenes, attend post mortems, and collect, note and record evidence in various forms (for example photographic recording, development and recording of latent fingerprints, and the collection of physical evidence);

(c) Comply with all requirements of the QPS Forensic Services Quality System, including adherence to forensic procedures and maintenance of a case information management system as approved by the Superintendent, Forensic Services Group;

(d) Be constantly aware of the potential evidentiary value of all aspects of incident scenes;

(e) Appreciate the value of physical and other evidence and how its usefulness in court proceedings relates to the nature of the collections and recording methods used;

(f) Assume responsibility for the maintenance and overview of incident and crime scene integrity by preventing and reducing the potential interference of such scenes by inappropriate actions of other persons;

(g) Conduct follow-up examinations of evidence obtained and prepare documentary and other evidence for use in court proceedings including statements, audio-visual and exhibit presentations;

(h) Liaise with investigative and intelligence personnel outlining activities or crime trends observed and identified during examination of crime and incident scenes within the Division/District/Region;

(i) Set and maintain high standards of performance and conduct at all times, including answering enquiries from the public and members of the Service concerning all matters relating to the Divisional/District/Regional Scenes of Crime activities;

(j) Maintain accurate and timely records of tasks performed within the Division/District/Region by the Scenes of Crime Unit;

(k) Promote and maintain good relations by liaising with and providing advice to members of the community and other police.

31. Business as usual for Scenes of Crime Officers relates to the examination of volume crime offences, as well as some major crime offences. SOCOs are required to triage received requests for service to determine suitability for examination, and to determine time sensitive responses required.

32. SOCOs are also required to assist Scientific officers at major crime scene investigations, generally involving homicide and/or sexual assault.

33. To undertake the role of a Scenes of Crime Officer, officers are required to apply for the training program, and are accepted onto the program if deemed suitable, as positions become available.

34. Scenes of Crime Officers are required to complete a 12 month training package facilitated by QMS, which includes, theoretical and practical training and assessments, in both the workplace and training environment. Upon the successful completion of the Scenes of Crime Development Program, students are awarded the Scenes of Crime Development Program certificate and authorised by the Laboratory Director (Superintendent FSG), to undertake crime scene examinations.

35. Students are also awarded the Diploma of Forensic Investigations, under a Recognition of Prior Learning (RPL) pathway through the QPS as an RTO. The units of study relating to this Diploma RPL are:

(a) Contribute and comply with quality systems (POLFOR017);
(b) Maintain a safe forensic working environment (POLFOR023);
(c) Detect, record and collect forensic evidence (POLFOR024);
(d) Process forensic evidence (POLFOR025);
(e) Prepare and Present forensic Evidence (POLFOR026);
(f) Assess and control incident/crime scene (POLFOR027).

36. The delivered units and subsequent awarding of the qualification is audited through the QPS RTO.

37. All training delivered throughout the program, is developed on the back of the current workplace policy and procedure developed by QMS under the quality system. The training is developed to the ensure techniques taught and assessed meet the requirements of the QPS FSG quality system and is continually updated in line with procedural change.

38. Biological evidence training is delivered over a number of sessions, under varying conditions, with multiple assessment/proficiency requirements.

39. The outline for biological evidence training is attached and marked '**Exhibit 4**'.

40. All assessments relating to the biological evidence training, are contained within the attached assessments marked '**Exhibit 5**'. This exhibit contains the related pages from the Scenes of Crime Development Program assessment workbook. It indicates all requirements of practical assessment for biological evidence. In addition, there are theoretical examinations, which are performed online, via the online platform Microsoft Forms.

41. On conclusion of the 12 month program, students commence the proficiency testing requirements of the quality system as well as the required refresher programs to maintain authorisations.

42. Proficiency tests include-

(a) Participation in internal or external proficiency testing and collaborative trials

Example: <u>After the Fact:</u> After the Fact (AtF) is an online virtual crime scene assessment test for forensic science practitioners. Each designated lab is required to complete the AtF package.

(b) Direct observation of routine work procedures

Example: <u>Scene Assessment (PFS 51)-</u> Completed on a biannual basis. SOCOs are required to attend a scene under assessment from a qualified SOCO (Generally more senior). The scene is required to involve the collection of evidence, but does not specify biological evidence. The SOCO is assessed by the senior member under a number of criteria including:

[redacted]

(c) Evaluation of staff knowledge and understanding

(d) Independent assessment of work undertaken

Example: Technical review of individuals case files

(e) Court testimony monitoring

Example: Completion of court monitoring form, covering the following:

Personal Impression: Voice, Eye Contact, Demeanour, Appearance, Poise

Testimony: Confident, Response to Questions, Technical Knowledge, Clear and Concise, Objectivity, Impartiality, Ability to convey Scientific concepts in understandable terms, performance under cross examination.

(f) Peer review of case files

Files requiring statements are required to be peer reviewed. This includes the statement.

[redacted] [redacted]

....

Asha Louann Haxton Witness

(g) Client feedback

Example: Feedback email sent to involved persons on completion of interaction with FSG members.

43. To maintain authorisation or competence to perform a particular type of test, individual officers must have completed at least one of the above evaluations of their competency each year.

44. Scenes of Crime officers are required to complete a 12-month training package, which includes theoretical and practical training and assessments, in both the workplace and training environment in relation to the collection of biological evidence marked **'Exhibits 4 and 5'.**

45. The training program for Scenes of Crime officers is required to meet the standard for the qualification POL54115. The attainment of this is audited by the QPS under RTO authorization (as per paragraph 26 above).

46. I am not in a position to accurately or comprehensively detail the role and typical duties of a Scientific Officer. Senior Sergeant Letitia Everist holds a better understanding and knowledge of the roles and duties of Scientific Officers.

National Association of Testing Authorities (NATA)

48. I am not in a position to accurately or comprehensively identify each NATA administered standard related to collection, storage and/or testing of biological material. The Quality Manager holds a better understanding and knowledge of these requirements.

49. I am not in a position to accurately or comprehensively explain the frequency and nature of each occasion NATA checks the QPS accreditation of each of the standards. The Quality Manager holds a better understanding and knowledge of these checks.

50. I am not in a position to accurately or comprehensively identify other standards related to the collection, storage and/or testing of biological material. The Quality Manager holds a better understanding and knowledge of these accreditation bodies.

DNA collection

51. During crime scene examination, items are sampled for biological material on a case-by-case basis. Testing for biological material is only conducted when a specific biological material is being targeted.

52. This testing is conducted using presumptive screening methods as outlined in each related presumptive screening procedure:

    (a) CSE115- Combur Strips;
    (b) PST100- TMB test for blood;
    (c) PST101- ABA Card for Semen;
    (d) PST102- Luminol (Blood);
    (e) PST104- Seminal Fluid;
    (f) PST105- Forensic Light Sources;
    (g) PST106- Chemical Enhancement of Impressions.

53. Biological sampling is conducted under the premise of Locards principle-

    '*When two objects come into contact there will always be a transfer of small amounts of material from one to the other*'.

54. Several considerations may be made in relation to the sampling. This includes reference to the operational procedure manual (OPM) and the collection of DNA samples (OPM 2.25.17).

55. Sampling for biological evidence is conducted as per instruction in several procedures, some specific to evidence types-

    (a) CSE100- Crime Scene Examination;
    (b) CSE101- Biological Evidence [redacted];
    (c) Presumptive Screening Procedures (as listed above).

56. Best practice within QPS procedure requires that items be subsampled in situ, or in a designated DNA lab. CSE101 s.5- Samples for submission must be reduced to fit into a microcentrifuge tube (except Acid Phosphatase [redacted]

[redacted] positive areas, condoms, cigarette butts, chewing gum, syringes, sanitary pads and tampons). This process occurs during the subsample procedure.

57. Requirements in relation to the forwarding of whole items to QHFSS are contained within CSE101 s.8.3- '*As a general rule, whole items are not to be submitted to QHFSS.*'

58. The forwarding of these samples to QHFSS is triaged and considered on a case-by-case basis. Instruction in relation to the allowances of such, are contained in CSE101 s.8.

59. I am not in a position to accurately or comprehensively explain the practices in other state or territories within Australia as I am not aware of collection methods within other jurisdictions.

60. I am not aware of any changes to DNA results since the introduction of sub sampling.

61. I am not aware of any departures from policy in relation to biological evidence collection.

62. Biological exhibits and/or samples collected from a crime scene are suitably packaged following CSE101.

63. Samples are photographed, generally prior to departure from a scene.

64. Samples are transported by the Forensic Officer, or other designated officer (Investigating Officer, Criminal Investigation Branch etc) from the scene for lodging within a designated storage facility (Property Point). The recording of this is completed on the Forensic Register entries and QPRIME.

65. Samples are then triaged, and as required, forwarded to QHFSS. This process involves a procedure of checking, as contained in CSE101a- DNA sample quality checklist.

66. Samples can be forwarded in one of two ways-

(a) Postage through registered post (see CSE101. s.8.5);

(b) Hand delivered by QPS personnel (Forensic or otherwise).

67. Receipt of items at QHFSS is documented on the Forensic Register.

68. The Forensic Reception Centre is a designated single point of contact for the various specialist sections within FSG.

69. Officers are able to lodge and collect forensic exhibits, inquire as to the progress of cases and meet with forensic officers all from one location.

70. The Forensic Reception Centre is the central contact point for Forensic Units including Major Crime Unit, Ballistics Unit, Document Examination Unit, Analytical Services Unit, Forensic Imaging section (formerly Photographic Section), Electronic Recording Section and Fingerprint Bureau.

71. My only interaction or involvement with the Forensic Reception Centre relates to the booking of conference rooms and administrative tasks I may require to be completed.

72. Property points vary across the state, depending on location and function.

73. Property points are designated as such, by the OIC of the region or command or district officer.

74. Information in relation to property point types, storage allowances and security requirements is contained within the OPM s.4.8.

75. PFS 100- Quality Manual s.10.3 relates to the storage of exhibits within FSG sections. Internal audits are conducted on an annual basis, with random property selection for audit (QPRIME records v property on hand, packaging requirements met etc.)

76. In addition to this, sections will have local policy in relation to the auditing requirements of the property points, which are generally completed on a monthly basis. This involves the checking QPRIME records with exhibits contained within the FSG property point.

77. QPRIME is the official means of tracking exhibits between property point.

78. There is a formal FSG requirement for FSG property points to be audited annually a part of the QMS audit process.

79. Further requirements in relation to audit are contained within relevant policy (OPM etc.). Requirements vary for the varying storage facilities.

80. Annual ESC audits are conducted on FSG property points.

81. Local policy may require the more regular auditing of property points, however this is at a section or region level and is not audited by QMS.

82. I am not aware of any failures in relation to the auditing of property points.

83. I am not aware of any reoccurring problems or failures to follow policy in the management of the FSG property points.

84. The only issues that QHFSS have raised, that I am aware of, are in relation to the recording of exhibits on the Forensic Register and are not directly related to the specific collection of the items.

85. Details of these issues include: -

    (a) Exhibits being received at QHFSS that are still marked on the Forensic Register as 'no testing required' (NTR). This can occur as a result of initial triage of exhibits, and some items not being sent to QHFSS. If no result is obtained from the primary exhibits, and further testing is requested, subsequent items may be sent. It is at this point the 'NTR' checkbox is, on occasion, not being removed, which creates an inability for QHFSS to see the exhibit register relating. This is resolved by the box being unchecked by a QPS FSG member (Processes are being considered in relation to processes on the Forensic Register to reduce this error).

    (b) Explicit images being attached to exhibits and visible to QHFSS staff. Due to the requirement of substrate images being attached to biological exhibit entries, at times, images of deceased persons may be attached (e.g. A trace DNA sample from the neck of an alleged strangulation). There is an option for these images be marked explicit, which removes the ability for QHFSS to see the image. This is, on occasion, not completed, exposing QHFSS staff to the image.

Technical reviews, Scene assessments, 'Train the Trainer'

86. What comprises a 'Technical review' is explained in PFS 100- Quality Manual s. 13.5-

The technical review examines the process by which conclusions or opinions are reported in individual case records. Working notes and technical information including sampling, examination and testing information are checked against the relevant operational procedures and acceptable forensic practice. A technical review does not involve examination of the actual exhibits or items of interest. The technical reviewer checks that correct procedures are followed and that conclusions reached are supported by observations/results documented in the case file. A technical review does not shift primary responsibility for findings from examiner to reviewer, however the reviewer shares responsibility for any scientific findings they endorse.

87. Further information is contained within this section of the Quality Manual.

88. Technical reviews may not be documented as differing, however the requirements relating to the procedures and/or techniques involved will vary across specialist sections and specialist subject matter.

89. Anyone who conducts a technical review of a case file, must hold the authorisation in all techniques utilised as part of the examination.

90. The QPS policies, guidelines or similar documents that concern technical reviews include: -

(a) PFS 100- Quality Manual;
(b) FPB 100- Case File Procedures;
(c) SOC 100- Case File Procedure;
(d) SCI 116- Case File Management.

91. Technical reviews are conducted on all major crime completed by SOC officers. All technical reviews are recorded on the Forensic Register Case Management system.

92. Any case file that has a statement or report produced must undergo a technical review prior to the release of the statement/report.

93. I am not aware of the review process for other specialist sections.

94. Technical reviews are conducted on volume crime when a statement is produced.

95. Technical reviews may also be conducted on volume crime examinations for scenes of crime development program students, as part of their training and assessment. Students are required to have 10 files per month reviewed, during their training, which will generally include some volume crime offences.

96. I am not aware of any departures from policy or guidelines in relation to how and/or when technical reviews are conducted.

97. Technical reviews are completed by another examiner who is qualified in any of the relevant disciplines being reported on.

98. The number of technical reviews conducted can be drawn down from the Forensic Register.

99. Issues or concerns identified as a result of a technical review, are handled at a station level.

100. Concerns that are at a level meeting the requirements of an Immediate Action or Corrective Action, are to be recorded in Quality Improvement System on the Forensic Register.

101. An administrative review is conducted on all case records to ensure compliance with the relevant case file procedure.

(a) FPB 100- Case File Procedures;
(b) SOC 100- Case File Procedure;
(c) SCI 116- Case File Management.

102. All case records are to be administratively reviewed to ensure compliance with the relevant case file procedure. Any member of the QPS who is authorised to perform forensic procedures is authorised to conduct administrative reviews of case records.

Administration officers may also perform reviews after appropriate instruction and demonstration of competence.

103. A Scene Assessment (PFS 51) is completed on a biannual basis by all SOCOs. SOCOs are required to attend and examine a scene under assessment from a qualified SOCO (generally more senior). The instruction relating to the completion of the Scene Assessment form is as follows:

The following competencies must be assessed by an authorised officer. Once complete, an entry is to be made in the officers Proficiency or Training Record on the Forensic Register depending on the circumstances, and a signed (electronic or physical) copy of this form attached to the record.

104. The SOCO is assessed by the authorised member under a number of criteria including:

[redacted]

105. I am unable to comment on any use of this form by other forensic sections.

106. I am unable to comment on the proficiency testing completed for other forensic sections.

107. I am not aware of any departures from policies and guidelines with respect to scene assessments.

108. Data related to the completion of scenes assessments is contained on the Forensic Register. I do not have the capability to draw down this information.

109. The 'Train the Trainer' program was developed as a result of COVID isolation and budget constraints. Previously, all members of Scenes of Crime attended Police HQ or a designated location to undertake refresher training.

110. As a result of the above, this was removed as a viable option and an alternate was arranged. The 'Train the Trainer' program was developed.

111. Officers attending as the trainers are required to be SOCOs and Forensic Services Training Officers, of any rank. These officers are endorsed by their Officer-In-Charge or Forensic Manager to attend as a participant for a region or section.

112. Officers take part in the refresher program, delivered by Subject Matter Experts and QMS members. They are then given instruction on the refresher program to be delivered on return to their section, the units of study to be presented and are trained in the new techniques being offered.

113. These officers then to return to their given region and/or section and deliver the training to the members in the region.

114. Trainers are given access to presentations, practical assessment sheets and check sheets to complete on the delivery of the training.

115. The training delivered is generally refresher and as such, the majority is not assessed.

116. These refresher programs are run every two years, with the last one delivered in 2020. As a result of COVID and staffing, the next program is under development for 2023.

117. QMS undertakes annual audits of Forensic Laboratories. This relates to both Scientific and SOC sections. These audits are governed by the requirements of NATA accreditation and cover the recording and adherence to procedure during the examination of crime scenes.

118. QMS are responsible for overseeing the adherence to and completion of the requirements of the Quality Improvement System.

Terminology used by QHFSS

119. SOC students are given very little detail in relation to the reported results from QHFSS. This is to prevent the dissemination and/or reporting of incorrect information, due to a misinterpretation of results.

120. CSE 101 [redacted] gives further detail in relation to the reporting of results by Forensic Officers.

121. The options available for further testing are rarely raised from a SOC perspective, however, any queries in relation to DNA analysis results from any members, would be raised through the DNA Management Unit.

Equipment for DNA collection

122. The role of the QMS in the selection and purchase of equipment used in the collection, storage and transportation of biological material is outlined in the PFS 100 Quality Manual, specifically, at s.8.3.1 which states that the Quality Manager is responsible for coordinating the evaluation of equipment suitability and calibration.

123. s.8.3.4 of the Quality Manual states that prior to being used in case work, each new item of equipment must be tested to ensure that it is functioning correctly, is suitable for the purposes of the procedure it will be applied to and provides results within the accuracy requirements of the procedure. This may include testing with known samples. The trial or evaluation of all new types of equipment is to be approved and coordinated by QMS (further information is included in Procedure PFS 131 – Research and Equipment Approval). The results of such evaluations are recorded on Form PFS 80 – Equipment Evaluation Report which is to be retained by the relevant specialist area.

124. This process is overseen and approved by QMS and can be conducted by FSG members from any section through consultation with the Principal Research Officer (QMS). Any changes suggested as a result of research outcomes, are to be made in consultation with QHFSS also (see PFS 131 Research Approval and reporting Policy).

125. Guidelines have been developed in relation to the storage and transportation of exhibits. s.10 of PFS 100 Quality Manual relates to exhibit handling.

126. s.8.3.1 of the Quality Manual states that the Quality Manager is responsible for coordinating the evaluation of equipment suitability and calibration.

127. s.8.4.1 state that the NATA General Equipment Table and NATA Calibration Reference Equipment Table provide guidance on how often equipment should be calibrated or checked. These schedules outline the following:

(a) the nature of the calibration or check;

(b) calibration and check intervals for each instrument; and

(c) performance criteria to be identified.

128. Annual auditing is conducted by QMS to monitor this compliance.

129. Any identified issues in relation to equipment utilised is raised with QMS staff- namely the principal research officer, for actioning.

130. I am not aware of any reoccurring problems or failures to follow policy in the selection, use and maintenance of equipment for the collection, storage and transportation of biological material.

131. Implementation of changes in equipment or procedures relating to the collection of biological material would be considered on a case-by-case basis. It would be dependent on the type of change, and whether training is required as a result.

132. Methods available would be-

(a) Specific training – face to face, train the trainer, online delivery;
(b) Email advice;
(c) Forensic Register notification system.

Forensic Medical Examinations

133. The QMS does not have any involvement in the devising, implementing and/or monitoring practices of Forensic Medical Examinations. These examinations are

conducted by Forensic Medical Officers and QMS does not govern how these are completed.

134. Scenes of Crime officers may assist Forensic Medical officers, on request from the Forensic Medical Officer. Crime scene examination procedures would be followed, if assistance is requested and all examinations would be conducted under the direction of the Forensic Medical Officer.

135. Forensic Medical Examinations are legislatively addressed in OPM (s.2.23- Forensic Procedures) and the PPRA (Chapter 17, Part 2 ss.448-456). I am not personally aware of other legislation and/or policy that may govern the completion of Forensic Medical Examinations.

136. I have no overview of or involvement from a DNA collection quality management perspective regarding the training, policies, methods, systems, or processes surrounding intimate forensic examinations, forensic orders insofar as they relate to the taking of a DNA sample by court order, sexual assault kits or the taking of DNA samples from people charged with indictable offences.

137. Intimate Forensic Examinations are not conducted by FSG officers.

138. Forensic Orders as they relate to the taking of a DNA sample by court order do not specifically have to be undertaken by FSG officers. They can be completed by any qualified person (s 445 PPRA defines who is a qualified person).

139. Sexual Assault kits are not conducted by FSG officers. External packaging is barcoded by FSG for recording on the Forensic Register and transfer to QHFSS.

140. The taking of DNA samples from people charged with indictable offences is not specifically undertaken by FSG officers. They can be completed by any qualified person (s 445 PPRA defines who is a qualified person).

The Forensic Register

141. In my current role at QMS, I utilise the Forensic Register for the following purposes:

(a) I am required to instruct new SOCOs on the use of the Forensic Register and the requirements for the correct recording.

(b) I utilise the Forensic Register for the recording of training assessment and review.

(c) I use the Forensic Register on occasion as a means of communication to students.

(d) I am involved in the continued development of the Forensic Register and the rectifying of identified bugs and enhancement processes.

(e) I use the register for the recording of examinations whilst undertaking my proficiency testing for maintenance of my crime scene examination and latent fingerprint development authorisations.

(f) I occasionally use the register for the checking and recording of Improvement Actions and Corrective Actions on the Quality System.

142. The QMS use the register as a means to maintain/audit the FSG under the Quality system. The Forensic Register allows for the identification and recording of identified issues, and monitors the action taken to resolve such issues. The system allows communication between QMS and FSG sections in relation to these issues, and the action being taken.

143. Internal Audits on the Forensic Register are conducted on an annual basis.

144. External Audits (NATA attendance) are conducted on an 18-month basis. These include a surveillance audit and full re-accreditation audit, which alternate on an 18-month basis.

145. The procedure in PFS101 '*Corrective and Improvement Processes*' relates to the FSG and strives for continuous improvement through a variety of activities outlined in Procedure PFS 100 Quality Manual, which include:

(a) Actively seeking client feedback, both within the QPS and clients external to the QPS;

(b) Management review;

(c) Review of operational procedures;

(d) Risk assessment;

(e) Suggestions from personnel; and

(f) Internal quality assessments.

146. The '*Corrective and Improvement Processes*' are undertaken to eliminate the causes of nonconformities or other undesirable situations.

147. Corrective Action (CA) – Is used to deal with significant matters that require root cause analysis and monitoring to ensure effectiveness of action taken to address issue.

148. Improvement Action (IA) – Is used to deal with minor matters that do not require root cause analysis and can be readily resolved without monitoring.

149. From a training perspective, random audits of case files are conducted for students throughout the initial 12 month program. In addition to this, the review of a crime scene examination assessment is completed, providing specific advice to the individual student.

150. Internal audits are conducted annually at each of the 53 work units within the FSG which are accredited by NATA. External audits are conducted in each of 8 locations every 18 months. Results obtained during any of these audits can be supplied upon request.

151. Any CA or IA issued is recorded on the Forensic register- Compliance- Quality Improvement System.

152. The majority of requirements in relation to individual proficiency testing, and equipment auditing are monitored on the Forensic Register. There is no prompt in relation to this, however there is an audit review process that allows for a quick review on outstanding equipment or personal requirement.

153. All biological evidence consumables are recorded on the Forensic Register. There is a requirement to record batch numbers in relation to the receipt of consumables, and a relating requirement to record specific batch numbers on use of consumables within the exhibit register. This will prompt personnel if a there is an identified issue with the utilised consumable, as well as offering an ability to track the use of consumables.

154. I have very little knowledge in relation to the specifics of the wording of DNA results on the Forensic Register.

155. My only real focus is if an identification has been made.

156. The below diagram is an indication of what is recorded on the Forensic Register in relation to an identification being made. While there is further information contained within the exhibit register itself, it is not something I try to interpret.

Exhibits Collected +

Exhibits Collected	Latents Collected 1	Total Exhibits 2	⋮

[redacted]

157. Other reports maybe mixed profiles or no DNA detected. I do not try and interpret these further.

158. I do not consider or look at DNA results coming back from QHFSS on the Forensic Register on a regular basis in my current role as I am not required to collect biological samples. As a SOCO, this is entirely dependent on the job itself. Major crime is more of a possibility; however I would still not consider it regular. Volume crime even less.

159. I am not aware of any training regarding general QPS officers' understanding and interpreting results of a forensic analysis of biological material.

Sampling consumables and equipment

160. I am not in a position to accurately or comprehensively explain sampling consumables as I do not have access to this information. Inspector Keatinge and Dr Matthew Krosch hold a better understanding and knowledge of these matters.

161. I am not in a position to accurately or comprehensively detail sampling consumables information from 2003 to 2017. Inspector Keatinge and Dr Matthew Krosch hold a better understanding and knowledge of these matters.

162. I am not in a position to accurately or comprehensively explain the role of QMS in the decision as to what consumables and equipment is used for sampling or collecting material. Inspector Keatinge and Dr Matthew Krosch hold a better understanding and knowledge of these matters.

163. I am not in a position to accurately or comprehensively outline the processes, systems and methods for equipment selection and consumables for collection of samples and DNA testing. Inspector Keatinge and Dr Matthew Krosch hold a better understanding and knowledge of these matters.

Other matters

164. I do not hold sufficient knowledge to determine if a Forensic Review occurs, if the QMS would be involved.

Olivia McIntyre

165. I am not in a position to accurately or comprehensively detail Olivia McIntyre's position or role within the QPS. Inspector Keatinge or Inspector Neville would hold a better understanding and knowledge of these matters.

Asha Louann Haxton Witness

Troy O'Malley

166. I am not in a position to accurately or comprehensively detail Troy O'Malley's position or role within the QPS. Inspector Keatinge or Inspector Neville would hold a better understanding and knowledge of these matters.

167. I am not in a position to accurately or comprehensively detail Troy O'Malley's involvement in the development and implementation of the Forensic Register. Inspector Keatinge or Inspector Neville would hold a better understanding and knowledge of these matters.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 18th day of August 2022

Notice number: 2022/ 00028

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Asha Haxton

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement prepared either in affidavit form or verified as a statutory declaration under the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Friday 29 July 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 15th day of July 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00028

Schedule of topics for statement

Senior Sergeant Asha Haxton

1. State your current rank and position in the QPS.

Qualifications and experience

2. List your post-graduate qualifications, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Attach a current CV.

5. Explain the structure of the Forensic Services Group (**FSG**), and where the sections/units you worked in fit into the structure.

Quality Management Unit

6. Explain the structure of the Quality Management Unit and where you fit into that structure.

7. Explain your current role, including what staff you supervise and who you report to. Detail the purpose and functions of the Quality Management Unit (**QMU**).

8. Identify how many people work in the QMU.

9. Detail each of the staff roles within the QMU, and who currently holds those roles.

QPS Scenes of Crime Officers and Scientific Officers

10. Explain the role and typical duties of a Scenes of Crime Officer (**SOCO**). Explain the qualifications (if any) and training required for that role, including refresher programs and all units of study (theory and practical). Identify what organisation or unit conducts the training, and how the training is delivered. Explain what proficiency testing is applied.

11. Outline how, if at all, SOCOs are trained or instructed in policies concerning the collection and sampling of biological material.

12. Explain the role and typical duties of a Scientific Officer. Explain the qualifications (if any) and training required for that role, including refresher programs and all units of study (theory and practical). Identify what organisation or unit conducts the training, and how the training is delivered. Explain what proficiency testing is applied.

13. Outline how, if at all, Scientific Officers are trained or instructed in policies concerning the collection and sampling of biological material.

14. Identify what external standards the training programs for SOCOs and Scientific Officers comply with.

15. Explain what group, sections and/or units within the QPS contain SOCOs and Scientific Officers.

National Association of Testing Authorities (NATA)

16. Identify each NATA administered standard related to the collection, storage and/or testing of biological material for which QPS maintains accreditation. Advise what year each accreditation was initially obtained.

17. Explain the frequency and nature of each occasion NATA checks the QPS accreditation of each of those standards.

18. Identify any other standards related to the collection, storage and/or testing of biological material for which QPS maintains accreditation from a body other than NATA.

DNA collection

19. Explain how, when dealing with a crime scene, items are tested for biological material. Explain in what circumstances physical items suspected to contain DNA are sent to QHFSS, and in what circumstances QPS officers take samples and send a vial with the sample to QHFSS.

20. Identify which QPS policy or policies (if any) regulate the matters in the paragraph immediately above, and which policy or policies regulate the collection of DNA evidence more broadly.

21. Based on your knowledge, explain how the practices described in paragraph 19 compare to the practices in other Australian states and territories. Has the practice of sending a sample in a vial instead of sending the physical item to QHFSS affected the quality of DNA results that are returned?

22. Outline any departures from policy or policies concerning the collection of biological material that have occurred on more than one occasion.

23. Explain how and by who biological materials are transported from a crime scene, and where they are taken to and stored. Explain how and by who biological materials are taken from that storage point and provided to QHFSS.

24. Explain what the Forensic Reception Centre is, and your role with respect to the Forensic Reception Centre.

25. Explain the different types of property points at QPS stations. Explain the audit and quality management processes for property points managed by FSG.

26. Have there been any failures to regularly audit FSG property points? If so, provide details.

27. Have there been any reoccurring problems, or failure to follow policy, in the management of the FSG property points? If so, provide details.

28. Outline what issues or problems, if any, QHFSS have raised with you with respect to the collection of biological material and/or the submission of biological material to QHFSS.

Technical reviews, Scene assessments, 'Train the Trainer'

29. Explain what a technical review is – its purpose and what it involves – and whether there are different types of technical review. Identify who conducts a technical review and the minimum rank a police officer must hold in order to conduct a technical review.

30. Identify which QPS policies, guidelines or similar documents (if any) concern technical reviews.

31. Outline how often technical reviews are conducted for major crimes, and any further detail about technical reviews specific to major crimes.

32. Outline how often technical reviews are conducted for volume crimes, and any further detail about technical reviews specific to volume crimes.

33. Outline any departures from policies and guidelines you are aware of with respect to how technical reviews are conducted, who participates and completes a technical review.

34. Provide any data concerning the conduct of technical reviews and aggregate results of technical reviews since 2003.

35. Explain what an administrative review is. Provide the same level of information and details about administrative reviews as is requested in relation to technical reviews at paragraphs 29 to 34, above.

36. Explain what a scene assessment is and what it involves. Identify which staff members must be subjected to a scene assessment, and how often scene assessments occur. Identify who conducts a scene assessment and the minimum rank a police officer must hold in order to conduct a scene assessment.

37. Identify which QPS policies, guidelines or similar documents (if any) concern scene assessments.

38. Outline any departures from policies and guidelines you are aware of with respect to how scene assessments are conducted, who participates and completes a scene assessment, and how often they are conducted.

39. Provide any data concerning the conduct of scene assessments and the aggregate results of scene assessments since 2003.

40. Explain what the 'Train the Trainer' program is and what it involves. Explain which staff members conduct and which staff members participate in the 'Train the Trainer' program, and how often it occurs.

41. Identify any further type of oversight that the Quality Management Unit has over the work of SOCOs and Scientific Officers.

Terminology used by QHFSS

42. Outline the communication used/training/education provided by the QPS to its SOCOs, SO and investigators regarding the terminology used by QHFSS when reporting results from DNA testing (for example *Insufficient DNA*, *No DNA*, *Mixed Profile* etc...). Are there any policies or guidelines regarding the terms used, definitions and options for further testing or re-working of samples?

Equipment for DNA collection

43. Explain what role the Quality Management Unit has in the selection and purchase of equipment used in the collection, storage and transportation of biological material?

44. Explain what role the Quality Management Unit has in the auditing and/or quality management of the equipment referred to in the paragraph immediately above.

45. Identify any policies, guidelines or similar documents relevant to the matters discussed in the two paragraphs immediately above. Identify any NATA administered standard related to such equipment for which QPS maintains accreditation.

46. Have there been any reoccurring problems, or failures to follow policy, in the selection, use and maintenance of equipment for the collection, storage and transportation of biological material? If so, provide details and any available data about those problems or failures.

47. How are changes in equipment or procedures relating to the collection of biological material implemented in QPS?

Forensic Medical Examinations

48. Identify what role, if any, the Quality Management Unit has in devising, implementing and/or monitoring the practices, policies and procedures related to forensic medical examinations.

49. If the Quality Management Unit does have some role, have there been any reoccurring problems, or failures to follow policy, in the conduct of forensic medical examinations? If so, provide details.

50. Do you have any overview/involvement from a DNA collection quality management perspective regarding the training, policies, methods, systems, or processes surrounding intimate forensic examinations, forensic orders insofar as they relate to the taking of a DNA sample by court order, sexual assault kits or the taking of DNA samples from people charged with indictable offences? If yes, please detail. Attach any relevant policy or guideline covering the topics touching on collecting DNA in such circumstances, including training and auditing.

The Forensic Register

51. Explain the ways in which you use the Forensic Register in your position.

52. Explain the main ways staff in the Quality Management Unit use the Forensic Register.

53. What audits or quality management processes does the Quality Management Unit conduct of data held in the Forensic Register, including the frequency of those audits or quality management processes. Explain what 'Corrective Actions' and 'Improvement Actions' are and what role they play in audit and quality management processes.

54. Where and how are the results of those audits and/or quality management processes stored? Provide any data concerning the results of those audits and/or quality management processes.

55. Does the Forensic Register prompt other staff within QPS to conduct audits or quality management processes in relation to any process or item that is related to the collection of biological materials? If so, provide details. What is your understanding of the terms used by QHFSS to report DNA testing results (eg insufficient DNA, no DNA, complex mixed profile etc...)? Include in your answer the options available for further testing and/or re-working.

56. Do you consider or look at DNA results coming back from QHFSS on the Forensic Register?

57. Is the Quality Management Unit involved in any training for general QPS officers to understand and interpret the results of a forensic analysis of biological material?

Sampling consumables and equipment

58. What sampling consumables are used by the QPS currently, and since 1 July 2017 (for example, brand and type of swab used)?

59. List the sampling consumables used by the QPS between 2003 and 2017.

60. What role – including research – does the Quality Management Unit have in the decision of what consumables and equipment used for the sampling and collecting of biological/forensic material for DNA testing?

61. Outline the processes, systems, and methods for electing what equipment and consumables to use for the collection of samples for DNA testing.

Other matters

62. If a Forensic Review occurs in a particular investigation, is the Quality Management Unit involved in any way in the Forensic Review? If so, outline the nature of that role.

Olivia McIntyre

63. Who is Olivia McIntyre and what position does she hold within the QPS? What role does she perform? What are her responsibilities?

Troy O'Malley

64. Who is Troy O'Malley? What role/position did he occupy within the QPS and when?

65. What involvement did Troy O'Malley have with the development and implementation of the Forensic Register?

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

ADDENDUM STATEMENT OF DAVID HAROLD NEVILLE

I, **David Harold Neville,** of 200 Roma Street, Brisbane, Queensland state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 207'** is a copy of that notice.

Memorandum of Understanding

1. I recall attending a meeting around August or September 2019 involving Bruce McNab, John Doherty and Cathie Allen where the development of a Memorandum of Understanding (MOU) was discussed. I recall John advising that they planned to develop a generic agreement that included provisions for all the services that Queensland Health Forensic and Scientific Services (QHFSS) deliver to the QPS. He said that there would be a schedule attached for each particular service that included costs and performance criteria. He indicated that they would seek agreement on the content of the MOU before the schedules were completed.

2. On 7 January 2020, the office of Superintendent McNab forwarded a copy of a draft MOU to me and requested that I provide comment. I provided the following comment:

   (a) Does the execution of this MOU preclude us from procuring services from an alternative service provider should the QPS desire to do so due to cost of performance issues. In the past we have explored having a second service provider for business continuity purposes. Would the MOU preclude this?

   (b) Clause 8.3 indicates that QH will cover the cost of travel within 300km for court. Does this mean the QPS will cover any other travel? This is something we currently do not do and we are not funded for it.

[redacted] ..... [redacted] .....
David Harold Neville Witness

(c) Clause 19.1 states the QPS will provide information and reports required under a service schedule. There is no reciprocal requirement for QH. The QPS currently reports nothing to QH so I am not sure what they need this for.

(d) Clause 19.2 requires QH to maintain records of costs and expenses. A request for this type of information from QH was recently declined. This clause should include "and be made available to the QPS upon request".

(e) Clause 8.2 indicates that the fees will be reviewed annually and clause 17 states it takes 6 months to terminate the MOU. If QH increases the fees, are we locked into paying that fee for 6 months before we can opt out?

3. A copy of the draft MOU is attached and marked **'Exhibit 208'**.

4. I have had no further involvement in the development of the MOU. I believe that some further discussions may have occurred involving Bruce McNab, Assistant Commissioner Brian Connors and members of the Queensland Health (QH) Executive. I was not involved in those discussions. I believe that the process stalled because the details of costs and performance criteria were not provided by QHFSS.

Forensic Register

5. The Forensic Register (FR) was developed in-house by Mr Troy O'Malley. Development commenced in 2003. Troy was an Acting Inspector within the Forensic Services Group. Development continued with functionality increasing based on business needs. In about 2005 an interface was developed that enabled the FR to exchange information with AUSLAB which was the case management system used by QHFSS. From this time both QPS and QHFSS shared common barcodes as exhibit identifiers.

6. The QPS provided the FR to police services in other jurisdictions including Tasmania, South Australia and Western Australia. It was provided free of charge on the understanding that QPS would not provide technical support. I understand that Troy was given outside employment approval to work for 'Bdna' who was contracted by some of those other agencies to implement the FR and provide ongoing support.

....

David Harold Neville Witness

7. Between 2015 and 2017 the FR was further developed to include functionality for QH. I believe this work was undertaken by Troy at no cost to QH. The developments included enhancements to facilitate the operations of the QHFSS DNA Laboratory. The DNA Laboratory commenced using the FR in around 2017. From this time QPS and the QHFSS DNA Laboratory shared the FR as a common system.

8. On 16 February 2018, Troy O'Malley separated from the QPS and commenced working for 'Bdna' full time. With the departure of Troy, the ongoing internal support and development of the FR was unsustainable. As a result, the QPS commenced a tender process to outsource support and development of the FR. Bdna was awarded the contract with the intellectual property of the FR being transferred to them as part of the IP agreement executed on 1 October 2020. There is also a ten-year support agreement between Bdna and QPS.

9. The QPS has some capacity to undertake its own data extraction which is limited to the parameters of search fields contained in the same screen. Requests for more extensive data extraction must now be made through Bdna. This may incur a cost depending on the time involved.

10. Under the terms of the support contract, the QPS pays Bdna for the support of both the QPS and QHFSS. The QPS then invoices QHFSS for its share of ongoing support. I believe that QHFSS is free to engage Bdna directly to undertake development including data extraction.

11. The information pertaining to each sample submitted to QHFSS is recorded on the Exhibit Record in the FR. This includes:

    (a) the unique barcode identifier used by both QPS and QHFSS,

    (b) the details of the collecting officer,

    (c) the date of collection,

    (d) the location collected from,

(e) a description of the item,

(f) the person the items relates to (victim, suspect, unknown),

(g) the results of presumptive screening,

(h) information on hazards, and

(i) images of the area sampled.

Sexual assault investigation kits (SAIKs)

12. QH is responsible for the provision and use of SAIKs.

13. QH is responsible for the development of the content of the SAIK. I believe the SAIKs are developed in-house at QHFSS.

14. QH provide the SAIKS to the QPS for distribution to investigating police officers. A store of SAIKs is maintained in each police district.

15. I am not aware of any agreement between QPS and QH in relation to the supply of the kits.

16. I understand that QHFSS provides the kits to the QPS for distribution throughout the state to investigating police officers. When a sexual assault complaint is made, police provide the Forensic Medical Officer (FMO) with the SAIK to facilitate the forensic medical examination. Upon completion of the examination, the SAIK is handed back to the investigating officer who arranges delivery to QHFSS. The relevant parts of the Operational Procedures Manual are attached and marked **'Exhibits 209 and 210'**.

17. To my knowledge, the SAIK currently does not contain equipment for the collection of reference samples from victims. I know that because the QPS has been attempting to get the SAIK modified to include this equipment.

18. I am not aware if the SAIK is the same equipment that is used to collect a sample from an accused person. This is a question that would need to be asked of QH.

19. I first raised a desire to explore the inclusion of reference collection materials in SAIKs on 29 August 2018 when I sent an email to Inspector George Marchesini, Child Trauma and Sexual Crime Unit. This was around the time I raised the issue with Cathie Allen. A copy of the email chain with George is attached and marked **'Exhibit 211'**.

20. On 6 September 2018, I contacted Dr Adam Griffin. At the time he managed the Forensic Medical Officers (FMOs) within QH. I asked about the prospect of the FMO taking a reference sample. He advised this was not something he was interested in pursuing. He advised of a number of risks including relating to contamination and training of FMOs. Dr Griffin gave me the impression that he was opposed to the idea of FMOs taking reference samples. As a result, I sent an email to Cathie and Craig Russell (Acting Executive Director, QHFSS) to advise that I was not pursuing the matter. A copy of that email is attached and marked **'Exhibit 212'**.

21. On 7 September 2018, I sent an email to all Forensic Services Group managers that included some suggested changes to the Operational Procedures Manual to ensure police officers collected reference samples from victims of sexual assaults. Inspector Peter Bushell responded drawing my attention to the 2014 interagency guideline titled, "*Response to Sexual Assault: Queensland Government Interagency Guidelines for Responding to People who have experienced Sexual Assault*". This document was designed to ensure agencies work together in the best interest of the victim. The policy states DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the forensic medical examination. A copy of my email and Peter's response is attached and marked **'Exhibit 213'**.

22. I believe that Superintendent McNab may have followed up the matter based on information provided to him by Peter Bushell. This included raising the matter to Assistant Commissioner Alan McCarthy, Operations Support Command.

23. I understand that on 27 September 2018, Alan McCarthy met with Michael Lok and Craig Russell of QH and the matter of reference samples in SAIKs was discussed. Alan emailed me, requesting advice on the issues pertaining to SAIKs, to which I responded on 28 September 2018. A copy of my response is attached and marked **'Exhibit 214'**.

24. On 7 November 2018, I received an email from Cathie seeking advice as to whether the QPS had told its staff that QHFSS had issued a directive that they would not accept SAIKs without a reference sample. I responded that this was not correct and drew her attention to the 2014 interagency guideline. I advised I would like to work towards complying with that policy. A copy of her email and my response is attached and marked **'Exhibit 215'**.

25. I did not have any other involvement with respect to the inclusion of reference sample equipment in SAIKs until about November 2021 when Superintendent Dale Frieberg sought advice. I provided her the same advice that I had previously provided Alan McCarthy. During November and December 2021, I attended a number of meetings relating to this issue involving Dale Frieberg, Peter Bushell and David Briese of QPS; and Lara Keller, Cathie Allen and Adam Griffin of QH. My understanding is that Adam Griffin continued to oppose the involvement of FMOs in the collection of reference samples and an impasse was reached. As a result, I believe that Dale prepared an Executive Briefing Note to raise the matter for the information of the Womens' Safety Justice Taskforce.

Sexual assault investigation kits – other issues

26. I am not aware of any other issues or problems about SAIKs and/or reference samples.

27. I have not been involved in the development or adoption of any new policies or guidelines other than already discussed. I have had no further involvement with any working group regarding SAIKs or relevant policies relating to them.

28. The only improvement I would like to see with the SAIK is the inclusion of reference sample collection equipment.

TAKEN AND DECLARED before me at Brisbane in the State of Queensland this 19th day of September 2022

Notice number: 2022/00137

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: David Neville

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **12.00pm on 19 September 2022** by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 6th day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice number: 2022/00137

Schedule of topics for statement

Inspector David Neville

Queensland Police Service (QPS)

Memorandum of Understanding

1. Explain your involvement in the negotiation of a Memorandum of Understanding between the DNA Unit and the Queensland Police Service for the processing of crime scene samples. Include in your answer your understanding of:
    a. Who is/was involved in any negotiations;
    b. the reasons for any delays in formalising the Memorandum of Understanding.

Forensic Register

2. Explain how the Forensic Register was developed and implemented.
3. Explain how the Forensic Register was procured by the Queensland Police Service.
4. Explain how the Forensic Register was procured by the DNA Analysis Unit.
5. Explain any involvement QPS staff had in the procurement or implementation of the Forensic Register at the DNA Analysis Unit.
6. Explain how the QPS extracts data from the Forensic Register.
7. Explain your understanding of how staff at the DNA Analysis Unit extract data from the Forensic Register.
8. Explain what information or material police upload to the Forensic Register for each sample submitted to FSS for DNA Analysis and where in the Forensic Register that information or material is available.

Sexual assault investigation kits (SAIKs)

9. Identify who, or what organisation, is currently responsible for undertaking forensic medical examinations using sexual assault identification kits (SAIKs).

10. Identify and attach any current QPS policy, procedure or manual regarding the use, distribution and transportation of SAIKs.

11. Who determined the content of the current SAIK model? Who makes the SAIKs? Identify and attach any agreement, policy or memorandum of understanding concerning these matters.

12. Does QPS keep and store SAIKs? If so, where?

13. Who is responsible for providing a SAIK to the person administering a SAIK on a complainant or accused? Who is responsible for transporting a completed SAIK from the place of examination to QHFSS? Identify and attach any policies relevant to these matters. Explain how a SAIK is usually transported from the site of examination to, ultimately, Queensland Health Forensic and Scientific Services (QHFSS)?

14. Are SAIKs used by persons conducting forensic medical examinations on accused persons? Or is some other equipment used? If some other equipment is used, identify that equipment.

15. To your knowledge, does the SAIK contain equipment that is to be used to take a reference sample? Who is currently responsible for taking a reference sample from a person on whom a SAIK is conducted? If it is not the person who administers the SAIK, what equipment is to be used to take a SAIK? Attach any policies, procedures, MOU or emails which you sent or received that outline who is responsible for taking reference samples. Outline any changes in policy or practice on this issue since 2018.

Sexual assault investigation kits – other issues

16. Apart from any matter already discussed in full above, identify if there were are any issues, problems or matters about SAIKs and/or reference sampling that have come to your attention while you have worked in the FSG Quality Management Section, the DNA Management Section and/or the Biometrics Unit? If so, provide details of those matters, who raised them, and when they came to your attention. Include any current or ongoing issues.

17. Explain what actions you have taken, if any, in response to those matters being raised with you? Were you involved in developing or adopting any new policies or guidelines about SAIKs and/or reference sampling? If yes, provide details.

18. Are you currently involved in any working group regarding SAIKs or involved in developing or adopting any new policies or guidelines about SAIKs and/or reference sampling? If yes, provide details.

19. Is there any other change or improvement to the use, content or availability of SAIKs and/or forensic medical examinations that you would like to see occur? If yes, provide details.

Queensland
Government

MEMORANDUM OF UNDERSTANDING

for

FORENSIC SCIENCE SERVICES

Between

STATE OF QUEENSLAND
acting through Queensland Health

and

STATE OF QUEENSLAND
acting through Queensland Police Service

This **Memorandum of Understanding for Forensic Science Services** is made:

BETWEEN **STATE OF QUEENSLAND acting through Queensland Health** of 41 O'Connell Terrace, Bowen Hills, Queensland 4006

('QH')

AND **STATE OF QUEENSLAND acting through Queensland Police Service** of 200 Roma Street, Brisbane, Queensland 4001

('QPS')

BACKGROUND

A. The Parties wish to ensure the continued safety of the Queensland community through the provision of forensic services.

B. QH performs certain forensic services upon request by QPS.

C. The Parties seek to maximise collaboration to ensure the sustainability, efficiency and effectiveness of the delivery of forensic services.

D. The Parties have entered into this MOU to establish:

a. the arrangements under which QH will provide forensic services and QPS will pay for those services; and
b. the framework by which the parties will collaborate and consult in relation to:
    i. Services which are delivered;
    ii. matters which may effect the delivery of forensic services;
    iii. opportunities to expand the scope forensic services;
    iv. opportunities to collaborate into relation to scientific research.

THE PARTIES AGREE AS FOLLOWS:

1. INTERPRETATION

1.1. In this MOU, the following definitions apply:

'Business Day' means any day other than a Saturday, Sunday or public holiday in Brisbane.

'Confidential Information' means, information of, or supplied by the disclosing party that:

(a) is by its nature confidential;

(b) is designated as confidential; or

(c) the receiving Party knows or ought to know is confidential.

'Fees' means the fees that QPS is required to pay to QH for the supply of Forensic Services under a Service Schedule.

'MOU' means this document and all of its attachments.

'New Material' means all material that is created by a Party for the purpose of this MOU.

'Parties' means QPS and QH.

'Personnel' means a Party's officers, employees, contractors and agents.

'Services' means the forensic science services provided by QH to QPS under a Service Schedule.

'Service Schedule' means a Service Schedule generally in the form of the template in Schedule 2 that is agreed by the parties.

2. TERM

2.1. This MOU will commence on the date it is signed by the last Party and will continue until:

(a) the parties agree in writing to terminate this MOU; or

(b) a party terminates it under clause 17.

2.2. The Parties agree to review the operation and outcomes of this MOU within 60 days after the end of each anniversary of the commencement of this MOU.

3. NATURE OF MOU

3.1. This MOU is not intended to create legal relations between the Parties or create legally enforceable rights and obligations.

3.2. The objective of this MOU is to outline the roles and responsibilities of the Parties in relation to the delivery of the Services.

4. MOU COMMITTEE

4.1. The Parties will establish a MOU Committee.

4.2. The MOU Committee will:

(a) be constituted by persons, of appropriate seniority, qualifications and experience, as agreed between the parties from time to time;

(b) meet at a frequency as agreed between the parties from time to time, though in default of agreement, will meet quarterly;

(c) generally, operate on an informal basis, though may adopt any procedures and processes as agreed between the parties from time to time;

(d) consider any matter relevant to the efficient and effective delivery of forensic services, including but not limited to:

i) operational forecasting;

ii) resource planning;

iii) system risk management;

iv) common systems, practices and process; and

v) any other matter which may have an impact on either Parties' obligations, processes or resources.

5. COOPERATION

5.1. Each Party agrees, in performing its obligations under this MOU, to:

(a) diligently carry out its obligations;

(b) not cause unreasonable delays to the other Party's performance of its obligations;

(c) act reasonably and in good faith in performing its obligations;

(d) manage and mitigate risks that may arise in connection with the performance of its obligations;

(e) notify the other Party of any potential delays of difficulties in performing its obligations as soon as is reasonably possible;

(f) ensure its Personnel have the training and skills to effectively contribute to the performance of the obligations;

(g) ensure that its Personnel involved in performing their obligations meet the performance standards expected of a person usually occupying the position; and

(h) ensure that its Personnel and any other representatives of the Party that are involved in any way with the Services or the Forensic Register comply with all relevant laws.

5.2. Each Party is responsible for providing, at its own cost, any facilities, equipment and support it needs to perform its obligations under this MOU. Any facilities or equipment provided by a Party remains the property of that Party.

5.3. Each Party agrees to provide the other Party with:

(a) such information, assistance, support, advice, Personnel and records as may reasonably be necessary to facilitate the performance of obligations under this MOU; and

(b) such reasonable training as may be necessary to assist in the completion of any necessary tasks under this MOU to the extent that the request for training is reasonable and the Party to which the request is made has resources available.

6. SCIENTIFIC COLLABORATION

6.1. The Parties agree to pursue opportunities to collaborate in matters of mutual benefit to the Parties or benefit to the Queensland community including:

(a) basic and applied evidence-based research; and

(b) the development of research areas and projects including:

i) identification of business improvements, with the aim of eliminating inefficiencies and reduce the cost of the provision of forensic services; and

ii) identification of trends and market influences which support the development of analytical methods, prevention strategies, policies and legislation that inform training and professional practices.

6.2. The Parties will comply with any laws, research ethics requirements, confidentiality and privacy requirements and policies which may apply to any proposed research.

6.3. The Parties may adopt any processes or take any steps reasonably necessary to give effect to scientific collaboration.

7. PERFORMANCE OF SERVICES

7.1. The Parties' intention is for this MOU to set out the framework under which the Services will be delivered, but particular details of the Services will be set out in a Service Schedule.

7.2. QH agrees to deliver Services in accordance with the requirements set out in the Service Schedules that are agreed and signed by both Parties.

7.3. QPS will:

(a) work cooperatively with QH to enable QH to deliver the Services; and

(b) fulfil any obligation placed on it under a Service Schedule.

7.4. QH will perform the Services.

8. FEES AND COSTS

8.1. QPS will pay the Fees to QH for the Services as set out in the relevant Service Schedule.

8.2. Unless otherwise specified in a Service Schedule, the parties agree to review the Fees annually within 60 days after the end of each anniversary of the commencement of this MOU.

8.3. QH will fund the following costs associated with delivery of the Services:

(a) all travel costs and expenses incurred by QH personnel who undertake attendance at court within 300km from Brisbane CBD in connection with performance of Services; and

(b) any other costs specified to be funded by QH in a Service Schedule.

8.4. QPS will pay the Fees to QH monthly in arrears via electronic transfer to an account nominated by QH in writing for Services performed in the previous month.

8.5. QH will submit monthly invoices for the Fees to QPS within 5 Business Days after the end of each calendar month and QPS will make payment within 30 days after receipt of an invoice.

9. GST

9.1. In this clause, words used which have a defined meaning in the GST Law, have the same meaning as in the GST Law unless the context indicates otherwise.

9.2. Unless expressly indicated, the consideration for any supply under or in connection with this MOU is exclusive of any GST.

9.3. To the extent that any supply made under or in connection with this MOU is a taxable supply, the recipient must pay, in addition to the consideration to be provided under this MOU for that supply, unless it expressly includes GST, an amount equal to the amount of that consideration, or its GST exclusive market value, multiplied by the rate at which GST is imposed in respect of the supply. The additional consideration is payable at the same time and in the same manner as the consideration to which it relates.

9.4. The supplier must issue a tax invoice to the recipient of the supply prior to the time of payment of the GST inclusive consideration or at such other time as the Parties agree.

9.5. Where an adjustment event arises under on in connection with this MOU, the supplier must issue to the recipient an adjustment note in accordance with the GST Law within 14 days of becoming aware of the need to make the adjustment. If, as a result of an adjustment event, an additional amount is required to be paid by the recipient this payment will be made subject to an adjustment note being issued by the supplier.

9.6. If either party is entitled under this MOU to be reimbursed or indemnified by the other party for a cost or expense incurred in connection with this MOU, the reimbursement or indemnity payment must not include any GST component of the cost or expense for which an input tax credit may be claimed by the party being reimbursed or indemnified.

10. INSURANCE

10.1. Each party will obtain and maintain such insurances or self-insurance arrangements as it would normally maintain when carrying out the types of activities contemplated by this MOU.

11. PUBLIC SECTOR OVERSIGHT LAWS

11.1. The Parties acknowledge that they are required to comply with applicable laws, including laws relating to the oversight of public sector agencies, including laws relating to audit, financial matters, information privacy, public records, public sector ethics, the public service and the right to, or freedom of, information.

12. INFORMATION PRIVACY & CONFIDENTIALITY

12.1. Each Party will comply with applicable privacy and confidentiality laws, including the *Information Privacy Act 2009* (Qld).

12.2. Each Party will immediately notify the other on becoming aware of any breach of privacy laws in connection with this MOU.

13. CONFIDENTIALITY

13.1. Each Party must not, and must ensure that its Personnel do not, use or disclose the Confidential Information of the other Party without the other Party's consent, other than in accordance with this clause.

13.2. Each Party may disclose the other Party's Confidential Information:

(a) to its Personnel to the extent necessary for the performance of the arrangement, provided that the disclosing Party makes such persons aware that the information is confidential;

(b) if specified or directed by the other Party;

(c) where required by law; or

(d) where this MOU requires disclosure to a third party.

13.3. Each Party must keep the other Party's Confidential Information in a secure location so that no unauthorised person is able to gain access to it.

14. INTELLECTUAL PROPERTY RIGHTS

14.1. Nothing in this MOU affects intellectual property rights in any existing material.

14.2. As between the Parties, any New Material created by a Party in the course of performing its obligations under this MOU will be owned by that Party.

14.3. Each Party grants to the other a non-exclusive, royalty-free licence to use, reproduce, adapt and modify its material for the purposes of Queensland Health complying with its obligations under this MOU.

14.4. This clause is subject to any specific term about intellectual property rights in certain material set out in a Service Schedule.

14.5. The Parties acknowledge that:

(a) the Queensland Government owns the Forensic Register and QPS is the custodian of it; and

(b) QH owns any of its client data that is contained in the Forensic Register.

15. GENERAL PROVISIONS

15.1. This MOU may be varied at any time by a written MOU signed by both Parties. The Parties may vary a schedule to this MOU by signing and dating a substitute schedule or an additional schedule.

15.2. A Party will not by virtue of this MOU be or become an agent or partner of the other Party or a joint venturer with the other and must not represent itself or allow itself to be represented as such.

15.3. Neither Party will assign or subcontract its obligations under this MOU without the prior written consent of the other Party. If a Party is permitted to assign or subcontract its obligations under this MOU, that Party will remain responsible for its obligations under the MOU.

15.4. Each Party will bear its own costs incurred in negotiating and settling the terms of this MOU.

15.5. This MOU may consist of a number of counterparts and, if so, the counterparts taken together constitute one document.

15.6. Any notice or other communication to be given under this MOU must be in writing and may be delivered by hand, pre-paid post, facsimile or e-mail transmission to the other Party at its address set out in Schedule 1 or other persons the Parties notify to each other.

16. RESOLUTION OF DISPUTES

16.1. For the purpose of this clause, a dispute will have arisen when either Party gives notice in writing to that effect to the other Party.

16.2. Where there is a conflict or dispute over any matter relating to this MOU, the Parties will seek to resolve the issue by negotiation initially between the Contact Persons.

16.3. If the dispute is unable to be resolved pursuant to clause 16.2 within 4 weeks of the date of service of the dispute notice, the dispute must be referred to the Parties' chief executives to resolve the complaint.

16.4. Despite the existence of a dispute, the Parties will (unless agreed otherwise in writing) continue to perform their obligations under this MOU.

17. TERMINATION

17.1. Either Party may at any time end this MOU by providing at least 6 months' notice to the other party.

17.2. If this MOU is terminated under clause 17.1 or the Parties agree to end this MOU, then the Parties must collaboratively develop and implement a plan for smoothly transitioning to new arrangements in a way that will minimise the impact on both Parties' business operations.

18. CONTACT OFFICERS

18.1. Each Party will appoint persons as Contact Officers to be the principal point of contact for MOU oversight, finance enquiries and other enquiries between the Parties for the purposes of this MOU.

18.2. At the Commencement Date, the Contact Officers are the individuals specified in Schedule 1.

18.3. A Party may change its nominated Contact Officers by notice to the other party.

19. REPORTING

19.1. QPS will provide to QH the information and reports required under a Service Schedule.

19.2. QH will keep and maintain all records and accounts necessary to provide a complete and detailed record of QH's costs and expenses.

SCHEDULE 1 MOU PARTICULARS

QH Contact Officer	Name: Position: Email: Phone: Address:
QPS Contact Officer	Name: Position: Email: Phone: Address:

SCHEDULE 2 TEMPLATE SERVICE SCHEDULE

Service Schedule

This Service Schedule is made between Queensland Police Service and Queensland Health under the Memorandum of Understanding for Forensic Science Services dated .

Terms defined in the MOU have the same meanings in this Service Schedule.

Description of Services to be provided by QH

Results to be provided by QH

Process for requesting Services

QPS will submit samples for analysis as follows:

Results will be delivered by QH as follows:

Timeframe for delivery of Services

Results will be provided within Business Days of receipt of the request through the Forensic Register

Fees payable for the Services

(a)	$	for up to	
(b)	$	per	for every service that exceeds the cap in (a)
(c)	$	per	for storage of

Fees will be increased on [each anniversary of commencement of this Service Schedule or] as follows:

2.6.3 Sexual offences

CIB and CPIU OIC responsibilities

The OICs of CIBs and CPIUs are responsible for undertaking the role of the sexual violence liaison officer (SVLO) as outlined in the section: 'Sexual violence liaison officer (SVLO) responsibilities' below.

First response officer responsibilities

Where first response officers identify a sexual offence, they should consider contacting the relevant district SVLO to assign an investigating officer in line with local arrangements and the responsibilities of an SVLO contained in this section.

Additional responsibilities of first response officers for sexual offences include:

(i) ensuring the safety and welfare of the victim (see Charter of Victims' Rights of the *Victims of Crime Assistance Act* (VOCAA) and s. 2.12.1: 'Victims of Crime Assistance Act' of this chapter);

(ii) identifying any person to whom the victim may have stated the complaint to following its occurrence, i.e. preliminary complaint and any other possible witnesses;

(iii) obtaining personal particulars from the victim and identifying the offence to be investigated, i.e. rape, sexual assault;

(iv) completing a brief account of the occurrence involving the offence complained of, including location, time, injuries, conversation, indicia, sequence of events, etc.;

(v) obtaining sufficient information which would assist in identifying the suspect(s), including as appropriate:

(a) ascertaining if the suspect(s) is known to the victim or any witnesses;

(b) obtaining an accurate description of the suspect(s);

(c) identifying if any CCTV or security surveillance camera vision is available (see s. 2.4.11: 'Video and photographic evidence recorded during the commission of offences' of this chapter);

(d) obtaining any information which will assist investigators in locating and identifying the suspect(s); and

(e) arranging for a broadcast of suspect(s) where necessary; and

(vi) not asking leading questions of the victim in relation to the complaint.

Investigating officer responsibilities

Additional responsibilities of investigating officers for sexual offences include:

(i) providing an objective account of the investigative process and judicial process to ensure the victim is fully informed of the process;

(ii) discussing with the victim their needs and concerns in relation to the investigative process including whether the victim has any preference in relation to the gender of any officer to be present during the investigation. Preferences should be complied with where possible;

(iii) providing the opportunity for the victim to have a support person present during the various stages of the investigation, including taking the victim's statement (see also s. 7.6: 'Interview with a child or person with an impairment of the mind' of this Manual) and during any medical examinations. A support person may include an employee from a sexual assault support service. Victims should be advised that witnesses or potential witnesses may not act as support persons;

(iv) fully informing the victim of the importance of retaining forensic evidence. However, officers should not discourage victims from washing bodily fluids from the vaginal or anal areas due to the risk of infection from potentially life-threatening diseases such as HIV;

(v) arranging for a medical examination by a forensic medical officer (FMO), doctor or forensic nurse;

(vi) providing the examining medical practitioner with a Sexual Assault Investigation Kit (SAIK);

(vii) taking possession of the completed SAIK and ensuring it is;

(a) allocated a forensic exhibit number;

(b) entered onto the forensic register by a forensic officer; and

(c) delivered to Queensland Health Forensic and Scientific Services (FSS) (see s. 2.19.6: 'Forensic Services Group (FSG)' of this chapter);

(viii) where additional biological evidence is taken from the complainant, only the SAIK is to be delivered to FSS. The biological samples are to be:

(a) retained by the investigating officer whilst awaiting the results of SAIK analysis; and

(b) submitted for analysis, if the analysis fails to identify the offender;

(ix) ensuring a DNA reference sample is collected from the complainant:

(a) at the same time as the SAIK; or

(b) in offences involving oral rape, 48 hours after the time of the offence; and

(c) using a DNA 'Mouth Sample Kit – QPS'; and

(d) completing a:

- QP 0442: 'DNA Sample Particulars Form'; and
- QP 0535B: 'Signed consent for the taking of sample for DNA Analysis from victim/complainant/witness',

(see s. 2.25.6: 'Obtaining samples for DNA analysis from a victim/complainant/witness' of this chapter);

(x) collecting DNA reference samples from witnesses/husband/partners for the purpose of assisting analysts with the interpretation of complex mixed DNA profiles and improving the timeliness of results;

(xii) prior to obtaining a DNA sample:

(a) ensure the victim is fully aware of the procedures involved in the medical examination and discuss the evidentiary benefit to have such examination;

(b) explain to the victim written and signed consent should be given for:

- any clinical or forensic examination;
- the collection of specimens by the doctor;
- the release of any specimens taken or relevant laboratory results; and
- the taking of necessary photographs;

(c) provide the victim the option of having a support worker present during the examination. The examination should be directed to establishing whether the victim had been penetrated to any extent or sexually assaulted. All possible evidence of the commission of the crime should be obtained from the examination of the victim including signs of injury corroborating lack of consent (these signs may consist of bruises, lacerations, scratches, etc. on any part of the body, including the thighs and genital area).

Note: there is no legal requirement for a police officer to be present during a medical or forensic examination. Officers may however advise the victim they or medical staff may request an officer to be present;

(d) be aware of the provisions of s. 93A: 'Statement made before proceeding by child or person with an impairment of the mind' of the *Evidence Act* (EA) which deals with the admissibility of statements by a child or an intellectually-impaired person. Wherever possible, statements in this format should be obtained by officers who have successfully completed an ICARE (Interviewing Children and Recording Evidence) course; and

(e) where possible, obtain photographs of the victim which illustrate any injuries or other evidence;

(xiii) ensuring the victims clothing and underclothing which may assist in the investigation (e.g. bodily fluids such as saliva, semen or blood) are collected as per s. 2.25.20: 'Procedure for items of clothing worn by a complainant' of this chapter;

(xiv) arrange for the examination of the crime scene by forensic personnel as soon as possible, ensuring the scene is not disturbed until the examination is completed. Items such as discarded clothing, bed linen etc. which may provide forensic evidence to support the investigation are collected in accordance with s. 2.25.19: 'Procedure for items left at scenes of crime' of this chapter;

(xv) making, if appropriate, a detailed plan of the scene. Officers trained in accident investigation procedures may be able to assist;

(xvi) obtaining a detailed statement from the victim. In doing so officers should:

(a) consider the provisions of Chapter 6: 'Persons who are vulnerable, disabled or have cultural needs' of this Manual;

(b) consider the provisions of s. 93A of the EA (Admissibility of statements by a child or an intellectually-impaired person). Statements in this format should, where possible, be taken by officers who have completed an ICARE course;

(c) inquire if a support person is required during the interview, e.g. a friend, family member or a community support worker;

(d) ensure if the victim has a disability/impairment, a representative from the appropriate agency or a support person, where available, is present during the interview;

(e) ensure, where the victim is not conversant with the English language, where available, an appropriate interpreter is present (see s. 6.3.7: 'Interpreters' of this Manual);

(f) consider the use of a Queensland Intermediary Scheme (QIS) intermediary to assist witnesses with communication difficulties during the interview process for child sexual offence investigations (see s. 7.6.3: 'Procedures for interviewing a child' of this Manual);

(g) acknowledge the impact of sexual violence can be different for everyone and ensure the victim is comfortable prior to commencing the statement;

(h) create an environment of trust with the victim;

(i) conduct the interview in a private quiet area;

[redacted]

Lodgement of forensic samples for testing

In order to reduce the risk of test results being compromised as a result of forensic samples (e.g. arson debris, blood and firearm residue) being delivered to unsuitable facilities, the following guidelines have been developed:

Sample analysed by Queensland Health Forensic and Scientific Services

Forensic toxicology samples

Samples from post mortem examinations and from living subjects such as vehicle drivers requiring analysis for alcohol, drugs or poisons (toxicology) are to be sent to Forensic Toxicology, Queensland Health Forensic Scientific Services (QHFSS).

In cases where a person has died in hospital after a significant period of survival and where toxicology is forensically relevant, samples taken from the person upon admission to hospital should, where possible, also be sent to Forensic Toxicology.

In the case of suspected poisoning due to cholinesterase inhibitors (e.g. organ phosphorus and carbamate type pesticides) blood samples are to be sent to a hospital pathology laboratory with the capacity to estimate cholinesterase levels (e.g. Royal Brisbane Hospital and Princess Alexandra Hospital).

Histology samples

Samples from post mortem examinations requiring microscopic examination of tissues (histology), including whole organs, are to be sent to Forensic Pathology, QHFSS unless the autopsy is performed by a pathologist other than a QHFSS Pathologist. In such cases histology is normally performed in the pathologist's own laboratory.

Sexual Assault Investigation Kits (SAIK) and seminal stains

The SAIK must be delivered to QHFSS as a matter of priority. Prior to delivery, the investigating officer must attend a scenes of crime office in order have the SAIK barcoded and entered onto the Forensic Register.

Items requiring examination for presence of seminal fluid including clothing from complainants should be collected by a forensic officer wherever possible to prevent contamination and ensure that they are packaged correctly. These items are then returned to investigating police pending the outcome of the SAIK analysis. If the SAIK analysis fails to identify the offender, the remaining items requiring seminal fluid examination are forwarded to a scientific officer.

See also s. 169: 'Preserving evidence at crime scene' of the PPRA.

Crime scene exhibits suspected of yielding DNA (other than seminal stains)

All crime scene exhibits requiring examination for the presence of DNA are to be collected by a forensic officer (scenes of crime or scientific officer). If circumstances prevent this, a forensic officer should be contacted for advice prior to collection. The collected item is to be delivered to a forensic officer for assessment of probative value and sub-sampling if required.

QHFSS will not accept crime scene exhibits (other than swabs or tape lift) submitted for testing for the presence of DNA. These exhibits are to be delivered to a forensic officer for sub-sampling. The subsequent sub-samples are then forwarded to QHFSS.

All crime scene exhibits collected by non-forensic police officers that are to be submitted to QHFSS for DNA testing must be:

(i) recorded as property in QPRIME;

(ii) taken to a forensic officer for a sub-sampling and/or examination; and

(iii) entered on the Forensic Register and barcoded prior to lodgement at QHFSS.

His reasoning was that it was too invasive to take blood from the victim. Given a swab is taken from the vagina/anus, I would have thought that this was nothing. Anyway, I think I have another solution,

Dave,

I would be interested to know his reasoning and I am sure it will come back to the training required across the HHS's across the state. I wouldn't say this is a lost cause as we are having current discussions with Health as per below email. At the end of the day Health can't be criticising the QPS for delays in obtaining reference samples from victims and then not working with the QPS to develop some options. Additionally, from a trauma-informed practice perspective, it is not the best option to go back to a victim to seek a reference sample when they have already had the medical exam.

This should be viewed from the perspective of developing a victim-centric solution, rather than one that best serves government agencies. It may warrant further discussion at the Interagency Committee that is currently amending the current government response to sexual assault guidelines. I have copied in my Supt and also DI Steve Blanchfield who will soon be taking over my role.

Hi George, I spoke to Adam and he was adamant that he did not want to take reference samples from the Complainant. As a result I will not be pursuing this process.

Subject: RE: SAIK Kit Review

Hi Dave,

Firstly thanks for the email for the promotion – not quite official yet. Jumping from the frypan into the fire, so to speak!!!

It might be easier if you are able to give me a call as there are a many moving parts and stakeholders involved in this. Our involvement in the SAIK kits is really one of ensuring there is a supply available for the regional investigators. My understanding is that Qld Health are the main stakeholder in regards to the kits. The bigger issue though is the complexity in negotiating with Qld Health as their organisational structure is such that the Health and Hospital Services (16 in Qld) are very autonomous due to the legislation (Hospital and Health Boards Act 2011). Denzil Clarke and I have had some issues in trying to engage senior representatives in Qld Health to discuss current issues involving FMEs and FNEs.

The main issue with any change will be influencing Qld Health and also how this will flow on to training of the FMEs and FNEs and in a large proportion of cases around the state, the GPs and hospital doctors that also conduct the examinations when FMEs and FNEs are not available.

Give me a call to further discuss as it may be the case we have a representative from our unit also attend the meeting with you. We also sit on the Interagency Working Group that oversees the current government response protocols for responding to sexual assault.

Talk soon

Regards

George

Subject: SAIK Kit Reveiw

Supt
Firstly, congratulations on your promotion. I am told that you have the SAIKs under your portfolio. There is a significant issue with the SAIKs in that the investigators continually fail to get a reference sample from the victim. This causes delays in the testing. Often the sample is not able to be taken at the same time as the SAIK due to oral sexual activity.

From what I can determine, the complainant consents to the examination so there are no police powers exercised. As a result it may be possible for the medical practitioner to take the DNA reference sample at the same time. The medical practitioner could simply prick the finger of the complainant to collect a small sample of blood on a FTA card. This would prevent any issues with oral sex contamination of oral samples. In this way all required samples are received at once. The reference sample could only be used within the case to filter out the complainant's DNA, it would never be uploaded to NCIDD.

I have a meeting with Queensland Health on 28 September and I was wanting to raise this as a possibility. Do you have any thoughts on this? Has this ever been raised as a possibility with the GMOs?

Regards

Subject: Reference Samples / SAIK

Hi Cathie and Craig,
I previously indicated that I wished to raise the idea of a reference sample being included in the SAIK. I had a conversation with Adam Griffin this morning and he was adamant that this was not the best way forward for a number of reasons. Given these discussions, I will not be pursuing this avenue.

Because this is still am important issue that seems to be problematic, I reviewed the current policy to see what measures we can implement to get investigators to comply with our procedures that require them to take the reference sample. The procedures require the investigators to take the SAIK to a SOC officer to be barcoded and placed on the FR before it is sent to FSS. Another solution may be that the SOC officer only enters the SAIK on the FR if a reference sample has been taken. This should prompt the investigators to take the sample. I will look into how feasible this is, but I think it might work.

Subject: RE: SOC Officers to check if Reference Samples have been taken before a SAIK is entered on QPRIME

Gents,

The OPM's have only recently been changed to include the below.

2.6.3 Sexual Offences
Procedure
Additional responsibilities of first response officers for sexual offences include:
vii) ensuring a DNA reference sample is collected from the complainant:

a) At the same time of the SAIK; or
b) in offences involving oral rape, 48hrs after the time of the offence.

So this wasn't in the OPM's originally and some investigators thought that the GMO did the reference sample or others were building rapport with the complainants and simply forgot. So the OPM's reflect that the reference sample is now to be taken by the investigating officer at the time of the SAIK. So in theory this should reduce the amount being submitted without a reference sample as this has just been modified.

I can't see this being a forensic issue as the OPM's state that it should be taken at the time of the SAIK.

Ideally, why couldn't you design the SAIK to include the reference sample on the outside of the kit (similar to below). That way it prompts the I/O to include the reference sample as part of the SAIK. This way, they are delivered at the same time, which is attached but external to the kit. It can easily be separated and prompts the I/O that hey something's missing and forensic officers can see whether it's been taken or not.

The whole SAIK thing is a drama believe me and yes we are the only state in Australia where the investigating officer takes the reference sample. In all other states the GMO takes the sample as part of the SAIK – one procedure obviously best for the victim. Actually the other states couldn't believe that a rape victim was subject to the SAIK and then police have to take a reference sample after it – they thought it was the most bizarre thing they heard.

In a nutshell, there is a memorandum of understanding between agencies which highlight best practice as the taking of the reference sample as part of the forensic medical examination, that is by the nurse or doctor.

We hit a hurdle as the forensic director says no not his problem even though there is an interagency guideline for responding to sexual assaults signed by the Police Commissioner, Dept of Health, Dept of Justice & Dept of Communities. Pointless having the document really as why would you expose a victim to procedures which could easily be covered by the GMO, I thought that was the idea of an interagency agreement.

Hope this helps a little….

Bushy

Yes Lloyd, Bushy has been asking this for some considerable time now…. for RS to be taken at same time as SAIK.. the biggest issue for me and Bushy is concern for the complainant, generally having to make another appointment with police for the RS to be taken when clearly the best time is at the time of the SAIK – it seems ludicrous that it is not done then – (another swab as part of the SAIK kit) and I guess some investigators would naturally think it would be done at that time.

Interestingly and from memory so don't hold me to this but Bushy will know…. when this was first mooted with QH it didn't seem too difficult a task.. then other people at QH were involved and it became difficult. What about the complainant in all this?

Cheers PB

Of course another way to achieve your aim might be to get QHealth to include a reference sample kit within all SAIK kits.

Subject: SOC Officers to check if Reference Samples have been taken before a SAIK is entered on QPRIME

Dear Forensic Managers,
There continues to be issues with investigators failing to collect reference samples from rape victims. One way to make them do it is to only enter the SAIK on the FR if a reference sample has been taken. I was hoping to amend CSE101 Biological evidence as per below to include a check to ensure a reference sample has been taken. Does anyone see any risk or object to this, or have a better alternative.

8.6 Sexual Assault Investigation Kits (SAIK)

8.6.1 Investigating police in possession of a SAIK will require the kit to be allocated a forensic exhibit number and entered as an exhibit on the Forensic Register by a forensic officer.

8.6.2 The forensic officer is to ensure that a reference DNA sample has been collected from the complainant. This is recorded on QPRIME as an "Ident/fingerprint" report against the complainant. To view the report open the "Involvements" tab and select the complainant's name. The "Ident/fingerprint report" will be included under the "Occ events/reports" tab. If there is no reference sample, the forensic officer is to advise the investigator that the SAIK cannot be processed until the refence sample has been collected and no further action is required on the part of the forensic officer.

8.6.3 The forensic officer should not open the kit, or label anything inside it. The outside of the SAIK is labelled with the forensic exhibit number.

8.6.4 The forensic officer will enter the SAIK onto the Forensic Register as an exhibit to allow the tracking of the SAIK. It is not necessary to add an examination summary for this process.

8.6.5 In cases where other biological evidence is taken as well as a SAIK, only the SAIK is to be delivered to QHFSS Forensic Biology, generally by the investigating officer or a delivery officer. The biological samples are to be retained by the Investigating Officer until it is determined that either:

1. the SAIK has returned a positive result, in which case it will typically not be necessary to examine the additional biological evidence, or
2. the SAIK has returned a negative result and further information may be adduced from the biological evidence.

Subject: RE: Qld Health Follow up - SAIK
Attachments: 28092018102808-0001.pdf; VPARL2006-10No301.pdf

Dear Supt,

Please find the following dot points on the SAIK matter.

- The Sexual Assault Investigation Kit (SAIK) is produced by QHFSS and used by Forensic Medical Examiners (FMEs) when examining rape victims. It is used to collect the offender's DNA, which is usually present as semen. It includes vaginal and/or anal swabs plus other components.
- The swabs from the SAIK generally return a mixed DNA profile consisting of the offender's DNA and the victim's DNA. As a result, a reference DNA sample is required from the victim so their DNA can be filtered from the mixed profile.
- The SAIK currently does not include materials to collect a reference sample from the victim. The current practice is for police to collect a reference sample from the victim at another time. Police request the victim to sign a consent form and give them a mouth swab which they use to sample themselves with.
- Because the SAIK and reference samples are collected separately, the majority of SAIKs are received at QHFSS without any reference sample causing delays in the analysis. The delays in the provision of the reference sample has been repeatedly raised as an issue by QHFSS.
- QPS investigators are tasked with taking a statement from the victim which is often very traumatic as they have to recount the details of the crime. There is concern that asking the victim to consent to a second forensic examination to collect a reference sample of DNA only adds to the victim's stress at this time.
- This practice does not comply with Queensland Government policy issued in 2014 titled, "*Response to Sexual Assault: Queensland Government Interagency Guidelines for Responding to People who have experienced Sexual Assault*." This document was designed to ensure agencies work together in the best interest of the victim. The policy states,

  Victim DNA reference samples
  DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the FME (forensic medical examination)
  (A copy of the guideline is attached).
- The solution to this problem is to include materials within the SAIK for the collection of a reference sample from the victim during the forensic medical examination. This is what occurs in all other states and is deemed best practice as per the guidelines.
- There is no legal impediment to collection of the refence sample by the FME. The sample is taken by consent and not by some police power.
- QPS has made repeated requests to QHFSS to alter their practice and kits so that a reference sample is taken during the forensic medical examination. In 2016 Dr Gary Hall, Acting Chief Medical Officer, and Ms Debbie Whelan, Acting Managing Scientist, both agreed that this would be best practice. However, support for these changes was later withdrawn by Dr Adam Griffin and Ms Cathie Allen who are the relative incumbents of those positions. They have subsequently declined repeated request to change the practice to comply with the Queensland Government Guidelines and what is considered as best practice nationally. The reasons for declining the requests are as follows:
  - The victim may have been assaulted orally which could result in the offender's DNA contaminating the reference sample.
    - QPS Comment: The other jurisdictions collect a sample of blood by pricking the victim's finger to prevent this contamination issue.
  - Taking a sample of blood is too invasive on the victim.

        - QPS Comment: The victim has their vagina and/or anus swabbed, the collection of blood would seem to be unobtrusive in comparison. It is also common practice for QH to take blood from the victim to test for STD in any case.
    - There is a chance that the reference sample could contaminate the other samples.
        - QPS Comment: The other jurisdictions manage this risk by appropriate packaging of samples. In any case, all of the samples taken from the victim are going to be contaminated with the victim's DNA because they were taken from intimate areas of the victim.
    - It would be difficult to train FMEs outside of the metropolitan areas due to variation in the line control arrangements.
        - QPS Comment: It is critical that the medical examination of rape victims is closely regulated by procedures, training and compliance monitoring. Poor practice in forensic medical examination led to the 2008 wrongful conviction of Mr Farah Jama in Victoria. The parliamentary enquiry into this affair recommended strict processes to be adopted within that state to prevent repetition. Queensland FMEs should be regulated in such a manner to prevent this type of miscarriage of justice. If so, methodology should be able to be effectively modified to conform with contemporary views on best practice.

Subject: Qld Health Follow up

Bruce,

I met with Michel Lok (and Craig Russell) from Qld Health this afternoon and discussed the listed issues with them.

All matters raised were discussed positively.

Outcomes as follows:

- Bar codes – commitment given that they will work with Dave Neville to ensure we have necessary number of 9 digit codes to continue.

- AO6 payment arrangements – assurances provided that the full 12 month contract/funding is there and will be maintained. They agree to provided payment quarterly – it remains an admin matter for them. They understand the sensitivity around Tims' position and agree that he needs to be provided job security with certainty over funding.

- QAO re DNA audit – will remain in contact with us, and they appreciate the possible issues and risks involved – similarly with DNA turn-around times. Will remain in contact to work towards better TAT.

- STRMix problems with rescinded results – they immediately understood the ramifications and risks involved and happy to look at amending the process. Please arrange for Dave to liaise with Craig Russell asap on this one.

- SAIK and victim reference sample – they were unaware of the issue, but very happy to follow up. They requested that Dave liaise and explain some of the detail (in plain, non-expert terms) and the problems that arise. I gave them the explanation I had, but I think it will be better for Dave to follow up with some more detail – in a detailed email to me that I can forward to Michel - who has direct control over the CMO.

Preface

The guidelines are designed to promote whole-of-government interagency cooperation and service coordination with an aim to improve governmental responses to victims of sexual assault. The need for enhanced coordination and cooperation has long been recognised and resulted in the development of the *2001 Queensland Government Interagency Guidelines for responding to adult victims of sexual assault.*

The 2013 guidelines aim to facilitate best practice, quality service and support to people who have experienced sexual assault.

Legislation relevant to and defining sexual assault includes but is not limited to:

- *Aboriginal and Torres Strait Islander Peoples Recognition Act 2013*
- *Child Protection Act 1999*
- *Criminal Code Act 1899*
- *Criminal Law (Sexual Offences) Act 1978*
- *Domestic and Family Violence Protection Act 2012*
- *Evidence Act 1977*
- *Health Act 1937 & associated regulations*
- *Hospital and Health Boards Act 2011*
- *Mental Health Act 2000*
- *Police Powers and Responsibilities Act 2000*
- *Public Health Act 2005*
- *Victims of Crime Assistance Act 2009*

Policy referred to includes but is not limited to:

- Queensland Government Language Services Policy
- Queensland Health Protocol for conducting child sexual assault examinations

The guidelines should be read in conjunction with internal agency procedures such as the Office of the Director of Public Prosecutions Guidelines and the Queensland Police Service Operational Procedures Manual. In addition to legislation, policies and procedures, the Queensland Government joins with governments around Australia in the implementation of the National Plan to Reduce Violence against Women and their Children 2010-2022.

Each government agency has a complementary and essential role in ensuring that people have access to effective, timely and appropriate information, support, care and treatment following a sexual assault.

Given the nature of the crime, sexual assault is an area of legal and social complexity. The guidelines are designed to help government officers and agencies work together in the best interests of the person who has been sexually assaulted through better understanding one another's roles and responsibilities.

The Queensland Government encourages reporting of criminal activity and prosecution of offender(s) where possible.

Section 1 Introduction

Governance

The government agencies responsible for delivering a service to victims of sexual assault, in accordance with relevant legislation, whole-of-government policy and internal departmental procedures, are responsible for the ongoing governance of this document. The guidelines are underpinned by each government agency's own internal policies and procedures which they are obligated to adhere to. Each government agency has a formal complaints mechanism which is accessible to members of the public.

The Government Interagency Working Group will meet bi-annually to review the guidelines and consider matters of particular concern for people impacted by sexual assault and to consider the impact of any legislative change.

Sexual assault

Sexual assault is a crime of violence. It is a humiliating and degrading experience. It has an emotional, physical, financial and social cost, not only to those directly affected, but also for the community as a whole.

The number of reported sexual offences against women aged 15 or over in Queensland in 2011/2012 was 2035 compared with 227 against males.[1]

Major Australian studies indicate that only 11-25 per cent of sexual assaults are reported to the police and that most offenders are known to the victim.[2] People who experience sexual assault may feel a range of emotions including shock, fear, guilt, shame, depression and an inability to trust others. The social stigma attached to sexual assault can heighten these feelings and increase the trauma experienced. It is imperative that when disclosing or reporting a sexual assault, people receive an effective, professional and appropriate response from the agencies to which they report.

Community education can encourage family and friends to respond supportively and appropriately to a disclosure of sexual assault. However, in order to assist their recovery, victims may also need access to a range of personal support services including counselling, medical services and assistance to report the crime to the police.

The information provided in the guidelines is intended to provide a strategic overview to support the development of policies and procedures at a local level. Local level procedures will differ according to the nature of the service system in each area. It is also intended to contribute to improving service responses to victims.

Responses to victims

Following disclosure of a sexual assault, the following needs of the victim should be addressed:

- immediate safety needs
- immediate health needs
- options for pursuing justice
- ongoing emotional needs for longer term wellbeing.

In order to avoid secondary traumatisation and mitigate the risk of negative, long term outcomes, government responses to sexual assault must be both sensitive and effective. These responses therefore need to take into account the diversity of victims, including their cultural and linguistic background, disability, sexual orientation, age and geographical location. In addition to assisting recovery, more sensitive and effective responses may also lead to an increase in reporting rates.

This, in turn, can lead to a more accurate understanding of the prevalence of sexual assault, inform community education and awareness approaches, and result in improved prevention strategies.

1 Queensland Police Service (2012) Statistical Review 2011-2012 Brisbane
2 Australian Bureau of Statistics (1996) Women's Safety Survey, Cat.no. 4218.0 (unpublished data) as cited in Office of Women's Policy (1999) A Social and Economic Profile of Women in Queensland 1999 Brisbane; Australian Bureau of Statistics (1996) Victims of Crime Survey

Children and young people

It should be noted that the *Child Protection Act 1999* (CPA) is relevant where there are concerns that a child has been sexually abused and where a child does not have a parent able and willing to protect them from the abuse. The main principle for administering the CPA is that the safety, wellbeing and best interests of a child are paramount. Section 159B of the CPA imposes a responsibility on particular service providers to assess and meet the protection and care needs of children and provide collaborative and coordinated support to their families.

The definition of harm in the CPA includes harm resulting from sexual abuse or exploitation. A child is defined in the CPA as an individual less than 18 years of age. Where the child or young person is under the age of 16, their parent or guardian should be consulted where possible and appropriate. Whilst certain circumstances may not make this possible, the child or young person should have access to a support person throughout the response.

The safety and protection of children and young people who are sexually assaulted is a high priority. When disclosing a sexual assault, young people should be encouraged to access services so that they are aware of their options in terms of support, assistance, treatment and prevention.

When working with a young person who reports a sexual assault, personnel from the Queensland Police Service, Department of Communities, Child Safety and Disability Services (DCCSDS) and Queensland Health (QH) are required to follow the statutory requirements under the CPA and the *Public Health Act 2005* relevant to their position.

Where the child or young person is subject to an order granting custody or guardianship of the child, the Chief Executive, Child Safety, DCCSDS, must be notified regarding the report of a sexual assault.

Confidentiality cannot be guaranteed where a child or young person is believed to be in need of protection from harm. To work in the best interest of that child or young person, information may need to be exchanged between departments. It is best practice for the child or young person to be advised that a report to the DCCSDS and the police may take place. Certain circumstances may not make this possible.

Section 2
Principles of the Interagency Guidelines

Government responses to sexual assault are framed by the following overarching principles:

- All agencies will focus on the safety, physical and psychological needs of the victim
- The victim's right to privacy and confidentiality will be respected at all times unless disclosure is required by another law
- Comprehensive information about all processes and options will be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location
- The victim's informed decision will be respected at every stage of the process
- The victim's sense of personal control will be supported and encouraged
- All relevant agencies will work collaboratively to respond to sexual assault, to provide clear, up to date and comprehensive information about other agencies and services and will facilitate access to appropriate agencies and services on request
- All agencies will ensure documentation and records are prepared in accordance with individual agency requirements and respect confidentiality, privacy, security and choice.

Fundamental Principles of Justice for Victims of Crime and Complaints Mechanism

Government responses are also framed by the legislated responsibilities defined in the Fundamental Principles of Justice for Victims of Crime (Principles of Justice) in Queensland, set out in Chapter 2 of the *Victims of Crime Assistance Act 2009*.

If a victim feels they have been treated unfairly or without respect by a Queensland Government officer, they have the right to complain to the government agency responsible for the conduct of the officer or to Victim Assist Queensland (Victim Assist).

As a guide, the following is a summarised version of the Principles of Justice:

Fair and dignified treatment

The victim must be treated fairly and shown dignity, respect, compassion and courtesy. The government entity must take in to account and be responsive to the particular needs of the victim relating to the victim's age, sex, race, cultural identity, impairment, sexuality or religion.

Privacy of victim

A person's personal information, including their address and phone number, can only be disclosed with consent or as authorised by the law.

Information about services

The victim must be given timely information about relevant services available to them, including welfare, health, counselling, legal help and financial assistance.

Information about investigation of the offender

If the victim asks, they should be given information about the investigation of the offender where possible. Information given to a victim may include the progress of the investigation and the name of the person charged.

Information about prosecution of the offender

If asked by the victim, the prosecuting agency is to give the victim details about the crime committed against them, including when the victim may attend a court proceeding, notice of a decision to change a charge, or notice of the outcome of a court proceeding.

Victim to be advised on their role as a witness

A victim, who is to be a witness for the prosecution in the trial for the crime committed against them, is to be informed by the prosecuting agency about the trial process and their role as a witness.

Minimal exposure to and contact with the offender

As much as possible, relevant agencies present at court are to ensure the victim has minimal contact with or exposure to the offender during court proceedings or in the court building.

Victim Impact Statement

During sentencing of the offender, the victim has the right to give details of the impact and harm caused to the victim by the offence, to the prosecutor as an impact statement. Victims can access information about completing a victim impact statement by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Guide to Making a Victim Impact Statement* at *www.justice.qld.gov.au.*

Information about the convicted offender

A victim can apply to be registered on the Victims Register. If the offender is then convicted and imprisoned, the victim will be provided with this information on request. This includes information on the sentence, an escape from custody, or day of release. To be included on the Victims Register call 1800 098 098.

Making a complaint

If a victim of crime feels a government agency, person or persons within the agency have engaged in conduct that is not consistent with the Principles of Justice, they have the right to make a complaint. Victims can access information about making a complaint by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Complaint Form* at *www.justice.qld.gov.au.*

Government agencies are obligated to have a formal complaints management system, and the Queensland Government is committed to having these systems available and acted upon in accordance with the Principles of Justice.

Section 3
The Roles of Key Government Agencies

Queensland Police Service

The Queensland Police Service (QPS) has three main functions in relation to sexual assault cases including:

1. Investigate complaints of sexual assault and establish whether an offence of sexual assault has been committed.
2. Protect victims of sexual assault.
3. Identify, apprehend and prosecute offenders.

In carrying out this role, the police should:

- observe QPS Operational Procedures Manual
- observe QPS local procedures or instructions
- observe legislative requirements
- observe the Fundamental Principles of Justice for Victims of Crime
- provide victims with information regarding the investigation and prosecution
- provide protection to victims at immediate risk of sexual assault
- provide victims with information about support services

Queensland Health

In responding to sexual assault, the role of QH is to provide medical care, forensic medical examinations (FME), sexual health assistance and information and support. These responses are provided by public hospitals, the Clinical Forensic Medicine Unit and may include specialist sexual assault teams. The extent and nature of this care varies across hospital and health services in accordance with local procedures and resources.

Assistance and care in the acute phase includes:

- medical treatment
- collection and documentation of medico-legal evidence where appropriate
- sexual health information and treatment
- information about rights as a victim of crime
- information about reporting to police and legal processes
- support and information extended to support networks.

In addition, QH provides education and training to government and non-government agencies, with an aim to broaden community knowledge, improve responses and prevent sexual violence as outlined in the National Plan to Reduce Violence against Women and their Children 2010 – 2022.

Department of Justice and Attorney-General

The Office of the Director of Public Prosecutions (ODPP), Victim Assist Queensland (Victim Assist), Youth Justice Conferencing (YJC) and the Queensland Courts all fall within the responsibilities of the Department of Justice and Attorney-General. The following provides an overview of each of these separate agencies.

Office of the Director of Public Prosecutions

The ODPP represents the Crown in criminal proceedings against persons accused of committing serious criminal offences including sexual assault. The criminal proceedings include:

- the committal hearing, before a Magistrate in Brisbane Central, Ipswich and Southport Magistrates Courts. In other centres, this hearing is conducted by prosecutors within the police
- trials before a judge alone or a judge and jury
- sentencing hearing before a judge
- any appeals arising from the trial or sentence.

In addition to prosecuting matters in court, the ODPP is responsible for:

- assisting victims by providing information about the progress of a prosecution, the victim's role as a witness, and how the victim can inform the court of the impact of the crime by providing a victim impact statement
- giving victims reasons for decisions made in relation to proceedings which directly affect them
- taking into account the wishes of a victim who does not wish to proceed with a prosecution for any reason
- providing information about the availability of other resources and processes that may assist victims
- requesting that the court give sexual assault matters appropriate priority
- ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building
- liaising with other relevant agencies to ensure that the victim and family members understand the legal and procedural issues which may impact them.

In carrying out the role of the ODPP, all officers are obliged to comply with the Director's Guideline No. 25 as at 2013 http://www.justice.qld.gov.au/_data/assets/pdf_file/0015/16701/Directors-guidelines.pdf. This aims to ensure that the Principles of Justice, as set out in the *Victims of Crime Assistance Act 2009* are complied with.

Victim Assist Queensland

Victim Assist provides access to specialised support services and financial assistance for victims of personal acts of violence including sexual assault.

Financial assistance may be available to victims of sexual assault to help them pay for the cost of goods and services that have arisen, or will arise as a consequence of the assault.

This includes medical and dental expenses, and expenses associated with improving safety or relocation from their current location in order to escape the offender.

Victim Assist also provides information, referrals and support (which may include court support) to victims, and assistance in making a victim impact statement if the victim chooses to make one.

Youth Justice Conferencing

If the offender is a young person, there may be alternative processes to the matter being dealt with by a court. The purpose of YJC is to hold the young offender accountable for their actions and to come to an agreement on what they will do to attempt to make reparation for the harm caused. To safeguard the victim, additional procedures are adopted before a conference for a sexual assault can occur. These include referring the victim to a counselling service as well as compulsory attendance of the juvenile offender in a specialist treatment service.

Queensland Courts

Queensland Courts afford victims of sexual offences, affected child witnesses and special witnesses protections when proceeding through court. These are detailed in the *Evidence Act 1977* (EA) and the *Criminal Law (Sexual Offences) Act 1978*.

Section 21A of the EA provides protections for special witnesses and affected child witnesses. The court can declare a person a special witness by hearing evidence (if the witness does not automatically fall into the special category, such as where the witness is a child or the person has a mental impairment). When the court hears evidence from these special witnesses, there are a range of options to assist the witness. These include ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building. Where the witness is an affected child witness, there are further protections in place.

For further information refer to the Supreme Court Bench Book: *http://www.courts.qld.gov.au/information-for-lawyers/benchbooks-and-ucpr-bulletin/supreme-and-district-courts-benchbook.*

Department of Communities, Child Safety and Disability Services

The Department of Communities, Child Safety and Disability Services allocates funding to non-government organisations to assist people, predominantly women, who have experienced sexual assault, in accessing necessary services and support needed to rebuild their lives as quickly as possible. These sexual assault services offer flexible, holistic and ongoing personal support including advocacy and sexual assault counselling (including crisis counselling), in a culturally appropriate and safe environment.

The range of support provided by these services includes:

- provision of information, advice and referral
- needs assessment and development of case/service plans
- individual advocacy
- sexual assault counselling for victims and survivors of sexual assault
- community education.

For more information about access to sexual assault services in local areas, contact the Sexual Assault Helpline on 1800 010 120.

Child Safety Services is the Queensland Government agency for child protection and adoption services. The department is dedicated to protecting children and young people from harm or who are at risk of harm, and whose parents cannot provide adequate care or protection for them.

Non-government organisations

It is acknowledged that a number of government departments provide grant funding to non-government organisations to deliver a range of specialist sexual assault services. Local procedures and service agreements in relation to services provided by these organisations should be adhered to.

Section 4
Interagency approach

Given the often violent and complex nature of sexual assault, an interagency approach is essential. The Queensland Police Service (QPS), Queensland Health (QH), the Department of Justice and Attorney-General (DJAG) and the Department of Communities, Child Safety and Disability Services (DCCSDS), each have a different but fundamental role in responding to sexual assault. Each of these agencies should assist each other in understanding and supporting their role and be familiar with, and sensitive to, their differing and complementary roles. An interagency approach provides opportunities to discuss and address issues of mutual concern across departments.

Teamwork

Quality of care depends on partnership between these different agencies. Each agency should establish local procedures to facilitate improved liaison and coordination between services. These procedures should include systems for information sharing and conflict resolution.

Confidentiality

Confidentiality, privacy of information and security of records is imperative when working with people who have experienced sexual assault. It is a fundamental principle in treating victims with dignity and respect.

Access to and disclosure of personal information regarding the assault will conform to legal requirements and be limited to people directly involved in the case. Except where legal obligations exist, information will not be released without the prior consent of the person involved. This includes names and identifying information.

Training

Joint training can contribute to achieving interagency objectives and allow those working in the field to understand how best practice is achieved. Training and orientation should be ongoing and could include input from relevant local services.

Information provision

Police officers, doctors, social workers, health workers and legal officers, should provide people with relevant information which may include written material. This information should be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location.

People should be made aware of, and be given an opportunity to discuss and consider the implications of proceeding with medical, investigative and legal processes so that they can make informed decisions. These decisions must be respected. It should be noted however that the decision whether or not an investigation should proceed rests primarily with the police.

Referrals

Relevant referral procedures and guidelines between police and health services should be observed.

Staff of government agencies should be familiar with local specialist services and actively support people who have experienced sexual assault to access appropriate supports available in their community. In addition, relevant health, welfare and legal services likely to be accessed by victims will need to develop local strategies and procedures to ensure that referral processes are appropriate and coordinated. These services should also be aware of the admission procedures and location of the nearest health facility and police station.

Feedback

Quality of care is essential in ensuring that people are referred to the appropriate service. QPS, QH, DJAG and DCCSDS should ensure that local interagency links and procedures operate in a coordinated manner. Mechanisms for giving feedback about service delivery should also be in place and observed.

Access, availability and promotion of services

People who have experienced a sexual assault may need encouragement to use medical, counselling, police and legal services. Local procedures should ensure that services are accessible and coordinated. This includes the use of written information and community education materials.

Gender of service providers

Following a sexual assault, the person may feel uncomfortable talking with personnel of the opposite sex. If a preference for female or male personnel is expressed, all reasonable steps to accommodate this preference should be taken.

Diverse needs

Procedures need to be flexible in order to respond to diverse needs; including culture, language, gender, disability, religion, sexuality and geographical location. Furthermore, it is important to understand how these needs impact access to and utilisation of appropriate services.

All agencies should ensure that procedures and facilities provide access to appropriate services for Aboriginal and Torres Strait Islander people, people of non-English speaking backgrounds, children and young people and people with disabilities, including physical disabilities.

Aboriginal and Torres Strait Islander people

Service provision should reflect the cultural needs of Aboriginal and Torres Strait Islander people. Agencies should have a referral mechanism to facilitate access to culturally appropriate information for Aboriginal and Torres Strait Islander people. Where there is consent and it is appropriate to do so, Aboriginal and Torres Strait Islander liaison workers may be offered to assist people during the process.

Communication

The Queensland Government recognises that a significant number of people may require interpreter services, as well as culturally appropriate support in order to adequately disclose and report a sexual assault, and make informed decisions about the support and options available to them.

People with a disability

Services and agencies should facilitate access to appropriate support workers and interpreters for people with a disability. Disability includes intellectual, physical, sensory, psychiatric or neurological impairment, or a combination of these, resulting in a substantial reduction in the person's capacity to make informed decisions or communicate. With the person's consent, and when it is safe and appropriate to do so, services should also consult with relevant people involved in that person's life such as carers, guardians and specialist agencies or departments.

People from culturally and linguistically diverse backgrounds

Service provision should be responsive to, and respect the cultural, religious and language needs of the person who has experienced sexual assault. Where communication in English is difficult or where requested, accredited interpreters and cultural support workers should be used to assist in both eliciting information from, and providing information to the person who has experienced sexual assault. This supports client safety and enables informed decision making about health care, investigative and legal processes for both the client and agency.

Translating and interpreter services

All reasonable steps will be taken by government agencies and funded non-government organisations providing sexual assault responses, to ensure fair and equitable access to interpreting and translating services that are responsive and high quality.

All reasonable steps should be taken to make an accredited interpreter available in all situations where an interpreter and/or translator is required, unless there are extenuating circumstances that genuinely prevent an interpreter from being used. This may include, for example, a medical emergency or where a language group or community is very small and confidentiality is a concern for the client, or where there is no interpreter available for that language group. All agencies will take into consideration the wishes of the person who have been impacted by the sexual assault in relation to the use of an interpreter.

Each government agency is required to observe its own policies and procedures in relation to the use of interpreters. These internal procedures should align with the *Queensland Government Language Services Policy.*

Section 5
Interagency procedures

Regardless of where sexual assault is first reported, the first priority is to ensure the safety and welfare of the person reporting. Prompt referral to the designated specialist service should take place.

Crisis intervention

The purpose of intervention by a designated sexual assault response worker is to:

- provide immediate assistance, stabilisation and emotional support to assist the person to return to their level of functioning before the crisis
- assist the person to process their perception of the stressor
- provide information about the options available, as well as the procedures of the local health facility
- provide an opportunity for the person to express their concerns and feelings
- offer practical support, including contacting family members or support persons where appropriate
- talk to family members or support persons (if present) about how best to support the victim
- co-ordinate the interagency response and facilitate patient care and treatment along the sexual assault pathway
- provide information in relation to available community support resources.

The sexual assault worker will advise the victim of their right to access medical advice and treatment including sexual health treatment. If information or clarification about police procedures is requested, the sexual assault worker will, with the victim's consent, arrange for police to provide this information.

During any phase of this process, a support person can be present. The support person should not adversely influence the process.

Initial report to police

Police receiving a report of a sexual assault will act on the information received. The police should inform the victim of relevant decisions made and where necessary, obtain the victim's consent.

Initial report to a health facility

Health facilities, such as hospitals, are often the first place where a person will disclose a sexual assault. When this happens, nursing and medical staff will assess the general medical condition of the person and administer immediate medical treatment if required. Assessment of a person's need and urgent medical intervention will always be the first priority.

Medical examination and treatment

A general, non-forensic medical examination may be conducted by a medical professional with the aim to:

- reassure victims about their physical welfare, including giving information on, and providing treatments to reduce the risks of pregnancy and sexually transmitted infections
- assess, treat and document injuries
- provide advice and referral options for follow up medical care.

A medical examination should include sexual health intervention as described in *Queensland Sexual Health Clinical Management Guidelines of 2010 section 6: http://www.health.qld.gov.au/sexhealth/documents/cm_guidelines06.pdf.*

Unconscious patients who are admitted to hospital with a suspicion of sexual assault will be assessed and treated as medical emergencies.

Referral to the local sexual assault team

Health staff must follow local procedures in the management of sexual assault. All efforts should be made to contact the designated sexual assault team and where there is no specialist team, crisis intervention and support will be delivered by health staff present. A referral for follow-up support and care should be made as soon as possible.

Notifying the police

The sexual assault worker should discuss available reporting options with the person. If the victim requests to speak to police, it is the role of the sexual assault team or other designated staff member, to notify the police as soon as possible to ensure all evidence including the crime scene can be secured. Notification and initial reporting to police does not mean an investigation will automatically take place.

Where police are operating under time constraints, they should inform health staff. Working together to meet time constraints will directly impact the quality of the outcome for the victim.

Victim attending with police

Where victims arrive at the health facility with police, procedures outlined in referral to the local sexual assault team above should still be followed by health staff.

Initial contact

It is the sexual assault worker's role to coordinate an immediate response; offer practical and emotional support, assess the person's immediate physical and emotional safety and recognise the potentially traumatic nature of the assault.

Medical assessment will be conducted in accordance with local procedures.

Forensic medical examinations

Doctors or nurses conducting forensic examinations must follow local procedures in the management of sexual assault.

The forensic examination consists of obtaining a history as to the nature of the assault in order to guide the subsequent physical examination. It also includes interpretation of injuries and the collection of forensic evidence as it relates to the alleged sexual assault.

Forensic medical examinations and informed consent for people aged 14 years and above

Informed consent reflects a legal and moral principle whereby the victim has the right to decide what is appropriate for them. This includes the right to accept or to decline a forensic examination and to change that decision.

In order for a patient to exercise this right, they require access to information that is relevant to them. An explanation about the nature of the forensic examination must be given by the forensic medial officer (FMO) or forensic nurse examiner (FNE) and police also need to inform the victim about police investigation processes.

The victim should be made aware that they may withdraw their consent at any time to any particular procedure, or any aspect of the examination. However after the examination is complete, an investigation by police may continue to progress.

It should be noted that the decision to have a forensic examination is a health care matter and therefore legislation and policy around informed decision-making in health care applies in this circumstance. For more information on decision-making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

It is the responsibility of the medical and forensic staff to assess capacity to consent. Where a person lacks capacity, it is appropriate to identify a capable adult to act on the patient's behalf. Please refer to section 2.2 of the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

If at any point there is a possibility that the capable adult identified is the offender, it is in the best interests of the patient for an Adult Guardian to be appointed in accordance with the *Powers of Attorney Act 1998* and the *Guardianship and Administration Act 2000*.

Where possible the examination will be carried out using the Sexual Assault Investigation Kit (SAIK).

Forensic medical examinations and informed consent for people under 14 years of age

Paediatric patients are generally those aged less than 14 years of age. It is usual practice for the child to be transferred to the hospital's child protection area for an examination, even if they have had initial treatment in an adult emergency setting. Emergency medical treatment for any child should be undertaken by the Department of Emergency Medicine prior to a forensic medical assessment.

Paediatric forensic medical assessments are undertaken by paediatricians. This will be done by the Child Protection Advisor on call (or similar) or the general paediatrician on call.

All examinations conducted on children should be consistent with Queensland Health's Hospital and Health Services Health Service Directive: Protocol for conducting child sexual assault examinations: *http://www.health.qld.gov.au/directives/docs/ptl/qh-hsdptl-029-11.pdf*. All paediatric FMEs should also adhere to legislation and policy around informed decision-making in health care. For more information on decision –making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf*

Chain of evidence

The chain of evidence and the need for 'contemporaneous recollection of facts' to aid an investigation is essential. The chain of evidence involves not only the examination of the victim, but also includes the geographic location where the assault occurred, the identification and interview of witnesses and identification of relevant additional evidence. Evidence collected needs to be stored and transported in approved and standardised ways as outlined in police procedures to ensure the utility in a court proceeding. This further emphasises the importance of police involvement prior to an examination being conducted.

Storage and transportation issues need to be considered when undertaking an examination as the inability to safely and correctly store and transport evidence may damage the evidence or make it inadmissible in court in the later stage of an investigation and prosecution.

The doctor or nurse conducting the forensic examination should discuss the case with the police before the forensic examination takes place. This is to ensure that:

- all necessary evidence is collected
- a re-examination is prevented
- unusual evidence is not overlooked.

Timing and nature of the forensic medical examination

In determining the timing and nature of the FME a number of factors will be considered. These include the time since the assault, the physical and emotional state of the victim and their account of the assault.

This process, particularly if it involves an internal gynaecological or anal examination, can be distressing and the examination may need to be delayed or discontinued on account of the victim's physical and emotional state.

Presence of police and support person at medical and forensic examinations

Regardless of age, a person is entitled to have a support person present during the medical and forensic examination. This may include a friend or family member, a nurse, health care worker or sexual assault worker, who is not a potential witness.

There is no legal requirement for a police officer to be present during the medical and FME. However, if a victim requests the presence of police, this police officer is to be the same gender as the victim.

A police officer must be present to receive all evidence collected during a forensic examination immediately after the procedure to maintain continuity of the evidence for any potential court proceeding.

Consent to release information and evidence

The doctor or nurse conducting the FME will not release the SAIK to police without the signed consent of the victim or the capable adult acting on their behalf.

Access to health records

Health records, including counselling notes, are confidential. However, patients should be notified that any records can be subject to a subpoena or other court-related mechanisms.

Drug facilitated sexual assault

Where the administration of drugs in the sexual assault is suspected, testing to maximise the chances of detecting these substances should be administered in a timely fashion. However, the decision to test remains a clinical one which is made by the FMO or FNE.

Victim DNA reference samples

DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the FME.

Support person during the police interview

Police should inform victims that they may be accompanied by a support person while their statement is being taken. However, the victim must be advised that:

- the support person may not participate in the interview
- the support person may not directly or indirectly influence the interview
- a potential witness may not act as a support person.

Discontinuance of police action before a proceeding has commenced

Where the victim does not wish to proceed with further police action, police should:

- make clear that following the withdrawal of the complaint no further police action will be taken
- attempt to obtain a signed withdrawal of complaint
- inform the adult victim (18 years and over, only) of the online *Adult Sexual Assault Resource (http://www.police.qld.gov.au/programs/adultassault/)* package that provides alternative reporting options

If a proceeding has commenced, the victim's wishes will be taken into account when deciding if the matter will continue.

Domestic Violence Protection Orders

Sexual assault is one form of domestic and family violence. Where the sexual assault has occurred within an intimate personal relationship (marriage, engagement, couple), family relationship or an informal care relationship, the victim should be informed of their option to seek protection under the *Domestic and Family Violence Protection Act 2012*. In situations where domestic violence has occurred and where protection is needed to prevent further violence, a domestic violence order can be applied for by the victim, by police on behalf of the victim or by another person authorised by the victim. This is done through the Magistrates Court.

Where appropriate, victims should also be referred to a specialist domestic violence service for support and assistance, for example DVConnect Womensline Ph. 1800 811 811 and DVConnect Mensline Ph. 1800 600 636.

Follow-up and registration on the Victims Register

After the trial and/or sentence, the victim will have the opportunity to talk to the case lawyer about the outcome of the case and the sentence imposed, if any. This opportunity may arise immediately after the trial and/or sentence concludes or at a later time by telephone.

If the offender is imprisoned or placed under the supervision of Queensland Corrective Services, the victim may register their details on the Victims Register which is administered by Queensland Corrective Services. A victim and/or their family or nominee can register to be kept informed about the offender's imprisonment, movement between locations and proposed parole dates. They will also be given the opportunity to make submissions to parole boards when offenders apply.

Where the offender is a young person, the Victim Information Register may be utilised. This register is administered by Youth Justice within the Department of Justice and Attorney-General. A victim and/or their family or nominee can register to be kept informed about the young person's detention, movement between locations and supervised release dates.

If the offender appeals against their conviction and/or sentence or the Attorney-General appeals against the leniency of the sentence, the victim will be kept informed about the progress and outcome of the appeal and any consequential matters arising from the appeal.

Key stakeholders at the local level should maintain current referral information on appropriate support and other community services available. Localised referral pathways and protocols should be developed between key service providers to ensure timely referral pathways for those in need of support.

Conclusion

The government agencies acknowledged in this document (QPS, QH, DJAG and DCCSDS) have committed to the principles, roles, approaches and procedures articulated in the guidelines. This commitment aims to ensure that individuals who have experienced sexual assault are provided with timely, high quality and coordinated service delivery responses appropriate to their needs and appropriate to the role played by departmental officers.

Key service providers are encouraged to use this document as a framework to develop local level arrangements and protocols to ensure best practice, quality service and support to people who have experienced sexual assault.

The government agencies responsible for the development of the guidelines would like to thank all key government and non-government stakeholders who kindly contributed their knowledge and expertise.

REPORT

INQUIRY INTO THE CIRCUMSTANCES THAT LED TO THE CONVICTION OF MR FARAH ABDULKADIR JAMA

THE HONOURABLE F H R VINCENT, AO QC

Ordered to be printed

VICTORIAN GOVERNMENT
PRINTER
May 2010

PP No 301, Session 2006-10

INQUIRY INTO THE CIRCUMSTANCES SURROUNDING THE WRONGFUL CONVICTION OF FARAH ABDULKADIR JAMA

29 March 2010

Ms Penny Armytage
Secretary, Department of Justice
121 Exhibition Street Melbourne

Dear Ms Armytage,

In accordance with the instructions contained in my letter of appointment of 15 December 2009, I herewith present my Report of the Inquiry that I have conducted into a number of matters relating to the wrongful conviction in the County Court at Melbourne, on 21 July 2008, of Farah Abdulkadir Jama for the crime of rape.

Yours sincerely,

The Hon. F.H.R. Vincent AO, QC

Acknowledgements

I wish to express my deep appreciation of the considerable assistance provided to me by Dr Bob Hoskins, Dr James Robertson, and Dr Lesley Shone, all of whom gave very generously of their time and considerable expertise. The contribution made by Harley Dannatt, a very able final year law student from Victoria University, to the necessary legal research was also extremely valuable.

All of the agencies and individuals involved in the matter were deeply concerned about what had happened in this case and all had initiated an examination of their roles and structures prior to the Inquiry. All were extremely open and helpful in their responses to matters raised by me and provided me with the maximum level of assistance.

Terms of Reference

For the purposes of establishing the circumstances surrounding Mr. Farah Jama's conviction, you are requested to inquire, consider and report on the following aspects of the case:

1. The integrity and continuity of the forensic evidence in relation to the investigation of Mr Jama.

2. In relation to the possible contamination of the forensic samples, and taking into account Victorian Institute of Forensic Medicine, the [Victoria Police Forensic Services Department] (VPFSD) and current relevant standards and processes:
    - The integrity of the forensic medical procedures adopted when any of the samples pertaining to Mr Jama were taken.
    - The integrity of the processes, procedures and protocols followed (or not) when the samples were transported, analysed and interpreted at all stages of the investigation.

3. Whether the processes, procedures and protocols utilized in the collection, transport, analysis and interpretation of the forensic samples in this matter were sufficient to minimise the risk of contamination.

4. In relation to the matching of the forensic sample (s) with Mr Jama's profile on Victoria Police's DNA database (s) :
    - On what basis was Mr Jama's profile initially uploaded and then retained on the DNA database?
    - How and at what stage of the first investigation was the match made for the purposes of the second investigation?
    - If relevant, what are the issues in relation to the validity of the match that was made that resulted in Mr Jama being charged?
    - With particular reference to the current legislative regime, how should Mr Jama's profile have been handled once the first complaint had been withdrawn given the timing of the second investigation?

5. In relation to the forensic evidence and the apparent presence of biological material from Mr Jama taken from the same FMO in the same hospital examination facility approximately 24 hours prior to the alleged victim in the case upon which he was convicted being examined:
    - When was this first apparent to each relevant agency?
    - What was done with this knowledge by each relevant agency?

6. In relation to the conduct of the *committal hearing*, how and when the relevant agencies detailed below fulfilled their respective responsibilities in respect of the forensic evidence.

7. In relation to the conduct of the *trial*, how and when the relevant agencies

detailed below fulfilled their respective responsibilities in respect of the forensic evidence.

8. In relation to the conduct of the *appeal*, how and when the relevant agencies detailed below fulfilled their respective responsibilities in respect of the forensic evidence.

9. What improvements or legislative amendments might be made to improve the standard and integrity of forensic evidence provided to the criminal justice system as a result of this inquiry into the conviction of Mr. Jama.

10. What improvements might be made to the communication between and within relevant agencies in criminal prosecutions involving forensic evidence.

In undertaking this inquiry, you are requested in particular to consider the role of, and consult with, the Victorian Institute of Forensic Medicine, Victoria Police (including the VPFSD) and the Director, Solicitor and Office of Public Prosecutions, and the Northern Centre Against Sexual Assault.

You are requested to provide a status report of your findings by 26 February 2010, and the final report by 31 March 2010.

The Approach and Methodology of Inquiry

The inquiry was initiated when it became apparent that there had been a miscarriage of justice, resulting in the wrongful conviction and imprisonment of a young Somali man, Farah Abdulkadir Jama, for the crime of rape.

Not only was the evidence against him ultimately revealed as inherently unreliable but, it came to be recognized, the likelihood that he had committed the offence alleged was, at the risk of understatement, remote and found to have been perpetrated in circumstances where it seemed to be highly improbable that there was any crime at all.

The consequences of his prosecution and conviction in such circumstances are obviously serious from the viewpoints not only of all the individuals and agencies directly involved but the community generally and raise important questions concerning the operation of our criminal justice system and, in particular, in cases involving scientific expertise and DNA evidence.

In addition to the stress and anxiety to which Mr Jama and his family were undoubtedly subjected as the matter proceeded through its various stages, it must be borne in mind that a finding that he had committed a crime of the most serious kind was made against him and that he was required to undergo approximately 15 months imprisonment, as an innocent person, before the conviction was set aside and a verdict of acquittal entered by the Court of Appeal.

Looked at from the perspective of the alleged victim of a rape and, in more than one sense, actual victim of the process, to whom I will hereafter refer as M, the situation must have been and is likely to continue to be extraordinarily distressful. She was informed and accepted that she had been raped whilst unconscious. Her victim impact statement provides some indication of the suffering that she experienced as a result. After a lengthy legal process, she was then told that it was highly unlikely that the person she had been led to believe was her assailant was guilty of offending against her and, further, that there was a very high level of probability that no assault had actually been perpetrated upon her at all. Presumably, she experienced some relief from that knowledge, but then had to come to terms with very different information and a dramatically altered personal situation. Although I gained the strong impression when speaking with her that she appeared to be handling the situation extremely well, it must have been, and almost clearly still is, very difficult for her.

The case against Mr Jama had been mounted and pursued on the basis of a single piece of evidence; namely, the presence on a slide and a swab, collected in the course of a forensic medical examination at the Crisis Care Unit operated by and under the control of the Northern Centre Against Sexual Assault (NCASA) at the Austin Hospital, of DNA that could, in the opinion of scientists, to an extraordinarily high level of mathematical probability, be attributed to him.

M had been taken this unit and examined by a Forensic Medical Officer (FMO) from the Victorian Institute of Forensic Medicine (VIFM), after she was found unconscious in a toilet cubicle in a nightclub in Doncaster and with no recollection of how she came to be the cubicle or in that condition.

Notwithstanding that there was nothing apart from that evidence that could be seen to inculpate him in any respect, or could even provide the foundation for suspicion, reasonably held or otherwise, that he may have committed the offence alleged against him and, very importantly, where all of the known circumstances indicated otherwise, the questions relating to the possible unreliability of this evidence were not properly addressed until long after his conviction.

When it was finally realised that that the tested swab and slide were collected in the same unit as forensic samples secured from another woman, who, it was undisputed, had had sexual contact with Mr Jama, and by the same doctor, it was immediately appreciated that they may have been contaminated and that the verdict had to be set aside. The whole case was then reconsidered.

Clearly, in conducting an inquiry into this matter within the Terms of Reference given to me, it was necessary to attempt to ascertain how this sorry stage of affairs developed. This raised a variety of questions including:

- How and when the swab and the slide may have been contaminated.
- How was it that the possible sources of contamination were not recognised by any of those involved in the various processes between the commencement of the investigation and Mr Jama's conviction.
- How did it come about that Mr Jama was convicted in the absence of any other circumstantial evidence and where the known facts strongly indicated that the crime alleged was almost certainly not committed by anyone
- Was this an isolated incident that was highly unlikely to occur again, or did it point to some underlying systemic problems. If so, what should be done to address them.

Accordingly, I considered it important to examine all of the available files with the assistance of recognised independent experts, consult with and interview a number of persons concerning the processes and procedures employed in obtaining the evidence with a view to identifying the possible points at which contamination may have occurred, and, after consultation with the various agencies involved, make recommendations directed to ensuring, as far as possible, the integrity of the forensic process and thereby avoid or minimise the risk of such occurrences.

But as I have indicated, the issues raised by this matter were not confined to those processes. This was, as will be readily appreciated, a quite unusual case. One notable and highly uncommon feature which it possessed was that that the DNA evidence

provided the only foundation for concluding that a crime had been committed at all, and then constituted the only means of identifying the perpetrator. M had not consented to intercourse and, in consequence, if the evidence was accepted as establishing that it had taken place, it also characterised the crime as rape and, as a practical proposition, identified the person responsible.

In other words, the DNA evidence was, like Ozymandias' broken statue in the poem by Shelley, found isolated in a vast desert. And like the inscription on the statue's pedestal, everything around it belied the truth of its assertion. The statue, of course, would be seen by any reasonably perceptive observer, and viewed in its surroundings, as a shattered monument to an arrogance that now mocked itself. By contrast, The DNA evidence appears to have been viewed as possessing an almost mystical infallibility that enabled its surroundings to be disregarded. The outcome was, in the circumstances, patently absurd.

It became clear that the DNA evidence was perceived as so powerful by all involved in the case that none of the filters upon which our system of criminal justice depends to minimise the risk of a miscarriage of justice, operated effectively at any stage until a matter of weeks, before Mr Jama's appeal was expected to be heard.

There were several questions to be addressed at this level, requiring the examination of Victoria Police and Office of Public Prosecutions files, the transcripts of the committal hearing, pre-trial directions hearings, the trial, including the opening and closing addresses of both counsel and the judge's charge to the jury.

A number of interviews were conducted with persons who played a part in these processes with a view to gaining an appreciation of their perception and understanding of the issues presented by the case generally.

DNA evidence can obviously be of considerable value in the investigation and prosecution of serious crime, assisting in the identification of perpetrators and exclusion on occasions of the innocent from suspicion. However, it requires little thought to appreciate that it presents a number of serious challenges and dangers, if its character and limitations are not properly understood and appropriate measures taken to ensure that it would be safe to have regard to it and then properly used, as this case demonstrates.

After following this history of the proceedings against the unfortunate Mr Jama from their origins through to their disastrous conclusion with his conviction, I have been left with the deep impression that at virtually every point, and by almost everyone involved, it was handled with so little insight into the issues which it presented that no need was seen to explore further or conduct research into them. This was particularly so in the case of those involved in the legal processes. There were ample warning signs along the way that suggested that something was amiss, but they were simply not read.

In this report, I have pointed to a number of deficiencies that emerged and have advanced suggestions for improvements. I have not attempted, however, save on one or two occasions, to be specific concerning techniques of implementation or the

allocation of responsibility for them between the various agencies and stakeholders involved. To do so would have necessitated a far broader exploration of their respective areas of operation and inter agency relationships than was possible within the ambit of this Inquiry. What I have done, hopefully, is to identify the nature of the issues and the type of changes that I consider need to be made.

Rather than structure the report directly on the basis of the Terms of Reference, it appeared to me that the issues would be more easily addressed and their relationships more apparent if I dealt with them as they as the emerged from the history of the investigation and the legal proceedings. Accordingly, I have approached them in that fashion. Individuals have not been named in order to protect their privacy.

The Background

Farah Abdulkadir Jama was, on 21 July 2008, convicted on his trial in the County Court at Melbourne of the commission of rape, for which he was subsequently sentenced to imprisonment for a term of 6 years in respect of which a non parole period of 4 years was fixed.

Shortly put, it was alleged against him that he engaged, without her consent, in the penile/vaginal penetration of M, a woman aged 48 years, in a night club at Doncaster, on 15 July 2006.

M had been found unconscious in a toilet cubicle, locked from the inside, at about 10.50 pm. She had entered the club at approximately 10:20 pm and recalled speaking to some people, purchasing two glasses of Frangelico, a well known liqueur, and lighting a cigarette at a table, but nothing thereafter.

She was of the view that the alcohol that she had consumed, in and before she entered the club on that evening, could not account for her condition and was understandably concerned about what may have happened. It occurred to her that she could have been surreptitiously given a drug of some kind and then sexually assaulted.

When she raised this possibility with the doctor who attended her at the Austin Hospital to which she was taken from the nightclub, the police, the Northern Centre Against Sexual Assault (NCASA) and a doctor on call that weekend for the Victorian Institute of Forensic Medicine (VIFM), were contacted.

The doctor conducted a physical examination of M, at 10.50 on the following morning, in a Crisis Care Unit, located in the Emergency Department at the hospital, but under the control of NCASA and took swabs from within the vagina of M and prepared slides that were subsequently conveyed for analysis at the Victoria Police Forensic Services Department (VPFSD) at Macleod. The doctor had, as mentioned, , in the same location and only approximately 28 hours previously, coincidentally taken forensic samples from another woman [B], who had, in fact, engaged in sexual activity with Mr Jama. There were no charges laid in respect of the earlier incident.

The Investigation Concerning M

The Circumstances

Apart from those who came across M in the toilet cubicle and attended to her afterwards, there were no witnesses as to what had occurred and nothing, save perhaps the degree to which she was observed to be incapacitated when found, to indicate that anything of a criminal character may have been involved. The circumstances under which she came to be in the cubicle were simply unknown and it certainly did not follow that something untoward must have happened.

Although, as I have mentioned, M did not consider that her state could be explained by the amount of alcohol that she had consumed, and therefore suspected that she may have been drugged, there was nothing, other than the presence of prescribed medication and alcohol, detected on subsequent toxicological investigation.

This did not exclude the possibility that some drug had been administered to her as one of those commonly used for this purpose, broadly known as GHB or Fantasy, is, by reason of its composition and the speed at which it metabolises in the body, difficult to detect within even a few hours on subsequent routine testing. On the other hand, the absence of any such finding means that there was no direct evidence of a drug being administered and the conclusion that it must or may have been would then be an inference drawn from the circumstances and the observations made by and of the person said to be possibly so affected.

I note that in the trial however, there was evidence adduced by the prosecution concerning GHB, pointing out its effects and the speed with which it can be metabolised by the body and thereby quickly become undetectable. This may well have been regarded by the jury as an invitation to speculate about the possible use of that substance and could have operated unfairly to Mr Jama in the circumstances. I also note that, despite the admission of this evidence, the Judge when sentencing recognized that he could not have regard to it.

In this case, M, had consumed some alcohol in the couple of hours before she was found and had taken a prescribed dose of Tegretol earlier in the day. She stated in her evidence that she had been taking this particular medication since 1994 and that it was her understanding and experience that it was safe to do so in conjunction of alcohol, provided that she kept within what she described as 'the limitation'. What that term encompassed was not explored by either counsel or explained by M herself. Whether she inadvertently exceeded it on this occasion must, of course, remain a matter of conjecture, although M remains confident that that was not the case.

The police member dealing with the matter recorded in their note of a conversation with M, conducted at the Austin Hospital shortly after 08:20 on the following morning, 'arrived at about 21:30 hours and sat in car having a few drinks, (sister in

law) drove to the location. M had 3 approx. 3 x shots from bottle of Frangelico she bought from home'.

The examining doctor recorded a history of 'a few drinks of Frangelico' which were described by M as larger than normal standard measures. She then gave a history of 2 further drinks inside the nightclub and told the investigating police member that she felt 'a bit drunk at this stage'.

In a statement taken from M by another police member, on 26 July 2006, she said that the drinks that she had in the car "were probably one and a half to twice the normal amount". She also told the police member that she had been intoxicated on only about three occasions in her life, but this time it felt "different".

Whilst the precise level of alcohol in her system when she was in the nightclub is unknown, what is clear, on the basis of M's evidence in the trial, is that she had consumed a minimum of 2 larger than standard and, at least, one, but possibly two, presumably standard drinks, of Frangelico within a time period of a little over an hour and in the presence of her medication.

A blood alcohol test taken at the Austin Hospital at approximately 12.50 am, that is, about 2 hours after she was found, indicated the presence of .13%, a not insignificant amount and one which may well have affected her.

It is well recognised that the effect of a given amount of alcohol upon an individual can vary significantly and may be influenced by a variety of factors, including the quantity consumed, the person's tolerance to alcohol, his or her state of health, level of tiredness and, of possible relevance in this case, the ingestion of various drugs, including Tegretol. In other words, whilst it is possible that M may have been given an undetected drug, there are explanations for her physical state at the time found and subsequently that do not involve the inadvertent taking of some surreptitiously administered substance.

Dr Dimitri Gerostamoulos, the Chief Toxicologist and Manager of the Toxicology Laboratory at VIFM, in the course of cross examination in the trial, gave evidence on this aspect, but the matter was left largely in the air.

> "[Defence Counsel, Is it possible that if a person takes Tegretol with an amount of alcohol, it can cause blackouts in certain instances? Yes, it can.
> Can it also cause periods of unconsciousness? Yes, and that depends on the volume of alcohol consumed, as well as the dose of Carbamazepine or Tegretol."

The prosecutor did not pursue this aspect in re examination.

With respect to the circumstances under which a drug may have been put into her drink, where, when and by whom this could have been done was also problematic.

M stated that, on entering the club, she purchased a drink which she then took to a lounge area equipped with couches. She was alone and sat there, smoking and sipping her drink for "perhaps ten maybe fifteen minutes", after which she walked around the club "for a little bit". She said that she had a brief conversation lasting "probably a couple of minutes" with a man she encountered, but she was not interested in talking to him and moved on. After wandering around again, for "a little bit", M returned to the bar and purchased another drink. She was unsure of her movements thereafter but thought that she may have walked around a little more until she made her way to a nearby table to light a cigarette. After placing her handbag and the glass she was carrying on the table, she extracted her cigarettes and lighter and commenced smoking. Whilst there, she spoke, for possibly 5 minutes, with two males of European extraction. During that time, her glass, she said, would have been on the table or in her hand. She was not certain that she drank from it at any stage. If she had not, then the only known occasion on which a drug may have been put into her glass could be excluded. Her next recollection was becoming conscious, lying on a floor.

Significantly, M stated that she did not speak to any 'black men' during that evening. To her knowledge, she had not seen Mr Jama, who, it should be pointed out ,was a thin, dark skinned 19 year old of African appearance, on that or any other occasion. However, in order to place something in her drink, he would, of necessity, have had to have been in very close proximity to her and at a time when her consciousness was not clouded by the administration of a drug. On the basis of her description, it would seem unlikely that an approach could have been made in the ten to fifteen minutes that she was sitting alone or when engaged in her conversations. The substance would also have had to act very quickly within the time frame set out above, and so effectively that she lost consciousness before she became aware of her assailant's presence.

Given that M had been in the night club for only about thirty minutes before being found and making full allowance for the possibility of significant inaccuracies in her estimates of time, the period within which all the activities involved in the alleged rape would have had to occur would be very brief indeed. The activities associated with the rape itself after she lost consciousness would, given M's prior movements and conversations, have had to have been undertaken, it seems, in a very few minutes.

All of her movements, conversations, the possible administration of a substance, the movement of her by her assailant to the place where the offence was committed and then possibly back to the toilet cubicle, would all have had to occur within that half hour period - a highly unlikely series of events, in my opinion.

The evidence indicated that DNA attributed to Mr Jama was found on only one of the two swabs taken from the endocervical region. None was detected on two other swabs taken from within the high vagina and there was nothing found on the clothing of M and specifically no semen elsewhere. The amount on the swab was remarkably small in the context of a penile/ vaginal rape, with only one intact sperm and fifteen heads being observed.

When sentencing Mr Jama, the trial judge said

> "Counsel rightly argued that there was no evidence of planning of this crime on your part. That is true, but it is more than outweighed by the fact that you took advantage of the situation as presented to you by the unwell state that the complainant was later found in. You raped her when she was in a most vulnerable state. You obviously saw her and sized up the situation as she presented to you. Instead of assisting her and making sure of her safety, you raped her for your own immediate and short-lived sexual gratification. The jury cannot have viewed the facts in any other way. That is what makes your crime so bad; and it is what makes the suffering of the complainant so lasting. She was sexually violated by a man she did not know and could never recognize.
>
> .....
>
> There is no evidence that you administered an illicit substance to the complainant, and you have not been charged with such an offence. I have sentenced you on the basis that you took advantage of the complainant and raped her when she was indisposed, and at her most vulnerable state, for whatever reason."

The problems inherent in that scenario hardly require recitation and can be seen to reflect the obvious difficulties encountered by the trial judge in formulating a factual foundation for sentencing in accordance with legal principle, the evidence given in the trial and the jury verdict.

There was no evidence, apart from that provided by the DNA, that Mr Jama had ever attended the nightclub which was promoted as an over 28's venue and located in a suburb approximately 15 kilometres from his home. On its face, it would seem to be an unlikely place for him to go, as a young person with no known or likely cultural or other links to the area or the venue, and presumably alone, on a Saturday night.

Regrettably, the surveillance camera located at the entrance of the club on that night did not record all of the comings and goings of patrons. There are gaps between 8pm and 9.30pm and 11pm and 11.30pm. If he was there, he must have entered and left at periods for which, and remarkably fortuitously for him, there were no camera records.

What is apparent from my viewing of the camera surveillance record is that almost all, if not all, of those attending the club would have easily fallen within the targeted age group. I noted no dark skinned young male of his apparent age group entering or leaving through the public entrance during the periods covered. Members of the nightclub staff to whom a folder of photographs containing a depiction of Mr Jama was shown did not recall ever having seen him in the premises.

Naturally, the police pursued this aspect, but no link could be found. Examination of fingerprints from the toilet cubicle did not provide any evidence of his presence and subsequent investigation revealed no record of telephone calls, police checks, field contacts, parking infringement notices, traffic camera fines or any other indication that he had ever had contact with that area, or, specifically, the nightclub.

The DNA Evidence

The VIFM doctor conducted an examination of B at 3.50 am. on 15 July, 2006 at the CASA unit at the Austin Hospital. The doctor did not enter the unit again until they attended M at 10. 50 am. on the following day, that is, approximately 30 hours later.

The doctor informed me that it was their practice to shower and change their clothing immediately upon returning home after completing the relevant duties. I have no hesitation in accepting that the doctor would have done so on this occasion. I also accept that the doctor showered and changed their clothing at least twice between the two examinations.

The possibility that the DNA of Mr Jama was transferred directly to M, either from the doctor's clothing or through the doctor's personal physical contact with the two women in the course of examination, is, I have concluded, extremely remote.

In a statement, dated 21 December 2009, the doctor said that, by July 2006, they had been conducting genital (including speculum) examinations of female patients for over eight years and described the practices they adopted in sexual assault examinations:

1. While the subject is redressing I wash my hands and don clean gloves so that I can prepare and label the specimens.

2. On the metal bedside trolley, in corresponding sequence. I dab the swabs on slides, then shorten and replace the top of the swab into the sheath. The samples are then sealed and labelled with patient stickers/date/doctor details. I then cut the corners off the swab sheaths for airing, and all samples are placed into specimen bags which are then sealed with patient stickers and cover- I ask the subject to undress (behind the curtain for privacy) and change into a clean hospital gown, and the clothes are dropped by the subject into paper specimen bags for evidence if required.

3. I ask the subject to sit atop a "bluey" (where available, a disposable, multiply, hospital issue underlay sheet), which is placed on the bed sheet. A second bed sheet is provided for the subject to cover herself.

4. I then prepare the swabs and slides that I will be using by laying out on the metal bedside trolley beside the bed the exact number of new swabs and slides I will need and labelling them (with the pencil provided on the trolley) according to the anatomical location to be swabbed.

5. I then perform a general physical examination (routine head-to- toe examination for signs of injury or foreign material), following which photographs are taken and forensic evidence is collected if required.

6. Prior to performing a genital–anal examination, I wash my hands and don clean gloves.

7. A sterilized/new speculum is obtained (I open the packaging but leave the speculum on the bed inside the packaging until I am ready to use it).

8. I then ask the subject to position herself as instructed for the genital-anal examination.

9. I inspect the external genital region.

10. To perform the internal genital examination, I part the labia with the gloved fingers of my left hand and with my gloved right hand; remove the speculum from its packaging by grasping the handle only. I then use my gloved right hand to insert the speculum bill into the vagina. When I have visualized the cervix, I lock the speculum in position and use my gloved left hand to hold the new swab sheaths.

11. In order of labelled samples, I open the swab top and insert the swab for sampling with my gloved right hand, then replace the swab top into the swab sheath.

12. When all the swabs have been taken I place them on the trolley, before removing and discarding the speculum. I then remove and discard my gloves.

13. On the metal bedside trolley, in corresponding sequence, I dab the swabs on slides, then shorten and replace the top of the swab into the sheath. The samples are then sealed and labelled with patient stickers/date/doctor details. I then cut the corners off the swab sheaths for airing, and all samples are placed into specimen bags which are then sealed with patient stickers and cover-signed as a method of tamper-proofing.

14. I clean up the residual items on the metal bedside trolley (e.g. plastic corners/wooden pieces etc.) and dispose of all the remaining items. I then remove and discard my gloves.

15. At the completion of the interview, I hand the samples over to police who countersign the forensic samples documentation.

Concerning the two relevant examinations, the doctor stated,

> "With specific reference to the collection of forensic specimens from [B], five bags of clothing were collected. Four oral swabs and corresponding slides were collected for spermatozoa. A skin swab of her right breast was collected for foreign DNA (saliva) and a vaginal swab and an anal swab were collected for foreign DNA, in view of the allegations of digital penetration. A portion of hair that appeared matted with a "sticky substance" was cut with

> scissors that were provided on the examination trolley, following which the collected hair specimen was placed into a yellow screw-top plastic specimen container. I did not swab the hair for semen, as I believed at the time that swab and slide specimens of the hair were unnecessary, given that I was able to collect the hair directly for the laboratory to conduct further sampling on."
>
> "The forensic samples that were collected during my examination of [M] were: 1bag containing black pants, 2 x high vaginal swabs and slides for spermatozoa, 2 x endocervical swabs and slides for spermatozoa, and 1 x buccal swab for a comparison DNA sample."

Police and laboratory records are entirely consistent with these descriptions of the number of specimens obtained, their labelling and what was ascertained on analysis. I considered the possibility of mislabelling, but it would seem that that could only occur, if there was an extra swab and slide obtained at the time of the first examination which were then missed and then later mistakenly included in the materials collected in the course of the second. This would involve significant departures by the doctor from their normal practices on each occasion. I have no reason to suspect that anything of that kind may have happened, or that the doctor did not follow their ordinary course when conducting these examinations and obtaining the forensic samples.

There are no standard procedures laid down for or adopted by doctors across the country when conducting forensic examinations of female subjects and the collection of samples for subsequent testing. In some States, what is done is influenced by the use of sealed kits containing a number of necessary items, check lists and so forth. These kits are not used in Victoria where doctors perform the examinations with swabs, slides and other equipment obtained from a trolley in the examination room that has been pre stocked in accordance with VIFM requirements.

In its response to the inquiry, VIFM stated that the doctor's description of their practices accorded with the standards adopted by the Institute in 2006 and there was nothing to suggest that the doctor had deviated from them in any respect.

Associate Professor Bob Hoskins, the State Director of Queensland Health's Clinical Forensic Medicine Unit, said that the stated procedures were designed to minimise the risk of contamination through the examining doctor's actions and widely adopted at the time.

Similar views were expressed by Dr. Lesley Shone, Sexual Assault Medicine Clinician, Yarrow Place Rape and Sexual Assault Service in South Australia and by Dr James Robertson, National Manager Forensic and Data Services, Australian Federal Police.

All however considered that the taking of these measures could prove to be of no avail, if the environment, and, in particular, the equipment and furnishings in the examination room were contaminated from previous use.

They disapproved of the Victorian practice of using swabs, slides and other from a pre stocked trolley in the examination room and advocated the adoption of the packaged sexual assault examination kits employed in many places elsewhere. This, they said, would reduce the possibility of contamination from that source, at least.

Each expressed the opinion that, although it was generally the position that reliance was placed upon the cleaning of examination rooms carried out by hospital or other staff, this was inappropriate when taking samples for DNA testing. They stated that the central purpose of hospital cleaning is to maintain adequate levels of infection control and only in a very few locations and for specific purposes, would it be directed to the avoidance of DNA contamination. They emphasised that minute quantities can be spread throughout the examination room and the area in which it is located as for example, people move about or when the person is being examined or removing her clothing. Trolley surfaces upon which particles could settle presented a problem in this regard and should be carefully decontaminated before and after each examination. Professor Hoskins said that, even if this is done, clean paper from the kit should be placed on the trolley top before swabs and slides or other items are taken out. Control swabbing should be performed before and after use. This represents an application of Locard's principle that "every contact leaves a trace".

What then of the possibility of environmental contamination of the later collected samples at the CCU in this case?

The CCU in which the examinations were conducted and the two sets of specimens collected is one of nineteen operated and controlled by fifteen independent CASA groups in Victoria. Nine are physically attached to and function under the auspices of public hospitals, with the remainder being operated as stand alone community based agencies governed by a committee of management.

A recent Survey of Crisis Care Units carried out by the Department of Justice Sexual Assault Steering Committee, which involved unit managers, reported that the CCUs operated under a variety of arrangements with the hospitals or other organisations in whose premises they are located, varying from formal signed protocols to relatively casual arrangements.

The units perform some very important functions. Among them is the provision of a supportive environment within which the sometimes badly injured and very frequently severely traumatised victims of sexual assault can be counselled and provided with information to enable them to make properly informed and appropriate decisions. Those located in the Melbourne metropolitan area are relatively widely distributed in order to facilitate access by victims and to minimise the additional distress that is likely to be occasioned by travel and delay. The units are also used for the purposes of forensic medical examination and the collection of what may become evidentiary material from victims.

The one located at the Austin Hospital consists of four rooms, including an examination room, and is situated in the Emergency Department. Under the arrangements in place at the time of the examinations in 2006, these rooms were supposed to be cleaned immediately after use by hospital staff, although, it would appear, this was not always done.

With respect to the equipment in the examination room, the disposable items would be placed into a bin for later removal. The trolley on which equipment was laid out would probably not be cleaned after use and some of the items would not be cleaned at all, for example, the trolley top and scissors. Linen would always be changed by hospital staff after a physical or forensic examination, but it was not always removed immediately from the examination room.

As far as I have been able to ascertain, there was no log book or other record kept that would enable a check to be made as to whether any cleaning was carried out during the weekend in question and I consider that there is a strong possibility that it had not been.

I have already drawn attention to the views of three experts with respect to the kind of cleaning required to ensure that, as far as reasonably practicable, the environment within which the samples are collected is uncontaminated by foreign DNA. Having taken the opportunity to visit the unit concerned with Professor Hoskins and the manager, it is apparent that, even if the room had been cleaned in accordance with the arrangements then in place, a problem could still have risen due to the inadequacy of the form of cleaning involved, the overall set up of the unit, including the presence of a pre stocked trolley and the areas that would not have been touched at all.

As it does not appear that any record was kept indicating when or by whom the rooms were cleaned and what, if any, steps were taken to ensure that the examination room, in particular, was at an appropriate standard for physical or forensic examinations to be conducted, there is a strong possibility that the environment, within which M was examined, was contaminated by DNA left after the examination of B.

Dealing with the causes of possible contamination of the samples from the environment, VIFM in its response to the inquiry, put the position

> "*VIFM* considers three possibilities of contamination at the Austin Hospital may be described as follows:
>
> 1. Mr. Jama's DNA deposited on [B] contaminated areas of the hospital where she was present. The seminal material on her hair would have been drying into a crusty material and would have been very prone to flaking off with any movement. Any part of the pathway between entering the hospital and the point at which she showered and washed here hair would have been prone to be contaminated.
>
> Certain of the above areas would also have been occupied by [M] when she was seen at the hospital. In particular common areas of the CCU such as the couch and chair in the counselling room are

routinely occupied by all patients seen there and are not cleaned routinely. Other common occupied areas include the examination room and the bathroom.

It is possible that [M] became contaminated with material from [B] and that this material could have found its way into the collection pathway of the endocervical swab. The amount of material that would have been required is microscopic and would not have been visible to the naked eye.

2. It is possible that flakes of seminal residue from [B's] hair contaminated work surfaces/equipment that were used in the subsequent examination of [M] and the collection of evidence from her. This includes the trolley surface on which the slides for collection of evidence from [M] were placed and from where they could have been contaminated. A microscopic piece of material could have landed on the slide at the time that [B] was examined, and remained there until the [M] examination, when part of it could have been transferred to the swab when the swab was dabbed on to the glass.

3. The same scissors might have been used to cut the hair sample from [B] and, without having been cleaned, to cut the swab sheath on the swab that had been used to collect the endocervical swab from [M]. Seminal residue on the scissors could have found its way into the swab sheath when this occurred.

In relation to the third possibility above, the scissors do not come into contact with the slide and they are used only on the swab after the slide has been made from the swab. Therefore, the likelihood of the scissors being the source of contamination in this scenario is remote.

Whilst the above scenarios describe the potential for contamination, the possibilities are limited by the fact that Mr. Jama's sperm was found on the slide and Mr. Jama's DNA was found in the combined swab analysis. If the sperm was indeed that of Mr. Jama and not someone else's, then it follows that either:

- The swab was contaminated and transferred semen as it touched the slide, or
- The slide was contaminated and transferred semen/DNA when the swab touched it.

VIFM considers that the forensic examination itself is unlikely to be directly the cause of the contamination. If the contamination occurred during the forensic medical examination, it is most likely to be caused by secondary deposit of the extraneous DNA from the first complainant on or around the second complainant, the equipment or the furnishings

> such that it may have been further transferred to the doctor or the equipment us contaminating the endocervical swab/slide."

I have concluded that the possibility that there was transference of a microscopic amount of material containing the DNA of Mr Jama from B to a swab and slide obtained in the examination of M as a consequence of the presence and examination of the two women in an environment where that might easily have occurred is quite high.

Precisely how it may have happened cannot be determined as the deposition of the minute quantity of material involved could have occurred in a number of ways. It is possible to speculate about the probability of transference through various mechanisms, but ultimately pointless to do so.

The Police Response

When a report was sent to the police from the laboratory police that a DNA match had been made between material taken from M and the profile of Mr Jama obtained in relation to another investigation, he was interviewed on 12 November 2006. He denied any knowledge of the incident, asserted that he had not heard of the nightclub and claimed that he had never been to the Doncaster area at any time.

Conscious of the lack of supporting evidence of any kind, the investigating police member queried the possibility that there may have been some contamination of the sample upon which the investigation depended at some stage after it arrived at the laboratory.

When asked, in the course of the Inquiry, about the reason for this query, the member stated that there seemed to be no realistic scenario available as to when and where a rape could have been committed and there was nothing to connect Mr Jama with the area or the nightclub. The possibility that it may have taken place in the toilet cubicle in which M was found was discounted for a number of reasons, and the backstage area of the club, which was, the only other possible location, was considered to be almost as unlikely.

Accordingly a memorandum was forwarded to the police member's superior, referring to the other investigation and pointing out that it seemed likely that the samples would have arrived at the laboratory in close proximity to each other.

This query was conveyed to the Manager of Biological Examination Division of the Forensic Biology Division of Victoria Police, expressed as follows;

> "On 24th November while you were at Doncaster CIU obtaining a buccal swab from a rape suspect, I discussed with you an offender identified through a DNA sample allegedly responsible for a rape in Doncaster. Briefly, he has denied all knowledge and the victim has little or no recollection of the night. The report from [the investigating member] is

> forwarded for attention and any results will assist me in recommending any charges.
>
> In the current climate I need to be able to discount the possibility of cross contamination. Perhaps a report is all that is required. I have every faith in the process but no doubt the subject will be raised at any subsequent trial so we may as well be armed with suitable answers to the inevitable questions.
>
> If this request is not your area of responsibility, can you forward to the appropriate person."

A response was then received from a Case Manager in the Biological Examination Branch, stating,

> "In my opinion I do not think contamination between the two cases could have occurred as items from the two cases and the relevant reference samples were examined at different times, at different areas and by different people. Also the DNA processes were done at different times such that the samples were not processed together in the same batch.
>
> If you need a report and any clarification, please do not hesitate to contact me."

This was a crucial statement in the history of the case and was repeated in different terms on several occasions afterwards. It effectively set the stage for all that followed.

No request for clarification was made of this seemingly comprehensive rejection of the existence of any risk or for a full report encompassing all the items tested. This should have been provided as a matter of course.

The investigating police member, when interviewed, said that it never contemplated that, if there was contamination, it may have happened at any other location than the testing laboratory. The member knew that the samples were taken to widely separated police stations and was generally familiar with the procedures for the taking of forensic samples.

The files relating to the other investigation, but that the focus of attention when doing so was on what might be learned about Mr Jama and the likelihood of his offending in the manner under consideration. Had the name of the examining doctor been seen, it would have possessed no significance to at the time.

It is apparent from the terms in which the opinion is expressed and the matters to which reference that it was addressing only the possibility of contamination at the laboratory, as the query was directed to what may have happened there, and that the scientist did not turn their mind to the question whether it could have occurred at

some other point. It is reasonable to assume that had the scientist done so, this limitation upon the opinion would have been expressed in the response and drawn the issue to the attention of the police, or VIFM.

The statement was also incomplete, in that the case notes from the laboratory indicate that another person in the examined the swabs and slides from B on bench 9 at 11.40 am on 17 July and the swabs and slides obtained from M at 12.05 pm on 21 July. A table attached to the response to the query, which has been set out above, makes no reference to any examination of the B samples on 17 July, nor was it mentioned subsequently.

When asked about this, the case manager said that this examination, but it was not mentioned it as no profile matching that of Mr Jama was obtained from the samples tested at that time and considered that the fact of common location and tester could not have presented a potential for contamination.

Given the time interval between the testing of the two sets of samples and the handling and cleaning protocols in place at the time and the reasonable assumption that there was compliance with them, I accept that it is extremely unlikely that contamination occurred at this stage. Under the protocols,

- Each scientist has their own kit or set of equipment and these are not transferred.

- The biology division has a stringent cleaning regime in place using hypochlorite to remove and destroy residual DNA from work surfaces. Additionally items are placed on disposable paper and not directly on to the bench surface. Gloves etc are routinely changed throughout the examination and specifically between handling different items or instruments.

- Instruments are used once and either discarded (in the case of disposable scalpels) or are subjected to extensive cleaning using hypochlorite, ethanol and autoclaving. In this case, the scientist used disposable scalpels.

- The biology division environmentally monitors the laboratory which involves the taking of swabs from surfaces, equipment etc and subjecting them to DNA profiling. Any DNA detected is compared to both staff profiles and those samples on the DNA database.

Noting that in the VIFM response to the Inquiry, reference was made in the laboratory case notes that the same person was recorded as receiving the two sets of items and as acting as case manager, I inquired into the matter and was informed that

> "The process of receiving exhibits from FEMU in 2006 was that the items would be issued to the case manager .... but upon their arrival in the biology wing, the paraprofessional would take control. Thus the latter would open the items,

> describe the contents, perform testing, sample for DNA (if applicable), re-seal the exhibit bags and return them FEMU.
> .....
> [The case manager] was not involved in the examination of either case .....
> As part of the review process on cases worked on by paraprofessionals, the case manager must satisfy themselves that everything required to be done was done and was done according to relevant procedures and methods. The verification of the case notes is achieved via the case manager initialling the case notes"

Whilst it is conceivable that there was some DNA on the swab or slide that was not detected in the testing process or which was present on associated covers or containers, the likelihood that it found its way on to the materials tested four days later can I think, be reasonably regarded as remote.

The hair sample was tested, on 19 July, on bench 1 which is located 25 metres away from bench 9 and is further separated by walls and other infrastructure. This would also be an unlikely source of contamination of the material tested on the 21 July. I am satisfied that there is no substance to the VIFM concerns.

Nevertheless, for the response to contain no reference to the fact of common location and a common tester for some of the samples was inappropriate. Insofar as the presence and degree of a risk of contamination in any given case could be matters of opinion that could be reasonably disputed, an accurate statement of the circumstances relating to each of the items tested and the reasoning underpinning the opinion should have been given.

In the present case, and at minimum, the limitations upon the opinion given should have been specifically expressed and in a full report from the outset. That, of itself, may have prompted a broader inquiry and contact with VIFM and the doctor concerned.

Further, had there been procedures and protocols in place that would, as a matter of course, have been triggered by the raising of the query, which included the tracing of the tested materials back to their sources, the connection between the two matters would, in all likelihood, have been seen, the possible sources of contamination identified and almost certainly Mr Jama would never have been prosecuted or put on trial. This, perhaps overly confident, assertion is based upon the fact that once it was realized that the connection existed, the miscarriage of justice was immediately recognised.

This has been indicated by the Director of VIFM to be a matter of real concern to the Institute which only became aware of the existence of a problem over three years later. He said that had the matter been drawn to their attention at the time of the initial query, it would have been immediately addressed and the whole situation that subsequently developed would have been avoided.

Having no justification for rejecting the statement of the VIFM doctor as to the practices normally adopted and compliance with them, or the advice given to me concerning the handling of the materials at the laboratory, I am of opinion that the contamination that I am satisfied must have occurred, was almost certainly the consequence of environmental factors.

The Interpretation and Use of the Scientific Opinion

Examples of the manner in which the opinion, expressed without its limitations being made clear, was interpreted and used can be can be found in several passages in the trial transcript.

At one point, the prosecutor, who presumably wanted to dispel any doubts that members of the jury might harbour concerning the reliability of the DNA evidence, adduced evidence from the scientist called on this aspect about the quality control procedures employed at the laboratory. The prosecutor then asked,

> "We are not talking about generalities, we are talking about the particular case that you might be giving evidence about in any situation?....In relation to this case there no any-or there was no evidence of any contamination occurring."

Significantly, a little later, the jury enquired as to whether there were any statistics relating to detected incidents of contamination.

The prosecutor then asked

> "...In this case, let's forget other cases was there any evidence of contamination using the controls you've described?--No there was no evidence of any contamination in this case"

In their final address, the prosecutor submitted;

> "There was no suggestion in this case of any lapse or error, including contamination type error about which the laboratory has got techniques that reveal such a thing if it happens..."

It must have been obvious to the VPFSD scientist that this evidence would be seen to exclude any possibility of contamination. However, the questions put by counsel were answered and there was no suggestion at any stage that a problem may have arisen at any earlier point. As I commented earlier, I do not think that that possibility had ever been considered as the situation appeared to have been approached entirely through the prism of the Forensic Science Centre and its role as it was understood .

The responsibility resting upon the participants in a criminal trial dependent upon scientific evidence was the subject of attention in the report of the Royal

Commissioner conducting the inquiry into the case of Edward Charles Splatt in South Australia in 1984. He expressed the view that

> "a very serious obligation lies not only on the scientist who gives evidence but on the representatives of the legal system who are responsible for the conduct of the trial.
>
> -The vital obligation which lies upon the testifying scientists is that they will spell out to the jury, in non ambiguous and precisely clear terms, the degree of weight and substance and significance which is or ought or ought properly to be attached to the scientific tests an analyses and examinations as to which they depose; and specifically the nature and degree of any limitations or provisos which are properly appended thereto.
>
> -And the critical responsibility which rests upon the legal persons is to ask such detailed and probing questions of the scientists as are most likely to elicit the type of evidence just mentioned.
>
> Of course, in that context of question and answer, the primary responsibility must always remain with the scientist; because it is [that person] (my alteration) who should know the nature and scope of [their] scientific analysis and the limitations and exceptions properly attachable to the results which [he or she] achieves.
>
> Accordingly, in my view, it is not properly open to a scientist, on a later occasion when [their] trial evidence is being reassessed, to say, for example; "I answered correctly such questions as I was asked. If I had been asked other and more relevant questions I would also have answered them correctly. It is not my fault that the correct questions were not asked of me".

If there is a failure on either side in respect to the exercise of that responsibility which I have just discussed it is the jury (and ultimately the particular accused) which suffers; in that it (the jury) is inadequately informed as to essential matters upon which its ultimate verdict must depend; it being the tribunal of fact which must give the ultimate decision"

I would add that these obligations must be recognised not only at the trial and by the legal representatives and the judge who has responsibilities in this area as well, but at all stages of the investigative and legal processes.

In this case, the defence did not challenge any of the prosecutor's assertions concerning the absence of any risk of contamination whatever as they were operating on the same assumptions. The trial judge was not alerted to the existence of any

problem and, in consequence, the jury arrived at their verdict on the basis of a fundamental misconception.

The Decision To Proceed

Although troubled by the lack of any other evidence connecting Mr Jama with the venue and still unable to develop a realistic scenario or theory of how, when and where a rape could have been perpetrated, the police member handling the matter prepared a brief of evidence in which it was pointed out that a criminal prosecution would be heavily, if not entirely, dependent upon the DNA evidence.

Approval was however given to proceed.

The brief was then forwarded to the Office of Public Prosecutions (OPP) for consideration.

The Deputy Commissioner for Crime of Victoria Police, Sir Ken Jones, informed me in the course of discussion that, as a result of greater familiarity in the UK with the issues and risks surrounding DNA evidence, it was not by itself considered a sufficient foundation upon which to base a prosecution. He was confident that it would not have been authorised in a case such as the present one, where there was no other evidence of any kind to establish that a crime had been committed and, if it had, anything whatever apart from the DNA evidence that even suggested that Mr Jama may have been the perpetrator.

Sir Ken was of the view that DNA matching was very valuable to police for intelligence and evidentiary purposes, but, when used as evidence, had to be seen as one part of a circumstantial case and not as the entirety of it. He said that Mr Jama's case highlighted the need to increase the level of understanding of investigators in Victoria Police of the issues arising from this type of evidence and indicated that steps were being taken to address this.

He also expressed concern that, as a result of exaggerated claims and expectations that reflect the "CSI effect", which are then debunked, its real value may be seriously diminished. This, he said, appears to be occurring in the United States where there have been a number of examples of the misuse of such evidence.

Dr Robertson strongly endorsed this approach. He said that it was vitally important that the proper role of forensic science within the criminal justice system is understood by other investigators, those involved in the legal processes and, of course, the scientists themselves. In the case of DNA evidence, its function must not be regarded as simply to produce a "number' to be applied uncritically. Like all other evidence, he said, whether or not it can be seen to be reliable and probative in the determination of disputed issues of fact involves consideration of a range of factors. However, the very nature and perceived probative value of this type of evidence requires that extreme care is taken at every stage from the collection, handling, testing of the materials and the interpretation of the results.

The importance of appropriate investigation to address the possibility of contamination, in particular, before DNA evidence is relied upon was also the subject of submission by VIFM.

> "Whether or not there has been contamination in a particular case is most often a question of opinion/judgement following investigation, not a fact. The assurance that there has or has not been a contamination is part of the overall investigation of the case. To a limited extend this occurred in this case with exploration of the possibility of contamination within the forensic laboratory. This explanation was initiated by the investigator. There is no particular "test" for contamination
>
> One way to explain what is involved in establishing whether or not there has been contamination is to consider the following:
>
> In an alleged sexual assault, one of the aims of taking the forensic samples is to detect foreign (i.e. another person's) DNA on the complainant. One of the risks of the forensic uses of DNA evidence in cases where the identity of the suspect is in dispute or unknown is: how does one distinguish between a true finding of foreign DNA (ie. swabbing detected presence of an individual who may be connected with the case) and inadvertent contamination (ie. contamination with DNA extraneous to the material being swabbed). One distinguishes between a true finding and inadvertent contamination by:
>
> An evaluation of the circumstances of the alleged sexual assault; and
>
> By relying on the overall (low) probability of inadvertent contamination having occurred bearing in mind
>
> - The total circumstances and procedures of the collection of the specimens
> - The environment in which the specimens are collected
> - The procedures of the forensic science laboratory
>
> "Locard's principle that every contact leaves a trace allows for the transfer of microscopic amounts of DNA/semen being feasible, although a complex set of events needs to occur to result in contamination. A combination of events might include a woman with DNA/semen on her person externally, (eg: on her hands, clothing or hair) coming into contact with

> furnishings, equipment and her environment in such a way as to transfer some of that DNA/semen. A second person then comes into direct contact with that contaminated environment and is themselves contaminated.
>
> In circumstances where DNA/semen is on the person externally (i.e. on the hair, outer clothing or hands), the possible opportunities for contamination are greater than when DNA/semen is deposited internally (vagina, anus) or under clothing (breasts, buttocks etc.)"

From the perspective of the police members directly involved, who clearly had limited knowledge of the problems presented by this kind of evidence and did not recognize the limitations within which the scientific opinion was expressed, they had made the appropriate enquiries and had received assurances that, in the present case, it was both compelling and entirely reliable.

The Prosecution Approach

Allegations of sexual offending are dealt with by a specialist unit within the OPP. After an initial assessment is made of the nature and complexity of the case, solicitors are allocated to handle it.

On this occasion, the initial assessment contained the observation that it was unusual in that "the case appears 100% reliant upon the DNA matching" and appeared to be the first time that the initiation of proceedings was being considered in the absence of any other evidence whatever.

Those handling the matter were well aware that, if the matter went to trial, the prosecution case would be constituted entirely upon the DNA evidence. In consequence, further checks were made in relation to the laboratory processes which confirmed the earlier findings and the assurance that there was no reasonable likelihood that contamination had occurred was effectively repeated.

On this aspect, there is nothing in the files, or was conveyed to me in the course of the Inquiry, that indicated that there was any appreciation on the part of involved of the possibility that contamination of the samples could have occurred other than at the testing laboratory.

It is clear however that no problem was perceived in proceeding on DNA evidence alone. Although directed attention to the issue of contamination, there can be little doubt that the prosecution was more concerned about a quite separate problem.

In a Memorandum, dated 19 September 2007, to the barrister appearing for the prosecution at the committal hearing, he was instructed,

> **"Issue(s) at Committal:**
> There is no other evidence that implicates the defendant other than the DNA evidence. The difficulty the prosecution will have is how to lead this evidence without disclosing that the defendant was arrested in relation to another rape that occurred the night before the current offence, for which he was profiled."

What was fundamentally important in the observation in the initial assessment was not only that the case was dependent on DNA evidence, but that it was the only occasion of which he was aware on which a prosecution was contemplated in the absence of any other evidence whatsoever.

As I have earlier mentioned, a single piece of evidence, based upon statistical probability of a match between the DNA profile of Mr Jama and DNA on material collected in the course of the forensic examination was to be used to establish both the commission of a crime at all and the identity of the perpetrator. The fact that it was seen as possibly unprecedented within the OPP, should, in my opinion, have prompted some investigation of the experience of the courts in cases of that kind or in which issues with respect to DNA evidence and probability reasoning were considered.

Those dealing with the matter obviously regarded the DNA evidence as reliable on the basis of the opinion that they had received. It is, I think, reasonable to infer that the limitations to that opinion were obviously not detected, and the evidence regarded as sufficient to justify the further progressing of the matter, although the features militating against the commission of a crime at all and Mr Jama's possible guilt of it were powerful.

- He was a 19 year old student of Somali origin living in Preston and studying year 12 VCE. He had no prior convictions, no known connection with the Doncaster area, claimed that he did not drink alcohol and had never been seen in the nightclub in question which was promoted as an over 28's venue. At face value, there would seem to be little, if anything, to attract a person of his age group and what is known of his social connections to such a place. Nothing was suggested as to why he might have gone there. As a broad proposition, I suspect that a nightclub catering to substantially older people would be anything but attractive to such a young person and that one of its attractions to the targeted group is that they can interact more comfortably with persons of their general age group.

- As a thin dark skin teenager of African appearance, it would be surprising if his presence was not noted by someone, including M, in that setting.

- As a potential predator looking for a victim, he could hardly anticipate that he would not be observed in that situation, or that the person chosen would not remember him or would lose consciousness so quickly and completely that she would have no recollection of him or his actions at all.

- If, on the other hand, he acted opportunistically, as the judge found when passing sentence, he would have had to observe the degree of vulnerability of his victim for at least long enough to assure himself that she was on her own, identify a location in which he could rape her, move her to it, commit the offence and then escape; all within a very short period of time.

- It would also have to be accepted that he entered and left the premises at times at which fortuitously for him the video surveillance camera at this entrance was not operating.

- The time frame within which the events related to the alleged rape would have had to occur was so short that it is improbable that they happened.

- There was DNA located on only one of the four swabs taken from within the vagina, only one complete sperm found and nothing on her clothing including the long black pants M was wearing.

- How he, a young dark skinned man could have moved a heavy and, at least, semiconscious woman in her late 40s a substantial distance across the nightclub without attracting attention is difficult to see. The only evidence bearing upon this scenario was that two male security staff members experienced a problem in moving her from the toilet cubicle to the back stage area; at times, dragging her across the floor. To attempt to move M in these circumstances , apart from the challenges in accomplishing the task, Mr Jama would have had to be a very self contained and calculating predator with a very high degree of personal confidence. Setting to one side the issue of admissible evidence, there was nothing whatever in his background that could be seen in any way to support that view.

- There was no prosecution scenario or theory ever developed concerning the circumstances under which the alleged rape was committed:

    - If it took place in the cubicle, Mr Jama had to take his victim there undetected, commit the offence, possibly pull up the slacks that M was wearing, as this was the state in which they were found when she was located, climb over the top of the cubicle, for the door was locked from the inside, and make his escape, again undetected. It is hardly necessary to draw attention to the improbabilities involved in this scenario, or to emphasise the risk to which Mr Jama would have placed himself by raping his victim in that location, At any moment, for example, women could have entered the area and detected him in the act, or seen him entering with his unconscious or semi conscious victim, or climbing over the top of the cubicle or leaving. The possibility that M was raped in the toilet cubicle was understandably rejected out of hand by the police member directly handling the investigation.

    - Where else a rape may have been committed was never indicated, nor was any possible location identified. The prosecution case simply bypassed this

aspect. In this context, I have earlier pointed to the difficulties that the judge encountered in his fact finding concerning the circumstances in which the rape may have occurred, when he was passing sentence. Bearing in mind that there were approximately 800 people in the venue at various stages on that night, wherever it could have been perpetrated, the risk of detection accepted by a potential rapist would almost certainly be very high.

- There was no evidence that Mr Jama had any access to the drug GHB in the course of the trial, or any other drug capable of inducing unconsciousness in the way suggested. In this regard, it is important to bear in mind, as earlier mentioned, that there were other explanations for M's state when found, including an unexpected reaction to the combination of medication and alcohol that she had taken.

- It emerged from the investigation of the other incident that Mr Jama had not taken the opportunity to engage in penile vaginal sex with a young woman less than 24 hours earlier. When questioned about that matter, he provided a version of events that was, in large measure, later accepted by the woman concerned. Yet, according to the prosecution, he was prepared to act in a most extraordinarily predatory fashion, by, either, surreptitiously drugging a woman in her late 40's and raping her or, opportunistically, attacking her upon observing that she was severely incapacitated.

Although the DNA evidence had become available because of the investigation of Mr Jama's possible involvement in the commission of a separate offence of a sexual character very shortly prior to the night in question, no attempt was made until well after the trial by the prosecution to secure detailed information concerning that matter or to investigate what had taken place.

At the very least, the fact that he had come to police notice for his possible commission of sex offences against two women in widely separated parts of Melbourne within a period of 24 hours, of itself, should have attracted attention to the full circumstances of each occasion.

The apparent dismissal of the other investigation as irrelevant to the matter in hand is also difficult to understand in a situation where there was no scenario ever developed as to how, when and where Mr Jama could have perpetrated the crime alleged against him.

The material gathered in relation to it may have been useful for any one of a number of purposes, including, what might be learned about Mr Jama himself, and, as it ultimately transpired, the likelihood that he may have committed the offence in the circumstances alleged, when, on the previous night, he had not availed himself of the opportunity to engage in consensual penile intercourse with an apparently enthusiastic young woman.

Had the earlier matter been adequately explored, presumably the fact that the samples were obtained from the two women at a common location and by a common forensic

medical officer would have been observed. That may well have alerted those conducting the case to the existence of a potential problem.

The reasoning of those dealing with the matter at the OPP seems to have been there was no justification for doubting the general reliability of the version of M which was consistent with the findings made upon the examinations conducted at the Austin Hospital, her condition when found at the nightclub and what was known of her movements prior to that time. The presence of spermatozoa constituted strong evidence that sexual intercourse had taken place to which she clearly had not consented, and probably after she had been rendered incapacitated by a 'spiked' drink. DNA had been located in the samples taken from her that could in turn be attributed to Mr Jama. They were satisfied that there had been no contamination of the tested sample. It followed that the question of his guilt should be put before a jury, although there was otherwise no evidence incriminating him and no scenario developed as to the circumstances of the offence itself.

This was the basis upon which the trial was conducted as, the prosecutor, made clear in his final address to the jury. The prosecutor submitted that they need not be concerned with such matters as when and where the rape of M could have taken place or the absence of any other evidence inculpating Mr Jama because the DNA evidence established his guilt. After asserting that the evidence of the scientist was "rock solid" and that they could act upon it "safely and beyond a reasonable doubt", it was argued;

> "If you are satisfied about that evidence there's no question, you may think, that the penetration was without [M's] consent and that the accused was aware that she was not consenting, or might not be consenting. Now, of course, it doesn't matter how or why she came to be unconscious. For example, whether her drink was spiked, or whether she'd had too much alcohol , or that there was a question of the mixture of alcohol with medication, or any combination of those possibilities it does not matter how or why she came to be unconscious.
>
> If you're satisfied beyond a reasonable doubt that the accused man penetrated her vagina with his penis without her consent while aware that she was not consenting , or might not be consenting, then he is guilty of the crime of rape. How ever she came to be incapable of consenting, or incapable of freely agreeing, how ever that came about doesn't matter. If you're satisfied that he penetrated her vagina and did so without her consent then he is guilty of the crime of rape. Nor do you need to make any finding or come to any conclusion about where exactly at the premises, for instance, the rape occurred and, for example, it's not necessarily and it's (not) a necessary part of the prosecution case that it happened in the toilets. It may have happened in the toilets. It may have happened somewhere else but you don't have to draw any conclusion or make any finding about that and you don't

> have to be temporary sleuths to work out where it did happen. The reason why you don't have to make any finding about that or draw any conclusion about that because the prosecution does not have to prove every fact in the case for you to be entitled to convict an accused person. The prosecution doesn't have to prove every fact but what the prosecution has to prove otherwise it would in any case – forget this case, in any case there's always lots of facts that rear their heads and it would be impossible to prove every fact we'd be here forever; in any case, not this case. It's futile and it's not necessary. The law doesn't require it."

Both conceptually and operationally, our legal system is being required to accommodate and respond to awe inspiring and almost magical developments in human knowledge and technologies concerning which, for most part, those involved have little or no knowledge or experience. In the present case, the obviously unreserved acceptance of the reliability of the DNA evidence appears to have so confined thought that it enabled all involved to leap over a veritable mountain of improbabilities and unexplained aspects that, objectively considered, could be seen to block the path to conviction

As far as I have been able to determine, it was not until the issues presented by this case came to the fore that the particular care with which DNA evidence must be approached was seriously considered. It was recognized that issues of contamination could arise but clear that it was thought that once they had been resolved there was no problem in using it directly as powerful proof of guilt.

As I have earlier mentioned, there was reference in the course of preparation of the matter to the possible difficulties that could be encountered in explaining to the jury how the police came to be in possession of Mr Jama's DNA profile without introducing the earlier investigation or creating an atmosphere of suspicion that would compromise the conduct of a fair trial.

This was, as it transpired, a matter of legitimate concern, as the jury enquired as to how it came about that the police were in possession of Mr Jama's DNA profile. The trial judge informed them that there was no evidence on that aspect, which was irrelevant to their deliberations. It is difficult to put to one side the thought that, notwithstanding his instructions, concerning the adequacy of which I have some reservations in any event, the jury may have harboured suspicions about Mr Jama on that basis. It could be seen as akin to an indication that an individual had prior convictions that they were not to know about.

The prosecution approach was, of course, determined to a large extent by the very important concession clearly made by the defence in the course of pre trial proceedings, that no issue of contamination arose and by the assurances that had been received from the laboratory.

I am acutely conscious that it is easy to be critical, given the advantage of hindsight, of actions taken or not taken, decisions made or approaches adopted in the absence of

later acquired knowledge. For a number of reasons, including the costs and limitation of resources involved and sheer work pressures, our investigative, prosecution and trial processes are of necessity directed to those matters repeatedly referred to by appellate courts as "the real issues" presented by a case. However, this was, from the outset, a rare case with a number of very curious features and warning signs, the significance of which were not understood.

The Defence Position

Mr Jama's counsel, in his address to the jury at the trial, argued that they could not be satisfied beyond reasonable doubt that M, who had no recollection of any assault upon her, had, in fact, been raped. In support of this argument, attention was drawn to a number of the features earlier listed. As mentioned, the prosecution did not attempt to respond at this level and simply relied on the overwhelming power of the DNA evidence.

In any event, counsel contended, the evidence was insufficient to support the conclusion that Mr Jama was the perpetrator. Counsel pointed to the circumstances in which the rape was alleged to have been committed, the fact that Mr Jama had no prior convictions and was to be regarded as a person of good character, the absence of evidence of any connection between Mr Jama, the Doncaster area and the nightclub or any evidence that a person fitting his description was even seen in there on that night.

Reliance was also placed upon evidence adduced from members of Mr Jama's family that he was at home at the time with his family members as his father was believed to be gravely ill. A friend of Farah Jama, said that he was present and tried to interest him in enrolling at Latrobe University.

Judging from the trial transcript, all of the alibi witnesses fared badly under cross examination, particularly, Mr Jama's young friend, who, had earlier told the police that he was at his own home at that time. Mr Jama, who did not give evidence, had told the police that he had not seen any of his friends on that night

With respect to these witnesses, the prosecutor, in their address, submitted

> "Now you've heard some alibi witnesses called only yesterday, two members of the family and, I suppose you could say, a loyal friend.... You might think [he]was roped in to give some semblance of non family type evidence.....you might think that the evidence this alibi evidence all of the witnesses taken together was a pretty artificial, synthetic contrived sort of account, evidence cobbled together not to be trusted".

The defence counsel presented a quite different perspective of them

> "..let me suggest this to you that in relation to the cross examination of those witnesses in relation to the alibi you

> might have thought that it was easy sport for my learned friend to cross examine these people. It's a matter for you to see how you judge them but obviously they appeared, I suggest, to be relatively simple people. They were people without guile of any sort. They could not even work out what the relevance was of certain things."

Whichever of these views may be taken of the alibi witnesses, it is perhaps not surprising that their evidence had no positive impact on the verdict and may well have operated to his disadvantage in the minds of some jury members.

The defence were confronted with what they perceived as reliable evidence that a surprisingly small amount of sperm on the swab in the context of an alleged penile vaginal rape, consisting of one intact spermatozoa and fifteen sperm heads, was obtained from within the body of M. Accepting that it was there, they questioned whether she may have had intercourse at some time shortly before that night, but this possibility was removed when she said that she had not been sexually active in that way for some considerable time.

Mr Jama's legal representatives obviously had no knowledge that the two sets of tested materials were obtained by the same doctor and at the same location. It can be safely assumed that, if they had been aware of the connection, this aspect would have been pursued well before the trial. Again, I observe that no request was made to the OPP to secure access to the file relating to the earlier incident and which may well have alerted them to the existence of a problem.

Against that background, the defence argued that a real question then arose with respect to the interpretation of the test results. They contended that, as Mr Jama was not present in the night club at any stage, he had mistakenly been involved, when it must have been the DNA of an unknown third person. I do not need to set out the technical argument advanced to support this claim. No expert witness to support the defence contentions was called and, through their verdict, the jury can be seen to have rejected this possibility.

Again, in common with the prosecution, no reference was made by the defence to the concerns expressed by judges in other jurisdictions over a number of years with regard to the dangers of relying on statistical probabilities in the determination of guilt and the specific problems that can arise in cases involving such calculations based upon DNA testing. No mention was made of them in the directions hearings prior to the trial or in the trial itself. The attention of the trial judge was not drawn to them at any stage. It would seem that their level of understanding was akin to that of the prosecution.

The Trial Judge's Directions

Although there have been a number of cases before Victorian courts in which issues relating to DNA evidence, including the question of the possibility of contamination, have arisen for consideration, I think that it is fair to state that, generally speaking, the

amount of experience by judges and legal practitioners alike concerning them is quite limited. Not many matters have been contested and, so far as I am aware, none have possessed the features of the present matter.

There can be no doubt that the introduction of this form of circumstantial evidence of the involvement of an accused person in the commission of the offence charged has posed substantial challenges for our system of trial by jury. What meaning can sensibly be ascribed, separate from an assessment of statistical probability, to the concept of proof beyond reasonable doubt is difficult to discern, when, as in the present case, a jury is informed that on the basis of "rock solid" evidence, using the Australian Caucasian population sample data it was 800 billion times more likely that the sample originated from the accused than from an unknown person taken at random. The range, it was said, within which the calculation was made was between 1 in 45 billion and 1 in 14 trillion. The same comparison, when made by reference to the Somali population database produced a calculation of 1 in 89 billion with a range of 4.7 billion and 1.6 trillion. In other words, it would appear to be necessary to search well beyond this planet and conceivably this galaxy to find a match.

The relationship between the concept of proof beyond reasonable doubt and a statistical probability of guilt of the order involved here is, to put it mildly, problematic. If the science and the methodology underpinning these calculations are valid, the evidence is of an extraordinarily powerful character and, realistically, what jury would require more.

In my experience, juries regularly encounter great difficulty with the standard of proof in a criminal trial not involving issues and probabilities assessments of this kind and often ask for assistance. The judge then informs them cannot be provided other than that" beyond reasonable doubt" is a common English language expression that means what it conveys. Although compelled by authority to answer in that fashion, I have, when doing so, always regarded the required response to a sensible question concerning the standard of proof as ridiculous. The jury had requested assistance because they were uncertain as to what substantively the standard was or how the concept of proof beyond reasonable doubt would apply in the case that they had to determine. They would then be effectively told, "Work it out for yourselves because I am not allowed to help you".

Not long ago when sitting as a member of the Victorian Court of Appeal I had occasion to consider a trial judge's response to a question from the jury to the effect – regarding proof beyond reasonable doubt, would 70 – 80% satisfaction be sufficient? The judge replied that he was not permitted by law to attempt to define the term "beyond reasonable doubt" and could not do more than repeat his general direction on that aspect. The court in that matter indicated that, although His Honour was correct in declining to define the term, he should have made clear to the jury that a doubt reasonably held was not to be put to one side by reason of an assessment of that kind. Only a moment's thought concerning the relative ratios involved in the two cases is required to see the nature of the challenges presented.

In *R v GK* [2001] NSWCCA 413, Mason P accepted the force of a comment made by the trial judge in the course of discussion with counsel concerning the practical realities in the case before him,

> "I think that there is a very considerable risk that the jury notwithstanding any blandishments on my part may take the practical position of a punter and say that this is not just a mere certainty but an absolute certainty"

In this context, I observe that the probability or likelihood ratio given by the VPFSD scientist in November 2009 in relation to a retesting performed during that year in preparation of the appeal was expressed as follows;

> "Using Australian Caucasian population sample data, the Likelihood Ratio is one hundred and fifty million (150,000,000) (with arrange of fourteen million (14,000,000) to one billion seven hundred million (1,700, 000,000)……..
>
> Using Somalian population sample data……The likelihood Ratio is 17 million (17,000,000) (with a range of one million six hundred thousand (1,600,000) to one hundred and eighty million (180,000.000)".

The later calculations were made, I have been informed, in the course of a review conducted into DNA evidence in the period after the trial and reflect a more conservative interim approach being adopted.

I understand that, as a consequence of the review, a third calculation formula will be employed that is likely to produce a different ratio somewhere between them.

The amazing variations in the ranges within which the separate likelihood ratios were determined and the changes in the ratios in such a short period could hardly engender confidence in the use of such statistical techniques in evidence. I wonder what would have been the response of the jury in the present case had they been told that, on one basis, the likelihood ratio was in the order of 99% less than it was on the other. At least, on the latter formulation, it would no longer be necessary be seek beyond the solar system for a possible match. They may have been far less inclined to accept that the evidence was "rock solid".

There are a number of reported and easily accessible unreported cases in which the courts in several countries during the last twenty five years have grappled with the problem of the value and use of evidence of statistical probability, calculated by reference to esoteric concepts of science and mathematics that they have, to a large extent, accepted on faith, deferring to the seeming expertise of scientific witnesses.

They have been concerned about their ability to ensure that verdicts are based upon the standard of proof beyond reasonable doubt by reference to the totality of the

circumstances and not some impenetrable notion of statistical probability or likelihood ratio that may ultimately be seen to rest on arbitrary assumptions. Evidence of that kind is inherently dangerous as the changes to the formula set out above, and which have been made within a matter of a very few years, make abundantly clear.

I wish to emphasise that this does not mean that the presence of the DNA of a suspect at a crime scene or upon associated items or the body of a victim is not extremely valuable both as an investigative tool and, when appropriately used, as evidence in a criminal trial. It has been so accepted and employed for quite a long time. But it must be carefully used and placed into proper perspective and understood that a calculation of statistical likelihood provides a dangerous basis for conviction, if it is upon that alone that proof beyond reasonable rests.

Hampel J, almost 20 years ago remarked in one of the relatively few Victorian cases dealing with DNA evidence - *R v Lucas* [1992] 2 VR 109- that "caution must be exercised as the scientific appearance of expert evidence may be overwhelming".

In R v GK, Mason P expressed his agreement with the extra- judicial statement of Hodgson J (*Probability and Proof of Fact in Legal Reasoning* (1995) 69 ALJ at 736) that

> "Decision making generally involves a global assessment of a whole complex array of matters which cannot be given individual numeric expression.

In the Queensland case of *R v Fletcher* (1998) 2 QR 437, the Court of Appeal set out the direction of the trial judge which makes this point quite well,

> "The DNA matching, if proved beyond reasonable doubt, does not prove that the accused is the offender. The evidence only fails to prove that he is not the offender. The only inference which can be drawn from a match proved beyond reasonable doubt, together with the evidence of the occurrence in the community, assuming you accept the percentage occurrences, which is not here challenged, is that it was possible that he was the person who had sexual intercourse with the deceased, such that the matter then could not be proved beyond reasonable doubt on its own, so that, if there is only DNA evidence and nothing else which you accept, you cannot convict the accused. If you accept that there has been a match and no mismatch shown on any one locus which would exclude the accused, you can use the probability of this match, in accordance with the random occurrence in the community, as another item of circumstantial evidence, along with all of the other evidence in the case which you accept, in deciding whether or not, at the end of your deliberations, you are satisfied beyond reasonable doubt of the guilt of the accused. You consider

> carefully all of the evidence in conjunction and not individually."

It was observed in the Court of Criminal Appeal in England in *R v Doheny and Adams* [1997] 1 Cr APP R 369 –

> "As the art of [DNA] analysis progresses....the stage may be reached when a match will be so comprehensive that it will be possible to construct a DNA profile that is unique and which proves the guilt of the defendant without any other evidence. So far as we are aware that stage has not yet been reached."(at 373)".

It certainly does not appear that, in that respect, the situation is any different at the present time. Arguably, the advances in technology which have enabled DNA to be extracted from infinitesimally small amounts of material and the application of Locard's principle, have increased the potential for the wrongful involvement of a person, whose DNA is detected, in the suspected commission of a criminal offence. The importance to be attributed to ensuring that the collection, transport, testing and analysis processes are maintained at the highest level could almost be said to increase in inverse proportion to the size of the particles involved as the smaller they are, the more easily they can be transferred.

It follows that, before evidence of such seeming strength is placed before a jury, the greatest possible care must be taken to ensure that its limitations are understood and that it is safe to rely upon it. There is such danger in the uncritical acceptance of what I have earlier called the mystical infallibility attributed to it, the methods employed to collect it and the interpretation given to the findings by experts whose opinions can often only be challenged by other experts in arcane discourse that its reliability must be the subject of the most careful scrutiny.

This gives rise to important responsibilities that must be addressed at each level of our forensic processes, a number of which can be seen to be demonstrated in the present case.

So far, Australian courts have been extremely reluctant to engage in the testing of the admissibility of DNA evidence and its possible exclusion by reason of its unduly prejudicial effect through the use of *voir dire* procedures under which the judge determines these questions, leaving it to the jury to struggle with the problem and with little assistance in dealing with it. That is, in my view, most unsatisfactory and should be addressed.

As I have emphasized, the courts of a number of jurisdictions have pointed out that it is fallacious simply to convert a statistical probability that an individual might be guilty of the offence charged into a finding that he was and dangerous to rely on DNA evidence alone.

Phillips LJ in *R v Doheny and Adams* described the fallacy

> "Only one person in a million will have a DNA profile which matches that of the crime stain.
>
> The defendant has a DNA profile which matches the crime stain.
>
> Ergo there is a million to one probability that the defendant left the crime stain and is guilty of the crime."

It is, to say the least, unfortunate that neither this nor any of the other expressions of concern in the courts or in the literature, some of which I have mentioned, were brought to the attention of the trial judge. If they had been, or if the trial judge had possessed greater experience in this area than can be inferred from my reading of the trial transcript, it is, I think, reasonable to assume that a number of questions would have been asked, consideration given to whether the matter should proceed at all, and, if the trial continued, appropriate directions would have been given to the jury. The fact that the DNA evidence, like Ozymandias' statue, was at odds with all around it could not have been so easily bypassed.

At the very least, the provision of clear instructions to the jury as to the proper use and limitations of DNA evidence is required. The charge in the present case was devoid of any reference to these considerations.

The Consciousness Of Guilt Direction

The trial judge's charge in this case was otherwise conventional in both form and content, save in one respect, which the prosecution conceded at the appeal, would have required the setting aside of the verdict in any event.

When interviewed by the police, Mr Jama was asked whether he went to nightclubs and responded that he did not. His friend, in the course of cross examination, said that he had been with him at one called Chasers and another called Monsoon. However, he denied that they had ever gone to the Doncaster area together. He said that he had no knowledge of the existence of that part of the metropolitan area until after and because of the laying of charges. Significantly, in the present context, he was not asked at that stage when it was that Mr Jama and he attended nightclubs together. In re-examination, on being asked to recall the approximate dates of these attendances, he said that he thought that they went to the clubs after Mr Jama finished school and early in 2007.

Contrary to the submissions of both the Prosecutor and Defence Counsel that the trial judge should not do so, the trial judge instructed the jury that Mr Jama's denial that he had gone to night clubs could be used as evidence of his consciousness of guilt of the rape of M. This is clearly not the occasion for an attempted exegesis on the principles governing the use of evidence in this way and sufficient, I think, to state that the Crown concession in the appeal was in my opinion properly made. In other words, the evidence was incapable of supporting the inference of Mr Jama's guilt for several reasons.

Whether the Judge's error affected the outcome of the trial cannot be determined. If the jury did regard Mr Jama's denial of night club attendances as encompassing the night of 15 July, 2006 and as indicating concern about being at one in Doncaster because he was trying to distance himself from his commission of the rape of M, then it may well have done so and dispelled any doubts about the reliability of the only other incriminating evidence before them, namely the DNA match.

At a lesser level, this innocuous evidence may have been used by the jury as indicative of a lack of credibility of both Mr Jama and his friend and perhaps the possession of greater worldly experience and social sophistication on Mr Jama's part that could only have operated to his forensic disadvantage. As a practical proposition however, I doubt that it affected the verdict whichever way it was perceived.

The Appeal

There is no need to detail the course of the matter as it proceeded to the Court of Appeal. New solicitors, who were engaged on Mr Jama's behalf, focused on the possibility of contamination, but still in the context of the procedures adopted at the testing laboratory. Further tests were conducted, one by an independent laboratory which was unable to replicate the findings and another at the Forensic Science Centre itself which confirmed them to their satisfaction.

The first indication in the files or the court proceedings that there had been judicial consideration of the question whether a case could be mounted on DNA evidence alone appears in a Memorandum of an Associate Crown Prosecutor in preparation of the appeal in which the following appears:

"Can an offender be safely convicted only on DNA evidence?

Whilst there is no absolute bar to a conviction based solely on DNA evidence, the better view is that a conviction should only be returned where there is DNA evidence and at least one other item of evidence present which is consistent with the guilt of the offender.

This issue was first raised in the decision of the New South Wales Court of Criminal Appeal in *R v Green*, unreported, 26/3/1991 and then in *R v Pantoja* (1996) 88A Crim R 554.

In *Green*, the Court did not doubt the admissibility or reliability of DNA evidence in general. However, the Court went on to observe in respect of DNA evidence –

> "That evidence being admitted, it became incumbent upon the trial judge to tell the jury that the evidence, if accepted, meant that the Appellant could not be excluded and that, therefore, it was possible that he was the person responsible for the semen stains. That was the highest the Crown

> claimed it could use the evidence. It would follow that it would have to have been made clear to the jury that the "matching" results could not, in the absence of other evidence, prove beyond reasonable doubt that the Appellant was the person responsible for the semen stains".

In *Pantoja,* the evidence linking the offender to a sexual assault was a DNA match. In addition, there was also evidence of a disputed confession from the offender as to having engaged in sexual intercourse with the victim.

In dealing with the probative force of DNA evidence, Hunt CJ stated –

> "The significance of a match between the blood type or DNA of the offender and the suspect (or accused person) must be clearly explained to the jury: that (as is said earlier) it establishes no more than the accused could be the offender…" (at 564)

Abbadee J stated that a direction in the terms expressed in *Green* was a necessary requirement in any jury trial where the crown relied upon disputed DNA evidence. His Honour stated -

> "First, the jury was required to be told that it had to be satisfied (beyond reasonable doubt) that there was a match between the two profiles. If they concluded that there was a match, then it would then have to be made clear to the jury that the only inference they could draw from such matching was that the Appellant could not be excluded, and that therefore it was possible that he was responsible for the semen stains. Further, it would also need to have been made clear to the jury that the matching results could not in the absence of other evidence, prove beyond reasonable doubt that the Appellant was the person responsible for the stains." (at 583 – 4)

The decision in *Pantoja* was cited with approval and followed in *R v Fletcher* [1998] 2 QD R 437 (Queensland), *Latcha v R* (1998) 127 NTR1 (Northern Territory) and *R v Karger* (2001) 83 SASR 1 (South Australia)."

The absence of any indication in the OPP files prior to this memorandum that there had been any legal research undertaken in what were recognized at the outset to be not only simply unusual circumstances, but involved a situation that had not previously been encountered at all, was both surprising and disappointing.

VIFM was notified of the link between the two cases, on 25 November 2009, for the first time as a result of investigation undertaken within the OPP in preparation of the appeal and commenced their own inquiries. The possibility of contamination was recognized and the hearing of the case was expedited.

The Director of VIFM in an affidavit on 4 December 2009 put the Institute's position as follows,

> "While the interpretation and utilization of the results in this case were not within the control of the VIFM, I would like to advise that it is possible that processes VIFM relied upon may have resulted in contamination of swabs taken during the examination of the alleged victim in this case".

It is apparent that those words were carefully chosen but, like the initial expression of opinion by the VPFSD scientist concerning the possibility of contamination, they did not make clear to a person who was unfamiliar with the "processes VIFM relied upon" that there may have been some other source of contamination than the involvement of the same doctor.

The focus was placed on the fact that the same doctor examined the two women, with, perhaps, through the mention of transferability on to surfaces, an oblique reference to the potential for it to have occurred otherwise than through that contact. In my view, this produced a measure of inadvertent unfairness to the doctor concerned.

When the matter came before the Court, the Crown accepted that there had been a miscarriage of justice and that a verdict of not guilty should be entered.

The Aftermath and Recommendations.

It is almost incredible that, in consequence of a minute particle, so small that it was invisible to the naked eye, being released into to the environment and then by some mechanism settling on a swab, slide or trolley surface, a chain of events could be started that culminated in the conviction of an individual for a crime that had never been committed by him or anyone else, created immense personal distress for many people and exposed a number of deficiencies in our criminal justice system. But that, I believe, is what happened.

The test samples-- VIFM and the CCUs

VIFM presented a substantial submission to the Inquiry, which sets out in detail its response to what has happened and provides much useful information concerning the conduct of forensic medical examinations and the collection of samples for testing generally. I found it to be quite helpful and have included it with this report. It is apparent that a considerable amount of thought and work has been put into the issues which have been thrown up by Mr Jama's case.

Although asserting that its standards of practice in 2006 accorded with those adopted internationally at the time, VIFM stated that, since Mr Jama's case, there have been meetings with a number of Australian leaders in sexual assault examinations. In consequence,

> "many of these leaders have met with the various local stakeholders and revisited their policies and procedures with respect to conducting the forensic medical examination and the collection of evidence. Examples of altered practice include: limitations being placed on entry to the examination rooms to authorized personnel, implementing cleaning policies in the facilities where the examinations take place and redesigning rape kits accordingly....Notwithstanding VIFM alignment with relevant standards in 2006, there are a number of VIFM forensic medical examination processes and practices however, that are not in line with National and International Standards at present. They include the following:
>
> - VIFM had introduced a list of items required on a trolley which was stocked by CASA members after each examination. It is no longer considered best practice to have a pre stocked trolley.
>
> - We cut the ends off swabs to allow air drying. Recent practice has changed to exclude this process.

- In all jurisdictions excluding Victoria, the use of a prepacked DNA free rape kit is used.

At present, FMO are not responsible for cleaning and the furnishings and room prior to the forensic medical examination."

RECOMMENDATION 1:

Insofar as VIFM's current practices do not accord with current National and International practices, the outstanding matters should be addressed as soon as practicable.

Until this case, VIFM accepted the undertaking of examinations and, in particular, the collection of samples for DNA analysis in less than satisfactory conditions as the FMOs were simply called to locations operated by and under the control of others. This meant that they were not involved in the decontamination and cleaning regimes and relied on the VIFM procedures to minimize the risk of contamination. This case made it apparent that, on occasions, this could prove to be inadequate.

As I have pointed out, I have grave doubts that there was any cleaning of the unit at all during the twenty eight hours between the two examinations. If any was carried out, it was highly unlikely to have been directed to DNA decontamination control. The trolley top, scissors and other items left on it would not have been cleaned and, I suspect, neither would have been the moveable light above the bed.

The unit was being at that time used for forensic examinations approximately once each week with significant variations in time intervals. It was quite uncommon for two examinations to be conducted there in the one weekend, as happened on this occasion. The maintenance of appropriate cleaning regimes to accommodate such relatively infrequent and unpredictable usage and the special requirements for DNA collection would undoubtedly constitute a problem for all concerned. I think that it is unlikely that, in any event, it would feature high on the list of priorities of any busy hospital emergency department.

The CCUs have been established to satisfy a number of related needs which are by no means incompatible. However, great care must be taken if they are to be performed in the same location. An environment that is essentially designed and furnished to reduce stress and create a sense of personal safety may look very different from one which is intended to be clinically sterile and with minimal risk of DNA contamination occurring and the latter may need to have quite different entry and cleaning arrangements in place.

It is trite to say that, if a CCU is to be used for the purpose of forensic examination and the taking of samples for the purpose of DNA testing, it must be fit for such use. That was clearly not the position with respect to the one in which the samples were collected from B and M. On the basis of the recent survey, it would seem that a

similar situation would exist in a number of the others, although I wish to make clear I have not explore this aspect.

Interim measures to address the risk of environmental contamination in the units have been developed by VIFM and are currently under consideration by an inter agency working group which includes VIFM, the CASAs, Victoria Forensic Paediatric Medical Services, Victoria Police, and representatives of the Departments of Health, Human Services and Justice. [Attachment A]

In the short term, the proposed regime in conjunction with changes that VIFM is making to its own procedures would appear to be adequate. A similar set of proposals has been helpfully provided to me by Associate Professor Hoskins which is also attached. [Attachment B]

It must be borne in mind however that they are only interim measures and that a more satisfactory set of arrangements will need to be developed.

I appreciate that the issue of who is to have responsibility for the maintenance of an appropriate sterile environment at locations for the collection of samples will be of some difficulty for the various agencies and stakeholders, but one which cannot be avoided.

RECOMMENDATION 2:

That the current discussions with respect to the interim measures proposed by VIFM should be vigorously pursued and the agreed changes put into effect as soon as practicable.

As the attached table shows, [Attachment C] as a practical necessity, forensic medical examinations may need to be conducted in a variety of locations, including prisons, police stations and residential care units as well as VIFM and hospital and medical centres, and sometimes in fraught and complex circumstances where the collection of samples constitutes only one of the matters to which attention must be given and, at that stage, by no means the most important.

The FMO cannot assume, as I have pointed out, that even when the examination is conducted within a hospital, appropriate cleaning for DNA collection purposes will have been carried out or that the environment may not have been contaminated subsequently.

It follows that, if samples are to be taken for this purpose, the FMO will have to accept responsibility for ensuring that all working services are decontaminated, both before and after the examination. This should be monitored through the use of control swabs.

In order to further reduce the risk of environmental contamination, the necessary items for the examination should be available in a sealed kit, with all unused items being discarded.

RECOMMENDATION 3:

That the use of sexual assault examination kits should be adopted as soon as possible and the FMOs accept responsibility for ensuring that trolley tops and working surfaces are cleaned before and after use.

There are currently six units catering for adults in the Melbourne Metropolitan area in which forensic examinations are seldom conducted more than once or twice per week. That is a large number of units by international standards for our population and requirements. There are four, for example, in London and they are specifically designed and staffed for this purpose.

I am acutely mindful of the importance of minimising the distress already being experienced by victims at such times by avoiding delay and the need to travel substantial distances for forensic examination and recognize that the units are widely dispersed for this very reason.

Victoria Police have informed me that they are currently working with relevant stakeholders on a whole of government approach towards a victim centric model that supports the victim locally and creates higher probability of dealing with the same counsellor throughout the process. There is obvious great sense in this approach.

The issue with respect to forensic examinations is by no means a simple one. Northern CASA made the powerful point in their response that the greater the level of support that is provided to victims and the less protracted and complicated are the processes to which they are subjected; the more likely it is that they will be prepared to undergo forensic examination. However, there is little point in conducting such examinations and collecting intimate samples for the purpose of obtaining DNA evidence, if the evidence is subsequently perceived to be of little or no value.

In this case, not only was the failure of the process productive of a miscarriage of justice for the person accused but the creation of much unnecessary suffering for M. At all stages, it must be remembered that this is a very different type of evidence from that normally adduced and requires special measures to be undertaken before it can be safely used.

It is, it seems to me, impractical to attempt to adequately staff, clean and maintain, for this particular purpose, six adult units in the Melbourne metropolitan area and suggest that two located within hospitals where access to other specialist services would be more easily secured would be sufficient. This could involve the use of some of the units presently being operated principally for counselling and other support purposes. The specialist units would, under this scheme, have a role in the training of FMOs and counsellors and act as a resource for those working in regional areas.

RECOMMENDATION 4

That consideration be given to the establishment of a smaller number of specifically designed and staffed units for the purpose of conducting such procedures.

The Police Role in Transport and Storage of Forensic Materials

The investigations into the separate complaints were undertaken by police units from different areas. There was no evidence of common contact by any police member with B and M and I am satisfied that it was extremely unlikely to have occurred.

The samples were handed to different police members and many hours apart. They were transported in different cars to widely separated police stations, Diamond Creek and Doncaster respectively. The possibility of contamination through police contact either with the two women or their handling or transportation of the samples can therefore be confidently discounted.

Consequently, in the context and time frame within which this inquiry was conducted, and which, in any event, was focussed on the issues that emerged from the case of Mr Jama, it was not necessary to direct attention to the procedures adopted by police members to avoid accidental contamination of crime scenes or materials collected in other situations.

Accordingly, this aspect has not been pursued. Obviously without suggesting that those in place currently are deficient, but with some doubts about the extent of knowledge of DNA issues possessed by investigators generally , I recommend that a review of police procedure be undertaken to ensure that the risk of environmental contamination through the activities of the investigators themselves is kept to a minimum.

RECOMMENDATION 5:

That a review of the procedures for the collection, transportation and storage of materials be conducted by Victoria Police, encompassing also the training of police members concerning the issues involved and the precautions to be taken.

The Victoria Police Forensic Services Department Role

I have earlier emphasized the impact upon the history of this matter made by the statements and evidence of the scientist. There is no need to expatiate further on this aspect.

Before DNA evidence can be used with reasonable confidence in its reliability as either an investigative tool or as evidence in court, the testing processes employed and the foundation upon which the resultant findings rest must be transparent and expressed in a fashion that admits of no reasonable possibility of misunderstanding of the precise findings made.

Dr James Robertson, the National Manager of Forensic and Data Centres of the Australian Federal Police, in my discussions with him, emphasized the importance he attributed to those engaged in the forensic science aspects of an investigation to remain conscious of the fact that their activities constitute only a part of a broader inquiry and that, insofar as the information in their possession enables them to do so, to relate their activities and findings to the other information available about the events in question. In this case, he said, there was only a minute amount of material on one swab and an associated slide. Nothing was found anywhere else, including M's clothing. The laboratory had been provided with the memorandum of the investigating police member which indicated that there was no other evidence. This, in Dr Robertson's opinion, "should have rung alarm bells' and prompted a call for further investigation rather than what he viewed as a regrettably too narrow response.

The point made by Dr Robertson is, I consider, an important one. This is not to suggest that the laboratory was under some obligation to intrude into or monitor the activities of the other agencies involved. For a number of obvious and excellent reasons, it is vital for the integrity of the system of justice upon which our society depends, that the forensic scientists and those responsible for the other parts of an investigation operate within their designated areas and maintain an appropriate professional distance and independence of each other. Neither does it mean, however, that they isolate themselves. In this case where, on the basis of the experience of Dr Robertson, "alarm bells" should have been ringing, their reverberations should have been heard by the other agencies involved.

I recognise that there could be some sensitive privacy issues that would need to be carefully addressed under this proposed approach.

RECOMMENDATION 6:

In cases where DNA testing is carried out for forensic purposes, a full report be provided as a matter of course to the investigating police members and, where VIFM is involved, to them, setting out,

1. **The history of the samples as known to the laboratory, both before and after their arrival.**
2. **A statement identifying all items examined, when where and by whom the examination was performed and indicating the findings, whether or not a DNA profile is obtained.**
3. **A clear statement setting out the basis upon which any opinion rests and limitations within which it is expressed.**

Common sense indicates that, where an issue of possible contamination arises, there should be some procedures that enable the question to be answered at each point in the process of collection, transport, storage and testing of the materials involved. Each of the relevant agencies can only be fairly held accountable for the integrity of their own operations and the quality of their own work, but they do and must interact effectively in the interests of the proper administration of justice.

RECOMMENDATION 7:

Arrangements should be developed by VIFM, VPFSD and Victoria Police so that in any case where a question concerning possible contamination can be seen to arise, all relevant agencies and, where proceedings have been instituted, the defence are notified.

There are separate issues relating to the data base itself where there is reliance upon that source for a DNA match. It was not constructed in a way that automatically picked up the existence of links between the collecting of the two sets of samples. Had the link been noted at the laboratory, it would undoubtedly have been explored or VIFM notified.

For completeness, I should advert to the Term of Reference which raises the query as to whether the DNA profile was lawfully on the database at the time of the match with the sample related to M. On examination, it was immediately obvious that no problem existed. The samples were collected within 28 hours of each other and at time that the match was made, approximately three months later, both investigations were still on foot. As there was no breach of the legislative provisions involved that I have detected, I have not addressed the legislative scheme which is outside the ambit of this report.

RECOMMENDATION 8:

Attention will need to be given to the possibility of reconfiguration of the data base to enable the existence of links between the collection and testing of samples to be detected.

This might require some legislative change.

Criminal Investigation and DNA evidence

In this case, the decision to proceed to prosecution was based entirely on the acceptance of the DNA evidence and with, it appears, only the most limited understanding of the proper use of such evidence. Statistical probability appears to have been converted to a prima facie case, although there was awareness of the absence of any scenario or evidence otherwise inculpating Mr Jama and without appreciating the problems involved.

I do not consider that the relevant police officer could be legitimately criticised for a lack of knowledge that was shared by virtually everyone else involved in the investigative and legal process. The point to be made is that is extremely unfortunate that all were so poorly informed and that there is a need to improve drastically this situation if evidence of this kind is to be used. Sir Ken Jones, the Deputy Commissioner for Crime, and the Director of Legal Services, of Victoria Police, have indicated to me that this deficiency has been recognised and was being addressed.

I have been informed that in light of this case and other issues, Victoria Police is currently developing a comprehensive "DNA Prosecutions Policy" that will minimise the risks associated with the use of this evidence.

RECOMMENDATION 9:

That police training in this area be reviewed with a view to developing a greater level of understanding of investigators with respect to the use of DNA evidence for both intelligence gathering and evidentiary purposes, and particularly in cases where there is minimal corroborative evidence to support proposed or pending charges.

The OPP and the Prosecution Process

In common with the police investigators, there was, as I have pointed out, no indication of any appreciation of the particular care that was required in dealing with a case dependent on DNA evidence or its proper probative use. Perhaps the most disappointing feature which emerged from the examination of the OPP files and the transcripts of the court proceedings is the total absence of any indication that any legal

research had been conducted, bearing in mind that the circumstances of Mr Jama's case had not previously been encountered in this jurisdiction.

Since this matter came to his attention, the DPP has issued a directive requiring that all cases wholly or principally dependent upon DNA evidence are to be referred to him for consideration. Whilst this is clearly a sensible move, it does not address the problem of limited understanding of the issues and what is involved in the adequate preparation of such cases by members of the OPP staff generally

RECOMMENDATION 10:

That the Judicial College of Victoria, the Law Institute of Victoria and the Victorian Bar Council be approached to conduct courses to instruct legal practitioners and members of the judiciary involved in areas where DNA evidence is used with respect to nature and appropriate use.

Attachment A

REPORT OF VIFM EXPERT WORKING GROUP ON THE CONVICTION OF MR FARAH JAMA
Interim Recommendations

Date 19th JANUARY 2010

---

1. PURPOSE

1.1 To advise of the potential risk of the contamination of forensic specimens in sexual assault cases

1.2 To research and explore national and international processes to
   a) reduce the risk of contamination of forensic samples in sexual assault cases; and
   b) reduce the risk of a miscarriage of justice from contaminated forensic samples in sexual assault cases in the future

1.3 To recommend short term solutions

2. BACKGROUND

2.1 Under section 66(2) of the *VIFM Act 1985*, VIFM has the function to ensure the provision of clinical forensic medical services to the police force of Victoria and government bodies.

2.2 In December 2009, the Court of Appeal in Victoria overturned the conviction for rape by Mr Farah Jama. One of the issues at appeal was the possibility of contamination of a forensic specimen with Mr Jama's DNA.

2.3 On December 24th 2009, VIFM received the Draft Crisis Care Unit (CCU) Audit Report[1] commissioned by the Department of Justice.

2.4 Informed by both the Jama case and the CCU Audit report, VIFM has been considering the implications of the conviction of Mr Farah Jama for its own practices and for the operation of VIFM medical staff in providing sexual assault services in Victoria.

2.5 A working group of VIFM clinical forensic medical, nursing, scientific and legal experts was convened and has been meeting since early December 2009 to

[1] This report is based on surveys of CCU managers. Most of the CCUs are hospital based but the units (Multi Disciplinary Units – MDUs) at Frankston and Mildura are not attached to a hospital.

consider the implications of the JAMA case, more recently in the light of the Draft CCU Audit report.

2.6 In developing the findings and recommendations, the VIFM working group has referenced national and international practices (see Attachment 1).

3. FINDINGS

3.1 Forensic Medical practice

3.1.1 VIFM has established standard procedures for the clinical forensic medical examination of complainants in sexual assault cases since 1995. These standards were updated in 2003 and 2008, and reflected relevant standards elsewhere.

3.1.2 In relation to the collection of the forensic evidence relied upon for the conviction of Mr JAMA, and on the basis of the forensic doctor's statement, there is no evidence that the doctor involved deviated from the applicable standard practice or procedure.

3.1.3 Over time standards change and VIFM is currently reviewing national and international practices to inform the next iteration of the VIFM standards manual.

3.2 Circumstances of the JAMA case

3.2.1 Transferring of microscopic amounts of DNA/semen is feasible although a complex set of events needs to occur to allow for contamination. A combination of events might include a woman with DNA/semen on her person externally, (eg: on her hands, clothing or hair) coming into contact with furnishings, equipment and her environment in such a way as to transfer some of that DNA/semen. A second person then comes into direct contact with that contaminated environment and is themselves contaminated.

3.2.2 In circumstances where DNA/semen is on the person externally (i.e. on the hair, outer clothes or hands), the possible opportunities for contamination increase.

3.2.3 In the Jama case, a woman has entered the Austin Hospital with a visible seminal deposit on her external person (hair). Transfer of this deposit to the samples taken from the second woman thirty hours later may have occurred in a combination of ways at any point from entry to the hospital, during the forensic medical examination (see Attachment 2 – Potential For Contamination In Sexual Assault Examinations), to the point of analysis and report at the forensic laboratory (VIFM acknowledges that Victoria Police Forensic Sciences Department has excluded the latter two possibilities to its own satisfaction). It is

theoretically possible for contamination to occur prior to entry to the hospital but this does not appear to be possible in this case.

3.2.4 This report has been written on the basis of possible contamination at the Austin Hospital.

3.3 VIFM reliance on other agencies

3.3.1 The majority of sexual assault forensic medical examinations are conducted in Melbourne, the rest being conducted in regional Victoria.

3.3.2 Almost all sexual assault examinations in Melbourne are undertaken at metropolitan Crisis Care Units (CCU)[2].

3.3.3 VIFM is a key service provider and a partner with the Victorian Forensic Paediatric Medical Service in the delivery of forensic medical examinations on children and young people throughout Victoria, the majority at the Royal Children's Hospital and Monash Medical Centre.

3.3.4 VIFM conducts its forensic medical examinations (FME) on the assumption that the standards for the cleaning of Crisis Care Units have been set, implemented and are monitored.

3.3.5 VIFM notes that the Draft CCU Audit Report shows significant deficiencies in the cleaning of the CCU facilities in Victoria, and notably at the Austin Hospital.

4. INTERIM RECOMMENDATIONS

The following recommendations will reduce the risk of contamination but not necessarily remove it completely. They are intended to be implemented immediately or as soon as practicable. They will be reviewed in the light of the Report of the Vincent Inquiry. The interim recommendations relate to the provision of forensic medical services by health care professionals from both VIFM and VFPMS. All recommendations are based on the References listed in Attachment 1 of this report.

Recommendation	Rationale	Timeframe
Physical facilities in all CCU		
1. Furnishings, in particular chairs/couches, to be made	In some CCU's (including that at the Austin Hospital), couches are	Immediately/ As soon as

[2] Exceptions to this include, for example, patients admitted to hospital for injuries associated with the assault whereby the examination will be conducted in the emergency or other medical ward

Recommendation	Rationale	Timeframe
of impermeable material that can be easily wiped clean.	covered with fabric which cannot be easily cleaned. Patients[3] sitting on these surfaces may leave behind traces of DNA/semen from their external person thereby risking contamination of another case.	practicable
2. Ensure a dedicated bench/trolley space is available to collect and process specimens.	If the bench/trolley space is crowded with equipment or utilised for other clinical purposes (e.g. suturing) there is a risk of contaminating specimens upon collection and processing.	Immediately/ As soon as practicable
3. Lockable cupboards/drawers to be provided for storing all equipment and disposable items	Storing of items away from the clinical workspace reduces the risk of contamination with foreign DNA and in association with Recommendation 14 below, assures the examiner that the items for each case have not been exposed to a previous sexual assault examination and are selected from clean storage.	Immediately/ As soon as practicable
4. Make appropriate hand-washing facilities and soap dispensers available within the examination room.	Some of the CCU examination rooms do not have non-touch taps and basins and one CCU does not have hand-washing facilities within the room at all. Turning taps on and off with hands and leaving the room to use a basin are both practices which increase the risk of contamination. Availability of taps as close as possible to the examination couch reduces the risk of contamination and improves hygiene.	Medium term to allow for facilities rebuild
Cleaning of the facility		
5. Strictly ensure CCU facility is cleaned after	Current cleaning processes have been identified as suboptimal.	Immediately/ As soon as

[3] VIFM acknowledges the terminology 'patient' may be interchanged with 'victim/survivor'

Recommendation	Rationale	Timeframe
every sexual assault related examination in accordance with *VIFM Interim Standards 2010 - Cleaning of CCU* (see Attachment 3).	The furniture will now be of a type which can be cleaned, and this must occur. Cleaning the facility after each sexual assault examination will reduce the presence of residual DNA remaining thus reducing the risk of contamination between cases.	practicable
6. Make appropriate cleaning products available within each CCU in accordance with *VIFM Interim Standards 2010 - Cleaning products required for Forensic Medical Examinations* (see Attachment 4).	Current cleaning processes fail to meet national/international standards in that bleach is rarely if ever used. If the appropriate cleaning solutions are not used, there is a risk that cleaning efforts will not eliminate residual DNA between cases, thereby increasing the risk of contamination.	Immediately/ As soon as practicable
7. In addition to 5 above, strictly ensure standard daily and weekly room cleaning regime according to standard hospital policy of cleaning clinical examination rooms (where sterile procedures may take place) and surrounding facilities.	If rooms are not cleaned to strict standards by appropriately trained personnel there is a risk that cleaning efforts do not reduce the risk of contamination in the facility	Immediately/ As soon as practicable
8. Implement, maintain and regularly audit a log book to record the cleaning of the CCU.	Without such a log, and its audit, confidence in the cleanliness of the facility will not be maintained. Such a log, and records of its audit, may be required for accreditation of the facility and/or in court proceedings to satisfy the court about the cleanliness of the facility.	Immediately/ As soon as practicable

Recommendation	Rationale	Timeframe
Access arrangements to the CCU facility		
9. Limit access to the examination room to patients, health care practitioners[4] performing the examination and hospital designated cleaners	The examination room should not be used for any other purpose eg: hospital clinics or Emergency Department patients or staff because of the risk of introducing biological material with DNA and therefore contaminating forensic evidence.	Immediately/ As soon as practicable
10. Implement, maintain and audit the proper use of a log book to record all persons who enter the examination room.	A log book is required to record adherence with the above standard. A log book and its audit records may be required for accreditation purposes and/or in court to satisfy the court about the cleanliness of the facility.	Immediately/ As soon as practicable
11. Suspected perpetrators or other persons are not to be examined in the CCU	Reduces the risk of contamination of the patient by the suspect or other persons	Immediately/ As soon as practicable
Equipment and materials		
12. Store all equipment for a forensic medical examination in locked drawers or cupboards.	Storing of items away from the clinical workspace reduces the risk of contaminating them with foreign DNA and, in association with Recommendation 14 below, assures the examiner that the items have not been exposed to a previous sexual assault and have been selected from clean storage	Immediately/ As soon as practicable
13. Health care practitioners are responsible for selecting the appropriate equipment and disposable supplies used to conduct the examination so as to	The forensic medical examination is a medical procedure. The equipment and supplies need to be specified by VIFM.	Immediately/ As soon as practicable

[4] Health care practitioner for the purposes of this document refers to forensic physicians, forensic medical officers and forensic nurse examiners. Health care practitioners are employed/contracted by VIFM to provide forensic medical services throughout Victoria.

Recommendation	Rationale	Timeframe
reduce the risk of contamination. The equipment and disposable supplies should be standard across the CCUs.		
14. The health care practitioner will select the appropriate equipment from the stores within the CCU and place them on the trolley. No items are to be removed from the trolley and placed back in the store	Placing unused items back into the stores will increase the risk of contaminating future cases as the unused items may have become contaminated with foreign DNA.	Immediately/ As soon as practicable
15. Stocks of clean gloves to be made available in three sizes	Gloves place a barrier between the health care professional's DNA and the patient thus avoiding possible contamination. They also provide a barrier between carriage of DNA from one patient to another	Immediately/ As soon as practicable
16. Sterile packs and gowns to be made available within the CCU	Gowns place a barrier between the health care professional's DNA and the patient thus avoiding possible contamination. They also provide a barrier between carriage of DNA from one patient/environment to another	Immediately/ As soon as practicable
17. VIFM staff[5] to be responsible for monitoring stocks in the locked cupboards and sourcing equipment and materials. Equipment and materials should be made available according to appendix 3 – *Equipment and materials required for FME – VIFM Interim Standards 2010*	Limiting the people that enter the room and people who open the specimens cupboard/drawer will further reduce the risk of contamination	Immediately/ As soon as practicable

[5] VIFM staff regularly visit the CCUs and will monitor stocks and arrange for replacements.

Recommendation	Rationale	Timeframe
18. The layout of the facilities at CCUs to be redesigned and redeveloped to bring them up to current national and international best practice models.	Poor layout of the facility impacts on the risk of contamination between cases. For example, if a bathroom is in a thoroughfare or utilised by a number of persons (patient, support people, health practitioners, police etc) it increases the risk of contamination. In this scenario, a bathroom should be an extension of the examination room and only accessible by the patient.	Medium term/ As soon as practicable

ATTACHMENT 2

POTENTIAL FOR CONTAMINATION IN SEXUAL ASSAULT EXAMINATIONS

1. DNA (deoxyribonucleic acid) is the genetic blueprint of a human being and is unique to every individual. It involves two strands bound together (double helix) and is organised into long structures called chromosomes. DNA is only visible under electron microscopes and is therefore analysed and 'read' or 'profiled' by scientific processes. In order to conclude the identity of a person from whom DNA has been shed and subsequently profiled, there needs to be comparison of this profile with the profile of a reference sample (i.e. a sample of DNA from a known source).

2. The ejaculate of a male consists of seminal fluid (secretions from glands and the seminal vesicles) and in most men sperm[6]. A sperm count of more than 20 million per ejaculation is considered normal. As a male achieves orgasm, the ejaculate is expelled and sperm is deposited along with the seminal fluid. An intact sperm consists of a head and a tail and is normally mobile when deposited. However over time, the tails disintegrate and when seminal fluid is examined under a slide, sperm can then appear as either intact sperm or sperm heads without tails. When viewed with a microscope, sperm heads without tails can be confused with other things such as nuclei of other cells.

3. Seminal fluid is visible to the naked eye for a short time after it is expelled from the male. It does however, change consistency and transparency and can be difficult or impossible to identify as time progresses. In some circumstances, semen can be seen with the assistance of special lights and luminescent sprays. This practice is not conducted on sexual assault victims or in examination facilities (i.e.: Crisis Care Units) and is only used at crime scenes and in examining evidence.

4. Sperm and seminal fluid contains DNA that can provide a male individual's DNA profile when scientifically analysed. It is distinguished from the female by part of the profile which reflects the nature of the sex chromosomes (XX, XY) and the reference sample of DNA provided from the patient.

5. Locard's principle states that 'every contact leaves a trace'. Theoretically, as any body part of one individual comes into contact with another person or object in the environment, there is the potential for the transfer of DNA.

6. The premise, upon which forensic samples are taken in a sexual assault case, is that the male individual's semen/sperm is deposited on the victim and thus the collection of the appropriate forensic sample(s) may assist in the identification of the male using DNA profiling technologies.

7. Sampling for DNA/sperm occurs in the following ways:

Genital area (vagina, anus, endocervix)	High vaginal swabs and corresponding slides* Low vaginal swabs and corresponding slides Endocervical swab and corresponding slides
Genital area (penis)	Wet skin swab and corresponding slide followed by a dry skin swab and corresponding slide
General body surface (i.e. abdomen, arm)	Wet skin swab and corresponding slide Followed by a dry skin swab and corresponding slide
Oral cavity	Oral swab and corresponding slide
Hair	Cut clump of hair from relevant site and place in appropriate container/envelope
***In order to identify sperm, every swab that is taken is dabbed in the centre of a corresponding slide immediately before the swab is placed back in its sheath. This is to assist the lab in identifying the presence**	

[6] Sperm may be absent from ejaculate in the following circumstances: drug/medication effects, azoospermia (medical condition of no sperm), oligospermia (medical condition of low sperm count), post-vasectomy, trauma, etc.

of sperm through the microscope prior to DNA analysis.

8. The definition of 'to contaminate' is: 'to make impure by contact or mixture' (Shorter OED). In relation to DNA contamination, the word is often used to refer to the presence of DNA, which is extraneous, being added to the material which is being sampled.

9. The word contamination is often used to describe the following scenarios:
   a. The health care professional's DNA found on the patient's forensic sample
   b. An individual's DNA present in a sample that has otherwise been shown to have no relation to that person
   c. The inadvertent pollution of minuscule amounts of DNA between cases

   (The inadvertent swapping of forensic specimens between cases could produce results mimicking contamination)

10. Contamination of forensic samples taken from complainants in sexual assault cases is possible at the following points in time:
    a. Errors or intersections prior to the examination of victims – meaning that the victim herself is contaminated and this is reflected in the samples which are taken
    b. Errors or intersections during the presentation of victim(s) – i.e. within the CCU environment, during the forensic medical examination
    c. Errors or intersections within the chain of custody post examination and pre laboratory
    d. Errors or intersection within the laboratory at the point of receipt of specimens, processing, analysis and/or entering or transferring data into the system.

11. Whether or not there has been contamination in a particular case is most often a question of opinion/judgement, not of fact. The assurance that there has or has not been a contamination is part of the overall investigation of the case. There is no particular 'test' for contamination.

12. In a sexual assault, one of the aims of taking the forensic samples is indeed to detect **contamination of the complainant** by the offender's biological material bearing the offender's DNA. This indicates one of the risks of the forensic uses of DNA evidence in cases where the identity of the suspect is in dispute: how does one distinguish between the detection of true contamination (i.e. contamination of the complainant, the contamination the swabbing is intended to detect) and inadvertent contamination (i.e. contamination with DNA extraneous to the material being swabbed). One distinguishes between true and inadvertent contamination by:

    a. An evaluation of the circumstances of the sexual assault; and
    b. By relying on the overall (low) probability of inadvertent contamination having occurred bearing in mind:
       i. The total circumstances and procedures of the collection of the specimens
       ii. The environment in which the specimens are collected
       iii. The procedures of the forensic science laboratory

13. Published experience of contamination of forensic specimens in sexual assault cases is limited especially with direct reference to contamination by semen. Therefore there is little in the way of an evidence base to assist in analysing the likelihood of DNA/sperm transfer within CCU type facilities. Most experience with contamination of forensic specimens is with DNA contamination in the laboratory, which can be thought of as involving extremely microscopic quantities of material.

14. It is accepted that every contact leaves a trace and thus the transfer of microscopic amounts of DNA/semen is feasible although a complex set of events needs to occur to result in contamination. A combination of events might include a woman with DNA/semen on her person externally, (eg: on her hands, clothing or hair) coming into contact with furnishings, equipment and her environment in such a way as to transfer some of that DNA/semen. A second person then comes into direct contact with that contaminated environment and is themselves contaminated.

15. In circumstances where DNA/semen is on the person externally (i.e. on the hair, outer clothes or hands), the possible opportunities for contamination is greater than when DNA/semen is deposited internally (vagina, anus) or under clothing (breasts, buttocks etc).

16. In order to reduce the risk of contamination of forensic samples in sexual assault cases in the facility where the forensic medical examination is undertaken, the following principles need to be adhered to:

a. Appropriate facility design that minimises the risk of patient, health care practitioner and environmental exposure to contamination (i.e.: a facility having a logical flow through the CCU from point of entry through to the examination and/or bathroom and then to the exit. (This is a consideration for the medium to longer term)
b. Limit the access to the space designed for forensic medical examinations so that the likelihood that extraneous DNA is present is reduced and if the potential for contamination is realised the contaminating individual(s) may be identified.
c. Adequate decontamination/cleaning techniques can destroy DNA/sperm and therefore reduce the risk of extraneous DNA being transferred to future cases.
d. Equipment should be clean and separate from exposure to people and the environment
e. Maintenance of strict security of the samples and well documented chain of custody

17. The VIFM Expert Working Group on the conviction of Mr Farah Jama has been exploring possible scenarios for contamination with direct reference to the specifics of the Jama case. In that case there was large amount of semen in the hair of complainant 1[7], some of which (a microscopic amount, smaller than a speck of dust) was found on a swab taken from complainant 2, who was examined in the same facility some thirty hours later.

18. At this stage it is not possible to conclude the mechanism by which contamination may have occurred, nor the point at which the contamination occurred.

[7] The women who were examined are referred to as complainants. This terminology is used even though the second woman examined was in fact not a complainant until she too believed she had been sexually assaulted following the results of the forensic samples being made available.

ATTACHMENT 3

EQUIPMENT AND MATERIALS REQUIRED

Gown
- Unisex
- Not transparent
- Loose short sleeves
- Non-shedding
- Soft
- Different sizes

1. Gloves
   - Sterile
   - Powder free
   - Non-latex
   - Various sizes
2. Drop Sheets
   - Sterile white paper sheets
   - Approximately 90cm^2
3. Swabs
   - Sterile standard swab – no transport medium
   - Fine tipped (endocervical) sterile swabs
4. Slides
   - Glass slides with frosted end
   - Slide covers
5. Blood
   - Alcohol-free skin cleansing tissue
   - Cotton wool balls
   - 19G, 21G and 23G needles
   - 2ml, 5ml and 10ml syringes
   - Hospital pathology blood tubes and laminated guide to their use/identification
6. Urine
   - Sterile urine containers
7. Lubricant
   - Single use sachets of Lubricating Jelly
8. Specula and Proctoscopes
   - Small, medium and large sterile disposable specula
   - Sterile disposable proctoscopes
9. Packaging
   - Envelopes – letter and A4 size
   - Brown paper bags – medium size
   - Patient clothing bags
10. Other
    - 5ml sterile water
    - Bandaids
    - Sterile gauze squares
    - Disposable or sterile forceps
    - Alcohol cleansing swabs
    - STI testing swabs/kits
    - VIFM toxicology kits
    - Tourniquet*
    - Disposable tape measures
    - Urine pregnancy tests
    - Medications (as directed)
    - Blueys
    - Emesis bags
    - Masks
    - Basic dressing packs
    - Chlorhexidine antiseptic single use vials
    - Disposable or sterilised scissors
11. Medications
    - Emergency contraception packs
    - Paracetamol
    - Paracetamol + codeine
    - Hepatitis B Vaccine adult dose
12. Office
    - Small pencils – disposable
    - Medical certificates
    - Hospital letterhead
    - Pencil sharpener*
    - Sexual assault proformas
    - Hospital pathology/radiology requests
    - Hospital pharmacy request forms
    - Stapler and spare staples*
    - Adhesive tape
    - Patient identification labels
13. Room
    - Microshield ® hand wash
    - Cleaning bleach – Det-Sol 500
    - Mixing jug
    - Chux or other wipes
    - Sphygmomanometer*
    - Stethoscope*
    - Auroscope*
    - Light source*
    - Clean and clear bench space
    - Sharps container
    - Biological waste bin
    - Rubbish bin

All stocks should be stored in secure, clean cupboards for selection by the Health Care Practitioner on the basis of the individual case that presents for a forensic medical examination. Equipment that has been selected for a case and not used will be disposed of at the conclusion of the examination. At no time should anyone replace the items back into the stocks.

* These items are non-disposable and will be cleaned at the conclusion of the examination after they have been used.

ATTACHMENT 5

CLEANING PRODUCTS REQUIRED FOR FME VIFM Interim Standards 2010

1. Hand-washing
    - Microshield ®

2. Equipment
    - Det-Sol 5000 Hospital Grade Disinfectant 5000ppm, 20g sachets
    - Det-Sol 500 Hospital Grade Disinfectant 500ppm, 6g sachets

3. Room cleaning
    - As per hospital clinical area cleaning protocols

ATTACHMENT 6

SEXUAL ASSAULT EXAMINATION PROCEDURE
VIFM Interim Standards 2010

Health care practitioners will follow the below procedure when conducting a forensic medical examination. The technical checklist will be filled in at the conclusion of every case.

Procedure	Technical Checklist
1. Check hospital cleaning log book for status	☐
2. Wearing gloves and a mask and using Det-Sol 5000 cleaning fluid and a disposable wipe • Clean examination table • Clean patient chair • Clean bench/trolley top • Wipe your pen	☐ ☐ ☐ ☐
3. Linen • Cover examination table with 2 clean sheets • Cover pillow with new pillow case • Obtain clean blanket or sheet to cover patient • Place a bluey/sterile pack down to designate specimen collection space	☐ ☐ ☐ ☐
4. Bring patient into clinical examination room to commence the examination by taking a history	☐
5. Glove and gown (mask is up to the discretion of the health care practitioner) to select equipment	☐
6. Select from the secure storage cupboard a range of items that you may use in conducting the forensic medical examination. If during the examination you require more items than you initially select, you must remove your personal protective gown and gloves before returning to the locked drawers/cupboards. Wash hands and retrieve the items, put on a new gown and glove before recommencing the examination.	☐
7. After selection of equipment (whilst still gloved and gowned) commence the physical examination	☐
8. Separate new clean gloves should be used for each of the following components of the FME ○ Body examination ○ Genital examination ○ Collection of specimens that may leave residue on gloves (i.e. blood, semen on body, paint, debris etc) ○ Processing of specimens including cutting of swabs ○ Selecting more equipment from the secure storage cupboard	☐ ☐ ☐ ☐ ☐
9. Swabs • Swabs should be 'cut' with disposable scissors midway along the shaft of the tube	☐
10. Dispose of all items that you selected and didn't use at the time of this examination. They should be disposed of in either the rubbish bin or sharps container.	☐
11. Ensure there are no specimens or equipment left at the conclusion of the examination	☐
12. Remove bed linen and place in linen basket	☐
13. Using Det-Sol 500 cleaning fluid and a disposable wipe • Clean examination table • Clean patient chair • Clean bench/trolley top • Wipe down any other non-disposable equipment you have used – phone, light source, sphygmomanometer, auroscope (i.e. any items as designated by the * in Attachment 3).	☐ ☐ ☐ ☐
CASE NAME: **TECHNICAL CHECKLIST COMPLETED BY:** **SIGNED AND DATED:**	

Under no circumstances should a forensic medical examination be conducted if the facilities or equipment are compromised in any way.

Attachment B

Associate Professor Bob Hoskin's List of Changes considered necessary

The following is a list of the changes I think are necessary. I've attempted to give a rationale for each and am happy to discuss any of them. In some instances the purpose of the proposed change is other than to reduce the risk of DNA contamination: as there is likely to be a process of significant change it makes sense to incorporate other changes that have merit at the same time.

The order of the changes has no significance.

	Recommendation	Reason
1[8]	Develop a national uniform protocol for the collection of forensic specimens by medical/ nursing staff (samplers).	Practices diverge within and between jurisdictions. There is only one best way of doing things and there is greater likelihood of conformity with a national standard, especially with itinerant practitioners. This could be referred to the Australasian Association of Forensic Physicians in association with FAMSACA to develop.
2	ALL equipment[9] used should be certified DNA-free and be drawn from a sealed single use kit.	Common use supplies and the retention of unused equipment from existing kits magnifies the opportunity for contamination. Current equipment is sterile but not uniformly certified DNA-free.
3	Access to examination facilities, to the extent it is possible to do so, should be restricted to staff who have a bona fide reason to be there with access logs used.	Unauthorised staff access is a double whammy – not only do they risk contaminating the environment, they are more likely to do so out of unfamiliarity with protocols.
4	Examination suites should carry a warning that unauthorised access may result in a person's DNA being identified in a criminal investigation.	Hospital staff, especially doctors, aren't terribly good at following rules.

[8] The only reason not to do this would be if different laboratory practices require different inputs.
[9] Swabs, scissors, labels, tapes, speculums etc. Gloves, which come in individually sealed packets are the only item where it may make sense to have separate.

5	All medical, nursing, counselling and cleaning staff who have bona fide access should be strongly encouraged to lodge their DNA profile on the laboratory (as opposed to national) register.	This allows detection of inadvertent DNA contamination by the people most likely to do so. Limiting this to the laboratory register protects the individual's privacy.
6	Swabs used should have polyester tips and plastic or metal stems.	Currently, medium-free bacteriology swabs are used. They are cotton-tipped with wooden stems. Cotton does not yield DNA as readily as synthetic fibre and wood inhibits the PCR reaction.
7a	Trolleys used during the examination to be cleaned according to laboratory protocol prior to every examination (probably by the person doing the examination).	This ensures that any "stray" DNA that may have found its way onto the trolley is removed.
7b[10]	The surface of the trolley is to be covered by a certified DNA-free drop-sheet immediately prior to the examination.	This ensures that any "stray" DNA that may have found its way onto the trolley is inaccessible.
8	Prior to opening and setting up equipment a control swab should be taken from the surface of the trolley or drop-sheet.	This control swab need not be routinely analysed but it provides an opportunity to confirm that the working surface was DNA-free if there is a subsequent need to do so.
9	Slides should be made at the laboratory rather than by the sampler.	Slide quality varies from practitioner to practitioner whereas it is a part of routine laboratory practice. As important, it also creates an opportunity for handling errors during which contamination may occur.
10	Swabs to be re-sheathed immediately after collection.	The practice of allowing them to air dry creates an opportunity for handling errors during which contamination may occur.

[10] 7a and 7b are alternative approaches to the same goal.

11	The practice of cutting corners from sheaths should be eliminated.	The evidence that this could possibly add value is scant and theoretical. It is completely unnecessary when swabs are correctly stored (frozen) and/or opened by the laboratory in a timely manner. Conversely, the possibility that there may be cross-contamination between multiple swabs in a single bag following this practice is completely untested.
12	Samplers should put on fresh pair of gloves[11] prior to moving to a new part of the body to collect a DNA sample[12].	It is important to prevent transfer of DNA from one body part to another, especially where doing so may change the nature of the offence to whose proof it may contribute.
13	Each kit to contain sufficient swabs to cater for 95% of examinations.	This means extra kits will need to be "broken into" only rarely. The number of swabs needed to achieve this can be established by asking the labs.
14	Equipment kits to contain barcodes which are applied to each specimen.	This ensures that samples that are truly related to the same examination can be identified as such and that if there is mixing of kits it can be identified.
15	A checklist to be developed for use by the sampler at the conclusion of each examination.	This serves as an aide memoire for all of the steps in the protocol and is useful given that the sampler's alertness cannot be guaranteed.
16	Once all the crime scene samples have been labelled, barcoded and sealed any residual equipment is to be disposed of.	This prevents equipment that may have been contaminated during the examination from being involved in subsequent examinations.
17	Once the trolley is clear it is to be cleaned according to laboratory protocol after every examination (probably by the person doing the examination).	This ensures that any contamination that may have occurred during the examination is cleaned away.

[11] Sealed surgical gloves as noted above.
[12] In the majority of examinations this would require only one change of gloves during an examination.

18	After cleaning a control swab should be taken from the surface of the trolley.	This control swab need not be routinely analysed but it provides an opportunity to confirm that the working surface was DNA-free at the end of the examination if there is a subsequent need to do so.
19	Any item needed during the examination that cannot be rendered non-touch or certified DNA-free should be cleaned and swabbed in the same manner as the trolley surface.	Items such as flexible lamps, tap handles and light switches may provide opportunities for between-case contamination.
20	Examination couches to be impermeable material that can withstand cleaning by bleach and alcohol as per laboratory protocol[13].	This allows couches to be cleaned to the requisite standard.
21	Suspects are never to be examined in the same facility as complainants.	Makes it very hard to answer the question "is it possible?".
22	Where a sampler conducts more than one examination without the benefit of a shower or thorough wash of any exposed clothing or skin they should don a disposable all-in-one suit for subsequent examinations.	Prevents sampler cross-contamination.
23	A national minimum standard be developed for the construction, layout, equipment level and operation of sexual assault examination suites be developed (AAFP & FAMSACA).	I'd be surprised if this is achievable in all locations in the context of competitive funding but at least we'll have something that should be achievable in metro areas and it will allow the identification of shortfalls elsewhere, especially where they may compromise evidence.

[13] Not sure that control swabs are necessary. Generally the couch would be covered with a sheet and/or a bluey. Probably we should move to a certified DNA-free dropsheet for couches, too.

24	These recommendations be reviewed and refined by colleagues from around the country through the AAFP and FAMSACA.	I don't have a monopoly on good ideas.
25	Collegiate review of the final products.	As well as ensuring that it is comprehensive and has buy-in this will also ensure that things that are currently done well have not been eliminated by the process of change.

Attachment C

FORENSIC MEDICAL EXAMINATIONS IN SEXUAL ASSAULT CASES VICTORIA

The tables below represent the number of forensic medical examinations conducted in adult (18 years and over) sexual assault patients in Victoria for the period of January 2007 until February 2010 by location.

There are 6 metropolitan Melbourne Crisis Care Units in which forensic medical examinations are conducted; Austin Hospital, Monash Medical Centre, Maroondah Hospital, Royal Women's Hospital, Sunshine Hospital, and the Frankston Multidisciplinary Centre.

Metro Sexual Assault Examination Summary Table
Year and CCU Location

Metropolitan Melbourne CCU Location	**2007**	**2008**	**2009**	**2010**[14]	**Total**
Maroondah Hospital (CASA East)	1	26	37	5	**69**
Austin Hospital (CASA North)	46	39	24	6	**115**
Monash Medical Centre (CASA South East)	163	137	129	18	**447**
Sunshine Hospital (CASA West)	49	46	51	9	**155**
Royal Women's Hospital (CASA House)	78	71	82	11	**242**
Frankston Multidisciplinary Centre (PENSAC)	2	16	7	0	**25**
Yearly Totals	**339**	**335**	**330**	**49**	**1053**

The number of forensic medical examinations conducted on adults in the metropolitan Melbourne region does not appear to have changed over the last three years. The apparent decrease in forensic medical examinations conducted at the Monash Medical Centre (163 (2007) – 129 (2009)) might be explained by the dispersion of cases to either the Frankston Multidisciplinary Centre or the Maroondah CCU facility both of which gained momentum early 2008. The existence of a Gippsland Forensic Nurse Examiner Network may also account for some of the decrease in cases seen at Monash Medical Centre as they may be examined locally at Latrobe Regional Hospital.

[14] The numbers of forensic medical examinations tabled in 2010 are not truly representative of the numbers of forensic medical examinations conducted to date as the data has not been entered in all cases.

There are a number of other locations in which forensic medical examinations are conducted in the metropolitan Melbourne region. This is not a regular occurrence but rather, provided on an individual case by case basis. The numbers are tabled below:

Metro Sexual Assault Examination Summary Table Year and non-CCU Location					
Metropolitan Melbourne non-CCU Location	**2007**	**2008**	**2009**	**2010**	**Total**
Hospital other	13	8	10	2	**33**
Medical centre	1	2			**3**
Prison	1	2		2	**5**
Police Station	3	11	12	2	**28**
VIFM	3	4	10	3	**20**
Residential Care Unit	2	1	1	0	**4**
Yearly Totals	**23**	**28**	**33**	**9**	**93**

The field 'hospital other' refers to FME conducted at a Melbourne hospital other than one housing the above listed CCU. In these circumstances, the examiner is requested to see patients admitted to the Emergency department, Intensive Care Unit or Medical ward at a Melbourne hospital – for example the Royal Melbourne Hospital or the Alfred Trauma Centre.

Where sexual assault forensic medical examinations are noted at the locations of 'police station' or 'VIFM' these refer to examinations of alleged offenders or opinion cases respectively.

The total number of forensic medical examinations conducted in metropolitan Melbourne is as follows:

Metro Sexual Assault Examination Summary Table TOTAL FME					
Metropolitan Melbourne	**2007**	**2008**	**2009**	**2010**	**Total**
Yearly Totals	362	363	363	58	1146

Forensic Medical Examinations of adults are conducted by Forensic Medical Officers and Forensic Nurse Examiners in Regional and Rural locations in Victoria. The term non-hospital in the main refers to medical centres in which doctors practice and therefore conduct a forensic medical examination during the course of their day. Most of the hospitals noted below are designated as facilities in which forensic medical examinations occur (i.e. there is an MOU between VIFM and the hospital or a designated CCU). There may be errors of interpretation regarding the terms hospital/non-hospital at some of the regional locations below (eg Bannockburn). The following table represents the locations in which FME were conducted during the timeframe of January 2007 to February 2010:

Regional Sexual Assault Examination Summary Table Year and Location									
	2007		2008		2009		2010		Region Total
Region	Hospital	Non	Hospital	Non	Hospital	Non	Hospital	Non	
Bairnsdale	4		10		5	1			20
Ballarat	14		10		18			1	43
Bannockburn	2		3		2				7
Bendigo	10		10		16	1	1		38
Camperdown					1				1
Castlemaine							1		1
Corio				1					1
Geelong	10		14	1	18	1			44
Gippsland	1								1
Gisborne								1	1
Goulburn					1				1
Horsham	3		3						6
Kerang			2						2
Kyneton						1			1
Lilydale		2							2
Mildura	8		9		10	1	2		30
Mt Hotham			1						1
Portland			1						1
Sale	3		1		3				7
Shepparton	7		4		6				17
Swan hill	3		3		1				7
Traralgon			5		15				20
Wangaratta	4		5		3				12
Warragul					1				1
Warnambool	5		7		3		1		16
Werribee			1	1					2
Wodonga	1		4						5
	75	2	93	3	103	5	5	2	
Yearly Totals	77		96		108		7		288

Whilst forensic medical examinations are conducted on the children and young people (i.e. 17 years old and under) in some of the above locations, they have not been included in the numbers for the purpose of this exercise. An account of the numbers and locations of FME conducted in this age group should be sought from the Victorian Forensic Paediatric Medical Service.

Subject: RE: Reference Samples and SAIKs
Attachments: 28092018102808-0001.pdf

Hi Cathie
This seems to be misconstrued a bit. The QPS has a policy that all SAIKs are to be checked, bar coded and entered onto the FR by a SOC officer. The investigating officer has to attend a SOC office for this to occur. Recently we have instructed our SOC officers not to process the SAIK unless a reference sample has been collected. The reason for this is to try and eliminate instances where IO's fail to obtain a reference sample. This is an internal policy established to try and overcome issue with SAIKs (i.e. the lack of reference samples). It has not been sold as a directive from QHFSS.

My preference would still be that reference samples are collected at the same time as the SAIK. This is what occurs in other states. The current practice does not comply with Queensland Government policy issued in 2014 titled, "*Response to Sexual Assault: Queensland Government Interagency Guidelines for Responding to People who have experienced Sexual Assault*." This document was designed to ensure agencies work together in the best interest of the victim. The policy states,

> ***Victim DNA reference samples***
> ***DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the FME (forensic medical examination)***
> (A copy of the guideline is attached).

The QPS would like to work towards compliance with the guideline and hope to have discussions moving forward on this matter in the near future.

Regards

David

Subject: Reference Samples and SAIKs

Hi David

Our Scientific Services Liaison Unit (SSLU) at FSS have been contacted by a police officer from the Gold Coast regarding reference samples and Sexual Assault Investigation Kits (SAIK). The officer has advised that a directive has been issued from QHFSS to the QPS stating that a SAIK will not be accepted for testing unless a reference sample has been taken from the complainant.

Are you able to advise if the QPS have disseminated something with respect to reference samples and SAIKs or advise the context that this may have come from.

Cheers
Cathie

These guidelines have been developed through a strong collaborative approach by a Government Interagency Working Group including representatives from:

- **Queensland Police Service**
- **Department of Justice and Attorney-General**
  - *Office of the Director of Public Prosecutions*
  - *Queensland Courts*
  - *Victim Assist Queensland*
  - *Youth Justice Conferencing*
- **Department of Communities, Child Safety and Disability Services**
- **Queensland Health**
  - *Aboriginal and Torres Strait Islander Health Unit*
  - *Clinical Forensic Medicine Unit*
  - *Child Advocacy Service*
  - *Royal Brisbane and Women's Hospital Department of Social Work Services (Sexual Assault Service)*

The Strategic Policy Priority Areas, System Policy and Performance Division of Queensland Health were consulted during this process.

The guidelines are intended to outline key principles and a best practice framework for working with people who have experienced sexual assault. This includes children and young people who have been sexually abused or sexually assaulted.

The term victim is used throughout the document where there is reference to specific legislation and where the person is either a male or female who has experienced sexual assault. The term sexual assault is used throughout the document and includes those assaults where rape and/or sexual abuse has taken place or is alleged to have taken place.

Preface

The guidelines are designed to promote whole-of-government interagency cooperation and service coordination with an aim to improve governmental responses to victims of sexual assault. The need for enhanced coordination and cooperation has long been recognised and resulted in the development of the *2001 Queensland Government Interagency Guidelines for responding to adult victims of sexual assault.*

The 2013 guidelines aim to facilitate best practice, quality service and support to people who have experienced sexual assault.

Legislation relevant to and defining sexual assault includes but is not limited to:

- *Aboriginal and Torres Strait Islander Peoples Recognition Act 2013*
- *Child Protection Act 1999*
- *Criminal Code Act 1899*
- *Criminal Law (Sexual Offences) Act 1978*
- *Domestic and Family Violence Protection Act 2012*
- *Evidence Act 1977*
- *Health Act 1937 & associated regulations*
- *Hospital and Health Boards Act 2011*
- *Mental Health Act 2000*
- *Police Powers and Responsibilities Act 2000*
- *Public Health Act 2005*
- *Victims of Crime Assistance Act 2009*

Policy referred to includes but is not limited to:

- Queensland Government Language Services Policy
- Queensland Health Protocol for conducting child sexual assault examinations

The guidelines should be read in conjunction with internal agency procedures such as the Office of the Director of Public Prosecutions Guidelines and the Queensland Police Service Operational Procedures Manual. In addition to legislation, policies and procedures, the Queensland Government joins with governments around Australia in the implementation of the National Plan to Reduce Violence against Women and their Children 2010-2022.

Each government agency has a complementary and essential role in ensuring that people have access to effective, timely and appropriate information, support, care and treatment following a sexual assault.

Given the nature of the crime, sexual assault is an area of legal and social complexity. The guidelines are designed to help government officers and agencies work together in the best interests of the person who has been sexually assaulted through better understanding one another's roles and responsibilities.

The Queensland Government encourages reporting of criminal activity and prosecution of offender(s) where possible.

Section 1 Introduction

Governance

The government agencies responsible for delivering a service to victims of sexual assault, in accordance with relevant legislation, whole-of-government policy and internal departmental procedures, are responsible for the ongoing governance of this document. The guidelines are underpinned by each government agency's own internal policies and procedures which they are obligated to adhere to. Each government agency has a formal complaints mechanism which is accessible to members of the public.

The Government Interagency Working Group will meet bi-annually to review the guidelines and consider matters of particular concern for people impacted by sexual assault and to consider the impact of any legislative change.

Sexual assault

Sexual assault is a crime of violence. It is a humiliating and degrading experience. It has an emotional, physical, financial and social cost, not only to those directly affected, but also for the community as a whole.

The number of reported sexual offences against women aged 15 or over in Queensland in 2011/2012 was 2035 compared with 227 against males.[1]

Major Australian studies indicate that only 11-25 per cent of sexual assaults are reported to the police and that most offenders are known to the victim.[2] People who experience sexual assault may feel a range of emotions including shock, fear, guilt, shame, depression and an inability to trust others. The social stigma attached to sexual assault can heighten these feelings and increase the trauma experienced. It is imperative that when disclosing or reporting a sexual assault, people receive an effective, professional and appropriate response from the agencies to which they report.

Community education can encourage family and friends to respond supportively and appropriately to a disclosure of sexual assault. However, in order to assist their recovery, victims may also need access to a range of personal support services including counselling, medical services and assistance to report the crime to the police.

The information provided in the guidelines is intended to provide a strategic overview to support the development of policies and procedures at a local level. Local level procedures will differ according to the nature of the service system in each area. It is also intended to contribute to improving service responses to victims.

Responses to victims

Following disclosure of a sexual assault, the following needs of the victim should be addressed:

- immediate safety needs
- immediate health needs
- options for pursuing justice
- ongoing emotional needs for longer term wellbeing.

In order to avoid secondary traumatisation and mitigate the risk of negative, long term outcomes, government responses to sexual assault must be both sensitive and effective. These responses therefore need to take into account the diversity of victims, including their cultural and linguistic background, disability, sexual orientation, age and geographical location. In addition to assisting recovery, more sensitive and effective responses may also lead to an increase in reporting rates.

This, in turn, can lead to a more accurate understanding of the prevalence of sexual assault, inform community education and awareness approaches, and result in improved prevention strategies.

1 Queensland Police Service (2012) Statistical Review 2011-2012 Brisbane
2 Australian Bureau of Statistics (1996) Women's Safety Survey, Cat.no. 4218.0 (unpublished data) as cited in Office of Women's Policy (1999) A Social and Economic Profile of Women in Queensland 1999 Brisbane; Australian Bureau of Statistics (1996) Victims of Crime Survey

Children and young people

It should be noted that the *Child Protection Act 1999* (CPA) is relevant where there are concerns that a child has been sexually abused and where a child does not have a parent able and willing to protect them from the abuse. The main principle for administering the CPA is that the safety, wellbeing and best interests of a child are paramount. Section 159B of the CPA imposes a responsibility on particular service providers to assess and meet the protection and care needs of children and provide collaborative and coordinated support to their families.

The definition of harm in the CPA includes harm resulting from sexual abuse or exploitation. A child is defined in the CPA as an individual less than 18 years of age. Where the child or young person is under the age of 16, their parent or guardian should be consulted where possible and appropriate. Whilst certain circumstances may not make this possible, the child or young person should have access to a support person throughout the response.

The safety and protection of children and young people who are sexually assaulted is a high priority. When disclosing a sexual assault, young people should be encouraged to access services so that they are aware of their options in terms of support, assistance, treatment and prevention.

When working with a young person who reports a sexual assault, personnel from the Queensland Police Service, Department of Communities, Child Safety and Disability Services (DCCSDS) and Queensland Health (QH) are required to follow the statutory requirements under the CPA and the *Public Health Act 2005* relevant to their position.

Where the child or young person is subject to an order granting custody or guardianship of the child, the Chief Executive, Child Safety, DCCSDS, must be notified regarding the report of a sexual assault.

Confidentiality cannot be guaranteed where a child or young person is believed to be in need of protection from harm. To work in the best interest of that child or young person, information may need to be exchanged between departments. It is best practice for the child or young person to be advised that a report to the DCCSDS and the police may take place. Certain circumstances may not make this possible.

Section 2
Principles of the Interagency Guidelines

Government responses to sexual assault are framed by the following overarching principles:

- All agencies will focus on the safety, physical and psychological needs of the victim
- The victim's right to privacy and confidentiality will be respected at all times unless disclosure is required by another law
- Comprehensive information about all processes and options will be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location
- The victim's informed decision will be respected at every stage of the process
- The victim's sense of personal control will be supported and encouraged
- All relevant agencies will work collaboratively to respond to sexual assault, to provide clear, up to date and comprehensive information about other agencies and services and will facilitate access to appropriate agencies and services on request
- All agencies will ensure documentation and records are prepared in accordance with individual agency requirements and respect confidentiality, privacy, security and choice.

Fundamental Principles of Justice for Victims of Crime and Complaints Mechanism

Government responses are also framed by the legislated responsibilities defined in the Fundamental Principles of Justice for Victims of Crime (Principles of Justice) in Queensland, set out in Chapter 2 of the *Victims of Crime Assistance Act 2009*.

If a victim feels they have been treated unfairly or without respect by a Queensland Government officer, they have the right to complain to the government agency responsible for the conduct of the officer or to Victim Assist Queensland (Victim Assist).

As a guide, the following is a summarised version of the Principles of Justice:

Fair and dignified treatment

The victim must be treated fairly and shown dignity, respect, compassion and courtesy. The government entity must take in to account and be responsive to the particular needs of the victim relating to the victim's age, sex, race, cultural identity, impairment, sexuality or religion.

Privacy of victim

A person's personal information, including their address and phone number, can only be disclosed with consent or as authorised by the law.

Information about services

The victim must be given timely information about relevant services available to them, including welfare, health, counselling, legal help and financial assistance.

Information about investigation of the offender

If the victim asks, they should be given information about the investigation of the offender where possible. Information given to a victim may include the progress of the investigation and the name of the person charged.

Information about prosecution of the offender

If asked by the victim, the prosecuting agency is to give the victim details about the crime committed against them, including when the victim may attend a court proceeding, notice of a decision to change a charge, or notice of the outcome of a court proceeding.

Victim to be advised on their role as a witness

A victim, who is to be a witness for the prosecution in the trial for the crime committed against them, is to be informed by the prosecuting agency about the trial process and their role as a witness.

Minimal exposure to and contact with the offender

As much as possible, relevant agencies present at court are to ensure the victim has minimal contact with or exposure to the offender during court proceedings or in the court building.

Victim Impact Statement

During sentencing of the offender, the victim has the right to give details of the impact and harm caused to the victim by the offence, to the prosecutor as an impact statement. Victims can access information about completing a victim impact statement by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Guide to Making a Victim Impact Statement* at *www.justice.qld.gov.au.*

Information about the convicted offender

A victim can apply to be registered on the Victims Register. If the offender is then convicted and imprisoned, the victim will be provided with this information on request. This includes information on the sentence, an escape from custody, or day of release. To be included on the Victims Register call 1800 098 098.

Making a complaint

If a victim of crime feels a government agency, person or persons within the agency have engaged in conduct that is not consistent with the Principles of Justice, they have the right to make a complaint. Victims can access information about making a complaint by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Complaint Form* at *www.justice.qld.gov.au.*

Government agencies are obligated to have a formal complaints management system, and the Queensland Government is committed to having these systems available and acted upon in accordance with the Principles of Justice.

Section 3
The Roles of Key Government Agencies

Queensland Police Service

The Queensland Police Service (QPS) has three main functions in relation to sexual assault cases including:

1. Investigate complaints of sexual assault and establish whether an offence of sexual assault has been committed.
2. Protect victims of sexual assault.
3. Identify, apprehend and prosecute offenders.

In carrying out this role, the police should:

- observe QPS Operational Procedures Manual
- observe QPS local procedures or instructions
- observe legislative requirements
- observe the Fundamental Principles of Justice for Victims of Crime
- provide victims with information regarding the investigation and prosecution
- provide protection to victims at immediate risk of sexual assault
- provide victims with information about support services

Queensland Health

In responding to sexual assault, the role of QH is to provide medical care, forensic medical examinations (FME), sexual health assistance and information and support. These responses are provided by public hospitals, the Clinical Forensic Medicine Unit and may include specialist sexual assault teams. The extent and nature of this care varies across hospital and health services in accordance with local procedures and resources.

Assistance and care in the acute phase includes:

- medical treatment
- collection and documentation of medico-legal evidence where appropriate
- sexual health information and treatment
- information about rights as a victim of crime
- information about reporting to police and legal processes
- support and information extended to support networks.

In addition, QH provides education and training to government and non-government agencies, with an aim to broaden community knowledge, improve responses and prevent sexual violence as outlined in the National Plan to Reduce Violence against Women and their Children 2010 – 2022.

Department of Justice and Attorney-General

The Office of the Director of Public Prosecutions (ODPP), Victim Assist Queensland (Victim Assist), Youth Justice Conferencing (YJC) and the Queensland Courts all fall within the responsibilities of the Department of Justice and Attorney-General. The following provides an overview of each of these separate agencies.

Office of the Director of Public Prosecutions

The ODPP represents the Crown in criminal proceedings against persons accused of committing serious criminal offences including sexual assault. The criminal proceedings include:

- the committal hearing, before a Magistrate in Brisbane Central, Ipswich and Southport Magistrates Courts. In other centres, this hearing is conducted by prosecutors within the police
- trials before a judge alone or a judge and jury
- sentencing hearing before a judge
- any appeals arising from the trial or sentence.

In addition to prosecuting matters in court, the ODPP is responsible for:

- assisting victims by providing information about the progress of a prosecution, the victim's role as a witness, and how the victim can inform the court of the impact of the crime by providing a victim impact statement
- giving victims reasons for decisions made in relation to proceedings which directly affect them
- taking into account the wishes of a victim who does not wish to proceed with a prosecution for any reason
- providing information about the availability of other resources and processes that may assist victims
- requesting that the court give sexual assault matters appropriate priority
- ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building
- liaising with other relevant agencies to ensure that the victim and family members understand the legal and procedural issues which may impact them.

In carrying out the role of the ODPP, all officers are obliged to comply with the Director's Guideline No. 25 as at 2013 http://www.justice.qld.gov.au/__data/assets/pdf_file/0015/16701/Directors-guidelines.pdf. This aims to ensure that the Principles of Justice, as set out in the *Victims of Crime Assistance Act 2009* are complied with.

Victim Assist Queensland

Victim Assist provides access to specialised support services and financial assistance for victims of personal acts of violence including sexual assault.

Financial assistance may be available to victims of sexual assault to help them pay for the cost of goods and services that have arisen, or will arise as a consequence of the assault.

This includes medical and dental expenses, and expenses associated with improving safety or relocation from their current location in order to escape the offender.

Victim Assist also provides information, referrals and support (which may include court support) to victims, and assistance in making a victim impact statement if the victim chooses to make one.

Youth Justice Conferencing

If the offender is a young person, there may be alternative processes to the matter being dealt with by a court. The purpose of YJC is to hold the young offender accountable for their actions and to come to an agreement on what they will do to attempt to make reparation for the harm caused. To safeguard the victim, additional procedures are adopted before a conference for a sexual assault can occur. These include referring the victim to a counselling service as well as compulsory attendance of the juvenile offender in a specialist treatment service.

Queensland Courts

Queensland Courts afford victims of sexual offences, affected child witnesses and special witnesses protections when proceeding through court. These are detailed in the *Evidence Act 1977* (EA) and the *Criminal Law (Sexual Offences) Act 1978*.

Section 21A of the EA provides protections for special witnesses and affected child witnesses. The court can declare a person a special witness by hearing evidence (if the witness does not automatically fall into the special category, such as where the witness is a child or the person has a mental impairment). When the court hears evidence from these special witnesses, there are a range of options to assist the witness. These include ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building. Where the witness is an affected child witness, there are further protections in place.

For further information refer to the Supreme Court Bench Book: *http://www.courts.qld.gov.au/information-for-lawyers/benchbooks-and-ucpr-bulletin/supreme-and-district-courts-benchbook.*

Department of Communities, Child Safety and Disability Services

The Department of Communities, Child Safety and Disability Services allocates funding to non-government organisations to assist people, predominantly women, who have experienced sexual assault, in accessing necessary services and support needed to rebuild their lives as quickly as possible. These sexual assault services offer flexible, holistic and ongoing personal support including advocacy and sexual assault counselling (including crisis counselling), in a culturally appropriate and safe environment.

The range of support provided by these services includes:

- provision of information, advice and referral
- needs assessment and development of case/service plans
- individual advocacy
- sexual assault counselling for victims and survivors of sexual assault
- community education.

For more information about access to sexual assault services in local areas, contact the Sexual Assault Helpline on 1800 010 120.

Child Safety Services is the Queensland Government agency for child protection and adoption services. The department is dedicated to protecting children and young people from harm or who are at risk of harm, and whose parents cannot provide adequate care or protection for them.

Non-government organisations

It is acknowledged that a number of government departments provide grant funding to non-government organisations to deliver a range of specialist sexual assault services. Local procedures and service agreements in relation to services provided by these organisations should be adhered to.

Section 4
Interagency approach

Given the often violent and complex nature of sexual assault, an interagency approach is essential. The Queensland Police Service (QPS), Queensland Health (QH), the Department of Justice and Attorney-General (DJAG) and the Department of Communities, Child Safety and Disability Services (DCCSDS), each have a different but fundamental role in responding to sexual assault. Each of these agencies should assist each other in understanding and supporting their role and be familiar with, and sensitive to, their differing and complementary roles. An interagency approach provides opportunities to discuss and address issues of mutual concern across departments.

Teamwork

Quality of care depends on partnership between these different agencies. Each agency should establish local procedures to facilitate improved liaison and coordination between services. These procedures should include systems for information sharing and conflict resolution.

Confidentiality

Confidentiality, privacy of information and security of records is imperative when working with people who have experienced sexual assault. It is a fundamental principle in treating victims with dignity and respect.

Access to and disclosure of personal information regarding the assault will conform to legal requirements and be limited to people directly involved in the case. Except where legal obligations exist, information will not be released without the prior consent of the person involved. This includes names and identifying information.

Training

Joint training can contribute to achieving interagency objectives and allow those working in the field to understand how best practice is achieved. Training and orientation should be ongoing and could include input from relevant local services.

Information provision

Police officers, doctors, social workers, health workers and legal officers, should provide people with relevant information which may include written material. This information should be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location.

People should be made aware of, and be given an opportunity to discuss and consider the implications of proceeding with medical, investigative and legal processes so that they can make informed decisions. These decisions must be respected. It should be noted however that the decision whether or not an investigation should proceed rests primarily with the police.

Referrals

Relevant referral procedures and guidelines between police and health services should be observed.

Staff of government agencies should be familiar with local specialist services and actively support people who have experienced sexual assault to access appropriate supports available in their community. In addition, relevant health, welfare and legal services likely to be accessed by victims will need to develop local strategies and procedures to ensure that referral processes are appropriate and coordinated. These services should also be aware of the admission procedures and location of the nearest health facility and police station.

Feedback

Quality of care is essential in ensuring that people are referred to the appropriate service. QPS, QH, DJAG and DCCSDS should ensure that local interagency links and procedures operate in a coordinated manner. Mechanisms for giving feedback about service delivery should also be in place and observed.

Access, availability and promotion of services

People who have experienced a sexual assault may need encouragement to use medical, counselling, police and legal services. Local procedures should ensure that services are accessible and coordinated. This includes the use of written information and community education materials.

Gender of service providers

Following a sexual assault, the person may feel uncomfortable talking with personnel of the opposite sex. If a preference for female or male personnel is expressed, all reasonable steps to accommodate this preference should be taken.

Diverse needs

Procedures need to be flexible in order to respond to diverse needs; including culture, language, gender, disability, religion, sexuality and geographical location. Furthermore, it is important to understand how these needs impact access to and utilisation of appropriate services.

All agencies should ensure that procedures and facilities provide access to appropriate services for Aboriginal and Torres Strait Islander people, people of non-English speaking backgrounds, children and young people and people with disabilities, including physical disabilities.

Aboriginal and Torres Strait Islander people

Service provision should reflect the cultural needs of Aboriginal and Torres Strait Islander people. Agencies should have a referral mechanism to facilitate access to culturally appropriate information for Aboriginal and Torres Strait Islander people. Where there is consent and it is appropriate to do so, Aboriginal and Torres Strait Islander liaison workers may be offered to assist people during the process.

Communication

The Queensland Government recognises that a significant number of people may require interpreter services, as well as culturally appropriate support in order to adequately disclose and report a sexual assault, and make informed decisions about the support and options available to them.

People with a disability

Services and agencies should facilitate access to appropriate support workers and interpreters for people with a disability. Disability includes intellectual, physical, sensory, psychiatric or neurological impairment, or a combination of these, resulting in a substantial reduction in the person's capacity to make informed decisions or communicate. With the person's consent, and when it is safe and appropriate to do so, services should also consult with relevant people involved in that person's life such as carers, guardians and specialist agencies or departments.

People from culturally and linguistically diverse backgrounds

Service provision should be responsive to, and respect the cultural, religious and language needs of the person who has experienced sexual assault. Where communication in English is difficult or where requested, accredited interpreters and cultural support workers should be used to assist in both eliciting information from, and providing information to the person who has experienced sexual assault. This supports client safety and enables informed decision making about health care, investigative and legal processes for both the client and agency.

Translating and interpreter services

All reasonable steps will be taken by government agencies and funded non-government organisations providing sexual assault responses, to ensure fair and equitable access to interpreting and translating services that are responsive and high quality.

All reasonable steps should be taken to make an accredited interpreter available in all situations where an interpreter and/or translator is required, unless there are extenuating circumstances that genuinely prevent an interpreter from being used. This may include, for example, a medical emergency or where a language group or community is very small and confidentiality is a concern for the client, or where there is no interpreter available for that language group. All agencies will take into consideration the wishes of the person who have been impacted by the sexual assault in relation to the use of an interpreter.

Each government agency is required to observe its own policies and procedures in relation to the use of interpreters. These internal procedures should align with the *Queensland Government Language Services Policy.*

Section 5
Interagency procedures

Regardless of where sexual assault is first reported, the first priority is to ensure the safety and welfare of the person reporting. Prompt referral to the designated specialist service should take place.

Crisis intervention

The purpose of intervention by a designated sexual assault response worker is to:

- provide immediate assistance, stabilisation and emotional support to assist the person to return to their level of functioning before the crisis
- assist the person to process their perception of the stressor
- provide information about the options available, as well as the procedures of the local health facility
- provide an opportunity for the person to express their concerns and feelings
- offer practical support, including contacting family members or support persons where appropriate
- talk to family members or support persons (if present) about how best to support the victim
- co-ordinate the interagency response and facilitate patient care and treatment along the sexual assault pathway
- provide information in relation to available community support resources.

The sexual assault worker will advise the victim of their right to access medical advice and treatment including sexual health treatment. If information or clarification about police procedures is requested, the sexual assault worker will, with the victim's consent, arrange for police to provide this information.

During any phase of this process, a support person can be present. The support person should not adversely influence the process.

Initial report to police

Police receiving a report of a sexual assault will act on the information received. The police should inform the victim of relevant decisions made and where necessary, obtain the victim's consent.

Initial report to a health facility

Health facilities, such as hospitals, are often the first place where a person will disclose a sexual assault. When this happens, nursing and medical staff will assess the general medical condition of the person and administer immediate medical treatment if required. Assessment of a person's need and urgent medical intervention will always be the first priority.

Medical examination and treatment

A general, non-forensic medical examination may be conducted by a medical professional with the aim to:

- reassure victims about their physical welfare, including giving information on, and providing treatments to reduce the risks of pregnancy and sexually transmitted infections
- assess, treat and document injuries
- provide advice and referral options for follow up medical care.

A medical examination should include sexual health intervention as described in *Queensland Sexual Health Clinical Management Guidelines of 2010 section 6: http://www.health.qld.gov.au/sexhealth/documents/cm_guidelines06.pdf.*

Unconscious patients who are admitted to hospital with a suspicion of sexual assault will be assessed and treated as medical emergencies.

Referral to the local sexual assault team

Health staff must follow local procedures in the management of sexual assault. All efforts should be made to contact the designated sexual assault team and where there is no specialist team, crisis intervention and support will be delivered by health staff present. A referral for follow-up support and care should be made as soon as possible.

Notifying the police

The sexual assault worker should discuss available reporting options with the person. If the victim requests to speak to police, it is the role of the sexual assault team or other designated staff member, to notify the police as soon as possible to ensure all evidence including the crime scene can be secured. Notification and initial reporting to police does not mean an investigation will automatically take place.

Where police are operating under time constraints, they should inform health staff. Working together to meet time constraints will directly impact the quality of the outcome for the victim.

Victim attending with police

Where victims arrive at the health facility with police, procedures outlined in referral to the local sexual assault team above should still be followed by health staff.

Initial contact

It is the sexual assault worker's role to coordinate an immediate response; offer practical and emotional support, assess the person's immediate physical and emotional safety and recognise the potentially traumatic nature of the assault.

Medical assessment will be conducted in accordance with local procedures.

Forensic medical examinations

Doctors or nurses conducting forensic examinations must follow local procedures in the management of sexual assault.

The forensic examination consists of obtaining a history as to the nature of the assault in order to guide the subsequent physical examination. It also includes interpretation of injuries and the collection of forensic evidence as it relates to the alleged sexual assault.

Forensic medical examinations and informed consent for people aged 14 years and above

Informed consent reflects a legal and moral principle whereby the victim has the right to decide what is appropriate for them. This includes the right to accept or to decline a forensic examination and to change that decision.

In order for a patient to exercise this right, they require access to information that is relevant to them. An explanation about the nature of the forensic examination must be given by the forensic medial officer (FMO) or forensic nurse examiner (FNE) and police also need to inform the victim about police investigation processes.

The victim should be made aware that they may withdraw their consent at any time to any particular procedure, or any aspect of the examination. However after the examination is complete, an investigation by police may continue to progress.

It should be noted that the decision to have a forensic examination is a health care matter and therefore legislation and policy around informed decision-making in health care applies in this circumstance. For more information on decision-making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

It is the responsibility of the medical and forensic staff to assess capacity to consent. Where a person lacks capacity, it is appropriate to identify a capable adult to act on the patient's behalf. Please refer to section 2.2 of the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

If at any point there is a possibility that the capable adult identified is the offender, it is in the best interests of the patient for an Adult Guardian to be appointed in accordance with the *Powers of Attorney Act 1998* and the *Guardianship and Administration Act 2000.*

Where possible the examination will be carried out using the Sexual Assault Investigation Kit (SAIK).

Forensic medical examinations and informed consent for people under 14 years of age

Paediatric patients are generally those aged less than 14 years of age. It is usual practice for the child to be transferred to the hospital's child protection area for an examination, even if they have had initial treatment in an adult emergency setting. Emergency medical treatment for any child should be undertaken by the Department of Emergency Medicine prior to a forensic medical assessment.

Paediatric forensic medical assessments are undertaken by paediatricians. This will be done by the Child Protection Advisor on call (or similar) or the general paediatrician on call.

All examinations conducted on children should be consistent with Queensland Health's Hospital and Health Services Health Service Directive: Protocol for conducting child sexual assault examinations: *http://www.health.qld.gov.au/directives/docs/ptl/qh-hsdptl-029-11.pdf*. All paediatric FMEs should also adhere to legislation and policy around informed decision-making in health care. For more information on decision –making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf*

Chain of evidence

The chain of evidence and the need for 'contemporaneous recollection of facts' to aid an investigation is essential. The chain of evidence involves not only the examination of the victim, but also includes the geographic location where the assault occurred, the identification and interview of witnesses and identification of relevant additional evidence. Evidence collected needs to be stored and transported in approved and standardised ways as outlined in police procedures to ensure the utility in a court proceeding. This further emphasises the importance of police involvement prior to an examination being conducted.

Storage and transportation issues need to be considered when undertaking an examination as the inability to safely and correctly store and transport evidence may damage the evidence or make it inadmissible in court in the later stage of an investigation and prosecution.

The doctor or nurse conducting the forensic examination should discuss the case with the police before the forensic examination takes place. This is to ensure that:

- all necessary evidence is collected
- a re-examination is prevented
- unusual evidence is not overlooked.

Timing and nature of the forensic medical examination

In determining the timing and nature of the FME a number of factors will be considered. These include the time since the assault, the physical and emotional state of the victim and their account of the assault.

This process, particularly if it involves an internal gynaecological or anal examination, can be distressing and the examination may need to be delayed or discontinued on account of the victim's physical and emotional state.

Presence of police and support person at medical and forensic examinations

Regardless of age, a person is entitled to have a support person present during the medical and forensic examination. This may include a friend or family member, a nurse, health care worker or sexual assault worker, who is not a potential witness.

There is no legal requirement for a police officer to be present during the medical and FME. However, if a victim requests the presence of police, this police officer is to be the same gender as the victim.

A police officer must be present to receive all evidence collected during a forensic examination immediately after the procedure to maintain continuity of the evidence for any potential court proceeding.

Consent to release information and evidence

The doctor or nurse conducting the FME will not release the SAIK to police without the signed consent of the victim or the capable adult acting on their behalf.

Access to health records

Health records, including counselling notes, are confidential. However, patients should be notified that any records can be subject to a subpoena or other court-related mechanisms.

Drug facilitated sexual assault

Where the administration of drugs in the sexual assault is suspected, testing to maximise the chances of detecting these substances should be administered in a timely fashion. However, the decision to test remains a clinical one which is made by the FMO or FNE.

Victim DNA reference samples

DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the FME.

Support person during the police interview

Police should inform victims that they may be accompanied by a support person while their statement is being taken. However, the victim must be advised that:

- the support person may not participate in the interview
- the support person may not directly or indirectly influence the interview
- a potential witness may not act as a support person.

Discontinuance of police action before a proceeding has commenced

Where the victim does not wish to proceed with further police action, police should:

- make clear that following the withdrawal of the complaint no further police action will be taken
- attempt to obtain a signed withdrawal of complaint
- inform the adult victim (18 years and over, only) of the online *Adult Sexual Assault Resource (http://www.police.qld.gov.au/programs/adultassault/)* package that provides alternative reporting options

If a proceeding has commenced, the victim's wishes will be taken into account when deciding if the matter will continue.

Domestic Violence Protection Orders

Sexual assault is one form of domestic and family violence. Where the sexual assault has occurred within an intimate personal relationship (marriage, engagement, couple), family relationship or an informal care relationship, the victim should be informed of their option to seek protection under the *Domestic and Family Violence Protection Act 2012*. In situations where domestic violence has occurred and where protection is needed to prevent further violence, a domestic violence order can be applied for by the victim, by police on behalf of the victim or by another person authorised by the victim. This is done through the Magistrates Court.

Where appropriate, victims should also be referred to a specialist domestic violence service for support and assistance, for example DVConnect Womensline Ph. 1800 811 811 and DVConnect Mensline Ph. 1800 600 636.

Follow-up and registration on the Victims Register

After the trial and/or sentence, the victim will have the opportunity to talk to the case lawyer about the outcome of the case and the sentence imposed, if any. This opportunity may arise immediately after the trial and/or sentence concludes or at a later time by telephone.

If the offender is imprisoned or placed under the supervision of Queensland Corrective Services, the victim may register their details on the Victims Register which is administered by Queensland Corrective Services. A victim and/or their family or nominee can register to be kept informed about the offender's imprisonment, movement between locations and proposed parole dates. They will also be given the opportunity to make submissions to parole boards when offenders apply.

Where the offender is a young person, the Victim Information Register may be utilised. This register is administered by Youth Justice within the Department of Justice and Attorney-General. A victim and/or their family or nominee can register to be kept informed about the young person's detention, movement between locations and supervised release dates.

If the offender appeals against their conviction and/or sentence or the Attorney-General appeals against the leniency of the sentence, the victim will be kept informed about the progress and outcome of the appeal and any consequential matters arising from the appeal.

Key stakeholders at the local level should maintain current referral information on appropriate support and other community services available. Localised referral pathways and protocols should be developed between key service providers to ensure timely referral pathways for those in need of support.

Conclusion

The government agencies acknowledged in this document (QPS, QH, DJAG and DCCSDS) have committed to the principles, roles, approaches and procedures articulated in the guidelines. This commitment aims to ensure that individuals who have experienced sexual assault are provided with timely, high quality and coordinated service delivery responses appropriate to their needs and appropriate to the role played by departmental officers.

Key service providers are encouraged to use this document as a framework to develop local level arrangements and protocols to ensure best practice, quality service and support to people who have experienced sexual assault.

The government agencies responsible for the development of the guidelines would like to thank all key government and non-government stakeholders who kindly contributed their knowledge and expertise.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF DAVID BARRY BRIESE

I, **David Barry Briese**, of 200 Roma Street, Brisbane, Queensland, 4000 state as follows:

The following statement is provided in response to notices I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedules attached to those notices. Attached and marked **'Exhibit 1'** is a copy of each notice.

Background

1. My current position within the Queensland Police Service is Detective Inspector of Crime Services, Ipswich Police District.

Experience and position

2. I have a Master of Leadership and Management, which I completed in 2020 from Charles Sturt University.

3. I was sworn into the Queensland Police Service on 4 December 1998. After initially working in uniform in 1999 and 2000, in March 2001 I commenced a plain clothes career at Toowoomba Criminal Investigation Branch. In 2005 I obtained my Detective classification. I have worked at Toowoomba Criminal Investigation Branch, Toowoomba Juvenile Aid Bureau, Yeppoon Criminal Investigation Branch, St George Criminal Investigation Branch as the Officer in Charge, Wide Bay Tactical Crime Squad as the Officer in Charge and Maryborough Criminal Investigation Branch as the Officer in Charge. In 2017 I was promoted to the rank of the Detective Inspector of Ipswich Crime Services. Since then, along with performing the roles of that position, I have also performed approximately 14 months as the Detective Superintendent, Regional Crime Coordinator of the Southern Region and 6 months as the Detective Inspector at the Child Trauma and Sexual Crimes Unit at the Crime and Intelligence Command.

4. I am not appointed to any boards or committees.

[redacted]

David Barry Briese

[redacted]

Witness

JUSTICE OF THE PEACE (QUALIFIED) Reg.No. [redacted] DEPT. OF JUSTICE & ATTORNEY GENERAL

5. My CV is attached and marked as **'Exhibit 2'.**

6. As the Detective Inspector of the Ipswich District, I am responsible for the overview and management of all major criminal and child protection investigations. This involves providing advice to operational Detectives, overviewing task and operational management, approving covert and overt investigative strategies and reporting of outcomes through correspondence to the District Officer, Ipswich District. I also manage all human resource matters within the crime group including vacancies, sick and recreational leave, discipline matters and conduct media releases.

7. The Ipswich District encompasses the following geographical area: Ipswich, Goodna, Springfield, Yamanto, Karana Downs, Marburg, Rosewood, Harrisville, Lowood, Toogoolawah, Esk, Boonah and Kalbar.

8. The crime units that I manage include the Criminal Investigation Branch, the Child Protection Investigation Unit, the Suspected Child Abuse and Neglect Unit, the Child Protection Offender Registry, the School Based Policing Unit, the Tactical Crime Squad, the Crime Management Unit, the Tactician unit and District Intelligence Unit.

Forensic medical examinations

9. I am not aware of and have not been involved in any matter in which a witness has undergone a forensic medical examination. The QPS involvement in forensic medical examinations of complainants is in general terms and based on my experience and knowledge, as follows: upon receiving a sexual offence complaint from a victim and after conducting an assessment taking into account offence details including, importantly, the timing of the offence, an officer will offer the victim a Sexual Assault Investigation Kit (SAIK) examination, to be performed by an appropriately trained health professional at a hospital. If the victim agrees and provides their consent, they attend hospital with an investigator and undergo the procedure. In the Ipswich District, the officer takes the SAIK with them to the hospital. The SAIK is obtained from the Criminal Investigation Branch office at Yamanto or Springfield and handed to the health practitioner by the investigator. The health practitioner opens the SAIK and completes all medical procedures and associated paperwork as required, then re-seals the SAIK and hands it back to the investigator. The investigator then returns to their police station and lodges the SAIK in the property fridge. At the investigator's first

availability, they will complete a QP00127 'Submission of Articles for Forensic Examination' with the assistance of a Scenes of Crime Officer, who provides them with a Forensic Number. The SAIK is then transported to QHFSS for examination.

10. From 2001 until 2012 I was an operational Detective in Toowoomba, Yamanto, Rockhampton and St George and was involved in this process with both children and adult victims. As I understand it, the process has not changed, apart from the fact that property is now lodged via QPRIME and results are returned via QPRIME where, until approximately, 2007 property, including SAIKs, were lodged using a written exhibit book and results were returned via letter from QHFSS.

11. The QPS involvement in forensic medical examinations of suspects and accused persons is, in general terms and based on my experience and knowledge, as follows: in respect to child offenders, a Forensic Procedure Order must be obtained from the Children's Court Magistrate. In respect to adult offenders and suspects, a Forensic Procedure Order can be consented to by the person. That consent may be withdrawn at any time prior to the procedure being completed). If it is not consented to, then a Forensic Procedure Order must be applied for from the Magistrates Court. In any case, the alleged offender t is transported to a hospital where an appropriately trained medical officer conducts the forensic procedure.

12. As regards the equipment used, as far as I am aware a SAIK (obtained from a CIB office) is the equipment most commonly used to perform the forensic procedure. Where only blood is to be obtained, I understand a Road Safety Unit blood kit may be used. Once the forensic procedure is completed, the kit is returned to the investigator for lodging in the property fridge and then, at the first available opportunity, a QP00127 is completed, and the kit delivered to QHFSS for forensic examination.

13. To my knowledge, the only difference in processes between when I was actively involved in investigating offences and now is the exhibit lodging via QPRIME and notification system as explained in the paragraphs above.

Sexual Violence Strategy

14. A copy of the *Queensland Police Service (QPS) Sexual Violence Response Strategy 2021-2023* is attached and marked **'Exhibit 3'.**

[redacted]

David Barry Briese

[redacted]

Witness

[redacted]

15. The *QPS Sexual Violence Response Strategy* was developed as a result of several drivers for change, including: the Royal Commission into Institutional Abuse (the Royal Commission) conducted between 2013 to 2017, the Queensland Government's Sexual Violence Prevention Framework released in 2019, the 2020 ABC News report '*Rough Justice*', on-going investigations by the Women's Safety and Justice Taskforce since March 2021, and release of several papers including '*Hear her Voice*'.

16. The QPS Sexual Violence Response Strategy provides a framework to address the findings of previous and current inquiries to ensure continuous improvement in QPS responses to victims of sexual violence. It aims to enhance the Service's capacity to prevent, disrupt, respond and investigate sexual violence, put victims first and hold perpetrators accountable. The Vision underpinning the Strategy is a victim-centric, trauma-informed sexual violence response that protects the community, strengthens public confidence, and contributes to Queensland and National integrated action plans.

17. In October 2020, I commenced my role as a member on the Sexual Violence Prevention Working Group. The Working Group was chaired by the Detective Inspector of the Child Trauma and Sexual Crime Group. The Working Group was established as a result of / in response to a recommendation of the Royal Commission to continue to prepare and deliver victim-centric, trauma informed training to all staff.

18. On 24 August 2021, I was seconded to the Child Trauma and Sexual Crimes Unit as the Detective Inspector. Whilst seconded to that role I led the Sexual Violence Prevention Working Group and worked alongside others to finalise the completion of the *QPS Sexual Violence Response Strategy*. I was the chair of that Working Group between August and December 2021.

19. The *QPS Sexual Violence Response Strategy* was released in October 2021 to coincide with the Sexual Violence Prevention Month.

20. Debbie Jones (Manager) and Bridgette Allen of the of Policy and Programs Unit Child Abuse & Sexual Crime Group, Detective Acting Superintendent Mark White, Child Abuse and Sexual Crime Group, and Detective Inspector Steve Blanchfield of the Child Trauma and Sexual Crimes Group were involved with developing the Strategy. I am aware that members of the Department of Justice and Attorney-General (DJAG), the Office of the Director of Public Prosecutions (ODPP) and Queensland Health (QH)

[redacted] ..... [redacted]

David Barry Briese Witness

JUSTICE OF THE PEACE (QUALIFIED) Reg.No. [redacted] DEPT. OF JUSTICE & ATTORNEY-GENERAL

were involved in assisting with the provision of information and advice in the completion of the Strategy. However, I cannot recall who, in particular, from each of those agencies was involved.

Ipswich Sexual Assault Network

21. The Ipswich Sexual Assault Network (ISAN) was formed in December 2021 in response and having regard to the *QPS Sexual Violence Response Strategy*.

22. The ISAN provides relevant agencies and stakeholders with the opportunity to identify new, and build upon and enhance existing, relationships with a view to improving local service delivery to victims of sexual violence. It also provides a platform to educate and raise awareness of relevant issues amongst partner agencies and within the QPS.

23. Core members of ISAN are identified below. Where a core member is unavailable, due to other commitments, a proxy attends in their place. Core members are: Detective Inspector David Briese; Detective Senior Sergeant [redacted] Ipswich Criminal Investigation Branch; the Officer in Charge of the Ipswich Child Protection Unit (Detective S/Sgt currently vacant); Detective Senior Sergeant [redacted], the Ipswich Suspected Child Abuse and Neglect team; [redacted] Ipswich Domestic Violence Action Centre and Support of Sexual Assault Victims (also the secretariat); [redacted] Director of Social Work at Ipswich Base Hospital; [redacted] Director of Health Information Management at Ipswich Base Hospital; [redacted] Director of Nursing including the Sexual Assault Nurse Examiner (SANE) program at Ipswich Base Hospital; [redacted] Legal Counsel at Ipswich Base Hospital; Sgt [redacted], Officer in Charge of the Ipswich Domestic Violence Unit; [redacted] manager of the Ipswich Police High Risk DV Team; [redacted] Principal Crown Prosecutor of Ipswich ODPP; [redacted] Ipswich ODPP; [redacted] Manager of West Moreton Child Safety Intake and Assessment Team; [redacted] District Manager Ipswich Community Corrections; [redacted] Principal Advisor Queensland Education; and [redacted] Regional Manager of Ipswich Integrated Family and Youth Service. There have also been invited members who attend a specific meeting based on identification

[redacted]

David Barry Briese

[redacted]

Witness

JUSTICE OF THE PEACE (QUALIFIED) Reg.No.: [redacted] DEPT. OF JUSTICE & ATTORNEY-GENERAL

of issues by any of the core members. Thus far, this includes members of Respect Inc., Bravehearts and the Women's Legal Service.

24. I co-chair the group with Detective Senior Sergeant [redacted].

25. Minutes for the January 2022, February 2022, March 2022, April 2022, May 2022, July 2022, and August 2022 meetings are attached and marked **'Exhibit 4'**. Minutes are not available for the June 2022 meeting due to the absence of the secretariat.

26. While the ISAN is in its infancy, I believe it is working well.

27. While ISAN meetings are held each month, parties have been able to draw upon the existence of the network to engage in on-going communication with other participants, enabling the timely sharing of information and advice out of session. For example, at times SANEs are unavailable at Ipswich Hospital. When that occurs, [redacted] or [redacted] advises the ISAN QPS members of that fact. That allows us to make timely, alternative arrangements to attend other hospitals for examinations which is very helpful in terms of keeping victims informed, as well as progressing investigations.

28. In my view, the challenge for the region, in future, will be ensuring appropriately trained nurses are always available to deliver this important service.

Sexual Assault investigation kits (SAIKs)

29. As set out above, I took up the role of Detective Inspector, Operations Manager of the Child Trauma and Sexual Crimes Unit. It sits within the Child Abuse and Sexual Crime Group, Crime and Intelligence Command, Police Headquarters on 24 August 2021.

30. On 7 September 2021, I first met with Dr Adam Griffin at the Queensland Health Office located at 51 Herschel Street, Brisbane. Detective Acting Superintendent Mark White and Policy and Programs Unit Manager, Debbie Jones, were present at that meeting. From my recollection, Jackie Thompson, SANE State Manager, also attended, along with two other doctors referred to by Dr Griffin as 'Forensic Physicians'. I cannot recall their names. This meeting was organized prior to my commencement at the Child Trauma and Sexual Crimes Group. The meeting was arranged to discuss issues surrounding the completion of SAIK examinations of sexual violence victims around the State. My recollection is that the meeting was cordial and there was consensus amongst those present re: the importance of ensuring victims were being examined at

the nearest available hospital, to ease their trauma and to assist police investigators. We agreed to come back on 6 October 2021 to identify and discuss any issues uncovered in the meantime. As I was new to the role the process, of arranging the meetings and preparing relevant information for consideration, was led by Detective Acting Superintendent Mark White and Debbie Jones. I do not have any minutes from this meeting.

31. The 6 October 2021 meeting was held for the purpose of continuing the discussion of issues canvassed at the 7 September 2021 meeting. The meeting was conducted via the Teams platform. I do not know who organized it. I do not have any minutes from this meeting. In relation to the meeting, I recall:

(a) In attendance was Detective Acting Superintendent Mark White, Debbie Jones, Bridgette Allen, myself, Dr Griffin and Jackie Thompson.

(b) The discussion centred on follow up items from the previous meeting. That is, issues experienced across the State in terms of medical staff at hospitals being unable or unwilling to conduct forensic medical examinations on sexual violence victims. I am aware that, at the time, Bridgette Allen was keeping a spreadsheet of issues identified by Investigators across the State in relation to forensic medical examinations. Bridgette or Debbie Jones presented the issues to Dr Griffin, who agreed to follow up on them.

(c) Following the meeting, on 8 October 2021, I sent an e-mail to all District Officers and Crime Coordinators within the State updating them on our on-going discussions with QH regarding the process for the forensic examination of sexual assault victims. That email is attached and marked **'Exhibit 5'**.

32. On 26 October 2021, Superintendent Dale Frieberg arranged a Teams meeting with me to discuss my role as the Detective Inspector, Child Trauma and Sexual Crime Group and to invite me to participate in a working group she wanted to establish regarding the issue of SAIK examinations. From that conversation I understood that the Forensics Unit, over which Superintendent Frieberg and previously Superintendent Bruce McNab sat, had experienced issues with respect to obtaining DNA elimination samples for victims of sexual crimes and the refusal, by Dr Adam Griffin, to comply with the *Response to Sexual Assault – Interagency Guidelines for Responding to People who*

have Experienced Sexual Assault ('the Response to Sexual Assault Guideline'). No-one else was involved in that discussion. I have no notes of that discussion.

33. I was due to attend a meeting with Dr Griffin on 9 November 2021, prior to the commencement of the Working Group. I advised Superintendent Frieberg of that arrangement and that I intended, at that time, to raise with Dr Griffin the issues I had just discussed with Superintendent Frieberg. I forwarded Superintendent Frieberg the e-mail I sent out to District Officers and Crime Coordinators on 8 October 2021.

34. On the 27th of October 2021, Debbie Jones and I attended the Queensland State Library where, at the invitation of Jackie Thompson, we presented to the Sexual Assault and Forensic Nurse Conference. We presented on the soon to be released QPS Sexual Violence Response Strategy and the role of the QPS Sexual Violence Liaison Officer. I recall there were numerous persons present in the conference room, as well as a number of people attending on-line. Dr Griffin was present, but I did not have the opportunity to catch up with him personally. For that reason, I sent him an e-mail later that day referring to the issue - of medical staff not obtaining the DNA elimination sample - and requesting a time to speak with him about it. A copy of that email is attached and marked **'Exhibit 6'**.

35. I did not receive a response from Dr Griffin.

36. On 9 November 2021, a QPS/QH catch-up meeting was held. It was conducted in the same manner (via Teams Platform) as the meetings held on 7 September 2021 and 6 October 2021. I do not have any minutes from this meeting.

    (a) I do not recall who was at this meeting apart from Dr Griffin, Debbie Jones and myself.

    (b) I raised the issue of the Response to Sexual Assault Guideline (in terms of collection of the victim DNA reference elimination sample) and questioned Dr Griffin as to why this was not being routinely done by QH. I recall Dr Griffin responded that:

        (i) he believed there could be an issue with cross contamination from saliva and semen in the victim's mouth that would prevent a buccal swab from being taken at the time of the SAIK;

[redacted]

David Barry Briese

[redacted]

Witness

OF THE PEACE (QUALIFIED) Reg.No [redacted] DEPT. OF JUSTICE & ATTORNEY GENERAL

(ii) even though another person's saliva only takes 8-10hrs to disappear - from a DNA perspective – from the inside of a victim's mouth, he did not want to have different processes for his staff for the taking of DNA depending on whether or not the victim may have mouth DNA contamination;

(iii) the current process - of police obtaining the reference sample a few days later - meant there was zero chance of contamination and thus was his preferred process; and

(iv) he was concerned about the possible contamination of samples if a reference sample were to be placed in the same SAIK for analysis.

(c) Following the meeting I sent an e-mail to Dale Frieberg and to Debbie Jones advising them of the outcome of that discussion and the explanation provided by Dr Griffin as to why Forensic Medical Officers were not complying with the Response to Sexual Assault Guideline. See attached and marked **'Exhibit 7'**.

(d) On 18 November 2021, at the request of Superintendent Frieberg, I attended a meeting at Police Headquarters with Superintendent Frieberg, Inspector David Neville, Inspector Peter Bushell, Assistant Commissioner Kath Innes and Assistant Commissioner David French. The purpose of this meeting was to discuss, as a group, the matters raised by Dr Griffin in conversation with me and concerns apparently expressed by the Acting Executive Director of QH Forensic and Scientific Services (FSS), Lara Keller, in respect of Dr Griffin's position in relation to medical officers obtaining DNA reference samples from victims. I was not a part of any discussions with Ms Keller, at that stage. The concern she was said to have had in relation to Dr Griffin was conveyed to me by Superintendent Frieberg during this meeting. Superintendent Frieberg also requested through both A/C's that a Ministerial Briefing Note (MBN) be completed for A/C French for the information and consideration of Deputy Commissioner Tracy Linford. I was not involved in preparing or completing the MBN.

(e) It was decided that Superintendent Frieberg would meet with Lara Keller on 24 November 2021 to discuss the issues relating to QH's non-compliance with the

[redacted] .....

David Barry Briese

[redacted] .....

Witness

[redacted]

Response to Sexual Assault Guideline. I understood that was with a view to attempting to change the (existing) process engaged in by QH.

37. As a result of the meeting on 18 November 2021, I provided a briefing note via e-mail to my immediate manager, Detective Acting Superintendent Mark White. It advised of the outcomes of the meeting and actions under consideration going forward. The briefing note was provided for his information and consideration of briefing senior management (i.e. Chief Superintendent and/or Assistant Commissioner, Crime and Intelligence Command). A copy is attached and marked **'Exhibit 8'**.

38. I did not attend a meeting on 2 December 2021. On 7 December 2021, Superintendent Frieberg arranged a meeting under the auspices of the newly formed 'Sexual Assault Investigation Kit' (SAIK) Working Group. This group included members of the QPS Forensics Command including Superintendent Frieberg, Inspector Neville, Inspector Bushell and Sergeant Carolyn Hoffman, as well as members of QH including Ms Keller, Cathie Allen, Justin Howes, Jacqui Thomson and Kirsten Scott. Dr Griffin was an apology for that meeting.

    (a) The group discussed the Response to Sexual Assault Guidelines and the on-going responsibility of collecting reference samples from sexual assault victims. I recall Jacqui Thompson indicated that she could not see a reason why the reference sample could not be obtained at the same time as the completion of the SAIK. There was also discussion by QH in terms of training required, packaging issues and exhibit management. I recall that Inspector David Neville gave an assurance that the QPS would outlay any costs associated with changes in packaging to facilitate a reference sample being included and assuring non-cross contamination. The minutes of this meeting are attached and marked **'Exhibit 9'**.

    (b) Cathie Allen, on behalf of QH, agreed to research costs and bring back that information to the working group. QH and QPS were each to research proposed workflow models for a new DNA reference sample procedure and provide those to the working group for consideration and further discussion. The group agreed to re-convene on 15 December 2021.

39. In relation to the 15 December 2021 meeting:

(a) It was arranged by the SAIK working group chair Superintendent Frieberg.

(b) I attended the 15 December 2021 meeting via the Teams Platform. From my recollection the following people were also present: Superintendent Frieberg, Inspector Neville, Inspector Bushell, Sergeant Hoffman and Senior Sergeant Nicole Townsend, as well as members of QH including Ms Keller, Cathie Allen, Justin Howes, Jacqui Thomson, Kirsten Scott and Dr Griffin.

(c) Further discussion was held in terms of the SAIKs and the issue of obtaining of reference samples from sexual assault victims. It was at this time I recall Dr Griffin challenged the group. He appeared to not believe that the taking of a reference sample in the days after the initial SAIK could be a traumatic experience for a victim. He further stated the guidelines were made in error. Dr Griffin also suggested that to change the current practice (of police obtaining the sample) was an attempt at cost-shifting to QH by QPS. On several occasions Inspector Bushell, Inspector Neville and myself referred to the fact that the Guideline stated that a reference sample was to be obtained by the medical practitioner at the same time as performing the SAIK examination. Dr Griffin admitted he was the co-author of the Guideline. At this point I challenged Dr Griffin's assertion that QPS was attempting a cost shifting exercise. Rather, the intent was to make the process more victim centric. Dr Griffin raised concerns around the medical training to obtain DNA reference samples. He repeated that the Guideline contained a typographical error (that had not been noticed or challenged for seven years). Dr Griffin reiterated the view that there should not be any change to the existing process as QPS could not provide any evidence in support of the suggestion that attendance by police upon a victim, at a later point in time to carry out a further procedure, could be traumatic for that individual. The minutes of that meeting are attached and marked **'Exhibit 10'.**

(d) It was decided that Superintendent Frieberg would raise QPS' concerns through our senior executive management. We believed that, despite all parties previously agreeing to research and implement a change to process in line with the 2014 guideline, Dr Griffin did not seem willing to agree to this. As the

[redacted] .....

David Barry Briese

[redacted] .....

Witness

JUSTICE OF THE PEACE (QUALIF... Reg [redacted] DEPT. OF JUSTICE & ATTORNEY-GE...

Senior Forensic Medical Officer for the State, his support was vital. I am not aware of any further meetings being held as a result of that disagreement.

40. On 20 December 2021, I provided an update to the briefing note that I had provided on 22 November 2021. As I recall Detective Acting Superintendent White was away at the time, so I forwarded the brief to Chief Superintendent Colin Briggs, Assistant Commissioner Innes and Superintendent Frieberg. A copy of that updated briefing note is attached and marked **'Exhibit 11'**.

41. I completed my secondment on the 23rd of December 2021.

Other issues

42. In my opinion, there is no doubt that the SAIK procedure and everyday medical practice are more invasive than the process for obtaining a DNA reference (mouth) sample. However, from a trauma-informed and victim-centric perspective, and in accordance with the National and State strategies and responses to victims of sexual violence highlighted through the Women's Safety and Justice Taskforce reports, the State Government's Sexual Violence Prevention Framework, recommendations of the Royal Commission and the ABC report, I believe that we should be exploring and welcoming any opportunity to limit the performance of any further invasive medical examination of an already traumatized victim. This is also reflected in the Women's Taskforce 'Hear her voice' report 2, volume 1, recommendations 32 and 40.

43. I do not have any experience with the just in case kits, but I think they are a good initiative as long as someone is appropriately following up with the victim as part of that process.

44. I think the current SAIK model, as set out in the Guideline, is good as long as we have appropriately trained investigators and appropriately trained medical examiners readily available, in the nearest location to a victim, so that the procedure can be performed in timely manner.

45. As far as I am concerned the ongoing issue that exists in relation to SAIKs is the fact that investigators and scenes of crime officers are required to attend with the victim or request the victim to attend a police station within seven days after the SAIK examination to have a DNA reference sample obtained.

[redacted] .....

David Barry Briese

[redacted] .....

Witness

JUSTICE OF THE PEACE (QUALIFIED) DEPT. OF JUSTICE Reg.No. [redacted]

Results

46. Given my role I am not required to use QPRIME on a frequent basis, nor do I have recent experience receiving results in the conduct of investigations. While I understand all results received would be available in QPRIME, my understanding - from speaking with investigators - is that when a positive DNA match is made as a result of a SAIK examination, a QPRIME task is sent from QHFSS to the investigating officer via the police district Crime Manager. I do not know whether a task is sent to the investigating officer if no DNA match is detected.

47. My understanding of the result 'No DNA detected' (or similar) is that this means no DNA has been detected as a result of the examination. I believe this is in respect to both the victim and any possible offender. I cannot recall the last investigation in which I may have received a result of this time. Prior to the establishment of the Commission of Inquiry, I was unaware it was possible to obtain a partial or full profile from a sample which initially returned the result 'no DNA detected' and could request FSS conduct further testing.

48. My understanding of the result 'DNA insufficient for further processing' (or similar) is that some type of DNA was obtained but it was insufficient to match it to a profile of any sort. Prior to the establishment of the Commission of Inquiry, I was unaware it was possible to obtain a partial or full profile from a sample which initially returned the result 'DNA insufficient for further processing' and could request FSS conduct further testing.

49. I don't recall receiving any other kinds of results during my investigations.

[redacted] .....

David Barry Briese

[redacted]

Witness

JUSTICE OF THE PEACE (QUALIFIED) Reg No.: [redacted] DEPT. OF JUSTICE & ATTORNEY-GENERAL

50. As regards the provision of DNA results of an examination to a complainant, I have no recent experience in this and nor do I recall same. Speaking with investigators from my area, I understand they may advise the victim of a positive DNA match in the course of conversations during investigations, but not as a matter of priority or policy. Where no DNA match is obtained and the matter involves an unknown offender, then investigators would, as a matter of course, advise the victim, not to affect or influence a victim's decision but to keep them updated as to the investigation.

TAKEN AND DECLARED before me at TOOWOOMBA in the State of Queensland this 22nd day of September 2022

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: David Briese

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Wednesday 21 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 9th day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/

Schedule of topics for statement

Detective Inspector David Briese

1. State your full name, current position/title and place of work.

Experience and position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained (if any).

3. Detail your work history.

4. Identify any appointments to any boards and/or committees.

5. Attach a current CV.

6. Identify the duties/responsibilities of your position. Include a description of the geographical area you oversee, and identify who you report to and how many persons report to you.

Forensic medical examinations

7. Explain, to your knowledge, the involvement of the Queensland Police Service (**QPS**) officers in the performance of forensic medical examinations on complainants and witnesses. Detail the process of QPS involvement, from the point of initial contact with the complainant/witness, up until the point at which samples of biological material are submitted to Queensland Health Forensic and Scientific Services. Identify, *inter alia*, where these examinations take place.

8. Identify at which points in your career you investigated sexual offences and were involved directly in the processes described in the paragraph immediately above.

9. Describe how current processes, of the type described in paragraph 7, above, are different to the processes you followed when you were investigating sexual offences?

10. Explain, to your knowledge, the involvement of QPS officers in the performance of forensic medical examinations on suspects and accused persons. Detail the process from the point at which an officer decides a sample should be taken, up until the point at which samples of biological material are submitted to Queensland Health Forensic and Scientific Services. Identify, at the least, where these examinations take place.

11. Describe how current processes, of the type described in the paragraph immediately above, are different to the processes you followed when you were investigating sexual offences?

Sexual Violence Strategy

12. What is the 'Sexual Violence Strategy'? Attach a copy of the Strategy.

13. Detail the full background to the development of, and your involvement with, the Sexual Violence Strategy. Provide specific timeframes of events if possible.

14. Identify who else was involved with developing, preparing and/or implementing the strategy. Explain the role of those persons. In addition, include the involvement of any groups or organisations.

15. If not already discussed in responding to a question above, explain what the Ipswich Sexual Assault Network is, including:

    (a) when and how it was formed;

    (b) who is a member; and

    (c) your role on the network.

16. Attach copies of minutes from each of the meetings of the working group.

17. What impact, if any, has the Ipswich Sexual Assault Network had on the availability and quality of forensic medical examinations for sexual assault complainants in the Ipswich area? Identify any other challenges or issues which exist in conducting forensic medical examinations that the Ipswich Sexual Assault Network has not been able to overcome or improve.

Sexual Assault investigation kits (SAIKs)

18. In about July or August 2021, identify if you commenced a new position, and, if so, what the position was.

19. Identify the problems or issues with sexual assault investigation kits that led to you meeting with Dr Adam Griffin in the second half of 2021? When did you first meet with him in the second half of 2021?

20. In relation to the meeting you had on about 7 September 2021, identify:

    (a) who organised the meeting and for what reason (provide as much background as necessary);

    (b) who attended the meeting;

(c) what was discussed at the meeting; and

(d) what actions followed from the meeting.

21. In relation to the meeting you had on about 6 October 2021, identify:

(a) who organised the meeting and for what reason (provide as much background as necessary);

(b) who attended the meeting;

(c) what was discussed at the meeting; and

(d) what actions followed from the meeting.

22. In relation to contact you had with Dale Frieberg on or about 26 October 2021, identify:

(a) who initiated the contact and for what reason;

(b) whether anyone else was involved in your discussion/contact with Dale Frieberg, and if so, who;

(c) what was discussed; and

(d) what actions followed from the contact.

23. Attach a copy of any notes of, or emails related to, your contact with Dale Frieberg on or about 26 October 2021.

24. In relation to the meeting you had on about 9 November 2021, identify:

(a) who organised the meeting and for what reason (provide as much background as necessary);

(b) who attended the meeting;

(c) what was discussed at the meeting; and

(d) what actions followed from the meeting.

25. In relation to the meeting you had on about 18 November 2021, identify:

(a) who organised the meeting and for what reason (provide as much background as necessary);

(b) who attended the meeting;

(c) what was discussed at the meeting; and

(d) what decisions were made at, and what actions followed from, the meeting.

26. Explain the content of, and the reason for, the briefing you gave on 22 November 2021. Identify who the briefing was made to.

27. In relation to the meeting you had on about 2 December 2021, identify:

    (a) who organised the meeting and for what reason (provide as much background as necessary);

    (b) who attended the meeting;

    (c) what was discussed at the meeting; and

    (d) what decisions were made at, and what actions followed from, the meeting.

28. In relation to the meeting you had on about 15 December 2021, identify:

    (a) who organised the meeting and for what reason (provide as much background as necessary);

    (b) who attended the meeting;

    (c) what was discussed at the meeting; and

    (d) what decisions were made at, and what actions followed from, the meeting.

29. Attach the minutes of each of the meetings referred to above.

30. Identify how you concluded your involvement with this issue. Identify and attach any briefing note (or similar) you prepared or finalised after 15 December 2021 related to the meetings or SAIKs. Who was that note/document provided to, if anyone?

31. When did you finish in the position you held in the second half of 2021?

Other issues

32. Identify and detail any of your concerns with, or criticisms of, the current Queensland SAIK model, the just-in-case kits or the current processes for collecting biological material for forensic DNA testing in sexual assault matters (if not already discussed). Attach any supporting documents.

33. What problems or issues related to SAIKs, or the collection of biological evidence in sexual matters, continue in the Ipswich area?

Notice number: 2022/00193

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: David Briese

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Wednesday 21 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 16th day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/

Schedule of topics for statement

Detective Inspector David Briese

Responses to the following questions should be provided as part of the statement you provide in response to Notice 2022/00160.

Results

1. Are you, or the investigating officers you supervise, notified when the samples from a forensic medical examination have been tested, and are you/your investigating officers notified of the results? If yes, explain how you are notified.

2. What is your understanding of the result '*No DNA detected*' (or similar)? If you have not seen this result-type before, confirm same.

3. What is your understanding of the result '*DNA insufficient for further processing*' (or similar)? If you have not seen this result-type before, confirm same.

4. What other type of results do you recall receiving? What is your understanding of those results?

5. Are the DNA results of the examination passed onto the complainant/witness? If yes, in your experience, does this have an effect on the complainant's decision to proceed with a criminal complaint? If so, explain how.

INTRODUCTION

The Queensland Police Service (QPS) commitment to deliver a victim-centric, trauma-informed response to sexual violence will protect our community, strengthen public confidence and build on Queensland and National responses to reduce sexual violence. This *Sexual Violence Response Strategy 2021-2023* aims to enhance the Service's capacity to prevent, disrupt, respond and investigate sexual violence, put victims first and hold perpetrators accountable. It is important to note the *Purpose, Vision, Priorities/Objectives* and *Underlying Principles* relate to this Strategy only.

Purpose	Vision
Together we prevent, disrupt, respond to and investigate sexual violence by putting victims first and holding perpetrators accountable.	A victim-centric, trauma-informed sexual violence response that protects the community, strengthens public confidence, and contributes to Queensland and National integrated action plans.

The QPS has set four strategic priorities to achieve its vision:

1. **Advance Our People** towards applying a victim-centric, trauma-informed approach when responding to sexual violence.
2. **Enhance Our Response** by improving our capability to prevent, disrupt, respond to and investigate sexual violence in Queensland.
3. **Empower Our Community** and reduce community harm through proactive engagement and education, and promoting access to victim support services.
4. **Maximise Our Partnerships** with government and non-government agencies, and academia to achieve our vision.

Scope of the Strategy

This strategy relates to sexual violence involving victims over the age of consent (16 years of age or older). Refer to page 9 for our working definition of sexual violence.

Drivers for Change

The QPS recognises the importance of its response to victims of sexual violence. Police assume a critical role for victims during a highly traumatic time and within an unfamiliar criminal justice system. Recent reporting revealed a perception within some sectors of our community that police and the justice system are not

uniformly meeting the needs of victims. The QPS has heard these community concerns and is committed to improving its response to victims of sexual violence:

Royal Commission – The Royal Commission into Institutional Responses to Child Sexual Abuse (Royal Commission) gathered research, explored case studies, interviewed survivors and experts in the areas of prevention, support, investigation and prosecution. The Criminal Justice Report, published in August 2017, identified inadequacies in institutional (including police and justice system) responses to victims, such as[1]:

- lack of empathy for victims;
- failing to adequately address their needs in a trauma informed way; and
- victims feeling disempowered during investigation and prosecution processes.

Sexual Violence Prevention Framework – In October 2019 the then Minister for Child Safety, Youth and Women, and the Minister for Prevention of Domestic and Family Violence published the *Prevent. Support. Believe. Queensland's Framework to address Sexual Violence* (the Framework).[2] The Framework establishes priorities for action that guide the Queensland Government's approach to preventing and responding to sexual violence. The Framework identified three priority areas: Prevention; Support and Healing; and Accountability and Justice.

The QPS has responsibility for three action items from Priority Three (Accountability and Justice) under the Framework:

- To develop an online reporting form to provide an alternate avenue for victims of sexual assault to report to police;
- To provide victim-centric and trauma-informed training to all police officers; and
- To conduct a pilot program of a dedicated Sexual Violence Liaison Officer (SVLO) within the Townsville District, and to conduct a comprehensive evaluation to determine the feasibility of the model and resourcing needs for expansion across all districts. Logan District was also added as a trial site during implementation.

Media – On 28 January 2020, ABC News published a report outlining its analysis of sexual assaults reported to police in Australia between 2008 and 2017.[3] It was generally critical of the national policing response to sexual assault. The findings for Queensland included:

- In 2018, 40% of sexual assault reports were either unfounded or withdrawn;
- In 2018 Queensland recorded the highest rate of reports withdrawn across Australian jurisdictions (33%;) and
- The Gold Coast City Council area recorded 44% of reports withdrawn.

Office of Health Ombudsman – On 5 June 2020, correspondence was received from the Office of the Health Ombudsman (OHO) raising concerns about the quality of some police investigations into health practitioners accused of sexual offences. The OHO identified two recurrent and related concerns associated with these police investigations:

- Inconsistency in police decision-making whether to prosecute; and
- Victims being discouraged from pursuing a prosecution.

The OHO infers both issues arise from a mistaken belief by some police there is a limited prospect of a successful prosecution based on the uncorroborated testimony of an otherwise credible victim; and, if the practitioner was found guilty, there is a limited likelihood of a sentence of imprisonment being imposed.

The Women's Safety and Justice Taskforce – On 11 March 2021, the Queensland Government announced a wide-ranging review into the experiences of women and girls with the criminal justice system, both as victims and offenders. The Women's Safety and Justice Taskforce (the Taskforce) was established to undertake the review. In June 2021, the Taskforce released its second discussion paper seeking community feedback about women's and girls' experiences with the criminal justice system regarding sexual violence.[4] The Taskforce specifically references recognising and responding to trauma, including trauma-informed care and practice. Further, the Taskforce indicated they will examine several other themes in the discussion paper including:

- Community understanding of sexual offences and barriers to reporting;

- Community attitudes to sexual violence against women and girls;
- Police response, investigation and charging of sexual offences;
- Legal and court processes for sexual offences;
- Drivers behind women and girls in the criminal justice system and their engagement with police and the legal system; and
- Women and girls experience of imprisonment and release into the community.

Findings and recommendations from the Taskforce may impact the criminal justice system broadly and the QPS specifically, informing responses to women and girls who are victims of sexual violence or who are accused of crimes.

QPS Sexual Violence Response Strategy 2021-2023

The *QPS Sexual Violence Response Strategy 2021-2023* (the Strategy) provides a framework to address the findings of previous and current inquiries to ensure continuous improvement in QPS responses to victims of sexual violence. The Strategy complements the work of the Royal Commission, Taskforce and the Queensland Government Framework while focussing on the role and responsibilities of police to prevent, disrupt, respond to and investigate sexual violence.

Actions to Date

These recent drivers of change reflect comparable insights revealed by the 2003 Crime and Misconduct Commission report *Seeking Justice: An Inquiry into how sexual offences are handled by the Queensland criminal justice system*[5] (Seeking Justice). As a result of the report, the QPS initiated significant changes in how it responded to sexual violence.

Included in these reforms was improved investigator training to better understand the impacts of sexual violence and enhance investigator responses. The Understanding Sex Crimes Course was created and delivered to all investigators across the then Juvenile Aid Bureau (now Child Protection and Investigation Units - CPIU) and Criminal Investigation Branches (CIB). At the time, this was a standalone course with limited resourcing to reach future investigators, frontline

sworn officers and/or staff members who are potentially the first QPS representatives to have interaction with victims of sexual violence.

In response to the Seeking Justice report, the QPS and the Office of the Director of Public Prosecutions (ODPP) also formed the Failed Sexual Offence Prosecutions Steering Committee and associated Working Group which included in their terms of reference an assessment of failed sexual offence prosecutions and whether systemic issues existed in the investigation and prosecution of sexual offences. The Steering Committee and Working Group continues to meet as required. To date, no systemic issues have been identified. Practice issues have been identified and action taken to address them.

In 2016, after identifying a need to extend the work started by the Understanding Sex Crimes Course, the QPS commenced delivering the Investigating Sexual Assault – Corroborating and Understanding Relationship Evidence (ISACURE) course to investigators. This course includes presenters with lived experiences, professionals in the field of trauma and supporting victims, and practical training in interviewing victims of sexual violence. ISACURE continues to be delivered to investigators from around the State and has been independently evaluated as improving the police response to sexual violence.

Since 2019, the QPS has continued to build its suite of initiatives to respond to sexual violence including:

- Developed and implemented an online sexual assault reporting form to provide an alternate reporting avenue for victims of sexual violence. This finalised one of the actions under the Sexual Violence Prevention Framework as well as meeting Royal Commission recommendations;
- Conducted a trial of a dedicated Sexual Violence Liaison Officer (SVLO) in Townsville and Logan Districts, in accordance with action 3.2.1 of the Framework;
- Completed a comprehensive evaluation of the SVLO trial with recommendations for enhancing the QPS response to victims of sexual violence, in accordance with action 3.2.1 of the Framework;
- Commenced development and delivery of a QPS state-wide, sustainable, victim-centric and trauma-informed training program in partnership with

the University of Queensland, in accordance with Royal Commission recommendations; and

- Established a Sexual Violence Prevention Working Group to lead and inform the Service-wide response to sexual violence.

While the Service has responded to previous calls for reform of its response to sexual violence, the QPS recognises that sustaining and building improvements requires a coordinated response. This Strategy represents the mechanism through which the Service will harness and coordinate activity to deliver, and continually improve, its professional, victim-centric and trauma informed responses to victims of sexual violence. The Detective Superintendent, Child Abuse and Sexual Crime Group (CASCG), Crime and Intelligence Command (CIC) will assume the role of capability owner for the Strategy to coordinate fit for purpose, agile and flexible strategies supported by clear actionable tasks implemented across the State. This role includes consistent messaging about the Service's commitment to professional, victim-centric and trauma informed responses to sexual violence.

Relationship to State and National Priorities and Plans

The QPS *Sexual Violence Response Strategy 2021-2023* aligns with a broad range of State and National reforms, frameworks, action plans and strategies currently being implemented across Australian jurisdictions (see Figure 1).

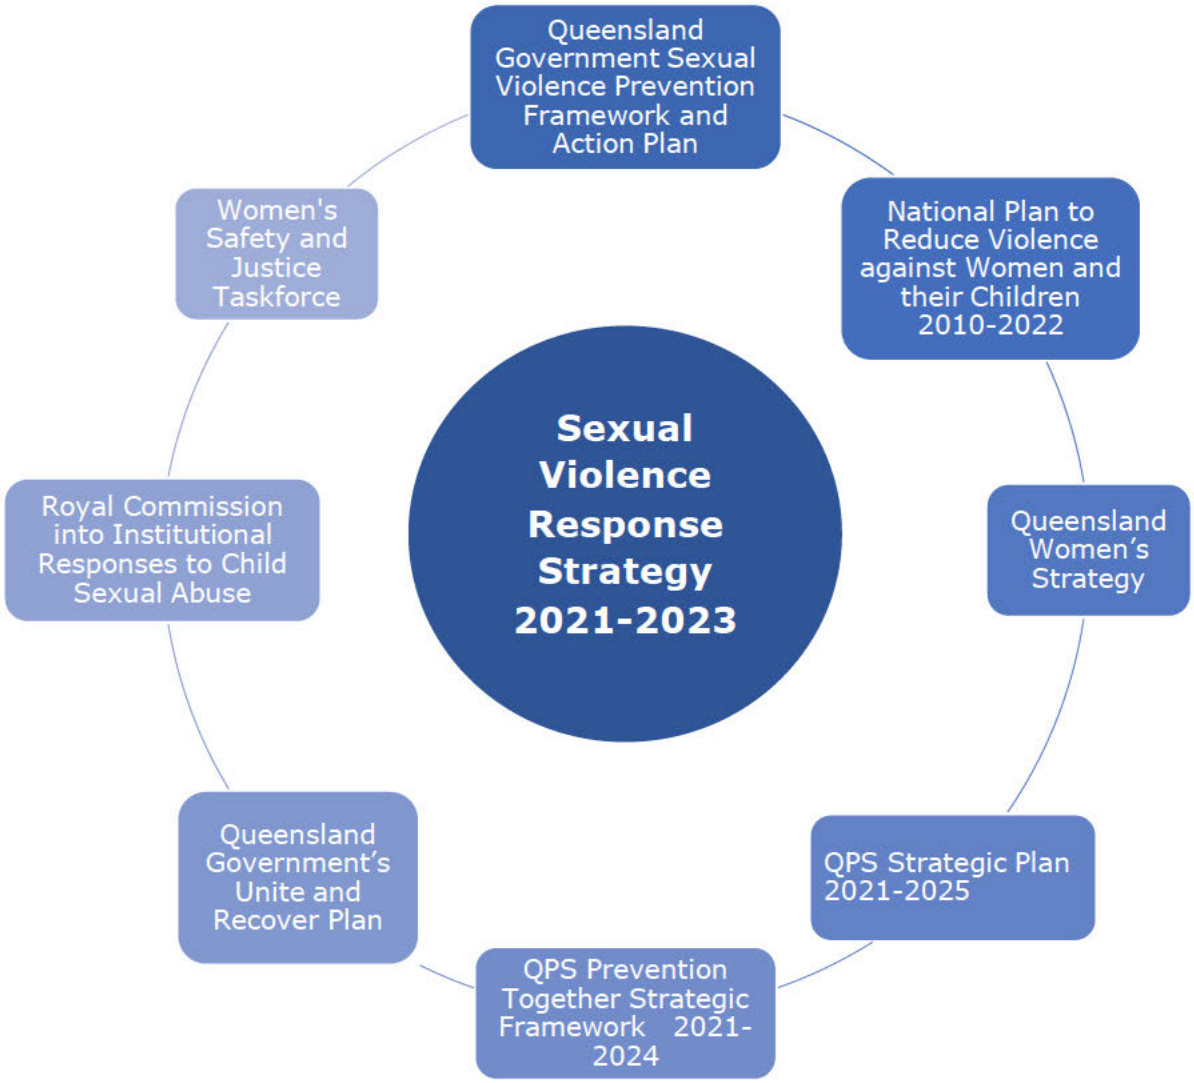

Figure 1. State and National priorities/plans

QPS Capability Owner

The Child Abuse and Sexual Crime Group (CASCG) is a specialist group within the Crime and Intelligence Command (CIC). The CASCG aims to protect children and the community by identifying, responding to and preventing physical and sexual offending. The Sexual Crime Unit, CASCG is responsible for responding to serious or complex cases of serial rape, sexual assault and online sex crimes against adult victims, and providing specialist investigative assistance to regions.

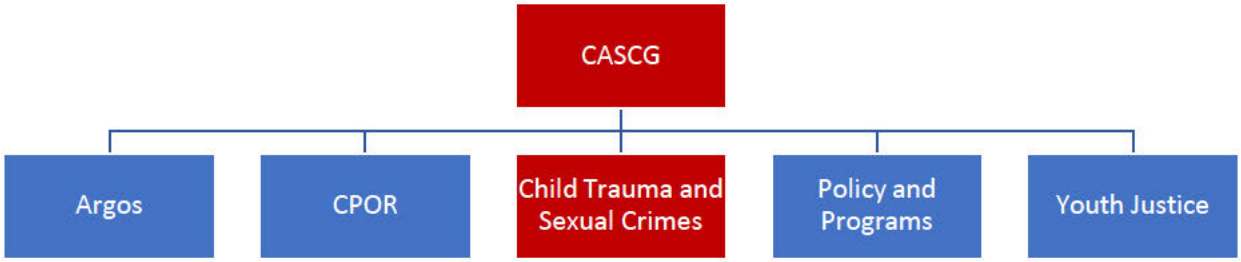

Figure 2. CASCG Organisational Chart

In June 2021, following CIC's Commissioner's Performance Review, CASCG assumed responsibility for the Service's sexual violence capability. This role includes, but is not limited to, coordinating specialist sexual violence advice, training, intelligence and best-practice investigations state-wide, and managing the implementation and monitoring of this Strategy.

Strategy Development

The objectives, strategies and action items that comprise the Strategy were developed in consultation with subject matter specialists from Commands, Regional/District representatives, and a rapid review of internal and external sources. This includes sexual violence strategic plans from other National and international jurisdictions, Queensland and national frameworks, internal evaluations and research evidence.

DEFINING SEXUAL VIOLENCE

Sexual Violence is defined as any unwanted sexual behaviour towards another person and encompasses a range of offence types.[6] The scope of this strategy is sexual violence relating to victims over the age of consent (16 years of age or older), and encompasses the following offence types:

- **Sexual assault**[7] refers to any unwanted sexual act that is forced on a person without their consent – including where intimidation, physical force, or coercion are involved. Sexual assault includes rape and attempted rape, as well as unwanted sexual touching or groping, or being forced to perform a sexual act on another person. Rape is a term used when sexual penetration is involved.
- **Youth sexual violence and abuse**[8] is defined as sexual contact between persons where either the perpetrator or the victim is under 18 years of age and where that contact is non-consensual. Such contact is non-consensual if either person is under 16 years of age (out of scope) or lacks the capacity to consent, or if a situation of imbalance of power exists, and if there is the presence of a threat or coercion to either person.
- **Technology-facilitated sexual violence**[9] is a range of behaviours where digital technologies are used to facilitate both virtual and face-to-face sexually based harms. This can include unwanted sexting, cyberstalking using mobile phones and social media technology, harassing and repetitive text messages or phone calls of a sexual nature, using technology to record sexual activity without consent, creating fake sexual images or videos, and sharing sexual images or video without consent of those involved, often called image-based abuse.
- **Intimate partner sexual violence**[10] refers to the perpetration of sexual acts without consent in intimate relationships (including by cohabiting and non-cohabiting partners, boyfriends/girlfriends, spouses or dates). It may involve physical force or psychological/emotional coercion, unwanted sexual acts, or tactics used to control decisions around reproduction. Intimate partner sexual violence often occurs alongside other forms of domestic and family violence, and puts a victim at much higher risk of being killed.[11]

SEXUAL VIOLENCE PREVALENCE

NATIONAL

27,505

Sexual assault victims in FY2019/20. This equates to 107 victims per 100,000 population[1]

5% Average yearly increase in victims since FY2014/15

4 in 5 of victims are female[2]

1 in 3 sexual assaults are domestic or family violence related (intimate partner sexual violence)[3]

Significantly under-reported
A FY2019/20 survey estimates **62,700** adults experienced sexual assault. Only **30%** reported the most recent incident to police[4]

67% sexual assaults occur in residential locations[5]

Note: There is no nationally consistent method of capturing sexual violence. Therefore these statistics focus on 'sexual assault'.

QUEENSLAND

6,870

Sexual violence related offences* involving victims 16 years and over in 2020[6]

16% Increase compared to 2017 (n=5,908)

4 in 5 of victims are female[9]

96% of offenders are male[10]

35% **withdrawn or unfounded** in 2020 — One of the highest proportions across Australian jurisdictions[7]

Rape myths, Negative attitudes by police are some of the key hurdles that stop victims feeling believed and supported[8]

Population groups at a higher risk of experiencing sexual violence[11]:
- First Nations people
- People with disability
- LBTIQ+ people
- People from CALD backgrounds
- Sex workers
- People in the custodial system

*Includes all offence codes under 'sexual offences' except online report – sexual assault, indecent treatment of children, and unlawful carnal knowledge.

^ includes rape and attempted rape complaints

11 Prevent. Support. Believe. Queensland's Framework to address Sexual Violence

COLLABORATIVE MULTIAGENCY RESPONSE

Due to the often complex nature of sexual violence offences, integrated multi-agency responses are imperative.[12] A broad range of government and non-government agencies assume key roles in responding to sexual violence, including the Queensland Police Service, Queensland Health, the Department of Justice and Attorney-General, Department of Communities, Disability Services and Seniors, Department of Children, Youth Justice and Multicultural Affairs, and non-government organisations who deliver specialist sexual assault support services.[13] While each agency has their own role within the system, effective inter-agency partnerships will enable the delivery of a holistic response that supports victims through the criminal justice process, from their first point of contact, to investigation, prosecution and beyond.[14]

Our role in the system

The QPS assumes a unique and important role within the multi-agency response, including:

- **Identify** – Provide avenues for victims to report sexual violence;
- **Investigate** – Investigate allegations, identify the suspect/offender, gather evidence;
- **Protect** – Protect the victim from further harm;
- **Prosecute** – Prosecute the offender;
- **Support** – Support the victim through the investigation and court process, refer victim to appropriate external support services, keep the victim informed, provide safety advice as appropriate;
- **Educate** – Deliver community education and awareness campaigns, as well as inform and promote partner agency information and education campaigns;
- **Prevent** – Leverage intelligence and research to promote primary, secondary and tertiary prevention messages and strategies to promote community safety; and
- **Disrupt** – Develop targeted strategies to interrupt facilitators of crime and/or patterns in offending to promote the safety of identifiable populations in defined situations and/or at risk of victimisation.

PRINCIPLES UNDERPINNING OUR APPROACH

The principles underpinning this strategy align with the QPS purpose, "*Together we prevent, disrupt, respond and investigate*" (see Figure 3 below).

Prevent Work together to reduce harm, trauma and crime to enhance community safety.	**Disrupt** In collaboration, conduct intelligence-led, early intervention activities to reduce crime opportunities that harm our community
Respond Provide timely and coordinated interventions to address real or perceived issues to protect our community.	**Investigate** Objectively and impartially examine and analyse an event or crime to achieve a just outcome in service of our community.

Figure 3. Principles underpinning our approach

Translation of these principles is informed by the following practice orientation:

- **Victim-centric –** prioritisation of victim needs using methods designed to reduce ongoing trauma.[15]
- **Trauma-informed –** a strengths-based framework grounded in an understanding of and responsiveness to the impact of trauma, emphasising physical, psychological, and emotional safety for everyone; and one that creates opportunities for victims to build a sense of control and empowerment.[16]
- **Evidence-informed –** approaches that combine researched/evaluated interventions to guide, inform and build on responses and services for victims.[17]
- **Consideration of human rights –** respect, protect and promote the human rights of individuals in alignment with the *Human Rights Act 2019*.[18]

STRATEGIES AND ACTIONS

Purpose	Vision
Together we prevent, disrupt, respond to and investigate sexual violence by putting victims first and holding perpetrators accountable.	A victim-centric, trauma-informed sexual violence response that protects the community, strengthens public confidence, and contributes to Queensland and National integrated action plans.

The Queensland Police Service has established four interconnected strategic priorities to achieve this purpose and vision:

Advance Our People	Enhance Our Response	Empower Our Community	Maximise Our Relationships
Advance our workforce towards applying a victim-centric, trauma-informed approach when responding to sexual violence.	Improve our capability to prevent, disrupt, respond to and investigate sexual violence in Queensland.	Empower the Queensland community and reduce community harm through proactive engagement and education, and promoting access to victim support services.	Maximise partnerships with government and non-government agencies, and academia to achieve our vision.

Priorities, Strategies, Action Plan & Success Measures

The strategies, action items, and success measures underpinning each objective/priority area are outlined in the following section (refer to Appendix A for this information presented in a table format).

1. Advance Our People

Advance our workforce towards applying a victim-centric, trauma-informed approach when responding to sexual violence.

Advancing the Service's workforce towards applying a victim-centric, trauma-informed approach[19] when responding to sexual violence represents a key priority and aligns with the QPS' *Prevention Together Strategic Framework 2021-2024*, as well as national and international best-practice. The Queensland Government Sexual Violence Prevention Framework identified the need for the broader justice system, including police, to improve responses to victims.[20] This starts with the first point of contact with a victim through to the investigation and prosecution processes. A key opportunity exists for the QPS to enhance the training of members when interacting with victims, conducting sexual violence related investigations and responding to vulnerable victims. This also includes addressing any perceived beliefs about prospects for successful prosecution for sexual violence offences.[21] Advancing the Service towards a victim-centric, trauma-informed response to sexual violence will enhance our response to victims, break down barriers to reporting,[22] and address concerns regarding withdrawn and unfounded complaints.[23] This strategic priority will be achieved through the following strategies.

We Aim To

1.1. Drive cultural change regarding sexual violence responses through leadership and victim-centric, trauma informed practices.

1.2. Develop, implement and evaluate specialist sexual violence training that is consistent with best-practice and evidence informed.

1.3. Continually review and benchmark sexual violence training needs of QPS members to remain current with evidence-informed responses and State/National frameworks.

1.4. Promote strategies consistent with the QPS Our People Matter Strategy to support the wellbeing of our members responding to sexual violence.

What Success Looks Like

- ✓ An increase in frontline QPS members completing victim-centric, trauma-informed training.
- ✓ An increase in frontline QPS members applying a victim-centric, trauma-informed approach in responding to sexual violence.
- ✓ An increase in investigative skills for responding to sexual violence.

- ✓ QPS members responding to sexual violence are supported.

Action Plan

The following section details actions the QPS has already progressed, as well the next steps to be taken in order to realise this strategic priority. The following action items align to the strategies detailed in this section.

In progress

- ✓ Continue to drive cultural change through the QPS Sexual Violence Working Group.
- ✓ Drive change through the QPS and ODPP Failed Sexual Offence Prosecutions Steering Committee and Working Groups.
- ✓ Continue delivering ISACURE training to investigators across the State.

Next Steps

- ☐ Develop internal communication products and resources to increase awareness of QPS members in relation to our response to sexual violence.
- ☐ Support District Officers to drive cultural change within their areas.
- ☐ Deliver mandatory trauma-informed, victim-centric training to all frontline QPS members.
- ☐ Evaluate mandatory trauma-informed, victim-centric training at each phase (2021-2022), to inform enhancements as required.
- ☐ Engage with the Safety & Wellbeing Group (OCC) to promote wellbeing initiatives for QPS members responding to sexual violence.

2. Enhance Our Response

Enhance our capability to prevent, disrupt, respond to and investigate sexual violence in Queensland.

Delivering consistent professional responses to sexual violence across the State will be achieved by designating the Detective Superintendent, CASCG as the Service's capability owner for sexual violence. This capability will enable central coordination of the Service's professional and evidence-informed response to sexual violence; support QPS members to build and apply their responses to sexual violence; promote victim-centric trauma-informed practice; and expand innovative QPS-led victim support models. The QPS is committed to enhancing its data capture of sexual violence offences to build its evidence base, inform insight and foresight of sexual violence issues, and produce evidence-based and intelligence-based responses to sexual violence. Enhancing our capability to prevent, disrupt, respond to and investigate sexual violence will be realised through the following strategies.

We Aim To

2.1 Designate the CASCG as the organisation's capability owner for specialist sexual violence advice, training, intelligence and investigations.

2.2 Expand the Sexual Violence Liaison Officer (SVLO) capability or other innovative victim support models across QPS regions.

2.3 Provide leadership and support to areas undergoing thematic Sexual Violence Commissioner Performance Reviews, and future Business Unit Reviews.

2.4 Develop and continually review organisational capabilities and processes to enhance service delivery and support QPS members responding to sexual violence.

2.5 Establish consistent and high quality data recording practices for sexual violence occurrences to support decision making and evaluate service delivery.

2.6 Utilise research and intelligence to inform prevention, disruption, response and investigation by QPS.

What Success Looks Like

- ✓ Designation of CASCG as the QPS capability owner for specialist sexual violence advice, training, intelligence and investigations.
- ✓ An improvement in understanding of, and ability to effectively respond to, sexual violence.
- ✓ The expansion of the SVLO or other innovative victim support model across QPS regions.
- ✓ QPS members have access to current data to inform decision making and investigative responses.
- ✓ Commissioners Performance Reviews and Business Unit Reviews drive continuous improvement across the Service.

Action Plan

The following section details the actions that the QPS has already progressed, as well the next steps to be taken in order to realise this strategic priority. The following action items align to the strategies detailed in this section.

In progress

- ✓ Designate CASCG as capability owner for the organisation's sexual violence response.
- ✓ Establish a SVLO implementation plan across QPS regions.

Next Steps

- ☐ CASCG to engage with and support Regions participating in thematic Sexual Violence Commissioner Performance Reviews, and future Business Unit Reviews.
- ☐ Develop a dashboard to assist Districts in monitoring sexual violence reports and outcomes.
- ☐ Review data relating to sexual violence offences to gauge progress of the Strategy.
- ☐ Review data capture of sexual violence offences, including finalisations; internet-facilitated offences; and national data recording consistencies.
- ☐ Develop evaluation framework for the Sexual Violence Response Strategy 2021-2023.
- ☐ Evaluate the Sexual Violence Response Strategy 2021-23.
- ☐ Develop the next Sexual Violence Response Strategy.
- ☐ Engage with Commissioner's Performance Review Unit to develop thematic reviews on sexual violence.

3. Empower Our Community

Empower the Queensland community and reduce community harm through proactive engagement and education, and promoting access to victim support services.

The Queensland Framework highlights the important role the community assumes in preventing sexual violence, particularly in changing attitudes that enable the behaviour.[24] This includes perceptions of gender equality, tolerance of aggression and violence, and treating sex and sexual violence as taboo and secret.[25] Empowering the community represents a key opportunity for the QPS, in partnership with key stakeholders, to develop and implement prevention strategies tailored towards keeping communities safe, and reducing harm and victimisation; awareness of our role in responding to sexual violence; and options for reporting offences.[26] This strategic priority will be realised through the following strategies.

We Aim To

3.1 Increase community awareness of the QPS role as part of an integrated system response to sexual violence.

3.2 Support tailored strategic and evidence-informed prevention activities for diverse population groups in collaboration with government and non-government agency partners.

3.3 Increase awareness of identified and anonymous reporting avenues, and alternative justice options.

What Success Looks Like

- ✓ An increase in reporting of sexual violence in Queensland through identified and anonymous avenues.
- ✓ An increase in victim satisfaction with the QPS.
- ✓ A reduction in revictimisation, particularly those at higher risk of experiencing sexual violence, including First Nations people, people with disability, LBGTIQ+ communities, CALD communities, sex workers, and people in custody.
- ✓ An increase in community engagement and education activities.

Action Plan

The following section details the actions that the QPS has already progressed, as well the next steps to be taken in order to realise this strategic priority. The following action items align to the strategies detailed in this section.

In progress

- ✓ Implement the sexual violence prevention communication strategy (see appendix C).
- ✓ Engage with stakeholders to provide information about reporting options, sexual violence prevention and personal safety.

Next Steps

- ☐ Enhance profile during Sexual Violence Awareness Month (October) in collaboration with partner agencies.
- ☐ Community engagement with the CALD community, vulnerable persons (including people with disabilities, mental health and the elderly) and sex workers.

4. Maximise Our Relationships

Maximise partnerships with government and non-government agencies, and academia to achieve our vision.

Responding to sexual violence requires a holistic approach involving multi-agency collaboration.[27] The effective response to sexual violence involves leveraging the expertise of a range of government and non-government agencies in relation to community prevention, providing support to victims, investigating reported offences and prosecuting offenders.[28] Research evidence indicates an integrated system response facilitates shared knowledge and communication of a victim's context and needs.[29] To assist the QPS in carrying out its role within an integrated response (i.e. supporting victims and holding perpetrators to account), the QPS will maximise relationships with relevant stakeholders by undertaking the following strategies:

We Aim To

4.1 Maintain our relationships with:
- government and non-government agencies to discuss and address issues regarding responses to sexual violence.
- internal, State, and national working groups to remain current with sexual violence responses and emerging issues
- universities and other research institutions to drive innovative research and development of evidence-based responses
- national and international law enforcement partners to enhance cross-jurisdictional response capabilities.

4.2 Enhance collaboration and integration with partner agencies to provide specialist support to victims and offender, including through police referrals.

What Success Looks Like

- ✓ A more holistic response to sexual violence.
- ✓ Promotion and implementation of multi-agency models across QPS regions as a result of effective relationships (e.g. Sexual Assault Response Team).
- ✓ An improvement in responses to victims through the investigation and prosecution processes as a result of maximising partnerships with the Office of the Director of Public Prosecutions.

Action Plan

The following section details the actions that the QPS has already progressed, as well the next steps to be taken in order to realise this strategic priority. The following action items align to the strategies detailed in this section.

In progress

- ✓ Maintain stakeholder engagement through State and national Working Group meetings.
- ✓ Engage with academia to conduct research to better understand sexual violence, inform development of models, and evaluate projects.
- ✓ Continue engagement with ANZPAA in relation to national sexual violence responses and other vulnerable person action plans.

TIMELINE

The successful delivery of the *QPS Sexual Violence Response Strategy 2021-2023* will involve a phased approach. The following timeline presents short, medium and long-term action items that will be implemented across the four strategic priorities.

Next Steps

- Evaluate mandatory victim-centric, trauma-informed training.
- CASCG to engage with and support regions participating in thematic Sexual Violence Commissioner Performance Reviews, and future Business Reviews.
- Review data relating to sexual violence offences to gauge progress of the Strategy
- Engage with academia to conduct research to better understand sexual violence, inform development of models, and evaluate projects
- Develop the next Sexual Violence Response Strategy.

2021 - 22 (short term)

In Progress

- Designate the CASCG as the QPS capability owner for sexual violence response.
- Drive cultural change through the QPS Sexual Violence Working Group.
- Establish a SVLO implementation plan across QPS regions.
- Continue delivering ISACURE training to investigators across the state.
- Implement the sexual violence prevention communication strategy.
- Drive change through the Failed Sexual Offence Prosecutions Steering Committee and Working Group.
- Continue engagement with State/National working groups, academia and ANZPAA.
- Engage with stakeholders to provide information about reporting options, sexual violence prevention and personal safety.

Next Steps

- Develop internal communication products and resources to increase awareness of the QPS' sexual violence response.
- Support District Officers to drive cultural change within their areas.
- Deliver mandatory victim-centric, trauma-informed training to all frontline QPS members (multiple phases 2021-2022).
- Develop a dashboard to assist Districts in monitoring sexual violence reports and outcomes.
- Enhance profile during Sexual Violence Awareness Month in collaboration with partner agencies (October 2021).
- Community engagement with CALD community, vulnerable persons (including those with disabilities, mental health and the elderly) and sex workers.
- Engage with Safety & Wellbeing Group (OCC) to promote wellbeing initiatives for QPS members responding to sexual violence.
- Develop an evaluation framework for the Strategy.
- Engage with Commissioner's Performance Review Unit to develop thematic reviews on sexual violence.

2022 – 23 (medium term)

2023 – 24 (long term)

Next Steps

- Review data capture of sexual violence offences, including finalisations, internet-facilitated offences, and national data recording consistencies.
- Evaluate the Sexual Violence Response Strategy 2021 – 2023.

CONCLUSION

The importance of responding effectively to sexual violence within our community cannot be overstated. The lasting impact, trauma and devastation of this crime is well-established – for victims, their families and communities. The *QPS Sexual Violence Response Strategic Plan 2021-2023* will enhance the organisation's collective capacity to prevent, disrupt, respond to, and investigate sexual violence. The four strategic priorities/objectives and their relevant strategies in this document establish a coordinated framework for the QPS to advance improvements in the way it responds to victims of sexual violence. Importantly, the QPS cannot address sexual violence in isolation; other government and non-government agencies, and the community share this responsibility. This document also serves as a platform for working in collaboration to address this complex crime and protect the Queensland community.

Subject: Issues experienced with Sexual Assault Forensic Procedures
Date: Friday, 8 October 2021 09:34:00
Attachments: image002.jpg

Good morning colleagues,

The Child Abuse and Sexual Crime Group (CASCG) continues ongoing discussions with the Department of Health regarding the provision of forensic examinations of sexual assault victims by Hospital and Health Services. As recently as this week, Det Supt Mark White, Debbie Jones and Bridgette Allen from the Policy and Programs Unit and I met with the Senior Forensic Physician and Director at Queensland Health Dr Adam Griffen and Forensic and Scientific Services Assistant Director of Nursing Jacqui Thomsen.

All matters of concern provided by your areas have been provided to the Department of Health and they have stated they will provide advice back as to why those issues occurred, and are committed to getting this process right.

While I believe that as a result of this continued communication we will see improvement, I also am under no illusion that we will continue to see problems in respect to refusals to conduct sexual assault examinations on both adult and child victims and/or directions to transport our victims to other hospitals.

CASCG is committed to assisting Qld Health get this process right – to ensure that our victims are treated in a timely and dignified manner, and to assist our investigators to obtain the evidence required. In this respect, I ask that you continue to provide any instances that we can provide formal representation of to our colleagues at Qld Health.

Furthermore, could you please ensure your investigators are aware that Forensic Physicians (GMO's) are on call 24/7 for the entire state and Qld Health have assured us that these Doctors will do everything to assist you on ground when you run into a difficult situation. They will provide information and advice to the medical staff you are dealing with and attempt to ensure they conduct the examinations as required. This also has the added bonus of it being recorded and accountable to Qld Health in real time. Should an investigator wish to make contact with the on-call forensic physician they only need to make contact with Police Communications who will then provide access to the on-call number.

Should you have any further queries or concerns, please do hesitate to contact me.

Thanks,

David

Subject: DNA reference samples

Hi Adam,

I was hoping to catch up with you today at morning tea but I got inundated with questions from some of the SANE's 😊…

Would like to discuss the issue of your medical staff taking DNA reference samples when doing SAIK's when possible please. I understand this has been raised before by Brice McNab with yourself and your predecessor John Dougherty and there has been some issues raised.

We are keen to get this process imbedded for a number of reasons, the main one being this incorporates the victim-centric approach we are trying to take (both of our departments). At present, as well as having to undertake the highly intrusive (but necessary) sexual assault examination, we are then required at a later time to re-attend with the victim to get them to conduct another intrusive (and necessary) procedure that no doubt brings back memories of the SAIK which I believe obtaining the reference sample at the same time as the SAIK would avoid.

Also, while I am new to this position, I understand from talking to my colleagues in the Forensic area, that this is a process that takes place in all other jurisdictions within Australia, except for Queensland currently.

Could you let me know your thoughts? I'm happy to work with you to get this up and running and will advance through my senior management once we have discussed.

Subject: FW: DNA reference samples

Hi Dale.

Deb Jones and I met with Adam Griffen about QHealth issues in the sexual crimes space.

In respect to the DNA sample issue. Dr Griffen provided the following advice:

- That he believes there is an issue with cross contamination from saliva and semen in the victims mouth that would prevent a buckle swab from being taken at the time of the SAIK;
- That even though another persons saliva only takes 8-10hrs to disappear from a DNA sense inside a victims mouth, he does not want to have different processes for his staff of taking DNA depending on whether they may have mouth DNA contamination – he wants one process for uniformity;
- He stated that with the current process of police obtaining the sample a few days later, it means that there is zero chance of contamination by that stage and thus this is his preferred process;
- He is also concerned about the possible contamination of samples if placed into the same SAIK kit for analysis.
- While he provided his opinion, he nominated Cathie Allen, Chief DNA Scientist with QHealth as the expert in this matter.

As you and Bruce are aware, and as per the above, he appears reluctant to change the current process.

EXHIBIT 8

From: Briese.DavidB[CIC]
Sent: Monday, 22 November 2021 10:00
To: White.MarkG[CIC]
Subject: Queensland Health - obtaining of DNA samples during SAIK examinations

Hey mate, as promised from meetings held last week.

GROUP – Child Abuse and Sexual Crimes Group.

DATE – 22/11/2021.

DESCRIPTION OF EVENT – Inquiries with Queensland Health (QHealth) in respect to refusal to obtain DNA comparison samples during conducting of Sexual Assault Investigations Kits (SAIK's) by QHealth medical practitioners.

CURRENT SITUATION / ACTIONS

- On 9 November 2021, during monthly discussions with QHealth Chief Government Medical Officer Dr Adam Griffen, it was queried by Detective Inspector David Briese as to why the process of obtaining a SAIK examination does not include the obtaining of a DNA comparative sample (by way of a buckle/mouth swab) during the procedure. Also present at this meeting was Debbie Jones, AO8 of Policy and Programs Unit, QPS.
- At present, this QHealth refuse to obtain this and police must re-attend with the victim in the days following the SAIK test to obtain the sample.
- It was raised by Det Insp Briese that Queensland is the only jurisdiction in Australia that operates in this way (information obtained from Superintendent Dale Frieberg of Forensics Unit) and further that obtaining the sample at the same time as the SAIK examination appeared to be less intrusive of the victim and therefore more victim-centric and in line with the '*Prevent, Support, Believe. Queensland Framework to Address Sexual Violence*'.
- Dr Griffen provided several reasons as to his belief as to why it didn't occur in Queensland including:
    - That he believes there may be an issue with cross contamination from saliva and semen in the victims mouth that would prevent a buckle swab from being taken at the time of the SAIK;
    - That even though another person's saliva only takes 8-10hrs to disappear from a DNA sense inside a victims mouth, he does not want to have different processes for his staff of taking DNA depending on whether they may have mouth DNA contamination – he wants one process for uniformity;
    - He stated that with the current process of police obtaining the sample a few days later, it means that there is zero chance of contamination by that stage and thus this is his preferred process;
    - He is also concerned about the possible contamination of samples if placed into the same SAIK kit for analysis.
    - He does not believe that a re-attendance to the victim by police and obtaining of the buckle swab would increase or add to the trauma being experienced by a sexual assault victim.
- Det Insp Briese subsequently provided this information to the Forensics Unit, and on 18 November 2021 Det Insp Briese attended a meeting with Superintendent Dale Freiburg, Inspector David Neville and Acting Inspector Peter Bushel of Forensics Capability. At the request of Supt Freiburg, this meeting was also attended by Acting Assistant Commissioner David French and Assistant Commissioner Kath Innes.
- Forensics Capability officers outlined that they believed the issues raised by Griffen were baseless and further that they had discussions with Lara Keller, Acting Executive Director of Forensic and Scientific Services, QHealth, who is Dr Griffen's direct supervisor and who has informed Supt Frieberg that she

disagrees with Dr Griffen and intends on implementing a procedure where the DNA comparison sample is obtained by QHealth Medical Practitioners at the same time as the SAIK.

- However, in the meantime, Supt Frieberg has requested that a Ministerial Briefing Note be completed (by her staff) and provided via Act A/C French (and for information of A/C Innes) to Deputy Commissioner Linford for executive noting and assistance if required. This is currently being completed.
- A further meeting is to be held on 24 November 2021, as organized by Supt Frieberg with her staff (as provided above) and Act A/C French to inform and complete the MBN and of which Det Insp Briese has received an invite for.

INTENDED ACTIONS

- Detective Inspector Briese to attend meeting on 24 November 2021 and update afterwards.

Inspector Duncan McCarthy, FSG
Dr Adam Griffin, QLD Health
Sergeant Fabian Colless, CIC

	Item	Responsible	Action Items
1.0	**Welcome and Apologies**		
1.1	Opening and Welcome	Chair	
1.2	Apologies • Inspector Duncan McCarthy, FSG • Senior Sergeant Nicole Townsend, FSG • Dr Adam Griffin, QLD Health	Chair	
2.0	**General Business**		
2.1	**Qld Government Interagency Guidelines** *Compliance with the 2014 Qld Government Interagency Guidelines* *PB* – Seeking compliance in line with Qld Government Interagency Guidelines *DN* – Discussion on obstacles to compliance and suggestions on how to overcome obstacles	All	*LK* - to follow up with Dr Adam Griffin on: • date his committee met • the status of the document • is there a review required? • Deadline for feedback • any Action items from this meeting committee
2.2	**Responsibility of collecting reference samples** *The reference sample to be taken on behalf of the victim by medical personnel during the Forensic Medical Examination (FME) so that the victim is only exposed to the one invasive procedure* All agreed that swabs are to be completed by a health professional *JT* – No issue with reference sample collection at the same time	All	ALL - Educate, communicate this process to all involved

QUEENSLAND POLICE SERVICE

SAIK Working Group

2.3	**SAIK and Reference Sample procedures – explanation to victim.** *The explanation of the SAIK and the reference sample to be conducted by support services/counsellors to alleviate two separate explanations of procedures* *DN* – Discussion on barriers to sampling – if QH wanted to return to blood sampling in SAIKs QPS doesn't need to handle them anymore *CA* – Buccal cell samples are preferred by QH to FTA. Blood has to be handled manually however there are only approx. 2.5% annually.	All	JT - Training program to be updated for new process integration
2.4	**Packaging of the SAIK/reference sample** *Packaging of the SAIK/reference sample would be best held with Health – similar to NSW where the reference sample is attached but separate to the kit – similar to an invoice on a package. Alleviates contamination as not in the one package and ensures both samples remain together.* *CA* - Current external packaging does not support the decided combination of FTA and SAIK. Obstacle with storage at QH end where one is stored in freezer and the other sample stored at room temperature *DN* - QPS will provide the budget for the 700 x FTA's and there should be no extra cost to QH above current processes.	All	CH – provide budget estimate for 700 x FTA production CA and PB – To follow up as to what this looks like in NSW (dual kit) and bring back an example to the next meeting. JH – Follow up provide information on who takes follow up second sample at the later time?
2.5	**The management of the exhibit (SAIK/reference sample)** *The management of the exhibit would be best discussed by Health and Insp Neville. Do QPS need to be involved? Can this go direct from the examination to analysis? Similar to the Just in Case Kits managed by Health. If QPS don't get involved, then this has the ability to expedite the analysis by days and days.* *CA* – How does the kit/continuity get transported to QH?	All	ALL– Each unit to bring a current and proposed flow chart to next meeting of the procedure so that the committee can discuss and see where to make changes. DN – Will provide QPS
3.0	**Other Business**		

QUEENSLAND POLICE SERVICE

SAIK Working Group

3.1	CA – suggested a review of the Sex Kit and costings.	All	QPS – add to next working group meeting agenda
4.0	**Meeting Finalisation**		
4.1	Next Meeting – 15/12/2021 11am		
4.2	Close		

EXHIBIT 10

Transcription SAIK Working Group at 11 am on 15.12.2021

Meeting Date: 15/12/2021
Location: Office of Superintendent, Forensic Services Group, [redacted] PHQ and Microsoft Teams
Time: 11:00am – 12:00pm
Chair: Superintendent Dale Frieberg
Invitees:

Inspector David Neville, FSG (DN)
Acting Inspector Peter Bushell, FSG (PB)
Inspector David Briese, CIC (DB)
Sergeant Carolyn Hoffman, FSG (CH)
Paula Brisotto, QH (PBO)
Dr Adam Griffin, QLD Health (AG)
Senior Sergeant Nicole Townsend, FSG (NT)
Acting E/Director Lara Keller, QLD Health (LK)
Cathie Allen, QLD Health (CA)
Justin Howes, QLD Health (JH)
Jacqui Thomson, QLD Health (JT)
Kirsten Scott, QLD Health (KS)
Sergeant Fabian Colless, CIC (FC)
Supt Dale Frieberg APM (DF)

Apologies
Inspector Duncan McCarthy, FSG

DF – *I guess Dave can just join us when he is available, so thank you everyone, again for joining us to discuss further the SAIK kits and how we are going to look to do business moving forward. First of all, I know that there was probably a little bit of contention over the minutes from the last meeting so I have made the decision just to leave the comments as they are, as they came in, obviously different people have different recollections about what was said or not said, so I will go around the room and if anyone wants to make any comment about that then we'll certainly make note of it and if there is any clarification we need to go through then we'll do that but, I have just made the executive decision that in order to make sure the minutes are correct moving forward that we will record them electronically and we will provide you with a copy of those, or I can provide them to Lara to distribute.*

LK – *thank you*

DF – *So if everyone is happy with that*

LK – *thank you yeh*

DF – *So apologies from our end, from Duncan McCarthy and we've been able to have Nicole Townsend join us on this occasion, it was good that she could make it, she couldn't make the last*

meeting. I think Sgt Fabian COLLESS, he's online, that's great. So I guess Lara, do you want us to to go through each of those items for discussion from the last meeting or do we just want to have a general discussion about those?

LK – *So I guess from our perspective, you know we did have some amendments to the minutes, but I do note that they were added on, so they kind of read as differing views on the same topic in some areas. I do note though that you had said that we would discuss at the next meeting and for each agency to put forward their position and I also note on the agenda for today that there is the opportunity to document that so, you know, I guess, moving forward, this is probably our preferred approach, to document each sides position and minute that.*

DF – Ok. *So we may as well just start with the first which is the 2.1. I don't think that there was anything really contentious in that agenda item from the last occasion, so, are we all in agreeance with that actually staying the same as it reads? (All agreed) Yep. Ok, 2.2 the responsibility for collecting reference samples so just a discussion I suppose on the completion, obviously something like this will be a work in progress and I know that there are some differing views about whose responsibility that is. I guess again from the last meeting the conversation around doing what's right I guess for the victim in the circumstances so we can alleviate some of the trauma for them moving forward. Does anyone want to make any comment about that? (Pause) Nope, ok. The SAIK and reference-*

LK – *Sorry, Adam has got his hand up*

DF – *Oh.*

AG – *Sorry about that. I was just trying to work out where the complaint came from?*

DF – *There's no complaint, it's been something that we've identified from the Queensland Police Service around the need for, in accordance with the guidelines, that are currently in place, just to make sure that we are victim centric and that we try and you know for their purposes, not have*

Transcription SAIK Working Group at 11 am on 15.12.2021

Police, you know, 7 days later, knock on the door to take a reference sample. So, there wasn't any particular complaint, but I might let Peter talk.

PB – *No, there wasn't a complaint Doctor. I think what realistically what we want to do is honour the guidelines from our perspective. In relation to taking the reference sample as part of the forensic medical examination and in that way we can condense two procedures into the one, and also it alleviates the fact that Police have to explain the process of the reference sample, and whilst QH staff explain the process of the SAIK so we can combine the two explanations together so to reduce the exposure for the victim.*

AG – Ok. *So, it's not a complaint and there has been no victim issues but this reference sampling which you do which is routine across the state and several hundred times a week is now a traumatic experience?*

PB – *Like I said Doctor, we just wanted to conform with respect to the guidelines, those guidelines were-*

AG – *So the guidelines are actually in error. I mean, it's not actually a requirement to be done and certainly there is no pathway so if we were to look at it from a global perspective the training and delivery of DNA reference sampling is standard Police procedure for anything including and beyond sexual assault. So this is an addition to a pathway that currently isn't in existence and in essence the backup of it seems to be that there is a concern that Police are traumatizing people. So I can't actually see it, we don't have a measurable there, we haven't got a viewpoint problem where it is an issue because otherwise you are still collecting a reference sampling across the board for various victims for various crimes then you are traumatizing them, I don't see that –*

PB – *I don't think we are necessarily traumatizing them, what we're doing is we're trying to reduce the fact that victims are not exposed to two actual processes that it would be a better way moving forward in conjunction with other states, now last week we were all in agreeance that that would rest with the forensic nurses or medical practitioners –*

Transcription SAIK Working Group at 11 am on 15.12.2021

AG – *Apologies, I wasn't at the meeting and I wasn't necessarily aware that that had been agreement. The actual basis of reference sampling as a standard, I am not particularly interested in what other states are doing, I am probably interested in just doing it properly. And are we comparing other geographically challenged states or are we just comparing states that are centrally located and centrally managed.*

PB – *I think both*

DN – *yeh*

AG – *So WA obviously there is a mixture isn't there?*

PB – *There is, yes.*

AG – *yeh, and so the really the part that we're talking about here is the development of something new that Police are concerned that they maybe traumatising a patient.*

DN – *Isn't just returning to the pathway that we used to have, my understanding was that prior to sometime in the 2000's it was a process and we've changed it now to police taking it, and yes Police do take DNA from people as a matter of course, our preference wouldn't be to take DNA from victims and to limit that. Obviously from offenders, yes we do for obvious reasons because we're exercising a police power but when you're a victim of a sexual assault and all of a sudden you have authorities taking your DNA from you as well it comes a lot more stressed with police taking dna from you then medicos because there is concern on how police will use that. And we don't exercise any powers to take it at that time. So, it is victim centric making sure that the person who potentially is very traumatized because sexual assault is unlike other offences and to make sure that it is done in a way that minimises any additional stress on the victim, so that's all we're seeking.*

Transcription SAIK Working Group at 11 am on 15.12.2021

AG – *Yep, so we have come up with some communication strategies if that's an issue but primarily you talk that it was a historic issue and its historic now and Police were actually analysing reference samples and it was separately packaged and sent with the older documentation, so you've got that was certainly a clear issue. I guess we've got to look at it from a practical perspective here too. We have people who are currently trained who are quite effectively performing the work and there has been no issue or complaint directly from it but more that there is a perceived issue. The perceived issue comes with a management issue to train and change pathways and add to kits which all add up to a very large expense both immediately and ongoing. I think with all honesty I think this has to be fleshed out as a much more policy document before we actually even start talking about it in this way and what I don't have in front of me is a policy document, what I have in front of me is an agenda and it actually looks more like a cost shifting agenda at the moment then it does a service centric agenda so you would probably be best if we looked at this more broadly as a significant policy change and we can reflect on those various issues and (inaudible) and consult out as well to support groups that are providing support to victims. If the expense there has to be shifted across from QPS to health then the way* that that expense will come *across is not going to be very friendly to QPS and you can appreciate the time and training it takes to train a clinician is significantly more expensive because you're already doing it within QPS, you're already training because you're already going to have to collect (inaudible) and so in essence it's quite a large expense that we're doing it and I don't necessarily think there is going to be a path forward by discussing this as a concept alone when there is actually quite a few layers to what is involved. At the moment we are close to training approximately 200 or more people we would have to bring back to retrain to explain the process of reference sampling and that's an expensive process and its one where we got to try and achieve 100% across the board. If we're going to look at what was going to work for the laboratory processes as well I will very much let Cathie speak to these but again we're going to need a discrete process I would suggest to ensure that there is no risk to contaminating or ruining the sample. And I think that that would really the victim centric approach is actually making sure that there is the one procedure that they go through is uninterrupted and unlikely to lead to an error so it has to be a discrete process. So there is a few issues here. I don't see this as a straight forward thing as it's being expressed at all, because we have an existing body of examiners which are already trained in the collection of DNA. Yeh, sorry, Dave has his hand up.*

DN – *So back to your point about your policy the reason we're at this point is that there is a policy and I don't agree it is in error. It's pretty clear in the policy that there is a recommendation that the sample be taken by the medical examiner at the time of the examination and it is for that reason we*

try and limit the trauma to the victim. We're not trying to shift costs back to QLD Health (QH) in fact the testing, we're in agreement that we would continue to pay for the person testing and we've even gone to the extent that whatever the consumables are, we're happy to provide those to QH for the preparation of the kits, and in terms of the training of medical experts, the collection of the reference sample is not a difficult process, it's quite straight forward and I don't envisage you would need to bring staff to have face to face training to provide that. And in terms of the potential contamination of it there is a much higher risk contaminating the crime scene samples taken from the intimate areas then there is of the reference sample and you will know straight away from the reference sample if it is contaminated because there will be more than one profile and as far as the buccal swab potentially contaminating all of the samples, the crime scene samples, everyone of those sample I would expect to have the victims DNA in it anyway because of where they were taken from, so that is how perspective on it. So, yeh. And just the policy that was referred to was something that was signed by all the parties in 2014 or something so –

AG – *Yeh, so, co-author of them, I am fully aware of the (inaudible) –*

DB – *So, Adam if you're the co-author of them, and I've just joined in but I, Dave Neville probably put it the best way and in a lot better way then I was about to because I got to be honest, when you say this thing is just a cost shifting exercise I am quite offended by that because it certainly isn't, it's trying to get you guys, as in health, to do what you signed back in 2014 and like you're supposed to be doing, to make sure that we're being victim centric here. So if you're saying that you're the co-author, why hasn't that been done, why isn't it being done and why are there so many blockers as you've just outlined to you doing it, because mate, policies there-*

AG – *But (inaudible)*

DB – *Hang on, hang on, woah, woah, Policies there, we're taking on a number of the costs already, and the training is minimal if required. We're talking about doctors and experienced nurses who examine all parts of the body but you're saying that there's going to be this massive training required for everyone because they have to stick a buccal swab in a victims mouth at the same time as they're undergoing other examinations. None of that adds up to me, I'm not a doctor, I don't pretend to be,*

but to me its not a shift, not a cost shifting exercise from our side it's a duty shifting exercise on your side. So back to my original question is, why is it that back in 2014 you co-authored this document but it hasn't been done?

AG – *yes, it is a typographical area, so it should say "not" because there was no actual capacity within the kit to do so. And that was the reason for it being there. So not sure when it changed from "not" but obviously it got overlooked as it went through and that's why it actually hasn't been in place or wasn't in place then. The only time it was in place was back in the very old kits and that had the separate document and things were actually going through to the Police DNA laboratory for analysis, which is of course, some decades ago. Though the actual capacity capability of the kit wasn't there so whilst it's based that we do want to actually create and make sure its there. I agree there is capability of people to collect reference samples but no, to suggest it doesn't have to be training is naïve. The actual packaging is separate utility of it and also when you can't collect it and if you are going to collect it and use FTA paperwork which I understand is the preferred process well that's the difference (inaudible) it is quite discrete so it's possible… it's naïve to think that no training is to be required.*

DB – *No, I'm not saying no training is be required-*

AG – *Yeh*

DB – *I'm not saying no training will be required because if coppers can learn in one day then medical practitioners who do this for a living can learn within an hour or two I would imagine.*

AG – *we are not going to get everybody together in one day (inaudible) Jacqui, sorry, you got your hand up?*

JT – *Sorry, I understand that the policy document, the guideline that we're referring to was created in 2014 and we're some 6 years down the track, I'm imagining (inaudible) not sure what the review for such a document, do we know what the time frame is for a review?*

Transcription SAIK Working Group at 11 am on 15.12.2021

AG – *Thanks Jacqui, yeh it is actually currently under review. We have about 12 months because we're pending the integration of the paediatric component from the Royal Commission. That's actually the main stay of what's stopping a review going forward. I have not heard from where that is, but that seems to be the main stop so it's going to be a uniform document that basically adult and paediatric response.*

CH – *If the FTA sampling is part of what's causing the hesitation that's just our agreement to work in with the lab preference because it's my understanding the buccal cells are the labs preference for a reference sample. Whereas, as you're aware it used to be blood tube but the FTA card for the buccal cells was just, so long as we get a victim reference sample we don't mind how that's done, the FTA cards which is what we were discussing here was just us working in with the lab preference. So, if you're saying for your doctors and nurses that it would be easier to take a blood sample and that would not require all the testing that you're suggesting then perhaps the blood is the way to go. But obviously that causes a problem at the lab.*

AG – *No, why would do we want to go stick needles in people if we're not sticking needles in them so that's possibly more of a point. No, I just think at the moment we're looking, like, I would like some more flesh before we're actually informing our policy and process and to spend money on this sort of thing and we need to actually look at how it's being done and make sure that it's an appropriate expenditure of funds and efforts. At this stage this is not emergent and as far as I can see we're not responding to a particular issue we're not changing the police training who will continue to understand how to collect DNA. We're looking at implementing a different process across kits both historic and before they actually go out now and a look at the training behind it. A substantial effort is actually going to be required from a small group of clinicians to train the larger body. I do have some hesitation in seeing it and really looking at how its supposed to be a harm, but so at the moment if we're looking at the policy document saying that this is the argument the policy document doesn't reflect the practice unfortunately and it's an unfortunate typographical error and if it's the basis for the policy-*

DN – *(inaudible) from our perspective –*

Transcription SAIK Working Group at 11 am on 15.12.2021

DB – *How about reflect the policy? How about reflect it and actually see its go nothing to do with you're saying its going to be so much more work for you, its more work for us too, yeh it reduces the time that we have to go three days later and do this but we need to put kits together, we need to assist with that, we've been working on it for some time now as a working party to come up with the best way to do this for us and for health but you know what. This isn't about health and it's not about the cost, its about the victim and what it seems to me is that for yourself Adam its about Health, its not about the victim, the victim comes second and you know I could say with all due respect that's how it seems to me. We are trying to make it better and more victim centric, you are creating barriers as to why we can't.*

AG – *That's not necessarily the case at all. Because what we have, you've described something as a notion, you've described something as (inaudible) –*

DB – *It's not a notion mate, it's done in every other state bar QLD and possibly one other. It's not a notion. It's something that you signed off on and is done in other areas.*

AG – *We've discussed that already. What we're actually looking to is the impetus for changing a process that has yet not received any complaints or concerns, that the police engagement is traumatic. It is something that is obviously something that must occur in other situations when you're collecting DNA from individuals (inaudible)*

DF – *I really don't –*

DB – *we take DNA off (inaudible)*

DF – *Dave, I really don't think, we're not getting anywhere having this discussion but I guess the things is that at the end of the day, there is a very big spotlight on sexual assaults, domestic violence and so on and so forth in relation to females and victims at this particular time, so I'm just thinking it look, I really don't think at this particular time we're moving forward at all I'm mindful we've all got members who are involved in the Women's Safety and Justice Taskforce. I think that this will become*

something that will be - Something that the light, the spotlight will be shone on at some particular stage in relation to the sexual assault of victims and the taking of DNA. So if we need to go back and we need to have further discussions in our own agencies about the position I am happy to raise it up to my AC and Deputy and maybe the discussions should be happening at a higher level.

AG – *Agree*

PB – *I completely agree. I cannot see how that would not be best practice moving forward into the future, in line with other states, in line with the guideline itself, I am at a loss. I completely agree with the Supt it can get addressed up our Commissioner has a very invested interest in it, along with her Deputies and Assistant Commissioners. So I agree with the Supt, we should raise that up.*

NT – *I don't think something needs to be complaint driven to show that it's traumatic either. I'm miffed about that, you know, the victims wouldn't have a process of making a complaint about the process anyway, I think its just a given that being dealt with twice is going to be more traumatic, I think anyone can see that.*

DF – *Alright, well look, I think, look we'll certainly take on board what you've said Doctor and we'll share that around, I really don't think we're progressing any further, obviously you've got a certain view in relation to this and I think there needs to be certain consultation perhaps from our level, at a higher level, so I'll take what you've said on board and I will raise it up to my AC and maybe they can have some conversations with Lara (Lara Keller) in the first instance and we can go from there.*

ALL – **All Agreed**

DF – *the time is 11:31 and we'll cease the meeting there. Thank you everyone for joining in today and I guess if you've got anything that you do wish to raise up to Lara, by all means please do that and we'll do that on our side and we'll take it up to a higher level to have those discussions on how we move forward.*

Transcription SAIK Working Group at 11 am on 15.12.2021

PB – *Thank you*

DF – *Thank you*

DB – *Thanks Super*

----------*MEETING RECORDING ENDED*----------

ACTION ITEM

QLD Health - Raise up any concerns/issues regarding the SAIK and the meeting on 15.12.2021

QPS – Raise up issues/concerns discussed and suggestions on a way to move forward with AC and Deputy.

Next meeting TBA

EXHIBIT 11

GROUP – Child Abuse and Sexual Crimes Unit (CTU).

DATE – 20 December 2021

DESCRIPTION OF EVENT – **Working party formed to address non-compliance of policy by Queensland Health to obtain buckle (mouth) swabs from sexual assault victims at the time of sexual assault examinations**.

CURRENT SITUATION / ACTIONS

- On 27 October 2021 I attended the State Library with AO8 Debbie Jones, where we presented to Queensland Health Forensic Nurses and Medical practitioners on the role of the Sexual Violence Liaison Officers and the Sexual Violence Prevention Strategy.

- Dr Adam Griffen, Chief Government Medical Officer was also in attendance and following the presentation I raised issue with him regarding the 2014 Government Interagency Working Group policy document *Response to Sexual Assault – Queensland Government Interagency Guidelines for Responding to People who have Experienced Sexual Assault*, the purpose of which was to prevent unnecessary trauma being caused to victims including during subsequent forensic medical examinations. Within the guidelines, it is recommended that victim DNA reference samples, usually a mouth swab (on occasion a blood sample) should be taken routinely as part of the forensic medical examination.

- Co-signatories on the policy were senior representatives from Queensland Health, Queensland Police Service, Department of Justice and Attorney-General, and Department of Communities, Child Safety and Disability Services.

- This was raised as the actual situation across all Queensland Health facilities is to conduct the examination without a health practitioner obtaining the sample at the same time, with the requirement that police then re-attend with the victim within the following week (approximately) to obtain that sample.

- It was also raised that Queensland appeared to be the only jurisdiction in Australia that operates in this way and further that obtaining the sample at the same time as the SAIK examination appeared to be less intrusive of the victim and therefore more victim-centric and in line with the '*Prevent, Support, Believe. Queensland Framework to Address Sexual Violence*'.

- Dr Griffen at that time provided several reasons as to his belief as to why it didn't occur in Queensland including:
    - That he believes there may be an issue with cross contamination from saliva and semen in the victims mouth that would prevent a buckle swab from being taken at the time of the SAIK;
    - That even though another person's saliva only takes 8-10hrs to disappear from a DNA sense inside a victims mouth, he does not want to have different processes for his staff of taking DNA depending on whether they may have mouth DNA contamination – he wants one process for uniformity;

- He stated that with the current process of police obtaining the sample a few days later, it means that there is zero chance of contamination by that stage and thus this is his preferred process;
- He is also concerned about the possible contamination of samples if placed into the same SAIK kit for analysis;
- He does not believe that a re-attendance to the victim by police and obtaining of the buckle swab would increase or add to the trauma being experienced by a sexual assault victim.

- A working party was formed by members of the Forensics Unit, including Superintendent Dale Frieberg, Inspector David Neville and Acting Inspector Peter Bushel, Detective Inspector David Briese of the Child Trauma and Sex Crimes Unit, and members of Queensland Health including Acting Executive Director of Forensic and Scientific Services, Queensland health and Dr Griffen.

- On 15 December 2021 this working group met (Chair Supt Frieberg). During the meeting Dr Griffen again repeated a number of his concerns as per above but also added:
    - That the 2014 policy, which he stated he was a co-author on, included a typographical error in respect to the obtaining of the mouth swab at the same time as the sexual assault examination;
    - That he believed it would be difficult and labour intensive to train medical practitioners in the taking of the mouth swab;
    - That unless actual complaints had been made by victims of sexual assault in respect to the mouth swab being obtained days later by police, he did not see a reason as to why the existing process should change.

- On 20 December 2021 Queensland Police members of this working party met with Assistant Commissioner Kath Innes, Crime and Intelligence Command and Acting Assistant Commissioner David French, Operational Support Command where this matter was discussed and a decision made to complete and advance an Executive Briefing Note with the aim to have the current policy reviewed and the process of obtaining mouth swabs from victims of sexual assaults brought in line with other jurisdictions across Australia and ensure any examination process is victim-centric.

INTENDED ACTIONS

- EBN to be completed and advanced.

MEDIA ISSUES

- Nil at this point.

OTHER MATTERS OF NOTE

- Margaret McMurdo Domestic Violence and Justice report is due for completion and report in early to mid 2022.

Response to sexual assault

Queensland Government Interagency Guidelines for Responding to People who have Experienced Sexual Assault

Queensland Government

These guidelines have been developed through a strong collaborative approach by a Government Interagency Working Group including representatives from:

- **Queensland Police Service**
- **Department of Justice and Attorney-General**
  - *Office of the Director of Public Prosecutions*
  - *Queensland Courts*
  - *Victim Assist Queensland*
  - *Youth Justice Conferencing*
- **Department of Communities, Child Safety and Disability Services**
- **Queensland Health**
  - *Aboriginal and Torres Strait Islander Health Unit*
  - *Clinical Forensic Medicine Unit*
  - *Child Advocacy Service*
  - *Royal Brisbane and Women's Hospital Department of Social Work Services (Sexual Assault Service)*

The Strategic Policy Priority Areas, System Policy and Performance Division of Queensland Health were consulted during this process.

The guidelines are intended to outline key principles and a best practice framework for working with people who have experienced sexual assault. This includes children and young people who have been sexually abused or sexually assaulted.

The term victim is used throughout the document where there is reference to specific legislation and where the person is either a male or female who has experienced sexual assault. The term sexual assault is used throughout the document and includes those assaults where rape and/or sexual abuse has taken place or is alleged to have taken place.

Conclusion 20

Preface

The guidelines are designed to promote whole-of-government interagency cooperation and service coordination with an aim to improve governmental responses to victims of sexual assault. The need for enhanced coordination and cooperation has long been recognised and resulted in the development of the *2001 Queensland Government Interagency Guidelines for responding to adult victims of sexual assault.*

The 2013 guidelines aim to facilitate best practice, quality service and support to people who have experienced sexual assault.

Legislation relevant to and defining sexual assault includes but is not limited to:

- *Aboriginal and Torres Strait Islander Peoples Recognition Act 2013*
- *Child Protection Act 1999*
- *Criminal Code Act 1899*
- *Criminal Law (Sexual Offences) Act 1978*
- *Domestic and Family Violence Protection Act 2012*
- *Evidence Act 1977*
- *Health Act 1937 & associated regulations*
- *Hospital and Health Boards Act 2011*
- *Mental Health Act 2000*
- *Police Powers and Responsibilities Act 2000*
- *Public Health Act 2005*
- *Victims of Crime Assistance Act 2009*

Policy referred to includes but is not limited to:

- Queensland Government Language Services Policy
- Queensland Health Protocol for conducting child sexual assault examinations

The guidelines should be read in conjunction with internal agency procedures such as the Office of the Director of Public Prosecutions Guidelines and the Queensland Police Service Operational Procedures Manual. In addition to legislation, policies and procedures, the Queensland Government joins with governments around Australia in the implementation of the National Plan to Reduce Violence against Women and their Children 2010-2022.

Each government agency has a complementary and essential role in ensuring that people have access to effective, timely and appropriate information, support, care and treatment following a sexual assault.

Given the nature of the crime, sexual assault is an area of legal and social complexity. The guidelines are designed to help government officers and agencies work together in the best interests of the person who has been sexually assaulted through better understanding one another's roles and responsibilities.

The Queensland Government encourages reporting of criminal activity and prosecution of offender(s) where possible.

Section 1 Introduction

Governance

The government agencies responsible for delivering a service to victims of sexual assault, in accordance with relevant legislation, whole-of-government policy and internal departmental procedures, are responsible for the ongoing governance of this document. The guidelines are underpinned by each government agency's own internal policies and procedures which they are obligated to adhere to. Each government agency has a formal complaints mechanism which is accessible to members of the public.

The Government Interagency Working Group will meet bi-annually to review the guidelines and consider matters of particular concern for people impacted by sexual assault and to consider the impact of any legislative change.

Sexual assault

Sexual assault is a crime of violence. It is a humiliating and degrading experience. It has an emotional, physical, financial and social cost, not only to those directly affected, but also for the community as a whole.

The number of reported sexual offences against women aged 15 or over in Queensland in 2011/2012 was 2035 compared with 227 against males.[1]

Major Australian studies indicate that only 11-25 per cent of sexual assaults are reported to the police and that most offenders are known to the victim.[2] People who experience sexual assault may feel a range of emotions including shock, fear, guilt, shame, depression and an inability to trust others. The social stigma attached to sexual assault can heighten these feelings and increase the trauma experienced. It is imperative that when disclosing or reporting a sexual assault, people receive an effective, professional and appropriate response from the agencies to which they report.

Community education can encourage family and friends to respond supportively and appropriately to a disclosure of sexual assault. However, in order to assist their recovery, victims may also need access to a range of personal support services including counselling, medical services and assistance to report the crime to the police.

The information provided in the guidelines is intended to provide a strategic overview to support the development of policies and procedures at a local level. Local level procedures will differ according to the nature of the service system in each area. It is also intended to contribute to improving service responses to victims.

Responses to victims

Following disclosure of a sexual assault, the following needs of the victim should be addressed:

- immediate safety needs
- immediate health needs
- options for pursuing justice
- ongoing emotional needs for longer term wellbeing.

In order to avoid secondary traumatisation and mitigate the risk of negative, long term outcomes, government responses to sexual assault must be both sensitive and effective. These responses therefore need to take into account the diversity of victims, including their cultural and linguistic background, disability, sexual orientation, age and geographical location. In addition to assisting recovery, more sensitive and effective responses may also lead to an increase in reporting rates.

This, in turn, can lead to a more accurate understanding of the prevalence of sexual assault, inform community education and awareness approaches, and result in improved prevention strategies.

1 Queensland Police Service (2012) Statistical Review 2011-2012 Brisbane
2 Australian Bureau of Statistics (1996) Women's Safety Survey, Cat.no. 4218.0 (unpublished data) as cited in Office of Women's Policy (1999) A Social and Economic Profile of Women in Queensland 1999 Brisbane; Australian Bureau of Statistics (1996) Victims of Crime Survey

Children and young people

It should be noted that the *Child Protection Act 1999* (CPA) is relevant where there are concerns that a child has been sexually abused and where a child does not have a parent able and willing to protect them from the abuse. The main principle for administering the CPA is that the safety, wellbeing and best interests of a child are paramount. Section 159B of the CPA imposes a responsibility on particular service providers to assess and meet the protection and care needs of children and provide collaborative and coordinated support to their families.

The definition of harm in the CPA includes harm resulting from sexual abuse or exploitation. A child is defined in the CPA as an individual less than 18 years of age. Where the child or young person is under the age of 16, their parent or guardian should be consulted where possible and appropriate. Whilst certain circumstances may not make this possible, the child or young person should have access to a support person throughout the response.

The safety and protection of children and young people who are sexually assaulted is a high priority. When disclosing a sexual assault, young people should be encouraged to access services so that they are aware of their options in terms of support, assistance, treatment and prevention.

When working with a young person who reports a sexual assault, personnel from the Queensland Police Service, Department of Communities, Child Safety and Disability Services (DCCSDS) and Queensland Health (QH) are required to follow the statutory requirements under the CPA and the *Public Health Act 2005* relevant to their position.

Where the child or young person is subject to an order granting custody or guardianship of the child, the Chief Executive, Child Safety, DCCSDS, must be notified regarding the report of a sexual assault.

Confidentiality cannot be guaranteed where a child or young person is believed to be in need of protection from harm. To work in the best interest of that child or young person, information may need to be exchanged between departments. It is best practice for the child or young person to be advised that a report to the DCCSDS and the police may take place. Certain circumstances may not make this possible.

Section 2
Principles of the Interagency Guidelines

Government responses to sexual assault are framed by the following overarching principles:

- All agencies will focus on the safety, physical and psychological needs of the victim
- The victim's right to privacy and confidentiality will be respected at all times unless disclosure is required by another law
- Comprehensive information about all processes and options will be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location
- The victim's informed decision will be respected at every stage of the process
- The victim's sense of personal control will be supported and encouraged
- All relevant agencies will work collaboratively to respond to sexual assault, to provide clear, up to date and comprehensive information about other agencies and services and will facilitate access to appropriate agencies and services on request
- All agencies will ensure documentation and records are prepared in accordance with individual agency requirements and respect confidentiality, privacy, security and choice.

Fundamental Principles of Justice for Victims of Crime and Complaints Mechanism

Government responses are also framed by the legislated responsibilities defined in the Fundamental Principles of Justice for Victims of Crime (Principles of Justice) in Queensland, set out in Chapter 2 of the *Victims of Crime Assistance Act 2009*.

If a victim feels they have been treated unfairly or without respect by a Queensland Government officer, they have the right to complain to the government agency responsible for the conduct of the officer or to Victim Assist Queensland (Victim Assist).

As a guide, the following is a summarised version of the Principles of Justice:

Fair and dignified treatment

The victim must be treated fairly and shown dignity, respect, compassion and courtesy. The government entity must take in to account and be responsive to the particular needs of the victim relating to the victim's age, sex, race, cultural identity, impairment, sexuality or religion.

Privacy of victim

A person's personal information, including their address and phone number, can only be disclosed with consent or as authorised by the law.

Information about services

The victim must be given timely information about relevant services available to them, including welfare, health, counselling, legal help and financial assistance.

Information about investigation of the offender

If the victim asks, they should be given information about the investigation of the offender where possible. Information given to a victim may include the progress of the investigation and the name of the person charged.

Information about prosecution of the offender

If asked by the victim, the prosecuting agency is to give the victim details about the crime committed against them, including when the victim may attend a court proceeding, notice of a decision to change a charge, or notice of the outcome of a court proceeding.

Victim to be advised on their role as a witness

A victim, who is to be a witness for the prosecution in the trial for the crime committed against them, is to be informed by the prosecuting agency about the trial process and their role as a witness.

Minimal exposure to and contact with the offender

As much as possible, relevant agencies present at court are to ensure the victim has minimal contact with or exposure to the offender during court proceedings or in the court building.

Victim Impact Statement

During sentencing of the offender, the victim has the right to give details of the impact and harm caused to the victim by the offence, to the prosecutor as an impact statement. Victims can access information about completing a victim impact statement by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Guide to Making a Victim Impact Statement* at *www.justice.qld.gov.au.*

Information about the convicted offender

A victim can apply to be registered on the Victims Register. If the offender is then convicted and imprisoned, the victim will be provided with this information on request. This includes information on the sentence, an escape from custody, or day of release. To be included on the Victims Register call 1800 098 098.

Making a complaint

If a victim of crime feels a government agency, person or persons within the agency have engaged in conduct that is not consistent with the Principles of Justice, they have the right to make a complaint. Victims can access information about making a complaint by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Complaint Form* at *www.justice.qld.gov.au.*

Government agencies are obligated to have a formal complaints management system, and the Queensland Government is committed to having these systems available and acted upon in accordance with the Principles of Justice.

Section 3
The Roles of Key Government Agencies

Queensland Police Service

The Queensland Police Service (QPS) has three main functions in relation to sexual assault cases including:

1. Investigate complaints of sexual assault and establish whether an offence of sexual assault has been committed.
2. Protect victims of sexual assault.
3. Identify, apprehend and prosecute offenders.

In carrying out this role, the police should:

- observe QPS Operational Procedures Manual
- observe QPS local procedures or instructions
- observe legislative requirements
- observe the Fundamental Principles of Justice for Victims of Crime
- provide victims with information regarding the investigation and prosecution
- provide protection to victims at immediate risk of sexual assault
- provide victims with information about support services

Queensland Health

In responding to sexual assault, the role of QH is to provide medical care, forensic medical examinations (FME), sexual health assistance and information and support. These responses are provided by public hospitals, the Clinical Forensic Medicine Unit and may include specialist sexual assault teams. The extent and nature of this care varies across hospital and health services in accordance with local procedures and resources.

Assistance and care in the acute phase includes:

- medical treatment
- collection and documentation of medico-legal evidence where appropriate
- sexual health information and treatment
- information about rights as a victim of crime
- information about reporting to police and legal processes
- support and information extended to support networks.

In addition, QH provides education and training to government and non-government agencies, with an aim to broaden community knowledge, improve responses and prevent sexual violence as outlined in the National Plan to Reduce Violence against Women and their Children 2010 – 2022.

Department of Justice and Attorney-General

The Office of the Director of Public Prosecutions (ODPP), Victim Assist Queensland (Victim Assist), Youth Justice Conferencing (YJC) and the Queensland Courts all fall within the responsibilities of the Department of Justice and Attorney-General. The following provides an overview of each of these separate agencies.

Office of the Director of Public Prosecutions

The ODPP represents the Crown in criminal proceedings against persons accused of committing serious criminal offences including sexual assault. The criminal proceedings include:

- the committal hearing, before a Magistrate in Brisbane Central, Ipswich and Southport Magistrates Courts. In other centres, this hearing is conducted by prosecutors within the police
- trials before a judge alone or a judge and jury
- sentencing hearing before a judge
- any appeals arising from the trial or sentence.

In addition to prosecuting matters in court, the ODPP is responsible for:

- assisting victims by providing information about the progress of a prosecution, the victim's role as a witness, and how the victim can inform the court of the impact of the crime by providing a victim impact statement
- giving victims reasons for decisions made in relation to proceedings which directly affect them
- taking into account the wishes of a victim who does not wish to proceed with a prosecution for any reason
- providing information about the availability of other resources and processes that may assist victims
- requesting that the court give sexual assault matters appropriate priority
- ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building
- liaising with other relevant agencies to ensure that the victim and family members understand the legal and procedural issues which may impact them.

In carrying out the role of the ODPP, all officers are obliged to comply with the Director's Guideline No. 25 as at 2013 *http://www.justice.qld.gov.au/__data/assets/pdf_file/0015/16701/Directors-guidelines.pdf.* This aims to ensure that the Principles of Justice, as set out in the *Victims of Crime Assistance Act 2009* are complied with.

Victim Assist Queensland

Victim Assist provides access to specialised support services and financial assistance for victims of personal acts of violence including sexual assault.

Financial assistance may be available to victims of sexual assault to help them pay for the cost of goods and services that have arisen, or will arise as a consequence of the assault.

This includes medical and dental expenses, and expenses associated with improving safety or relocation from their current location in order to escape the offender.

Victim Assist also provides information, referrals and support (which may include court support) to victims, and assistance in making a victim impact statement if the victim chooses to make one.

Youth Justice Conferencing

If the offender is a young person, there may be alternative processes to the matter being dealt with by a court. The purpose of YJC is to hold the young offender accountable for their actions and to come to an agreement on what they will do to attempt to make reparation for the harm caused. To safeguard the victim, additional procedures are adopted before a conference for a sexual assault can occur. These include referring the victim to a counselling service as well as compulsory attendance of the juvenile offender in a specialist treatment service.

Queensland Courts

Queensland Courts afford victims of sexual offences, affected child witnesses and special witnesses protections when proceeding through court. These are detailed in the *Evidence Act 1977* (EA) and the *Criminal Law (Sexual Offences) Act 1978*.

Section 21A of the EA provides protections for special witnesses and affected child witnesses. The court can declare a person a special witness by hearing evidence (if the witness does not automatically fall into the special category, such as where the witness is a child or the person has a mental impairment). When the court hears evidence from these special witnesses, there are a range of options to assist the witness. These include ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building. Where the witness is an affected child witness, there are further protections in place.

For further information refer to the Supreme Court Bench Book: *http://www.courts.qld.gov.au/information-for-lawyers/benchbooks-and-ucpr-bulletin/supreme-and-district-courts-benchbook.*

Department of Communities, Child Safety and Disability Services

The Department of Communities, Child Safety and Disability Services allocates funding to non-government organisations to assist people, predominantly women, who have experienced sexual assault, in accessing necessary services and support needed to rebuild their lives as quickly as possible. These sexual assault services offer flexible, holistic and ongoing personal support including advocacy and sexual assault counselling (including crisis counselling), in a culturally appropriate and safe environment.

The range of support provided by these services includes:

- provision of information, advice and referral
- needs assessment and development of case/service plans
- individual advocacy
- sexual assault counselling for victims and survivors of sexual assault
- community education.

For more information about access to sexual assault services in local areas, contact the Sexual Assault Helpline on 1800 010 120.

Child Safety Services is the Queensland Government agency for child protection and adoption services. The department is dedicated to protecting children and young people from harm or who are at risk of harm, and whose parents cannot provide adequate care or protection for them.

Non-government organisations

It is acknowledged that a number of government departments provide grant funding to non-government organisations to deliver a range of specialist sexual assault services. Local procedures and service agreements in relation to services provided by these organisations should be adhered to.

Section 4
Interagency approach

Given the often violent and complex nature of sexual assault, an interagency approach is essential. The Queensland Police Service (QPS), Queensland Health (QH), the Department of Justice and Attorney-General (DJAG) and the Department of Communities, Child Safety and Disability Services (DCCSDS), each have a different but fundamental role in responding to sexual assault. Each of these agencies should assist each other in understanding and supporting their role and be familiar with, and sensitive to, their differing and complementary roles. An interagency approach provides opportunities to discuss and address issues of mutual concern across departments.

Teamwork

Quality of care depends on partnership between these different agencies. Each agency should establish local procedures to facilitate improved liaison and coordination between services. These procedures should include systems for information sharing and conflict resolution.

Confidentiality

Confidentiality, privacy of information and security of records is imperative when working with people who have experienced sexual assault. It is a fundamental principle in treating victims with dignity and respect.

Access to and disclosure of personal information regarding the assault will conform to legal requirements and be limited to people directly involved in the case. Except where legal obligations exist, information will not be released without the prior consent of the person involved. This includes names and identifying information.

Training

Joint training can contribute to achieving interagency objectives and allow those working in the field to understand how best practice is achieved. Training and orientation should be ongoing and could include input from relevant local services.

Information provision

Police officers, doctors, social workers, health workers and legal officers, should provide people with relevant information which may include written material. This information should be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location.

People should be made aware of, and be given an opportunity to discuss and consider the implications of proceeding with medical, investigative and legal processes so that they can make informed decisions. These decisions must be respected. It should be noted however that the decision whether or not an investigation should proceed rests primarily with the police.

Referrals

Relevant referral procedures and guidelines between police and health services should be observed.

Staff of government agencies should be familiar with local specialist services and actively support people who have experienced sexual assault to access appropriate supports available in their community. In addition, relevant health, welfare and legal services likely to be accessed by victims will need to develop local strategies and procedures to ensure that referral processes are appropriate and coordinated. These services should also be aware of the admission procedures and location of the nearest health facility and police station.

Feedback

Quality of care is essential in ensuring that people are referred to the appropriate service. QPS, QH, DJAG and DCCSDS should ensure that local interagency links and procedures operate in a coordinated manner. Mechanisms for giving feedback about service delivery should also be in place and observed.

Access, availability and promotion of services

People who have experienced a sexual assault may need encouragement to use medical, counselling, police and legal services. Local procedures should ensure that services are accessible and coordinated. This includes the use of written information and community education materials.

Gender of service providers

Following a sexual assault, the person may feel uncomfortable talking with personnel of the opposite sex. If a preference for female or male personnel is expressed, all reasonable steps to accommodate this preference should be taken.

Diverse needs

Procedures need to be flexible in order to respond to diverse needs; including culture, language, gender, disability, religion, sexuality and geographical location. Furthermore, it is important to understand how these needs impact access to and utilisation of appropriate services.

All agencies should ensure that procedures and facilities provide access to appropriate services for Aboriginal and Torres Strait Islander people, people of non-English speaking backgrounds, children and young people and people with disabilities, including physical disabilities.

Aboriginal and Torres Strait Islander people

Service provision should reflect the cultural needs of Aboriginal and Torres Strait Islander people. Agencies should have a referral mechanism to facilitate access to culturally appropriate information for Aboriginal and Torres Strait Islander people. Where there is consent and it is appropriate to do so, Aboriginal and Torres Strait Islander liaison workers may be offered to assist people during the process.

Communication

The Queensland Government recognises that a significant number of people may require interpreter services, as well as culturally appropriate support in order to adequately disclose and report a sexual assault, and make informed decisions about the support and options available to them.

People with a disability

Services and agencies should facilitate access to appropriate support workers and interpreters for people with a disability. Disability includes intellectual, physical, sensory, psychiatric or neurological impairment, or a combination of these, resulting in a substantial reduction in the person's capacity to make informed decisions or communicate. With the person's consent, and when it is safe and appropriate to do so, services should also consult with relevant people involved in that person's life such as carers, guardians and specialist agencies or departments.

People from culturally and linguistically diverse backgrounds

Service provision should be responsive to, and respect the cultural, religious and language needs of the person who has experienced sexual assault. Where communication in English is difficult or where requested, accredited interpreters and cultural support workers should be used to assist in both eliciting information from, and providing information to the person who has experienced sexual assault. This supports client safety and enables informed decision making about health care, investigative and legal processes for both the client and agency.

Translating and interpreter services

All reasonable steps will be taken by government agencies and funded non-government organisations providing sexual assault responses, to ensure fair and equitable access to interpreting and translating services that are responsive and high quality.

All reasonable steps should be taken to make an accredited interpreter available in all situations where an interpreter and/or translator is required, unless there are extenuating circumstances that genuinely prevent an interpreter from being used. This may include, for example, a medical emergency or where a language group or community is very small and confidentiality is a concern for the client, or where there is no interpreter available for that language group. All agencies will take into consideration the wishes of the person who have been impacted by the sexual assault in relation to the use of an interpreter.

Each government agency is required to observe its own policies and procedures in relation to the use of interpreters. These internal procedures should align with the *Queensland Government Language Services Policy.*

Section 5
Interagency procedures

Regardless of where sexual assault is first reported, the first priority is to ensure the safety and welfare of the person reporting. Prompt referral to the designated specialist service should take place.

Crisis intervention

The purpose of intervention by a designated sexual assault response worker is to:

- provide immediate assistance, stabilisation and emotional support to assist the person to return to their level of functioning before the crisis
- assist the person to process their perception of the stressor
- provide information about the options available, as well as the procedures of the local health facility
- provide an opportunity for the person to express their concerns and feelings
- offer practical support, including contacting family members or support persons where appropriate
- talk to family members or support persons (if present) about how best to support the victim
- co-ordinate the interagency response and facilitate patient care and treatment along the sexual assault pathway
- provide information in relation to available community support resources.

The sexual assault worker will advise the victim of their right to access medical advice and treatment including sexual health treatment. If information or clarification about police procedures is requested, the sexual assault worker will, with the victim's consent, arrange for police to provide this information.

During any phase of this process, a support person can be present. The support person should not adversely influence the process.

Initial report to police

Police receiving a report of a sexual assault will act on the information received. The police should inform the victim of relevant decisions made and where necessary, obtain the victim's consent.

Initial report to a health facility

Health facilities, such as hospitals, are often the first place where a person will disclose a sexual assault. When this happens, nursing and medical staff will assess the general medical condition of the person and administer immediate medical treatment if required. Assessment of a person's need and urgent medical intervention will always be the first priority.

Medical examination and treatment

A general, non-forensic medical examination may be conducted by a medical professional with the aim to:

- reassure victims about their physical welfare, including giving information on, and providing treatments to reduce the risks of pregnancy and sexually transmitted infections
- assess, treat and document injuries
- provide advice and referral options for follow up medical care.

A medical examination should include sexual health intervention as described in *Queensland Sexual Health Clinical Management Guidelines of 2010 section 6: http://www.health.qld.gov.au/sexhealth/documents/cm_guidelines06.pdf.*

Unconscious patients who are admitted to hospital with a suspicion of sexual assault will be assessed and treated as medical emergencies.

Referral to the local sexual assault team

Health staff must follow local procedures in the management of sexual assault. All efforts should be made to contact the designated sexual assault team and where there is no specialist team, crisis intervention and support will be delivered by health staff present. A referral for follow-up support and care should be made as soon as possible.

Notifying the police

The sexual assault worker should discuss available reporting options with the person. If the victim requests to speak to police, it is the role of the sexual assault team or other designated staff member, to notify the police as soon as possible to ensure all evidence including the crime scene can be secured. Notification and initial reporting to police does not mean an investigation will automatically take place.

Where police are operating under time constraints, they should inform health staff. Working together to meet time constraints will directly impact the quality of the outcome for the victim.

Victim attending with police

Where victims arrive at the health facility with police, procedures outlined in referral to the local sexual assault team above should still be followed by health staff.

Initial contact

It is the sexual assault worker's role to coordinate an immediate response; offer practical and emotional support, assess the person's immediate physical and emotional safety and recognise the potentially traumatic nature of the assault.

Medical assessment will be conducted in accordance with local procedures.

Forensic medical examinations

Doctors or nurses conducting forensic examinations must follow local procedures in the management of sexual assault.

The forensic examination consists of obtaining a history as to the nature of the assault in order to guide the subsequent physical examination. It also includes interpretation of injuries and the collection of forensic evidence as it relates to the alleged sexual assault.

Forensic medical examinations and informed consent for people aged 14 years and above

Informed consent reflects a legal and moral principle whereby the victim has the right to decide what is appropriate for them. This includes the right to accept or to decline a forensic examination and to change that decision.

In order for a patient to exercise this right, they require access to information that is relevant to them. An explanation about the nature of the forensic examination must be given by the forensic medial officer (FMO) or forensic nurse examiner (FNE) and police also need to inform the victim about police investigation processes.

The victim should be made aware that they may withdraw their consent at any time to any particular procedure, or any aspect of the examination. However after the examination is complete, an investigation by police may continue to progress.

It should be noted that the decision to have a forensic examination is a health care matter and therefore legislation and policy around informed decision-making in health care applies in this circumstance. For more information on decision-making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

It is the responsibility of the medical and forensic staff to assess capacity to consent. Where a person lacks capacity, it is appropriate to identify a capable adult to act on the patient's behalf. Please refer to section 2.2 of the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf.*

If at any point there is a possibility that the capable adult identified is the offender, it is in the best interests of the patient for an Adult Guardian to be appointed in accordance with the *Powers of Attorney Act 1998* and the *Guardianship and Administration Act 2000*.

Where possible the examination will be carried out using the Sexual Assault Investigation Kit (SAIK).

Forensic medical examinations and informed consent for people under 14 years of age

Paediatric patients are generally those aged less than 14 years of age. It is usual practice for the child to be transferred to the hospital's child protection area for an examination, even if they have had initial treatment in an adult emergency setting. Emergency medical treatment for any child should be undertaken by the Department of Emergency Medicine prior to a forensic medical assessment.

Paediatric forensic medical assessments are undertaken by paediatricians. This will be done by the Child Protection Advisor on call (or similar) or the general paediatrician on call.

All examinations conducted on children should be consistent with Queensland Health's Hospital and Health Services Health Service Directive: Protocol for conducting child sexual assault examinations: *http://www.health.qld.gov.au/directives/docs/ptl/qh-hsdptl-029-11.pdf*. All paediatric FMEs should also adhere to legislation and policy around informed decision-making in health care. For more information on decision –making in health care settings, please refer to the Queensland Health guide to informed decision-making in healthcare: *www.health.qld.gov.au/consent/documents/ic-guide.pdf*

Chain of evidence

The chain of evidence and the need for 'contemporaneous recollection of facts' to aid an investigation is essential. The chain of evidence involves not only the examination of the victim, but also includes the geographic location where the assault occurred, the identification and interview of witnesses and identification of relevant additional evidence. Evidence collected needs to be stored and transported in approved and standardised ways as outlined in police procedures to ensure the utility in a court proceeding. This further emphasises the importance of police involvement prior to an examination being conducted.

Storage and transportation issues need to be considered when undertaking an examination as the inability to safely and correctly store and transport evidence may damage the evidence or make it inadmissible in court in the later stage of an investigation and prosecution.

The doctor or nurse conducting the forensic examination should discuss the case with the police before the forensic examination takes place. This is to ensure that:

- all necessary evidence is collected
- a re-examination is prevented
- unusual evidence is not overlooked.

Timing and nature of the forensic medical examination

In determining the timing and nature of the FME a number of factors will be considered. These include the time since the assault, the physical and emotional state of the victim and their account of the assault.

This process, particularly if it involves an internal gynaecological or anal examination, can be distressing and the examination may need to be delayed or discontinued on account of the victim's physical and emotional state.

Presence of police and support person at medical and forensic examinations

Regardless of age, a person is entitled to have a support person present during the medical and forensic examination. This may include a friend or family member, a nurse, health care worker or sexual assault worker, who is not a potential witness.

There is no legal requirement for a police officer to be present during the medical and FME. However, if a victim requests the presence of police, this police officer is to be the same gender as the victim.

A police officer must be present to receive all evidence collected during a forensic examination immediately after the procedure to maintain continuity of the evidence for any potential court proceeding.

Consent to release information and evidence

The doctor or nurse conducting the FME will not release the SAIK to police without the signed consent of the victim or the capable adult acting on their behalf.

Access to health records

Health records, including counselling notes, are confidential. However, patients should be notified that any records can be subject to a subpoena or other court-related mechanisms.

Drug facilitated sexual assault

Where the administration of drugs in the sexual assault is suspected, testing to maximise the chances of detecting these substances should be administered in a timely fashion. However, the decision to test remains a clinical one which is made by the FMO or FNE.

Victim DNA reference samples

DNA reference samples (usually a blood sample or mouth swab) should be taken routinely as part of the FME.

Support person during the police interview

Police should inform victims that they may be accompanied by a support person while their statement is being taken. However, the victim must be advised that:

- the support person may not participate in the interview
- the support person may not directly or indirectly influence the interview
- a potential witness may not act as a support person.

Discontinuance of police action before a proceeding has commenced

Where the victim does not wish to proceed with further police action, police should:

- make clear that following the withdrawal of the complaint no further police action will be taken
- attempt to obtain a signed withdrawal of complaint
- inform the adult victim (18 years and over, only) of the online *Adult Sexual Assault Resource (http://www.police.qld.gov.au/programs/adultassault/)* package that provides alternative reporting options

If a proceeding has commenced, the victim's wishes will be taken into account when deciding if the matter will continue.

Domestic Violence Protection Orders

Sexual assault is one form of domestic and family violence. Where the sexual assault has occurred within an intimate personal relationship (marriage, engagement, couple), family relationship or an informal care relationship, the victim should be informed of their option to seek protection under the *Domestic and Family Violence Protection Act 2012*. In situations where domestic violence has occurred and where protection is needed to prevent further violence, a domestic violence order can be applied for by the victim, by police on behalf of the victim or by another person authorised by the victim. This is done through the Magistrates Court.

Where appropriate, victims should also be referred to a specialist domestic violence service for support and assistance, for example DVConnect Womensline Ph. 1800 811 811 and DVConnect Mensline Ph. 1800 600 636.

Follow-up and registration on the Victims Register

After the trial and/or sentence, the victim will have the opportunity to talk to the case lawyer about the outcome of the case and the sentence imposed, if any. This opportunity may arise immediately after the trial and/or sentence concludes or at a later time by telephone.

If the offender is imprisoned or placed under the supervision of Queensland Corrective Services, the victim may register their details on the Victims Register which is administered by Queensland Corrective Services. A victim and/or their family or nominee can register to be kept informed about the offender's imprisonment, movement between locations and proposed parole dates. They will also be given the opportunity to make submissions to parole boards when offenders apply.

Where the offender is a young person, the Victim Information Register may be utilised. This register is administered by Youth Justice within the Department of Justice and Attorney-General. A victim and/or their family or nominee can register to be kept informed about the young person's detention, movement between locations and supervised release dates.

If the offender appeals against their conviction and/or sentence or the Attorney-General appeals against the leniency of the sentence, the victim will be kept informed about the progress and outcome of the appeal and any consequential matters arising from the appeal.

Key stakeholders at the local level should maintain current referral information on appropriate support and other community services available. Localised referral pathways and protocols should be developed between key service providers to ensure timely referral pathways for those in need of support.

Conclusion

The government agencies acknowledged in this document (QPS, QH, DJAG and DCCSDS) have committed to the principles, roles, approaches and procedures articulated in the guidelines. This commitment aims to ensure that individuals who have experienced sexual assault are provided with timely, high quality and coordinated service delivery responses appropriate to their needs and appropriate to the role played by departmental officers.

Key service providers are encouraged to use this document as a framework to develop local level arrangements and protocols to ensure best practice, quality service and support to people who have experienced sexual assault.

The government agencies responsible for the development of the guidelines would like to thank all key government and non-government stakeholders who kindly contributed their knowledge and expertise.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF BRENDAN PATRICK FRANCIS BLYTH

I, Detective Sergeant **Brendan Patrick Francis BLYTH,** of the Logan District Criminal Investigation Branch state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

Experience and current position

1. I currently hold a Diploma of Justice having graduated from the Yeronga Institute of Tafe in 2001.

2. I was sworn into the Queensland Police Service ("QPS") in July 2004 after having commenced at the Queensland Police Service Academy in January 2004.

   (a) From July 2004 until December 2008, I performed General Duties policing within the Wynnum District of the Metropolitan South Region (now known as the Bayside District in the Brisbane Region).

   (b) My General Duties tenure included an 18-month secondment to the Wynnum District Response Team which was a quasi-plain clothes / investigative role.

   (c) On 1 December 2008, I commenced a tenure at the Dutton Park Criminal Investigation Branch as a Plain Clothes Constable. In July 2009 I attained the rank of Senior Constable.

   (d) In July 2012, after successful completion of the Detective Training Program, I attained the designation of Detective. The successful completion of this program also awarded me an Advanced Diploma of Public Safety (Police Investigation).

(e) I remained at the Dutton Park Criminal Investigation Branch before being promoted to Detective Sergeant (Senior Investigator) with the Logan Criminal Investigation Branch in October 2017. From January 2019 until present, I have completed various relieving periods as a Detective Acting Senior Sergeant. This has included periods as the Officer in Charge of the Logan District CIB.

(f) Overall, I have over 18 years of sworn service within the QPS with nearly 14 years being in plain clothes and 10 as an appointed Detective.

3. I do not have a current CV.

4. My current substantive role is Detective Sergeant – Senior Investigator. The duties and responsibilities of this role are extensive and varied. This includes day to day supervision of junior staff (both appointed and non-appointed Detectives), overseeing their investigations and court paperwork as well as providing advice as required. At any one time I can be managing up to 20 staff as well as maintaining my own workload and managing more complex and protracted investigations.

(a) The Logan District is vast both geographically (covers 3,173sq km) and demographically with over 215 cultures represented. I report directly to two (2) Detective Senior Sergeants and have twenty (20) staff who report directly to me. I share the responsibility of staff management with two other detective Sergeants.

(b) As a Detective Sergeant, I am required to investigative a wide variety of crime that is either perpetrated by adults or committed against adults. These crimes included homicide, sexual violence offences, assault, armed robbery, fraud, drug trafficking, weapons offences and property crime (burglary, car theft etc).

Forensic medical examinations of complainants and witnesses

5. I am not aware of and have not been involved in any matter in which a witness has undergone a forensic medical examination.

6. Forensic medical examinations are commonplace in investigative work. In response to any reported crime, being forensically aware is important. This includes being provided with a detailed briefing by first response police and then attending the scene and

speaking with complainants and witnesses. I will often consult with a local Scenes of Crime Officer ("SOCO") around the most appropriate and best actions to secure forensic evidence. This is very relevant with the transferrable nature of DNA evidence. In the case of a sexual violence offences where there is alleged penetration, I will consult with the Forensic Medical Officer ("FMO").

(a) The offences I would primarily consider organising a forensic medical examination for are those involving sexual violence, in particular where penetration is alleged. Other offences include offences of violence such as robbery or assault where there is alleged physical contact.

(b) I can get notified of an incident requiring my involvement from police communications, general duties, the district duty officer, the hospital and through a CIB shift supervisor. On occasion, a person may attend a front counter however these offences may have occurred several days or more prior. I can also be tasked directly through QPRIME however, in my experience, the need for any forensic examination is generally gone by this stage.

(c) The nature of the forensic examination generally dictates where it will be conducted. For a sexual violence investigation where a sexual assault investigation kit ("SAIK") is to be used, this will usually occur in a secure room at the Logan Community Hospital. In this instance, the hospital is informed when police attend as the person needs be triaged through emergency before any examinations are conducted. Generally, there is no advance warning provided. Other less invasive examinations can be conducted at the scene, a police station or watchhouse. Sometimes a particular property item such as clothing will be seized from a scene, packaged as directed by Scenes of crime and then subject to an examination (if required) in a laboratory at a later stage.

(d) A person can be transported a number of ways to the location where a forensic examination is to be conducted. Sometimes QAS or police will conduct the transport and other times the person will self-present to the hospital. If a person is to be transported to a location other than the hospital, police often conduct the transport and if required, will be forensically aware by having the person in an evidence (zoot) suit or wearing gloves in the case of nail scrapings.

(e) There is a stock of SAIKs stored at each CIB office in the Logan District. In addition, there is generally a stock of SAIKs in the secure room at the hospital where the examination will take place. The SAIKs are stored on shelving in a general use storage room / section in each office. The SAIK provides all the required equipment for that type of investigation. For other forensic medical examinations such as penile swabs, nail scrapings etc, these kits are maintained by both the local Scenes of Crime. I believe that the Forensic Medical Officer ("FMO") also has a stock.

(f) If the FMO doesn't have a SAIK, an investigator will directly provide one to them. For a SAIK or other intimate procedure, an FMO is required to undertake this kind of examination. For a less intimate procedure such as nail scrapings, this can be conducted by a local SOCO. The waiting time for a complainant can vary depending on circumstances that include where the FMO is travelling from, time of day / night and the workload at the hospital (to have them triaged). Often the wait is several hours, sometimes longer for a complainant at a hospital. The information generally conveyed to a medical practitioner prior to an examination is based upon what the complainant and any witnesses have disclosed. This may include times that alleged offending occurred, location, nature of relationship with suspect and injuries.

(g) Once a SAIK is completed, all vials and packages are sealed and labelled by the FMO before being returned into a tamper proof bag and being provided to the investigator. The Investigator then takes the SAIK back to their local station, creates an electronic barcode and lodges the SAIK in a secure room as per policy (OPM 4.2.4) and storage instruction (temperature-controlled) that appears on the front of the SAIK. The SAIK is then electronically signed out in QPRIME by the investigator, provided to local Scenes of Crime where it is photographed and provided with a barcode from the Forensic Register. The SAIK is then transported to Queensland Health Forensic Scientific Services ("FSS') and lodged for analysis. Ultimately, the responsibility for this process lies with the Investigator but can be undertaken by any police officer. A copy of the relevant part of the OPM is attached and marked **'Exhibit 2'.**

Brendan Patrick Francis Blyth Witness

7. The circumstances in which a complainant / witness will be placed in a protective suit include when it can be identified that they have had direct contact with an offender and that there might be forensic evidence on their clothing or on their person. This is generally gathered from versions provided, CCTV etc. It would most commonly be deployed in cases where the complainant and alleged offender were unknown to one another.

8. Clothing will be collected from a suspect in circumstances where it is identified that there is contact (DNA), some sort of fluid (blood) or an aspect that needs corroboration (damage to clothing, description – not DNA related). The clothing will generally be collected by the Investigating Officer and placed as separate items into paper bags. On occasion, depending on the nature of the investigation (homicide), Scenes of Crime or Scientific may undertake the removal of the clothing.

9. I am unsure of the ordering process for a SAIK, but believe it is undertaken by the station administration officer, as required. I believe the supplier for the SAIK is Tamper-Evident.

10. When received by the QPS, a SAIK is fully compiled. The content is contained in the unsealed and open tamper proof bag and include 5 dry swab collection containers, a QLD Government sexual assault toxicology form (in a snap lock bag) and a drop sheet with relevant instructions (in a snap lock bag). If the sexual assault is within 72 hours, a blood and urine kit is also required.

11. There are often delays in transporting a SAIK to FSS. These often revolve around the availability of the Investigator (days off after incident, night shift, other investigations). This is where it is important for the Investigator to brief other members to assist. I am unable to provide a proportion of cases where it takes longer than two weeks for the samples to reach FSS. In some instances, a complaint might be withdrawn the next day or a complainant cannot be found and without a statement, the matter may not be progressed, especially if a DNA reference sample has not been obtained from the complainant. I am not aware of any particularly long delays regarding the transportation of a SAIK to FSS.

12. A DNA reference sample is taken by the Investigator by way of consent. This should be taken immediately after the SAIK or when a statement is being provided. In cases of sexual assault, where a SAIK is to be submitted, a reference sample is always taken.

[redacted]

Brendan Patrick Francis Blyth Witness

In other non-sexual assault investigations, a reference sample will be considered and taken if the analysis is likely to show the complainant's DNA (blood at a scene, on clothing or known physical contact with the suspect). A reference sample is generally taken at a police station.

13. The Operational Procedure Manual ("OPM") specifically s2.6.3 and s2.25.6 govern the procedure and policy to be undertaken in respect to the collection of SAIKs and reference samples. This a direct order for investigators to comply with. A copy of the relevant parts of the OPM are attached and marked **'Exhibit 3' and 'Exhibit 4'.**

14. Personally, I am involved in approximately 8-12 instances each year that require the administration of a SAIK. Within the last 12 months, due to my relieving as an ADSS, this has been significantly less.

15. The processes outlined above have always been the same. The SAIK was previously sealed, but I cannot recall when this changed over. I believe that, in the past, there was a male and female SAIK. Now the SAIK is universal.

16. I cannot comment on cases involving children under 14 as I have not worked in this area. I am aware that a specialist FMO for children would undertake any relevant procedures.

Forensic medical examinations of suspects/accused persons

17. The forensic medical examination of a suspect/accused person is far less common than that of a complainant. This is generally because the suspect is seldom in custody at an early enough stage for an examination of this nature to be of value.

18. A forensic medical examination of a suspect / accused person will be considered in circumstances where the alleged offence has been recently committed (generally within 72 hours, sometimes up to one week). Advice will often be sought from the FMO in this instance to identify if there is any evidential value in the examination. This could also include if the complainant and suspect are known to each other and previously engaged in a consensual act prior to an alleged offence.

19. The necessary authority is found under the PPRA, chapter 17. The investigator or police officer may apply to a Magistrate for an intimate, non-intimate forensic procedure order

or both. Some examinations can also be done with consent however for an intimate examination, my preference is to always have an order.

20. A forensic medical examination of an accused person / suspect is generally undertaken at a police station or watch house. I have previously taken an accused to the FMO office in Brisbane City and to the Gold Coast Hospital for this purpose.

21. The examination must be conducted by a 'qualified person'. For an intimate / non-intimate forensic procedure, a qualified person is a Doctor (FMO) or forensic nurse. To undertake this examination, the FMO is contacted on the listed landline during hours and the on-call mobile outside of hours.

22. For an intimate procedure, a standard SAIK is used as I believe they are now universal. The FMO is briefed on the known circumstances which assists in making the correct decision surrounding the examination required.

23. I am yet to have a person refuse to cooperate with a court order but have had a situation where initial consent was revoked when the examination was further explained, and an order was then sought, approved and complied with. There is power to use force against an individual s517(4) of the PPRA which could be considered to exercise this power / order.

24. If a forensic medical examination of a suspect is successfully completed, samples are provided to the Investigator and lodged at a local property point in compliance with policy. Much like a SAIK for the complainant, if the samples need to go to FSS, they are photographed and given a forensic barcode and transported to FSS for analysis.

25. There can be delays in transporting forensic samples to FSS. These often revolve around the availability of the Investigator (days off after incident, night shift, other investigations). This is where it is important for the Investigator to brief other members to assist. I cannot provide a proportion of cases where it takes longer than two weeks for the samples to reach FSS.

26. A DNA reference sample from the suspect / accused is taken by the Investigator. If proceedings are commenced, the reference sample is taken during the charging process (generally at a watch house, recorded on DVD) or if no charges have been preferred by way of consent. If there is no charge forthcoming and no consent, a court order can be applied for.

[redacted]

Brendan Patrick Francis Blyth Witness

27. The OPM, s2.25.4 outlines the taking of DNA samples for when proceedings have been commenced. Consent should always be considered first where a proceeding has not been commenced but failing that, an order can be sought. A copy of the relevant part of the OPM is attached and marked **'Exhibit 5'.**

28. I do not have recent experience with forensic medical examinations of suspects and have been involved in less than ten forensic medical examinations of that kind in my entire career. This is due to the reasons outlined above and most commonly, not having a suspect in custody in time.

29. To my knowledge, the processes have not changed significantly in this space since I commenced work in plain clothes.

Results

30. When an identification has been made from a forensic medical examination, the Investigator is tasked from the DNA unit on QPRIME. Generally, this is an FYI (For Your Information) task attached to the relevant occurrence under investigation. To my knowledge an Investigator is not directly notified by a task if there is no DNA identification. When a DNA result is returned from FSS (either an identification or non-identification) the DNA sample management unit create an electronic forensic supplementary report outlining this. If an Investigator was waiting for a DNA analysis result, they would generally hold the file on their electronic work list and would become aware when they reviewed the file. A review would generally occur every 28 days as that is when the bring up date is set to become overdue.

31. My understanding of 'no DNA detected' is that an item was sub sampled by SOC and that the analysis of the sample failed to produce DNA sufficient for comparison on the database or to the reference samples. Prior to the establishment of the Commission of Inquiry, I was unaware it was possible to obtain a partial or full profile from a sample which initially returned the result 'no DNA detected' and that an investigator could request FSS conduct further testing.

32. My understanding of 'DNA insufficient for further processing' is that a DNA sample was obtained but is to complex (multiple contributors) to isolate into a sample that can be matched to a reference or interpreted further. Prior to the establishment of the

Commission of Inquiry, I was unaware it was possible to obtain a partial or full profile from a sample which initially returned the result 'DNA insufficient for further processing' and that an investigator could request FSS conduct further testing.

33. I have seen mixed profile results which can sometimes be separated into contributors and sometimes not.

34. In some investigations, DNA results are provided to the complainant. Generally, these are not used and should not be used as the catalyst to proceed with a criminal complaint. Perhaps a complainant might want vindication of an allegation and the DNA result might provide this, even if the complaint is not current. I have mentioned to complainant's previously that DNA was located and matched but not said who to.

Other issues

35. Sub sampling does occur in our local area, generally by SOC in a class 2 laboratory (I believe that it what it is called). There is a class 2 lab here at Logan SOC.

36. Generally, FMO's / medical practitioners are very helpful and willing to assist. Often, they are travelling from the Gold Coast at odd hours. Sometimes there are lengthy discussions regarding the requirement for an examination but ultimately, if the Investigator wants a SAIK undertaken, it will be done. As outlined previously, we can call the office during business hours and each fortnight. In addition, the on-call roster with mobile numbers is emailed to police.

37. The current SAIK model, as outlined in OPM 2.6.3, is straight forward, and I am yet to have any issue with it.

38. While I do not have much experience with the just in case kits, I think they are a good idea. I am only aware of one Just in Case referral. In that case, the complainant attended the hospital and prior to this exam, decided to make a formal complaint so I attended and took possession as per normal procedure.

39. In relation to current processes for collecting biological material for forensic DNA testing, sub samples from clothing and bedding will generally not be sent for DNA analysis until the SAIK has returned a result. This can be frustrating and can hinder an investigation as often decisions need to be made in a timely manner. The need to have

these sub samples analysed needs to be a case-by-case basis but it does seem somewhat restricted.

40. The current turnaround to get a result is over 12 weeks. It can cause a complainant angst as sometimes police are waiting on this result to progress the investigation.

Notice number: 2022/ 00187

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Brendan Blyth

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Thursday 22 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 14th day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00187

Schedule of topics for statement

Detective Sergeant Brendan Blyth

1. State your full name, current position/title and place of work.

Experience and current position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained (if any).

3. Detail your work history.

4. Attach a current CV.

5. Identify the duties/responsibilities of your position.

   (a) Include a description of the geographical area you work in, and identify who you report to and who (if anyone) reports to you.

   (b) Include a description of what types of crime you investigate.

Forensic medical examinations of complainants and witnesses

6. Detail your involvement in the conduct of forensic medical examinations on complainants and witnesses, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

   (a) Identify the types of alleged offences for which you would consider organising a forensic medical examination.

   (b) Identify the different ways you become notified of a person making a complaint about an offence for which you would consider a forensic medical examination appropriate.

   (c) Identify where the forensic medical examinations are conducted, and, if this includes a hospital, identify what area/rooms in a hospital are typically used. What advance contact is made with hospitals/other locations when you are intending to bring a complainant there.

   (d) Explain how the complainant is transported to the place where the forensic medical examination will be conducted, and who transports them.

(e) Identify who supplies the sexual assault investigation kit (**SAIK**) for the examination. Where are SAIKs stored? Identify if any other equipment is used in the examination, and if yes, identify who provides that equipment.

(f) Explain what happens at the location of the forensic medical examination, including who the SAIKs are provided to. Who conducts the examination (and identify if this varies between locations within your area of operation)? Include an explanation of how long a complainant typically waits at a hospital/other location for the examination to be conducted. Explain what information you typically convey to medical practitioners conducting the examination.

(g) Once the forensic medical examination is completed, what happens to the SAIK? Explain the process from when the medical practitioner finishes the examination to when the SAIK is delivered to Queensland Health Forensic and Scientific Services (**FSS**). Identify any property points at which SAIKs are stored, and the method(s) of transportation. Identify who is in charge of seeing that the SAIK is transported successfully.

7. Explain the circumstances in which you place the complainant/witness in a protective suit (that is, a suit or covering that is intended to protect the evidential integrity of samples that may be collected from the complainant/the clothing they are wearing).

8. Explain the circumstances in which clothing that an accused is wearing will be collected for potential submission for forensic DNA testing. In those circumstances, at what point and in what location is the clothing collected from the complainant? Is the clothing collected by an investigating officer, scenes of crime officer, medical practitioner or someone else?

9. Who supplies SAIKs to the QPS stations in the area in which you work? Who is responsible for placing orders for SAIKs?

10. Describe the appearance of a SAIK when it is received by QPS. Is it already fully compiled/put together, or do QPS stations in your area receive individual components of the SAIK and put them together? If the latter, identify whose role it is to put the SAIKs together.

11. In your experience, once a forensic medical examination is completed, how long does it typically take for the SAIK to reach FSS for forensic testing? As part of your answer, addressing the following.

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for a SAIK to reach FSS after it has been administered.

(c) Describe any instances where there have been particularly long delays.

12. Identify who takes a reference sample from the complainant/witness? Explain when and in what circumstances that reference sample is typically taken.

13. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

14. Provide an estimate of the number of cases each year that you are involved with investigating which also involve the administration of a SAIK.

15. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

16. If any of the processes detailed above vary in the case of child complainants/witnesses, including those aged under 14, identify and explain those differences.

Forensic medical examinations of suspects/accused persons

17. Detail your involvement in the conduct of forensic medical examinations on suspects and accused persons, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

(a) Identify the circumstances leading up to the taking of intimate samples from an accused person, including any necessary authority that must first be obtained.

(b) Identify where the forensic medical examinations are conducted.

(c) Who conducts the examination (and identify if this varies between intimate and non-intimate examinations)? How are they contacted/organised to attend?

(d) What equipment do they use – is it a SAIK? If it is a SAIK, who supplies the SAIK?

(e) Explain what happens at the location of the forensic medical examination, including who the SAIKs/equipment are provided to. Explain what information is typically conveyed to medical practitioners conducting the examination.

(f) What happens if the accused person refuses to consent or cooperate with the examination, even if a court order has been obtained authorising the examination/procedure?

(g) Once the forensic medical examination is completed, what happens to the SAIK/samples? Explain the process from when the medical practitioner finishes the examination to when the samples are delivered to FSS. Identify any property points at which the samples are stored, and the method(s) of transportation.

18. In your experience, once a forensic medical examination is completed, how long does it typically take for the samples to reach FSS for testing? As part of your answer, address:

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for the samples to reach FSS after the examination has been conducted?

19. Identify who takes a reference sample from the accused? Explain when and in what circumstances the reference sample is typically taken.

20. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

21. Provide an estimate of how many cases per year you are involved with investigating that involve a forensic medical examination (or similar) of an accused.

22. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

Results

23. Are you notified when the samples from a forensic medical examination have been tested, and are you notified of the results? If yes, explain how you are notified.

24. What is your understanding of the result '*No DNA detected*' (or similar)? If you have not seen this result-type before, confirm same.

25. What is your understanding of the result '*DNA insufficient for further processing*' (or similar)? If you have not seen this result-type before, confirm same.

26. What other type of results do you recall receiving? What is your understanding of those results?

27. Are the DNA results of the examination passed onto the complainant/witness? If yes, in your experience, does this have an effect on the complainant's decision to proceed with a criminal complaint? If so, explain how.

Other issues

28. Does sub-sampling of items suspected to contain biological material occur within your area, or does that occur at a QPS laboratory elsewhere?

29. If not already discussed above, outline any difficulties you have had in finding medical practitioners available and/or willing to conduct forensic medical examinations? If yes, provide details, including what you had to do to find a suitable medical practitioner.

30. Identify and detail any of your concerns with, or criticisms of, the current Queensland SAIK model, the just-in-case kits or the current processes for collecting biological material for forensic DNA testing in sexual assault matters (if not already discussed). Attach any supporting documents.

EXHIBIT 2

4.2.4 Lodging property

Where members are required to lodge property they should after issuing a property receipt:

(i) generate a QP 0760: 'Property Receipt' from the QPRIME entry, if not already complete;

(ii) if possible and safe place the property in a suitable property bag;

(a) seal the bag;

(b) enter the following information on the bag:

- the officer's name, rank, registered number and station;
- the date and time of taking possession of the property;
- for property that consists wholly or partly of drug matter a full and complete description of the drug matter; and

(c) sign and date the seals

(d) if applicable:

- the name and address of the person from whom the property was taken; and
- invite the person from whom the property was taken to sign the bag at an appropriate position on the bag; and

(iii) if the property:

(a) is too large to fit into a property bag; or

(b) possesses features that would make storage in a property bag undesirable and unsafe,

seek advice from the officer in charge of the property point on the most suitable method of containing or wrapping the property; and

(iv) hand the property to the relevant property officer or lodge the property at a property point in accordance with local procedures.

EXHIBIT 3

2.6.3 Sexual offences

CIB and CPIU OIC responsibilities

The OICs of CIBs and CPIUs are responsible for undertaking the role of the sexual violence liaison officer (SVLO) as outlined in the section: 'Sexual violence liaison officer (SVLO) responsibilities' below.

First response officer responsibilities

Where first response officers identify a sexual offence, they should consider contacting the relevant district SVLO to assign an investigating officer in line with local arrangements and the responsibilities of an SVLO contained in this section.

Additional responsibilities of first response officers for sexual offences include:

(i) ensuring the safety and welfare of the victim (see Charter of Victims' Rights of the *Victims of Crime Assistance Act* (VOCAA) and s. 2.12.1: 'Victims of Crime Assistance Act' of this chapter);

(ii) identifying any person to whom the victim may have stated the complaint to following its occurrence, i.e. preliminary complaint and any other possible witnesses;

(iii) obtaining personal particulars from the victim and identifying the offence to be investigated, i.e. rape, sexual assault;

(iv) completing a brief account of the occurrence involving the offence complained of, including location, time, injuries, conversation, indicia, sequence of events, etc.;

(v) obtaining sufficient information which would assist in identifying the suspect(s), including as appropriate:

(a) ascertaining if the suspect(s) is known to the victim or any witnesses;

(b) obtaining an accurate description of the suspect(s);

(c) identifying if any CCTV or security surveillance camera vision is available (see s. 2.4.11: 'Video and photographic evidence recorded during the commission of offences' of this chapter);

(d) obtaining any information which will assist investigators in locating and identifying the suspect(s); and

(e) arranging for a broadcast of suspect(s) where necessary; and

(vi) not asking leading questions of the victim in relation to the complaint.

Investigating officer responsibilities

Additional responsibilities of investigating officers for sexual offences include:

(i) providing an objective account of the investigative process and judicial process to ensure the victim is fully informed of the process;

(ii) discussing with the victim their needs and concerns in relation to the investigative process including whether the victim has any preference in relation to the gender of any officer to be present during the investigation. Preferences should be complied with where possible;

(iii) providing the opportunity for the victim to have a support person present during the various stages of the investigation, including taking the victim's statement (see also s. 7.6: 'Interview with a child or person with an impairment of the mind' of this Manual) and during any medical examinations. A support person may include an employee from a sexual assault support service. Victims should be advised that witnesses or potential witnesses may not act as support persons;

(iv) fully informing the victim of the importance of retaining forensic evidence. However, officers should not discourage victims from washing bodily fluids from the vaginal or anal areas due to the risk of infection from potentially life-threatening diseases such as HIV;

(v) arranging for a medical examination by a forensic medical officer (FMO), doctor or forensic nurse;

(vi) providing the examining medical practitioner with a Sexual Assault Investigation Kit (SAIK);

(vii) taking possession of the completed SAIK and ensuring it is;

(a) allocated a forensic exhibit number;

(b) entered onto the forensic register by a forensic officer; and

(c) delivered to Queensland Health Forensic and Scientific Services (FSS) (see s. 2.19.6: 'Forensic Services Group (FSG)' of this chapter);

(viii) where additional biological evidence is taken from the complainant, only the SAIK is to be delivered to FSS. The biological samples are to be:

(a) retained by the investigating officer whilst awaiting the results of SAIK analysis; and

(b) submitted for analysis, if the analysis fails to identify the offender;

(ix) ensuring a DNA reference sample is collected from the complainant:

(a) at the same time as the SAIK; or

(b) in offences involving oral rape, 48 hours after the time of the offence; and

(c) using a DNA 'Mouth Sample Kit – QPS'; and

(d) completing a:

- QP 0442: 'DNA Sample Particulars Form'; and
- QP 0535B: 'Signed consent for the taking of sample for DNA Analysis from victim/complainant/witness',

(see s. 2.25.6: 'Obtaining samples for DNA analysis from a victim/complainant/witness' of this chapter);

(x) collecting DNA reference samples from witnesses/husband/partners for the purpose of assisting analysts with the interpretation of complex mixed DNA profiles and improving the timeliness of results;

(xii) prior to obtaining a DNA sample:

(a) ensure the victim is fully aware of the procedures involved in the medical examination and discuss the evidentiary benefit to have such examination;

(b) explain to the victim written and signed consent should be given for:

- any clinical or forensic examination;
- the collection of specimens by the doctor;
- the release of any specimens taken or relevant laboratory results; and
- the taking of necessary photographs;

(c) provide the victim the option of having a support worker present during the examination. The examination should be directed to establishing whether the victim had been penetrated to any extent or sexually assaulted. All possible evidence of the commission of the crime should be obtained from the examination of the victim including signs of injury corroborating lack of consent (these signs may consist of bruises, lacerations, scratches, etc. on any part of the body, including the thighs and genital area).

Note: there is no legal requirement for a police officer to be present during a medical or forensic examination. Officers may however advise the victim they or medical staff may request an officer to be present;

(d) be aware of the provisions of s. 93A: 'Statement made before proceeding by child or person with an impairment of the mind' of the *Evidence Act* (EA) which deals with the admissibility of statements by a child or an intellectually-impaired person. Wherever possible, statements in this format should be obtained by officers who have successfully completed an ICARE (Interviewing Children and Recording Evidence) course; and

(e) where possible, obtain photographs of the victim which illustrate any injuries or other evidence;

(xiii) ensuring the victims clothing and underclothing which may assist in the investigation (e.g. bodily fluids such as saliva, semen or blood) are collected as per s. 2.25.20: 'Procedure for items of clothing worn by a complainant' of this chapter;

(xiv) arrange for the examination of the crime scene by forensic personnel as soon as possible, ensuring the scene is not disturbed until the examination is completed. Items such as discarded clothing, bed linen etc. which may provide forensic evidence to support the investigation are collected in accordance with s. 2.25.19: 'Procedure for items left at scenes of crime' of this chapter;

(xv) making, if appropriate, a detailed plan of the scene. Officers trained in accident investigation procedures may be able to assist;

(xvi) obtaining a detailed statement from the victim. In doing so officers should:

(a) consider the provisions of Chapter 6: 'Persons who are vulnerable, disabled or have cultural needs' of this Manual;

(b) consider the provisions of s. 93A of the EA (Admissibility of statements by a child or an intellectually-impaired person). Statements in this format should, where possible, be taken by officers who have completed an ICARE course;

(c) inquire if a support person is required during the interview, e.g. a friend, family member or a community support worker;

(d) ensure if the victim has a disability/impairment, a representative from the appropriate agency or a support person, where available, is present during the interview;

(e) ensure, where the victim is not conversant with the English language, where available, an appropriate interpreter is present (see s. 6.3.7: 'Interpreters' of this Manual);

(f) consider the use of a Queensland Intermediary Scheme (QIS) intermediary to assist witnesses with communication difficulties during the interview process for child sexual offence investigations (see s. 7.6.3: 'Procedures for interviewing a child' of this Manual);

(g) acknowledge the impact of sexual violence can be different for everyone and ensure the victim is comfortable prior to commencing the statement;

(h) create an environment of trust with the victim;

(i) conduct the interview in a private quiet area;

(j) inform the victim of the investigative processes which will take place;

(k) advise the victim of the format of the interview and how it will be conducted;

(l) answer and clarify any questions asked by the victim;

(m) take care when interviewing the victim. The investigating officer is to be mindful the victim may subconsciously try to fill in gaps in memories and become suggestible when answering questions;

(n) record accurately the victim's responses;

(o) ensure the statement is signed by the victim in accordance with the *Justices Act* or *Oaths Act* provisions;

(p) keep all transcripts secured and together;

(q) ensure a copy of the statement is given to the victim;

(r) advise the victim that if the matter proceeds to court, the legal representative for the defence will be receiving a copy of the statement; and

(s) advise the victim that if the matter proceeds to court, they may be afforded rights granted to a special witness, e.g. the pre-recording of evidence, see s. 21A: 'Evidence of special witnesses' of the EA;

(xvii) keeping the victim fully informed on what is happening throughout the investigation;

(xviii) comply with the Charter of Victims' Rights of the VOCAA (see s. 2.12: 'Victims of crime' of this chapter);

(xix) if necessary, arranging for photographs to be taken of the crime scene, any exhibits, and photographs of any injuries received by the victim;

(xx) collating, labelling and securing all exhibits in accordance with the provisions of Chapter 4: 'Property' of this Manual;

(xxi) maintaining a log of events to assist in the management of the investigation;

(xxii) obtaining statements from any possible witnesses;

(xxiii) obtaining a statement of preliminary complaint without asking leading questions;

(xxiv) if the identity of the suspect is not known, arranging a Comfit and ensure the completed Comfit is attached to the relevant QPRIME occurrence (see s. 2.11.8: 'Comfit identification (Computer Generated Images)' of this chapter);

(xxv) if the identity of the suspect is known, locating and interviewing as necessary;

(xxvi) conducting any necessary searches to obtain any evidence from the suspect or from any other place;

(xxvii) once a statement has been taken from the complainant, forwarding a notification task within the relevant QPRIME occurrence to the Child Abuse and Sexual Crime Group, Crime and Intelligence Command for intelligence purposes; and

(xxviii) offering a Police Referral for support services and financial assistance. Victims Assist Queensland can assist with providing counselling, medical costs, security to place of residence, clothing and bedding.

Sexual violence liaison officer (SVLO) responsibilities

Additional responsibilities of the OIC of CIBs and CPIUs include undertaking the role of SVLO. This responsibility relates to Service responses to victims over the age of consent (16 years or older) and includes historical sexual offence matters.

Where a sexual violence offence is reported to the Service, the SVLO is to ensure:

(i) the first point of contact for the victim is with an appropriately trained investigator following initial advice of a reported sexual violence offence. This process is to be established by the SVLO based on local resourcing arrangements;

(ii) all interactions between police and victims are recorded in the QPRIME Occurrence Enquiry Log (OEL). The SVLO should monitor occurrence OELs to ensure all contact is recorded;

(iii) that at all stages throughout the investigation, and where operationally practical and appropriate, the victim is afforded the opportunity to have a support person present during all in-person contact with an investigating officer;

(iv) during the initial reporting of a sexual violence offence, the discussions around the proposed investigation process focus on ensuring the victim can access the justice process. Any undue emphasis on negative aspects of the process or to withdraw is unacceptable. This does not prevent an investigating officer from providing an honest and transparent account of the investigation and judicial processes, with the aim of ensuring the victim can make an informed decision;

(v) a referral to an appropriate support service is offered to all sexual violence victims;

(vi) where a matter cannot be progressed to prosecution, advice is provided in person to the victim by the investigating officer (where practicable);

(vii) a withdrawal of complaint is not formally progressed from the victim within 14 days from the date the offence is reported to the Service unless there are extenuating circumstances. If a withdrawal of complaint is to be obtained within 14 days, it should only occur following consultation and approval by the SVLO;

(viii) additional support and referrals are offered to a victim who insists on withdrawing within the first 48 hours after making a complaint;

(ix) all withdrawals of complaints relating to sexual violence offences are electronically recorded. Any recording is to cover the entirety of the interaction with the victim not just the completion of the withdrawal of complaint documentation;

(x) a monthly review of withdrawal of complaints is conducted with an entry made on the OEL in QPRIME;

(xi) a random audit of sexual offence investigations within the associated district is conducted for the purpose of quality assurance;

(xii) a local escalation process is established to ensure the SVLO is the first point of contact should a victim or sexual assault support service employee wish to raise an issue/s concerning the response provided by the investigator and/or the Service; and

(xiii) relationships with the local sexual assault support services are built and maintained and information is shared between agencies to improve the response to victims.

Where appropriate the SVLO can delegate some of the above responsibilities to appropriately trained officers.

Regional crime coordinator responsibilities

ORDER

In cases of rape, serious or complex sexual assaults the regional crime coordinator is to notify the Detective Inspector, Child Abuse and Sexual Crime Group, Crime and Intelligence Command, forthwith.

Drug facilitated sexual assaults

First response officers and investigating officers are to always consider the possibility of drugs being used to facilitate the commission of sexual assaults. In cases where it is suspected drugs may have been used, officers are to:

(i) ensure appropriate testing is conducted at the crime scene to maximise the chances of detecting these substances. The government medical officer or doctor conducting the examination is to be advised, so the appropriate blood and/or urine samples are correctly obtained. The decision to test for these remains a clinical one which is made by the victim in consultation with the doctor;

(ii) advise the victim of the need to examine the clothes they were wearing when both the drug was administered, and the sexual assault occurred. These clothes may contain traces of the drug used by the offender, which may provide corroboration of the victim's allegations. Items seized are to be placed separately into appropriate exhibit bags, to avoid cross transfer of evidence;

(iii) take care when interviewing the victim. The investigating officer is to be mindful the victim may subconsciously try to fill in gaps in memories and become suggestible when answering questions; and

(iv) consider locating potential witnesses in relation to these crime scenes.

Crime scenes may include the premises where the drug may have been administered to the victim or where it has been stored and/or prepared by the suspect.

Officers should search crime scenes for:

(i) possible drugs that may have been administered, including prescription medication;

(ii) devices used to administer the drug, syringes, eye droppers etc.;

(iii) receptacles and packaging used to store the drug;

(iv) in the case where the crime scene is a licensed premise, any CCTV footage; and

(v) any property of the victim the suspect may be in possession of.

Response to Sexual Assault Guidelines

Guidelines for responding to adult victims of sexual assault are available on the Child Abuse and Sexual Crime Group 'Resources' web page on the Service Intranet.

Officers are to:

(i) refer to the 'Response to Sexual Assault' Guidelines when dealing with victims of rape and sexual assault; and

(ii) ensure information, including local support agencies, is made available to victims of rape and sexual assault. Queensland Health maintain a list of support agencies on their 'Sexual Assault' webpage.

Online sexual assault reporting for adults

Adult members of the public may report a sexual assault online through the QPS Internet (https://www.police.qld.gov.au/units/victims-of-crime/support-for-victims-of-crime/adult-sexual-assault).

Victims may use the online sexual assault reporting form to report a sexual assault to police as an alternative way to making a report at a station or over the phone.

If a victim wishes to report a sexual assault, but does not want to make a formal complaint or they want to remain anonymous, the Alternative Reporting Option form located on the QPS Internet can be used.

Adult Sexual Assault Resource package

The Adult Sexual Assault Resource package is an on-line resource that provides alternative reporting options as well as detailed information relating to adult sexual assault. The package is available on the Service internet website and has been designed to be used by members of the Service, victims, sexual assault support counsellors, government and non-government service providers as well as members of the public. The package includes information on:

(i) making a complaint of sexual assault;

(ii) the investigative and court processes;

(iii) alternative reporting options; and

(iv) appropriate support services.

The Adult Sexual Assault Resource package is managed by Child Abuse and Sexual Crime Group, CIC.

Witness Intermediaries

Officers in the Brisbane and Cairns District and Supreme Court jurisdictions who are investigating allegations of child sexual offences and have prosecution witnesses who may have communication difficulties should consider the services of the QIS pilot program. For policy in relation to QIS eligibility and requesting process see s. 7.6.3 of this Manual.

Intermediaries can assess a witness with communication difficulties to advise police on the best way to interview the witness and ensure that the witness understands police questions and police understand the witness's answers.

EXHIBIT 4

2.25.6 Obtaining samples for DNA analysis from a victim/complainant/witness

POLICY

The provisions of Chapter 17: 'Forensic procedures' of the PPRA relating to obtaining forensic procedure consent and forensic procedure orders generally do not apply to persons who may be:

(i) a victim of crime;

(ii) a complainant; or

(iii) a witness to whom s. 448: 'What pt 2 provides' of the PPRA does not apply.

Where a victim/complainant or relevant witness consents to the taking of a sample for DNA analysis, officers are to:

(i) explain the procedure that will be performed to obtain a sample (i.e. mouth swab, hair sample, blood sample or medical examination);

(ii) advise the person they may limit the use of their sample for use in a particular investigation;

(iii) provide the person with a QP 0535A: 'Statement of Explanation for the Taking of a Sample for DNA Analysis from a Victim/Complainant/Witness' (available on QPRIME);

(iv) ensure three copies of the QP 0535B: 'Signed Consent for the Taking of a Sample for DNA Analysis from a Victim/Complainant/Witness' (available on QPRIME) are signed by:

(a) where the person is an adult and is not a person with impaired capacity, by the adult;

(b) where the person is a child at least 14 years, by the child and a support person;

(c) where the person is a child under 14 years, by the parent/guardian of the child and, if appropriate, by the child

(d) where the person is a person with impaired capacity, by the person and a parent/guardian/support person.

For the following distribution:

(a) a copy of consent form to the victim/complainant/witness;

(b) a copy of the signed consent form to the DNA unit with the DNA sample; and

(c) retain a copy for the investigation file.

EXHIBIT 5

2.25.4 DNA samples when proceedings started against an adult

POLICY

When an officer starts or continues a proceeding against an adult for an indictable offence by arrest, or starts a proceedings by notice to appear or complaint and summons the officer is to obtain a DNA sample from the person under the provisions of s. 481: 'Taking DNA sample if proceeding started or continued against an adult by arrest, notice to appear or complaint and summons etc.' of the PPRA at the time the person is arrested or served with a notice to appear or complaint and summons unless:

(i) a permanent DNA record already exists in relation to the relevant person; and

(ii) the DNA sample will not be required for evidence in relation to the current indictable offence.

(See s. 2.25.2: 'When DNA samples may be taken' of this chapter.)

When obtaining a DNA sample from an adult under s. 481 of the PPRA, the officer is to also obtain the persons fingerprints to ensure the accurate identification of the person. This is necessary for the purpose of recording the person's DNA profile as a permanent DNA profile on the DNA database.

Where an officer intends to obtain a DNA sample from an adult under s. 481 of the PPRA the officer is to detain the person for the time reasonably necessary to take a DNA sample from the person. If necessary, the person may be taken to a police station or police establishment, hospital or another place the sampler considers appropriate in the circumstances for the purpose of obtaining the DNA sample.

Where a DNA sample has not been taken from a person at the time of arrest and an officer later becomes satisfied performing a forensic procedure on a person suspected of committing an indictable offence may provide evidence of the commission of the offence, (e.g. taking a DNA sample) the officer is to make an application for a forensic procedure order under s. 458: 'Application for forensic procedure order' of the PPRA (see s. 2.23.2: 'Forensic procedure orders' of this chapter). (Note – s. 484: 'Taking DNA sample from adult before court' of the PPRA is a discretionary power of the court to make an order for the taking of a DNA sample and does not provide an avenue for an officer to make an application for a court order under that section.)

PROCEDURE

Where a prosecutor is presenting a matter and the court satisfies itself that it is reasonably necessary to order the taking of a DNA sample for DNA analysis from a person under s. 484: 'Taking DNA sample from adult before court' or s. 485: 'Taking DNA sample after finding of guilt' of the PPRA, the prosecutor should:

(i) inquire when and where a DNA sampler will be available to take the DNA sample;

(ii) make submissions to the court on whether, in light of the person's antecedents/criminal history and the availability of a DNA sampler, it would be more appropriate to order either the:

(a) detention of the defendant to enable a DNA sampler to take a DNA sample for DNA analysis; or

(b) defendant to report to a police officer at a stated police station or police establishment within 7 days, to enable a DNA sampler to take a DNA sample for DNA analysis; and

(iii) ensure a copy of any order made by the court is provided to either:

(a) the officer detaining the person; or

(b) the officer in charge of the police station or police establishment where the person is to report;

to enable a DNA sample to be taken for DNA analysis as appropriate. The officer taking the DNA sample is also to initiate a QPS IDP/DNA Attendance Notice task workflow from the occurrence.

POLICY

Where a court has ordered the detention of a person to enable a DNA sampler to take a DNA sample for DNA analysis, officers in charge of stations/establishments are to ensure a DNA sample is taken upon the request of a prosecutor.

Where a court has ordered a person attend a nominated police station or police establishment for a DNA sample to be taken from an adult before that court, the officer in charge of the nominated station or establishment is to ensure that the sample is taken and an appropriate entry made in QPRIME that the sample was taken by issue of a court order. If a QPS IDP/DNA Attendance Notice Task Workflow has not been started, then this is to be initiated and completed.

An officer taking a DNA sample from an adult ordered to attend a nominated police station or police establishment by a court so that a DNA sample can be taken from that person, is to require that person to state their full name and address an evidence of the correctness of thereof by producing personal identification pursuant to s. 40: 'Person may be required to state name and address' of the PPRA, and is to ensure, as far as is practicable, that the person named in the order is the person attending. The copy of the court order is to be filed at the establishment where the DNA sample was taken.

Where a person contravenes an order made under s. 484: 'Taking DNA sample from adult before court' or s. 485: 'Taking DNA sample after finding of guilt' of the PPRA, the officer in charge of the nominated station or establishment is to assign the matter to an appropriate officer for further investigation, and where appropriate for the commencement of proceedings against the person under s. 484(3) or s. 485(3) of the PPRA.

Where a person is attending or has attended to have a forensic procedure conducted is not the person named in the order, and the person is still present, the officer responsible for conducting the forensic procedure is to investigate with a view to commencing a prosecution under s. 790: 'Offence to assault or obstruct a police officer' of the PPRA and any other relevant offences and report the QPRIME occurrence through Policelink (see s. 1.11: 'QPRIME – Policelink entered occurrences' of this Manual).

In cases where the person attended to have a forensic procedure conducted is later found not to be the person named in the order, the officer who originally applied for the order is to investigate with a view to commencing a prosecution against s. 790: 'Offence to assault or obstruct a police officer' of the PPRA and any other relevant offences and report the QPRIME occurrence through Policelink (see s. 1.11 of this Manual).

Additionally, a copy of the order is to be filed with the station copy of the occurrence report or Court Brief (QP9) submitted in relation to the offence against s. 790 of the PPRA. The original order is to be returned to the investigating officer for inclusion in the brief of evidence.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF MARTIN KENNETH FORREST

I, **Martin Kenneth Forrest,** of 42 Queen Street, Roma state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

Experience and current position

1. I am a Detective Sergeant and currently performing duties as the Officer in Charge ("OIC") of the Roma Criminal Investigation Branch, Queensland Police Service ("QPS").

2. I do not have a current CV. Prior to joining QPS, I was a qualified Electrical Mechanical Tradesman and Contractor. I worked in various locations throughout Queensland and the Northern Territory. I worked for various private and government organisations and also operated my own electrical contracting business.

3. In February 2008, I commenced working with the QPS at the Brisbane Academy and completed my first year of policing at Gympie Police Station.

4. In 2010, I worked in General Duties at the Murgon Police Station before obtaining a position in Murgon Child Protection and Investigation Unit ("CPIU"), Gympie District Detectives.

5. From 2011 to 2014, I was in the Murgon CPIU before obtaining a position as Detective Senior Constable, Officer in Charge, Roma CPIU in 2014. I worked here from 2014 to 2016.

6. In 2016, I was promoted to Detective Sergeant at Roma Criminal Investigation Branch. I have remained in this position since 2016 and my current duties are as follows:

   (a) Investigating serious crime in the Roma Patrol, South West District and supplying on call 24 hour investigative response to the Patrol.

   (b) Supervising and training of one Investigator at Roma CIB ("CIB") and supervision of one Investigator at Roma CPIU.

   (c) Providing assistance to general duties and other specialist units in the area.

   (d) Working with two other Detectives from St George CIB, Roma Patrol and further assisting detectives from Charleville and Western Downs Patrols in the South West District to provide investigative and policing services to the community of the South West District.

   (e) The Roma Patrol comprises of over 100,000 square kilometres and includes 13 police divisions covering from the New South Wales border to the south, to Carnarvon Gorge/Taroom in the North. Dulacca to the East and Mungallala/Bollon in the West.

   (f) Investigations conducted by Roma Detectives include serious offences against the person (including but not limited to homicides, serious assaults, armed robberies, etc), sexual crime (including but not limited to rape, indecent treatment, sexual assaults, etc), serious domestic violence offences (including but not limited to strangulation, deprivation of liberty, torture, etc), property offences (including but not limited to burglary, enter premises, unlawful use of a motor vehicle, stealing, etc), drug offences, fraud, cyber crime offences and public order offences.

   (g) Roma Detectives also assist the number of one and two officer stations in the area as well as officers at bigger centres with policing public events and general daily policing tasks.

Martin Kenneth Forrest Witness

Forensic medical examinations of complainants and witnesses.

7. Throughout my duties, I have and will continue to utilise forensic medical examinations including:

   (a) For investigations of a sexual nature, for both adults and children, offences of rape, indecent treatment, sexual assault, etc I consider a forensic medical examination, particularly a Sexual Assault Investigation Kit ("SAIK"). Consideration for when to conduct a SAIK is subject to a number of factors, including if the person is willing to participate in the examination or not, if it will interfere with urgent medical attention needed by the persons and the circumstances of the assault and time frame since the assault.

   (b) I am notified of these investigations through a number of ways. These include being called to a location by police communications or other officer, where an offence has just occurred or is occurring, if an offence is reported to the counter of a police station by a victim or concerned informant (for recent and historical events), by receiving a child protection notification - an online report or an intelligence report via police computer systems that outlines an incident and possible criminal offence criminal offence or a notification or phone call from an external stakeholder such as a hospital, school, child safety or doctor's office.

   (c) To conduct forensic medical examinations on complainants, we try to use a local hospital service as close to the location of the complainant, as possible (for example, Roma, Mitchell, Taroom, St George Hospitals). The facilities and rooms used at the hospital will depend on the provider and what is available at the time however we always prefer a private room that is enclosed by solid walls to provide privacy and confidentiality for the victim and collection of evidence.

   (d) When attending a hospital to conduct a SAIK examination, we usually speak with a supervising nurse and doctor on duty and explain the circumstances and process of the examination. The complainant is also given an opportunity to speak privately with the nurse and doctor.

(e) If the complainant is not at the hospital, I will attend their location (on being notified of the matter) and transport the complainant in a police vehicle to the local hospital. Unless they specifically wish to take their own vehicle, then I would follow them from their location to the hospital. I am aware of DNA and forensic cross examination and am mindful of which police vehicle I use to transport complainants and/or suspects.

(f) If the complainant is located at several 100kms from me I will arrange for a local officer to transport the complainant to a local hospital and commence the forensic examination whilst I am travelling to their location.

(g) SAIKs are kept in our vehicles and at the police stations. We have heat sealed bags (investigative kits) ready to go, and to provide to stations, so they can commence processes associated with the SAIK examination prior to our arrival, if suitable. The heat sealed bags contain a SAIK (consisting of the paperwork and test tubes and drop sheet), and some additional equipment that may be required by officers investigating the complaint, namely: a number of paper and plastic evidence collection bags, gloves, a blue protective (zip) suit, evidence tape and a crime scene log. The kits can be used for any major crime.

(h) The usual process of a SAIK examination is that a Detective and Scenes of Crime Officer will attend the local hospital with the complainant. The two Scenes of Crime Officers in Roma Patrol are female, so it provides a male and female officer in most circumstances. The Detective will speak with the Doctor and Nurse on duty and explain the process. If the Doctor has any questions we would try to explain or put them in touch with another Doctor who has completed the process. I am aware that there is now an on-call number that the Doctor can call and obtain information. This process works well. The complainant is usually in a private room whilst this occurs and then the Doctor and Nurse are introduced to the complainant and the process is explained. The Doctor and Nurse are given private time with the complainant. The complainant can have a support person/s with them if they wish.

(i) After the private time, the Doctor is usually provided the SAIK kit, evidence bags and they supply their own gloves. The Scenes of Crime Officers take

general (non-intimate) photographs if required. The Doctor performs the SAIK examination in private (complainant undresses on the drop sheet and places on hospital or other personal clothing) the Doctor passes out of the room each piece of clothing in a separate paper bag, the Doctor or receiving officer writes on the outside of the bag what is in there and the receiving officer seals it with evidence tape.

(j) The Doctor then performs the intimate examinations in private and utilises the SAIK test tubes and attached documents to record their observations and conversations. These are provided to the Detective or Scenes of Crime Officer after the examination and subsequently lodged at the local station property point. The Scenes of Crime Officer makes a forensic register entry and Detectives make entries on police computer systems.

(k) The time taken to complete this SAIK examination can vary however, it is treated with priority. The complainant might wait 20 to 30 minutes at the hospital for the Doctor and then the assessment and process can take approximately 60 to 90 minutes. The complainant is usually in a private room. As most of the rural hospitals only have minimal Doctors working or on call, occasionally they may have to wait longer for Doctors and or Nurses to attend the hospital or prioritise a life threating emergency. In my experience, the local Nurses do everything they can to make the complainant comfortable in a private room if there is a wait for the Doctor. Police and medical staff also usually recommend a complainant completes a sexual health screen by blood test and this is conducted by the Nurse or Doctor after the SAIK and does not involve police.

(l) At the completion of the examination, the SAIK is transported and lodged at the local police property point by the Detective or Scenes of Crime Officer. The local officer then arranges a transportation of the SAIK to Brisbane, Forensic and Scientific Services ("FSS") for analysis.

(m) Transportation is conducted when required by officers either on a special trip or in conjunction with other trips (eg attending training or meetings, regular property transports, etc). The Officer in Charge of the Station where the SAIK

is lodged is responsible for arranging transport of the SAIK to Brisbane. Detectives and Scenes of Crime Officers overview to ensure it is completed in a timely manner or assist with the transport when required.

8. I do not recall ever placing a complainant in a protective suit. It may be necessary to prevent cross contamination however, it would only be needed if the complainant is willing and it is necessary to do so.

9. Clothing is regularly collected from suspects, either by seizure at time or arrest or during the execution of a crime scene warrant or search warrant. If clothing is seized, it is lodged in paper bags with evidence tape. Clothing from suspects are usually seized by detectives and scenes of crime officers at the earliest opportunity in the investigation.

10. SAIKS are ordered by administration officers at my request. This occurs when I am aware that there is low stock or if the dates on the SAIK test tubes are near out of date or out of date. SAIKs are ordered from the Child Abuse and Sexual Crimes Group at Police Headquarters.

11. The SAIKS come in a tamper proof bag containing a drop sheet, documents of notes and instructions and test tubes.

12. As discussed at paragraph 7(g), the SAIK, along with a number of other items, is placed in a heat-sealed bag for storage in police vehicles and stations to form an investigative kit. The heat-sealed bag (investigative kit) contains, the SAIK, paper and plastic evidence bags, evidence tape, gloves, a protective (zip) suit and a crime scene log. These kits can be used for any serious crime investigations. These investigative kits have been put together by Detectives and Scenes of Crime Officers at different times.

13. Once the SAIK is obtained and lodged, we strive to have it tested as soon as possible. I speak with the Officer in Charge of the Station and the Property Officer, and they then arrange it to be transported to Brisbane. Depending on staff and vehicle availability, it can take anywhere from one day to one week, sometimes up to two weeks for it to arrive to the FSS.

    (a) Delays in transportation can be experienced, however, they are rare. The delays may be caused by natural weather events or disasters, lack of staff or vehicles

to travel the 1,200km round trip, or giving priority to life threating or serious matters.

(b) I believe a small proportion of cases take longer than two weeks, circumstances where they might occur is due to distance. An example of this is if the complainant attends Roma, the offence occurred somewhere else, and the investigating officer is in another region in Queensland and consultation is ongoing with them as they are the lead investigators.

(c) I can only think of one occasion in which the above scenario has caused a delay to transport the SAIK.

14. Reference DNA samples are usually taken by the Investigating Officer if they are required. They might be taken to rule out or identify complainant DNA, they would be taken by mouth swab and with documented and verbal consent of the complainant. This would include the complaints consent to limit the DNA to this investigation or for use in the database.

15. Serious Crime Investigations including SAIK's, Forensic Examinations and DNA are covered in the Operation Procedure Manuals ("OPM's"), in particular Chapter 2 'Investigative process'.

16. In relation to number of offences in the Roma Patrol, in 2020 there were 25 offences of rape, sexual assault and indecent treatment investigated. In 2021, there were 20 investigated. In 2022, there have been 14 investigations to date. A SAIK would have been considered for each of these matters. However, one might not have been utilised in a number of the investigations due to unwilling complainants or historical offences being reported some time after the incident occurred.

17. I believe the process has improved. Previously I have had issues with having to transport complainants long distances to conduct SAIK examinations and have had issues with getting Doctors or forensic Nurses to conduct the examinations. However, this has not been the case in the Roma Patrol in the last few years and I believe personal relationships with Doctors at local hospitals as well as the access to the on call number for Doctors to provide advice and obtain guidance have made a big difference.

18. The exception to the above is still children under 14 years of age. The closest consistent examination site for young complainants is Toowoomba hospital which is about 400kms east of Roma. In the last few years Roma Patrol has not had many investigations that would require a SAIK however the current process is for the complainant to travel to Toowoomba alone or with police, at their preference, and conduct the examination. I always get a local Doctor to conduct a welfare examination of the child before transporting them to Toowoomba. Sometimes there may be some initial resistance, by the Doctor, to being involved. However, I have not experienced a Doctor refuse to conduct one. .

Forensic medical examinations of suspects/accused persons

19. I have obtained Forensic Procedure Orders and have arranged for forensic medical examination of suspects and accused persons in my duties at Murgon CPIU. This has not been as frequent in my duties at Roma CIB, mainly due to distances and remoteness leading to offenders not being located until a lengthy period of time after offences have occurred.

    (a) The normal process is to ask for consent of the suspect, then the forensic order application is made, the order for the intimate forensic procedure is obtained from an on-call Magistrate, the doctor is contacted, and the process is explained. The Doctor attends the station either by his own accord or a police officer picks them up. The suspect is explained the order and introduced to the Doctor who is provided any equipment they require; the scenes of crime officer obtains any non-intimate examinations required first and I am aware the doctor can conduct a non-intimate examination if required. The Doctor then conducts the intimate examinations, if the suspect is non-compliant, at the Doctor's request, there is ability for police to restrain the suspect to assist the Doctor during the procedure. I am aware that the order allows the suspect to speak to a lawyer and support person and have them present during the procedure.

    (b) In my experience, intimate Forensic Procedures Orders have been obtained from an on-call Magistrate after making an application. The purpose of the

Forensic Procedures Order is to conduct intimate and non-intimate examinations of the suspect to obtain evidence of the commission of an offence, for example to obtain swabs from a suspect, with the intent to locate DNA from the complainant on the suspects body (eg penis, fingernails, etc). Or to examine the suspects body and/or intimate parts for identifying features or injuries captured on camera during the offending or described by the complainant.

(c) At the time of obtaining the Forensic Procedure Order from a Magistrate the suspect has usually been under arrest for the offence and has been transported to a police facility. The suspect is typically transported wearing a blue protective (zip) suit to prevent cross contamination.

(d) I am aware that applications for forensic procedures orders can occur when the suspect in not in custody and after serving the suspect with the application for the order, and the order being made the suspect is required to attend a location and comply with the order.

(e) The forensic procedure order examinations I have been involved in usually occur in a private room at a police facility and a doctor from the local hospital attended to conduct the examination. I believe that on one occasion I have transported a suspect to a local hospital as the doctor could not leave the hospital unattended.

(f) I have only ever used local government Doctors from local hospitals for intimate examinations. Contact with local Doctors is made by phoning them or driving to the local hospital and speaking with them in person. The equipment used are test tubes from a SAIK at the station or medical test tubes supplied by the Doctor. In my experience, it is common for the Doctor to use the test tubes from a SAIK . I recall only one occasion where a Doctor used medical test tubes he had brought with him. This was because the SAIK test tubes were out of date.

(g) The obtained samples and Doctors' details, notes, etc are provided to Detectives and Scenes of Crime Officers who lodge the property and note the forensic register/police computer systems. The Doctor is taken back to the hospital and

the samples are sent for examination at Forensic Services, Brisbane when appropriate, (e.g., not at the same time as the SAIK, next available property run).

(h) If the suspect refuses to consent or cooperate and threatens or attempts to cause harm to the Doctor, police restrain the suspect while the Doctor completes the examination. In most cases, I find the suspect is aggressive towards police rather than the Doctor.

(i) The lodged samples are held in a similar manner to the SAIK. They are stored at a station property point until they can be transported to Brisbane. If a SAIK and Forensic Procedure Order were to be conducted in the same town I would lodge one there and the other back at Roma or another station to prevent them being in the same property refrigerator and an accusation of cross contamination. Consideration would be given to utilising different Doctors, Investigators, attending police, etc for the SAIK and Forensic Procedure Order to prevent any allegation of cross contamination.

20. It has been sometime since I have obtained a Forensic Procedure Order but the process, delays, etc for transport is similar to a SAIK. The Officer in Charge of the local station is responsible for the transport with oversight from the Detective and Scenes of Crime Officer. The samples are transported at the first available opportunity and a special trip would be made for the 1,200km return journey if required.

21. Reference DNA samples are taken from the suspect by either consent, court order or at time of charging. Typically, the DNA reference sample is taken with identifying particulars at the time of charging the suspect. If there is insufficient basis to charge at the time and the suspect does not consent, then an application for a court order to obtain DNA from a suspect would be made to the local Magistrate. If approved, a DNA mouth swab would be taken at the approved time and date. If the suspect provides consent, both oral and written on the appropriate forms (with a lawyer or support person present, if they wish), then a DNA sample could be taken at that time.

JUSTICE OF THE PEACE (MAGISTRATES COURT)

[redacted]

Martin Kenneth Forrest Witness

22. DNA is usually taken from the suspect by mouth swab by the arresting officer or an assisting investigator. In my experience, consideration is given to recent interaction with the complainant by that officer.

23. Serious Crime Investigations involving SAIKS, Forensic Examinations and DNA are covered in the OPM's, in particular Chapter 2 'Investigative process'. The *Police Powers and Responsibilities Act 2000* (PPRA) covers Forensic Examinations.

24. I have not had any cases recently that involved a forensic procedure order being obtained. DNA is regularly obtained at the time of charging suspects or by consent or court order. For example, if a SAIK has been obtained or clothing/bedding seized and a suspect sample is required for comparison.

25. There is no difference in the process I would follow now to previous postings.

Results

26. I am notified when samples have been tested. This occurs via police computer systems and I view results on QPRIME myself, a crime manager contacts me to inform me that there is something to review on an open case or a Scenes of Crime Officer contacts me and notifies me of a result.

27. The results are often under a number of headings and have several different sub-results. The QPRIME record has details explaining the results in the paragraph under the results. I regularly check my understanding of the results with Scenes of Crime Officers and also check if I can conduct any further investigations or comparisons, or if further tests could be conducted, in relation to the results.

28. To my understanding the result *'No DNA detected'* means that the swab or item tested has not provided any identifiable DNA. I have reviewed one of my files on QPRIME to refresh my memory and the actual wording is similar to *'No DNA profile' meaning DNA was not obtained from the item/sample due to, but not limited to: no DNA present, poor quality of the DNA, insufficient quantity or DNA or inhibition of the DNA.*

Martin Kenneth Forrest Witness

29. If I receive a result of 'No DNA detected' and the evidence is crucial for the case, meaning that there is not an amount of overwhelming evidence, I would contact my local Scenes of Crime Officer, DNA Management Unit or my supervisor for advice. I would ask if there was opportunity to retest or conduct any further testing such as direct comparison testing to another sample. Ultimately, I will follow the advice of the experts in the field. Nothing has changed in my process at any point.

30. To my understanding the result *'DNA insufficient for further processing'* means that the swab or item tested has some DNA present, but there is insufficient DNA in the sample for further processing (eg comparison with the database). I have reviewed one of my files on QPRIME to refresh my memory and the actual wording is similar to *'DNA Insufficient for further processing' the item sample was submitted for DNA analysis. Low Levels of DNA were detected in this sample and it was not submitted for further DNA profile. Please contact DNA Management Section if this sample is requested to be assessed for further processing. Further processing could include concentration of the low levels of DNA obtained, pooling with other samples (where appropriate), resampling of the parent item (where appropriate), or a combination of processes.*

31. If I receive a result of 'DNA insufficient for further processing' and the matter is crucial for the case, meaning that there is not an amount of overwhelming evidence, I would contact my local Scenes of Crime Officer, DNA Management Unit or my supervisor for advice. I would ask if there was opportunity to retest or conduct any further testing such as direct comparison testing to another sample. Ultimately, I will follow the advice of the experts in the field. Nothing has changed in my process at any point.

32. Other types I recall seeing include DNA matches and DNA mixed profiles.

33. To my understanding a DNA match is a very high likelihood that the DNA located on a swab or item tested, matches the DNA of a person on record in the database or a person who a DNA sample has been taken from for specific comparison (either suspect, complainant or witness). I have reviewed some of my QPRIME files/cases to refresh my memory and the actual wording is *'Person DNA Scene Link'* the results could include:

(a) *'Partial DNA Profile'* indicating a partial DNA profile match to an identified person's sample.

(b) *'9 Loci DNA Profile'* – indicating a full 9 loci DNA profile matches the DNA profile obtained from an identified person.

(c) *'Interim result – partial profile undergoing rework'* – indicating a partial DNA match to an identified person's sample however it is not a final result, and the sample is still being tested.

(d) *'Partial DNA profile. Insufficient for NCIDD Matching'* indicating there was partial DNA match to an identified persons sample however not enough to load to the database.

(e) *'9 Loci DNA profile – possible sub-threshold peaks'* indicating there was full match to a identified persons sample however there is possible presence of additional DNA at very low thresholds.

34. To my understanding, a DNA mixed profile means that the swab or item tested contains mixed profile DNA from multiple persons. I have reviewed some of my QPRIME files/cases to refresh my memory and the actual wording is *'Person DNA Scene Link'* the results could include:

(a) *'Mixed Profile, Minor Comp 3 of 18'* – indicating mixed DNA profiles, with the minor DNA profile very limited match to an identified person sample.

(b) *'Complex mixed DNA profile – cannot exclude'* indicating a mixed profile that could not be separated in distinct contributors and the identified person's sample could not be excluded as being a possible contributor.

(c) *'Mixed DNA Profile' 'Major Component'* indicating the DNA from identified person's sample has matched as the major contributor to a mixed DNA sample from a swab/item.

(d) *'Mixed profile' 'remain profile after cond – insuff NCIDD'* indicating a mixed DNA sample, not enough to local to the database but enough to partially match to an identified person's sample. .

(e) *'DNA ident' 'victim match' '3 person mixed profile' – 'conditioned on'* indicating the presence of three contributors and based on provided information the victims sample is assumed to have contributed to the mixed profile. For action – all relevant DNA reference samples must be collected and submitted to DNA section as a matter of priority.

35. I do not pass on DNA results or any investigative strategy to complainants or witnesses as it has the potential to influence witnesses and disrupt court proceedings. However, I would be willing to pass this information on after discussion with a prosecutor and senior officer if there was some particular benefit to the welfare or safety of a complainant or witness.

36. I do not recall experiencing, or discussing, a matter where a DNA result is the reason a complainant makes or proceeds with a complaint or does not. If a complaint is made by the victim, then police investigate it with every possible tool and process available to them to come to a conclusion, which may result in the decision to charge someone or not charge someone, as there may be insufficient evidence at the time to charge someone.

Other Issues

37. I believe that sampling of seized property can occur in the Roma Scenes of Crime Office. They have a dedicated area including an office, photography room and sterile laboratory for testing and examining. I believe that a Scenes of Crime Officer is able to assess items such as clothing and bedding to obtain samples or cut out specific areas for further testing.

38. In my recent experience, we have been able to find medical practitioners who are willing and able to conduct forensic medical examinations. This process is enhanced by personal relationships and the on-call number for Doctors to provide advice and seek guidance. Obtaining statements for Doctors to attend court was more difficult in the past, however, the Southwest Hospital Service, Queensland Health now has a dedicated email address for all medical records and statement requests, and they are being

JUSTICE OF THE PEACE (MAGISTRATES COURT)

Martin Kenneth Forrest ..... Witness .....

supplied promptly and fully. This service has removed any issues I previously encountered.

39. I am aware of the 'Just-in-case' kits but do not recall ever being involved in a case with one, collecting one or having any specific involvement with one. I do not have any concerns with the SAIK model or current processes for collecting biological material for forensic DNA testing in sexual assault matters.

TAKEN AND DECLARED before me at Roma in the State of Queensland this 23rd day of September 2022

EXHIBIT 1

Notice number: 2022/ 00188

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Martin Forrest

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00pm Thursday 22 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted], with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 14 day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00188

Schedule of topics for statement

Detective Sergeant Martin Forrester

1. State your full name, current position/title and place of work.

Experience and current position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained (if any).

3. Detail your work history.

4. Attach a current CV.

5. Identify the duties/responsibilities of your position.

   (a) Include a description of the geographical area you work in, and identify who you report to and who (if anyone) reports to you.

   (b) Include a description of what types of crime you investigate.

Forensic medical examinations of complainants and witnesses

6. Detail your involvement in the conduct of forensic medical examinations on complainants and witnesses, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

   (a) Identify the types of alleged offences for which you would consider organising a forensic medical examination.

   (b) Identify the different ways you become notified of a person making a complaint about an offence for which you would consider a forensic medical examination appropriate.

   (c) Identify where the forensic medical examinations are conducted, and, if this includes a hospital, identify what area/rooms in a hospital are typically used. What advance contact is made with hospitals/other locations when you are intending to bring a complainant there.

   (d) Explain how the complainant is transported to the place where the forensic medical examination will be conducted, and who transports them.

(e) Identify who supplies the sexual assault investigation kit (**SAIK**) for the examination. Where are SAIKs stored? Identify if any other equipment is used in the examination, and if yes, identify who provides that equipment.

(f) Explain what happens at the location of the forensic medical examination, including who the SAIKs are provided to. Who conducts the examination (and identify if this varies between locations within your area of operation)? Include an explanation of how long a complainant typically waits at a hospital/other location for the examination to be conducted. Explain what information you typically convey to medical practitioners conducting the examination.

(g) Once the forensic medical examination is completed, what happens to the SAIK? Explain the process from when the medical practitioner finishes the examination to when the SAIK is delivered to Queensland Health Forensic and Scientific Services (**FSS**). Identify any property points at which SAIKs are stored, and the method(s) of transportation. Identify who is in charge of seeing that the SAIK is transported successfully.

7. Explain the circumstances in which you place the complainant/witness in a protective suit (that is, a suit or covering that is intended to protect the evidential integrity of samples that may be collected from the complainant/the clothing they are wearing).

8. Explain the circumstances in which clothing that an accused is wearing will be collected for potential submission for forensic DNA testing. In those circumstances, at what point and in what location is the clothing collected from the complainant? Is the clothing collected by an investigating officer, scenes of crime officer, medical practitioner or someone else?

9. Who supplies SAIKs to the QPS stations in the area in which you work? Who is responsible for placing orders for SAIKs?

10. Describe the appearance of a SAIK when it is received by QPS. Is it already fully compiled/put together, or do QPS stations in your area receive individual components of the SAIK and put them together? If the latter, identify whose role it is to put the SAIKs together.

11. In your experience, once a forensic medical examination is completed, how long does it typically take for the SAIK to reach FSS for forensic testing? As part of your answer, addressing the following.

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for a SAIK to reach FSS after it has been administered.

(c) Describe any instances where there have been particularly long delays.

12. Identify who takes a reference sample from the complainant/witness? Explain when and in what circumstances that reference sample is typically taken.

13. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

14. Provide an estimate of the number of cases each year that you are involved with investigating which also involve the administration of a SAIK.

15. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

16. If any of the processes detailed above vary in the case of child complainants/witnesses, including those aged under 14, identify and explain those differences.

Forensic medical examinations of suspects/accused persons

17. Detail your involvement in the conduct of forensic medical examinations on suspects and accused persons, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

(a) Identify the circumstances leading up to the taking of intimate samples from an accused person, including any necessary authority that must first be obtained.

(b) Identify where the forensic medical examinations are conducted.

(c) Who conducts the examination (and identify if this varies between intimate and non-intimate examinations)? How are they contacted/organised to attend?

(d) What equipment do they use – is it a SAIK? If it is a SAIK, who supplies the SAIK?

(e) Explain what happens at the location of the forensic medical examination, including who the SAIKs/equipment are provided to. Explain what information is typically conveyed to medical practitioners conducting the examination.

(f) What happens if the accused person refuses to consent or cooperate with the examination, even if a court order has been obtained authorising the examination/procedure?

(g) Once the forensic medical examination is completed, what happens to the SAIK/samples? Explain the process from when the medical practitioner finishes the examination to when the samples are delivered to FSS. Identify any property points at which the samples are stored, and the method(s) of transportation.

18. In your experience, once a forensic medical examination is completed, how long does it typically take for the samples to reach FSS for testing? As part of your answer, address:

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for the samples to reach FSS after the examination has been conducted?

19. Identify who takes a reference sample from the accused? Explain when and in what circumstances the reference sample is typically taken.

20. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

21. Provide an estimate of how many cases per year you are involved with investigating that involve a forensic medical examination (or similar) of an accused.

22. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

Results

23. Are you notified when the samples from a forensic medical examination have been tested, and are you notified of the results? If yes, explain how you are notified.

24. What is your understanding of the result '*No DNA detected*' (or similar)? If you have not seen this result-type before, confirm same.

25. What is your understanding of the result '*DNA insufficient for further processing*' (or similar)? If you have not seen this result-type before, confirm same.

26. What other type of results do you recall receiving? What is your understanding of those results?

27. Are the DNA results of the examination passed onto the complainant/witness? If yes, in your experience, does this have an effect on the complainant's decision to proceed with a criminal complaint? If so, explain how.

Other issues

28. Does sub-sampling of items suspected to contain biological material occur within your area, or does that occur at a QPS laboratory elsewhere?

29. If not already discussed above, outline any difficulties you have had in finding medical practitioners available and/or willing to conduct forensic medical examinations? If yes, provide details, including what you had to do to find a suitable medical practitioner.

30. Identify and detail any of your concerns with, or criticisms of, the current Queensland SAIK model, the just-in-case kits or the current processes for collecting biological material for forensic DNA testing in sexual assault matters (if not already discussed). Attach any supporting documents.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF MARTIN KENNETH FORREST

I, **Martin Kenneth Forrest,** of 42 Queen Street, Roma state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

Experience and current position

1. I am a Detective Sergeant and currently performing duties as the Officer in Charge ("OIC") of the Roma Criminal Investigation Branch, Queensland Police Service ("QPS").

2. I do not have a current CV. Prior to joining QPS, I was a qualified Electrical Mechanical Tradesman and Contractor. I worked in various locations throughout Queensland and the Northern Territory. I worked for various private and government organisations and also operated my own electrical contracting business.

3. In February 2008, I commenced working with the QPS at the Brisbane Academy and completed my first year of policing at Gympie Police Station.

4. In 2010, I worked in General Duties at the Murgon Police Station before obtaining a position in Murgon Child Protection and Investigation Unit ("CPIU"), Gympie District Detectives.

5. From 2011 to 2014, I was in the Murgon CPIU before obtaining a position as Detective Senior Constable, Officer in Charge, Roma CPIU in 2014. I worked here from 2014 to 2016.

6. In 2016, I was promoted to Detective Sergeant at Roma Criminal Investigation Branch. I have remained in this position since 2016 and my current duties are as follows:

   (a) Investigating serious crime in the Roma Patrol, South West District and supplying on call 24 hour investigative response to the Patrol.

   (b) Supervising and training of one Investigator at Roma CIB ("CIB") and supervision of one Investigator at Roma CPIU.

   (c) Providing assistance to general duties and other specialist units in the area.

   (d) Working with two other Detectives from St George CIB, Roma Patrol and further assisting detectives from Charleville and Western Downs Patrols in the South West District to provide investigative and policing services to the community of the South West District.

   (e) The Roma Patrol comprises of over 100,000 square kilometres and includes 13 police divisions covering from the New South Wales border to the south, to Carnarvon Gorge/Taroom in the North. Dulacca to the East and Mungallala/Bollon in the West.

   (f) Investigations conducted by Roma Detectives include serious offences against the person (including but not limited to homicides, serious assaults, armed robberies, etc), sexual crime (including but not limited to rape, indecent treatment, sexual assaults, etc), serious domestic violence offences (including but not limited to strangulation, deprivation of liberty, torture, etc), property offences (including but not limited to burglary, enter premises, unlawful use of a motor vehicle, stealing, etc), drug offences, fraud, cyber crime offences and public order offences.

   (g) Roma Detectives also assist the number of one and two officer stations in the area as well as officers at bigger centres with policing public events and general daily policing tasks.

Martin Kenneth Forrest Witness

Forensic medical examinations of complainants and witnesses.

7. Throughout my duties, I have and will continue to utilise forensic medical examinations including:

   (a) For investigations of a sexual nature, for both adults and children, offences of rape, indecent treatment, sexual assault, etc I consider a forensic medical examination, particularly a Sexual Assault Investigation Kit ("SAIK"). Consideration for when to conduct a SAIK is subject to a number of factors, including if the person is willing to participate in the examination or not, if it will interfere with urgent medical attention needed by the persons and the circumstances of the assault and time frame since the assault.

   (b) I am notified of these investigations through a number of ways. These include being called to a location by police communications or other officer, where an offence has just occurred or is occurring, if an offence is reported to the counter of a police station by a victim or concerned informant (for recent and historical events), by receiving a child protection notification - an online report or an intelligence report via police computer systems that outlines an incident and possible criminal offence criminal offence or a notification or phone call from an external stakeholder such as a hospital, school, child safety or doctor's office.

   (c) To conduct forensic medical examinations on complainants, we try to use a local hospital service as close to the location of the complainant, as possible (for example, Roma, Mitchell, Taroom, St George Hospitals). The facilities and rooms used at the hospital will depend on the provider and what is available at the time however we always prefer a private room that is enclosed by solid walls to provide privacy and confidentiality for the victim and collection of evidence.

   (d) When attending a hospital to conduct a SAIK examination, we usually speak with a supervising nurse and doctor on duty and explain the circumstances and process of the examination. The complainant is also given an opportunity to speak privately with the nurse and doctor.

(e) If the complainant is not at the hospital, I will attend their location (on being notified of the matter) and transport the complainant in a police vehicle to the local hospital. Unless they specifically wish to take their own vehicle, then I would follow them from their location to the hospital. I am aware of DNA and forensic cross examination and am mindful of which police vehicle I use to transport complainants and/or suspects.

(f) If the complainant is located at several 100kms from me I will arrange for a local officer to transport the complainant to a local hospital and commence the forensic examination whilst I am travelling to their location.

(g) SAIKs are kept in our vehicles and at the police stations. We have heat sealed bags (investigative kits) ready to go, and to provide to stations, so they can commence processes associated with the SAIK examination prior to our arrival, if suitable. The heat sealed bags contain a SAIK (consisting of the paperwork and test tubes and drop sheet), and some additional equipment that may be required by officers investigating the complaint, namely: a number of paper and plastic evidence collection bags, gloves, a blue protective (zip) suit, evidence tape and a crime scene log. The kits can be used for any major crime.

(h) The usual process of a SAIK examination is that a Detective and Scenes of Crime Officer will attend the local hospital with the complainant. The two Scenes of Crime Officers in Roma Patrol are female, so it provides a male and female officer in most circumstances. The Detective will speak with the Doctor and Nurse on duty and explain the process. If the Doctor has any questions we would try to explain or put them in touch with another Doctor who has completed the process. I am aware that there is now an on-call number that the Doctor can call and obtain information. This process works well. The complainant is usually in a private room whilst this occurs and then the Doctor and Nurse are introduced to the complainant and the process is explained. The Doctor and Nurse are given private time with the complainant. The complainant can have a support person/s with them if they wish.

(i) After the private time, the Doctor is usually provided the SAIK kit, evidence bags and they supply their own gloves. The Scenes of Crime Officers take

general (non-intimate) photographs if required. The Doctor performs the SAIK examination in private (complainant undresses on the drop sheet and places on hospital or other personal clothing) the Doctor passes out of the room each piece of clothing in a separate paper bag, the Doctor or receiving officer writes on the outside of the bag what is in there and the receiving officer seals it with evidence tape.

(j) The Doctor then performs the intimate examinations in private and utilises the SAIK test tubes and attached documents to record their observations and conversations. These are provided to the Detective or Scenes of Crime Officer after the examination and subsequently lodged at the local station property point. The Scenes of Crime Officer makes a forensic register entry and Detectives make entries on police computer systems.

(k) The time taken to complete this SAIK examination can vary however, it is treated with priority. The complainant might wait 20 to 30 minutes at the hospital for the Doctor and then the assessment and process can take approximately 60 to 90 minutes. The complainant is usually in a private room. As most of the rural hospitals only have minimal Doctors working or on call, occasionally they may have to wait longer for Doctors and or Nurses to attend the hospital or prioritise a life threating emergency. In my experience, the local Nurses do everything they can to make the complainant comfortable in a private room if there is a wait for the Doctor. Police and medical staff also usually recommend a complainant completes a sexual health screen by blood test and this is conducted by the Nurse or Doctor after the SAIK and does not involve police.

(l) At the completion of the examination, the SAIK is transported and lodged at the local police property point by the Detective or Scenes of Crime Officer. The local officer then arranges a transportation of the SAIK to Brisbane, Forensic and Scientific Services ("FSS") for analysis.

(m) Transportation is conducted when required by officers either on a special trip or in conjunction with other trips (eg attending training or meetings, regular property transports, etc). The Officer in Charge of the Station where the SAIK

is lodged is responsible for arranging transport of the SAIK to Brisbane. Detectives and Scenes of Crime Officers overview to ensure it is completed in a timely manner or assist with the transport when required.

8. I do not recall ever placing a complainant in a protective suit. It may be necessary to prevent cross contamination however, it would only be needed if the complainant is willing and it is necessary to do so.

9. Clothing is regularly collected from suspects, either by seizure at time or arrest or during the execution of a crime scene warrant or search warrant. If clothing is seized, it is lodged in paper bags with evidence tape. Clothing from suspects are usually seized by detectives and scenes of crime officers at the earliest opportunity in the investigation.

10. SAIKS are ordered by administration officers at my request. This occurs when I am aware that there is low stock or if the dates on the SAIK test tubes are near out of date or out of date. SAIKs are ordered from the Child Abuse and Sexual Crimes Group at Police Headquarters.

11. The SAIKS come in a tamper proof bag containing a drop sheet, documents of notes and instructions and test tubes.

12. As discussed at paragraph 7(g), the SAIK, along with a number of other items, is placed in a heat-sealed bag for storage in police vehicles and stations to form an investigative kit. The heat-sealed bag (investigative kit) contains, the SAIK, paper and plastic evidence bags, evidence tape, gloves, a protective (zip) suit and a crime scene log. These kits can be used for any serious crime investigations. These investigative kits have been put together by Detectives and Scenes of Crime Officers at different times.

13. Once the SAIK is obtained and lodged, we strive to have it tested as soon as possible. I speak with the Officer in Charge of the Station and the Property Officer, and they then arrange it to be transported to Brisbane. Depending on staff and vehicle availability, it can take anywhere from one day to one week, sometimes up to two weeks for it to arrive to the FSS.

    (a) Delays in transportation can be experienced, however, they are rare. The delays may be caused by natural weather events or disasters, lack of staff or vehicles

to travel the 1,200km round trip, or giving priority to life threating or serious matters.

(b) I believe a small proportion of cases take longer than two weeks, circumstances where they might occur is due to distance. An example of this is if the complainant attends Roma, the offence occurred somewhere else, and the investigating officer is in another region in Queensland and consultation is ongoing with them as they are the lead investigators.

(c) I can only think of one occasion in which the above scenario has caused a delay to transport the SAIK.

14. Reference DNA samples are usually taken by the Investigating Officer if they are required. They might be taken to rule out or identify complainant DNA, they would be taken by mouth swab and with documented and verbal consent of the complainant. This would include the complaints consent to limit the DNA to this investigation or for use in the database.

15. Serious Crime Investigations including SAIK's, Forensic Examinations and DNA are covered in the Operation Procedure Manuals ("OPM's"), in particular Chapter 2 'Investigative process'.

16. In relation to number of offences in the Roma Patrol, in 2020 there were 25 offences of rape, sexual assault and indecent treatment investigated. In 2021, there were 20 investigated. In 2022, there have been 14 investigations to date. A SAIK would have been considered for each of these matters. However, one might not have been utilised in a number of the investigations due to unwilling complainants or historical offences being reported some time after the incident occurred.

17. I believe the process has improved. Previously I have had issues with having to transport complainants long distances to conduct SAIK examinations and have had issues with getting Doctors or forensic Nurses to conduct the examinations. However, this has not been the case in the Roma Patrol in the last few years and I believe personal relationships with Doctors at local hospitals as well as the access to the on call number for Doctors to provide advice and obtain guidance have made a big difference.

18. The exception to the above is still children under 14 years of age. The closest consistent examination site for young complainants is Toowoomba hospital which is about 400kms east of Roma. In the last few years Roma Patrol has not had many investigations that would require a SAIK however the current process is for the complainant to travel to Toowoomba alone or with police, at their preference, and conduct the examination. I always get a local Doctor to conduct a welfare examination of the child before transporting them to Toowoomba. Sometimes there may be some initial resistance, by the Doctor, to being involved. However, I have not experienced a Doctor refuse to conduct one. .

Forensic medical examinations of suspects/accused persons

19. I have obtained Forensic Procedure Orders and have arranged for forensic medical examination of suspects and accused persons in my duties at Murgon CPIU. This has not been as frequent in my duties at Roma CIB, mainly due to distances and remoteness leading to offenders not being located until a lengthy period of time after offences have occurred.

    (a) The normal process is to ask for consent of the suspect, then the forensic order application is made, the order for the intimate forensic procedure is obtained from an on-call Magistrate, the doctor is contacted, and the process is explained. The Doctor attends the station either by his own accord or a police officer picks them up. The suspect is explained the order and introduced to the Doctor who is provided any equipment they require; the scenes of crime officer obtains any non-intimate examinations required first and I am aware the doctor can conduct a non-intimate examination if required. The Doctor then conducts the intimate examinations, if the suspect is non-compliant, at the Doctor's request, there is ability for police to restrain the suspect to assist the Doctor during the procedure. I am aware that the order allows the suspect to speak to a lawyer and support person and have them present during the procedure.

    (b) In my experience, intimate Forensic Procedures Orders have been obtained from an on-call Magistrate after making an application. The purpose of the

Forensic Procedures Order is to conduct intimate and non-intimate examinations of the suspect to obtain evidence of the commission of an offence, for example to obtain swabs from a suspect, with the intent to locate DNA from the complainant on the suspects body (eg penis, fingernails, etc). Or to examine the suspects body and/or intimate parts for identifying features or injuries captured on camera during the offending or described by the complainant.

(c) At the time of obtaining the Forensic Procedure Order from a Magistrate the suspect has usually been under arrest for the offence and has been transported to a police facility. The suspect is typically transported wearing a blue protective (zip) suit to prevent cross contamination.

(d) I am aware that applications for forensic procedures orders can occur when the suspect in not in custody and after serving the suspect with the application for the order, and the order being made the suspect is required to attend a location and comply with the order.

(e) The forensic procedure order examinations I have been involved in usually occur in a private room at a police facility and a doctor from the local hospital attended to conduct the examination. I believe that on one occasion I have transported a suspect to a local hospital as the doctor could not leave the hospital unattended.

(f) I have only ever used local government Doctors from local hospitals for intimate examinations. Contact with local Doctors is made by phoning them or driving to the local hospital and speaking with them in person. The equipment used are test tubes from a SAIK at the station or medical test tubes supplied by the Doctor. In my experience, it is common for the Doctor to use the test tubes from a SAIK . I recall only one occasion where a Doctor used medical test tubes he had brought with him. This was because the SAIK test tubes were out of date.

(g) The obtained samples and Doctors' details, notes, etc are provided to Detectives and Scenes of Crime Officers who lodge the property and note the forensic register/police computer systems. The Doctor is taken back to the hospital and

the samples are sent for examination at Forensic Services, Brisbane when appropriate, (e.g., not at the same time as the SAIK, next available property run).

(h) If the suspect refuses to consent or cooperate and threatens or attempts to cause harm to the Doctor, police restrain the suspect while the Doctor completes the examination. In most cases, I find the suspect is aggressive towards police rather than the Doctor.

(i) The lodged samples are held in a similar manner to the SAIK. They are stored at a station property point until they can be transported to Brisbane. If a SAIK and Forensic Procedure Order were to be conducted in the same town I would lodge one there and the other back at Roma or another station to prevent them being in the same property refrigerator and an accusation of cross contamination. Consideration would be given to utilising different Doctors, Investigators, attending police, etc for the SAIK and Forensic Procedure Order to prevent any allegation of cross contamination.

20. It has been sometime since I have obtained a Forensic Procedure Order but the process, delays, etc for transport is similar to a SAIK. The Officer in Charge of the local station is responsible for the transport with oversight from the Detective and Scenes of Crime Officer. The samples are transported at the first available opportunity and a special trip would be made for the 1,200km return journey if required.

21. Reference DNA samples are taken from the suspect by either consent, court order or at time of charging. Typically, the DNA reference sample is taken with identifying particulars at the time of charging the suspect. If there is insufficient basis to charge at the time and the suspect does not consent, then an application for a court order to obtain DNA from a suspect would be made to the local Magistrate. If approved, a DNA mouth swab would be taken at the approved time and date. If the suspect provides consent, both oral and written on the appropriate forms (with a lawyer or support person present, if they wish), then a DNA sample could be taken at that time.

JUSTICE OF THE PEACE (MAGISTRATES COURT)

[redacted]

Martin Kenneth Forrest Witness

22. DNA is usually taken from the suspect by mouth swab by the arresting officer or an assisting investigator. In my experience, consideration is given to recent interaction with the complainant by that officer.

23. Serious Crime Investigations involving SAIKS, Forensic Examinations and DNA are covered in the OPM's, in particular Chapter 2 'Investigative process'. The *Police Powers and Responsibilities Act 2000* (PPRA) covers Forensic Examinations.

24. I have not had any cases recently that involved a forensic procedure order being obtained. DNA is regularly obtained at the time of charging suspects or by consent or court order. For example, if a SAIK has been obtained or clothing/bedding seized and a suspect sample is required for comparison.

25. There is no difference in the process I would follow now to previous postings.

Results

26. I am notified when samples have been tested. This occurs via police computer systems and I view results on QPRIME myself, a crime manager contacts me to inform me that there is something to review on an open case or a Scenes of Crime Officer contacts me and notifies me of a result.

27. The results are often under a number of headings and have several different sub-results. The QPRIME record has details explaining the results in the paragraph under the results. I regularly check my understanding of the results with Scenes of Crime Officers and also check if I can conduct any further investigations or comparisons, or if further tests could be conducted, in relation to the results.

28. To my understanding the result *'No DNA detected'* means that the swab or item tested has not provided any identifiable DNA. I have reviewed one of my files on QPRIME to refresh my memory and the actual wording is similar to *'No DNA profile' meaning DNA was not obtained from the item/sample due to, but not limited to: no DNA present, poor quality of the DNA, insufficient quantity or DNA or inhibition of the DNA.*

Martin Kenneth Forrest Witness

29. If I receive a result of 'No DNA detected' and the evidence is crucial for the case, meaning that there is not an amount of overwhelming evidence, I would contact my local Scenes of Crime Officer, DNA Management Unit or my supervisor for advice. I would ask if there was opportunity to retest or conduct any further testing such as direct comparison testing to another sample. Ultimately, I will follow the advice of the experts in the field. Nothing has changed in my process at any point.

30. To my understanding the result *'DNA insufficient for further processing'* means that the swab or item tested has some DNA present, but there is insufficient DNA in the sample for further processing (eg comparison with the database). I have reviewed one of my files on QPRIME to refresh my memory and the actual wording is similar to *'DNA Insufficient for further processing' the item sample was submitted for DNA analysis. Low Levels of DNA were detected in this sample and it was not submitted for further DNA profile. Please contact DNA Management Section if this sample is requested to be assessed for further processing. Further processing could include concentration of the low levels of DNA obtained, pooling with other samples (where appropriate), resampling of the parent item (where appropriate), or a combination of processes.*

31. If I receive a result of 'DNA insufficient for further processing' and the matter is crucial for the case, meaning that there is not an amount of overwhelming evidence, I would contact my local Scenes of Crime Officer, DNA Management Unit or my supervisor for advice. I would ask if there was opportunity to retest or conduct any further testing such as direct comparison testing to another sample. Ultimately, I will follow the advice of the experts in the field. Nothing has changed in my process at any point.

32. Other types I recall seeing include DNA matches and DNA mixed profiles.

33. To my understanding a DNA match is a very high likelihood that the DNA located on a swab or item tested, matches the DNA of a person on record in the database or a person who a DNA sample has been taken from for specific comparison (either suspect, complainant or witness). I have reviewed some of my QPRIME files/cases to refresh my memory and the actual wording is *'Person DNA Scene Link'* the results could include:

(a) *'Partial DNA Profile'* indicating a partial DNA profile match to an identified person's sample.

(b) *'9 Loci DNA Profile'* – indicating a full 9 loci DNA profile matches the DNA profile obtained from an identified person.

(c) *'Interim result – partial profile undergoing rework'* – indicating a partial DNA match to an identified person's sample however it is not a final result, and the sample is still being tested.

(d) *'Partial DNA profile. Insufficient for NCIDD Matching'* indicating there was partial DNA match to an identified persons sample however not enough to load to the database.

(e) *'9 Loci DNA profile – possible sub-threshold peaks'* indicating there was full match to a identified persons sample however there is possible presence of additional DNA at very low thresholds.

34. To my understanding, a DNA mixed profile means that the swab or item tested contains mixed profile DNA from multiple persons. I have reviewed some of my QPRIME files/cases to refresh my memory and the actual wording is *'Person DNA Scene Link'* the results could include:

(a) *'Mixed Profile, Minor Comp 3 of 18'* – indicating mixed DNA profiles, with the minor DNA profile very limited match to an identified person sample.

(b) *'Complex mixed DNA profile – cannot exclude'* indicating a mixed profile that could not be separated in distinct contributors and the identified person's sample could not be excluded as being a possible contributor.

(c) *'Mixed DNA Profile' 'Major Component'* indicating the DNA from identified person's sample has matched as the major contributor to a mixed DNA sample from a swab/item.

(d) *'Mixed profile' 'remain profile after cond – insuff NCIDD'* indicating a mixed DNA sample, not enough to local to the database but enough to partially match to an identified person's sample. .

(e) *'DNA ident' 'victim match' '3 person mixed profile' – 'conditioned on'* indicating the presence of three contributors and based on provided information the victims sample is assumed to have contributed to the mixed profile. For action – all relevant DNA reference samples must be collected and submitted to DNA section as a matter of priority.

35. I do not pass on DNA results or any investigative strategy to complainants or witnesses as it has the potential to influence witnesses and disrupt court proceedings. However, I would be willing to pass this information on after discussion with a prosecutor and senior officer if there was some particular benefit to the welfare or safety of a complainant or witness.

36. I do not recall experiencing, or discussing, a matter where a DNA result is the reason a complainant makes or proceeds with a complaint or does not. If a complaint is made by the victim, then police investigate it with every possible tool and process available to them to come to a conclusion, which may result in the decision to charge someone or not charge someone, as there may be insufficient evidence at the time to charge someone.

Other Issues

37. I believe that sampling of seized property can occur in the Roma Scenes of Crime Office. They have a dedicated area including an office, photography room and sterile laboratory for testing and examining. I believe that a Scenes of Crime Officer is able to assess items such as clothing and bedding to obtain samples or cut out specific areas for further testing.

38. In my recent experience, we have been able to find medical practitioners who are willing and able to conduct forensic medical examinations. This process is enhanced by personal relationships and the on-call number for Doctors to provide advice and seek guidance. Obtaining statements for Doctors to attend court was more difficult in the past, however, the Southwest Hospital Service, Queensland Health now has a dedicated email address for all medical records and statement requests, and they are being

JUSTICE OF THE PEACE (MAGISTRATES COURT)

Martin Kenneth Forrest ..... Witness .....

supplied promptly and fully. This service has removed any issues I previously encountered.

39. I am aware of the 'Just-in-case' kits but do not recall ever being involved in a case with one, collecting one or having any specific involvement with one. I do not have any concerns with the SAIK model or current processes for collecting biological material for forensic DNA testing in sexual assault matters.

TAKEN AND DECLARED before me at Roma in the State of Queensland this 23rd day of September 2022

EXHIBIT 1

Notice number: 2022/ 00188

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Martin Forrest

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00pm Thursday 22 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted], with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 14 day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00188

Schedule of topics for statement

Detective Sergeant Martin Forrester

1. State your full name, current position/title and place of work.

Experience and current position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained (if any).

3. Detail your work history.

4. Attach a current CV.

5. Identify the duties/responsibilities of your position.

   (a) Include a description of the geographical area you work in, and identify who you report to and who (if anyone) reports to you.

   (b) Include a description of what types of crime you investigate.

Forensic medical examinations of complainants and witnesses

6. Detail your involvement in the conduct of forensic medical examinations on complainants and witnesses, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

   (a) Identify the types of alleged offences for which you would consider organising a forensic medical examination.

   (b) Identify the different ways you become notified of a person making a complaint about an offence for which you would consider a forensic medical examination appropriate.

   (c) Identify where the forensic medical examinations are conducted, and, if this includes a hospital, identify what area/rooms in a hospital are typically used. What advance contact is made with hospitals/other locations when you are intending to bring a complainant there.

   (d) Explain how the complainant is transported to the place where the forensic medical examination will be conducted, and who transports them.

(e) Identify who supplies the sexual assault investigation kit (**SAIK**) for the examination. Where are SAIKs stored? Identify if any other equipment is used in the examination, and if yes, identify who provides that equipment.

(f) Explain what happens at the location of the forensic medical examination, including who the SAIKs are provided to. Who conducts the examination (and identify if this varies between locations within your area of operation)? Include an explanation of how long a complainant typically waits at a hospital/other location for the examination to be conducted. Explain what information you typically convey to medical practitioners conducting the examination.

(g) Once the forensic medical examination is completed, what happens to the SAIK? Explain the process from when the medical practitioner finishes the examination to when the SAIK is delivered to Queensland Health Forensic and Scientific Services (**FSS**). Identify any property points at which SAIKs are stored, and the method(s) of transportation. Identify who is in charge of seeing that the SAIK is transported successfully.

7. Explain the circumstances in which you place the complainant/witness in a protective suit (that is, a suit or covering that is intended to protect the evidential integrity of samples that may be collected from the complainant/the clothing they are wearing).

8. Explain the circumstances in which clothing that an accused is wearing will be collected for potential submission for forensic DNA testing. In those circumstances, at what point and in what location is the clothing collected from the complainant? Is the clothing collected by an investigating officer, scenes of crime officer, medical practitioner or someone else?

9. Who supplies SAIKs to the QPS stations in the area in which you work? Who is responsible for placing orders for SAIKs?

10. Describe the appearance of a SAIK when it is received by QPS. Is it already fully compiled/put together, or do QPS stations in your area receive individual components of the SAIK and put them together? If the latter, identify whose role it is to put the SAIKs together.

11. In your experience, once a forensic medical examination is completed, how long does it typically take for the SAIK to reach FSS for forensic testing? As part of your answer, addressing the following.

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for a SAIK to reach FSS after it has been administered.

(c) Describe any instances where there have been particularly long delays.

12. Identify who takes a reference sample from the complainant/witness? Explain when and in what circumstances that reference sample is typically taken.

13. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

14. Provide an estimate of the number of cases each year that you are involved with investigating which also involve the administration of a SAIK.

15. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

16. If any of the processes detailed above vary in the case of child complainants/witnesses, including those aged under 14, identify and explain those differences.

Forensic medical examinations of suspects/accused persons

17. Detail your involvement in the conduct of forensic medical examinations on suspects and accused persons, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

(a) Identify the circumstances leading up to the taking of intimate samples from an accused person, including any necessary authority that must first be obtained.

(b) Identify where the forensic medical examinations are conducted.

(c) Who conducts the examination (and identify if this varies between intimate and non-intimate examinations)? How are they contacted/organised to attend?

(d) What equipment do they use – is it a SAIK? If it is a SAIK, who supplies the SAIK?

(e) Explain what happens at the location of the forensic medical examination, including who the SAIKs/equipment are provided to. Explain what information is typically conveyed to medical practitioners conducting the examination.

(f) What happens if the accused person refuses to consent or cooperate with the examination, even if a court order has been obtained authorising the examination/procedure?

(g) Once the forensic medical examination is completed, what happens to the SAIK/samples? Explain the process from when the medical practitioner finishes the examination to when the samples are delivered to FSS. Identify any property points at which the samples are stored, and the method(s) of transportation.

18. In your experience, once a forensic medical examination is completed, how long does it typically take for the samples to reach FSS for testing? As part of your answer, address:

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for the samples to reach FSS after the examination has been conducted?

19. Identify who takes a reference sample from the accused? Explain when and in what circumstances the reference sample is typically taken.

20. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

21. Provide an estimate of how many cases per year you are involved with investigating that involve a forensic medical examination (or similar) of an accused.

22. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

Results

23. Are you notified when the samples from a forensic medical examination have been tested, and are you notified of the results? If yes, explain how you are notified.

24. What is your understanding of the result '*No DNA detected*' (or similar)? If you have not seen this result-type before, confirm same.

25. What is your understanding of the result '*DNA insufficient for further processing*' (or similar)? If you have not seen this result-type before, confirm same.

26. What other type of results do you recall receiving? What is your understanding of those results?

27. Are the DNA results of the examination passed onto the complainant/witness? If yes, in your experience, does this have an effect on the complainant's decision to proceed with a criminal complaint? If so, explain how.

Other issues

28. Does sub-sampling of items suspected to contain biological material occur within your area, or does that occur at a QPS laboratory elsewhere?

29. If not already discussed above, outline any difficulties you have had in finding medical practitioners available and/or willing to conduct forensic medical examinations? If yes, provide details, including what you had to do to find a suitable medical practitioner.

30. Identify and detail any of your concerns with, or criticisms of, the current Queensland SAIK model, the just-in-case kits or the current processes for collecting biological material for forensic DNA testing in sexual assault matters (if not already discussed). Attach any supporting documents.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF DYLAN PETER BROOK

I, **Dylan Peter Brook,** of 35 Egerton Street, Emerald, Queensland state as follows:

The following statement is provided in response to notices I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to the notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

1. I am currently an Acting Senior Sergeant of Police, Officer in Charge, Emerald Police Station. My substantive position is a Detective Sergeant, Officer in Charge, Emerald Criminal Investigation Branch.

Experience and current position

2. I hold a Bachelor of Arts in Criminology & Criminal Justice from Griffith University (2003), Diploma of Public Safety (Qld Police 2004), Advanced Diploma in Public Safety Investigations (Qld Police 2010) & Post Graduate Certificate in Leadership and management from Charles Sturt University (Policing and security) (2020).

3. I was sworn into the Queensland Police Service on 30 July 2003. I was transferred as a first year Constable (FYC) to the Gympie Police Station where I completed my training year. In 2004, I was confirmed as a Constable of Police and transferred to Deception Bay Police Station where I performed General Duties. In 2006, I was transferred to the Redcliffe District Tactical Crime Squad (now Moreton District Tactical Crime Squad) where I was tasked in a support role to the Redcliffe District. In 2007, I was appointed as a plain clothes Constable to the Brisbane City Criminal Investigation Branch. During this time, I completed Detective training and served until 2013 as a Detective Senior Constable. In 2013, I was promoted to the rank of Detective Sergeant, Senior Investigator, Officer in Charge of the Emerald Criminal Investigation Branch. In this position I was responsible for the establishment & maintaining proactive policing activities as it related to crime prevention, supervision and conduct of criminal investigations. In 2016, I was seconded to the Crime and Corruption Commission

(CCC) for a period of 10 months where I performed duties in the Organised Crime Group before transferring to the Internal Investigation Group (IIG), Ethical Standards Command (ESC). During my service at IIG, ESC I was tasked to primarily investigate internal misconduct matters and criminal matters involving serving members of the QPS, as well as death in custody and police operations at the direction of the State Coroner. I performed duties at ESC from 2017 until 2020. In 2020, I reapplied and was appointed as the Senior Investigator, Officer in Charge of the Emerald Criminal Investigation Branch where I currently perform duties.

4. I do not have a current CV.

5. I am responsible for establishing and maintaining proactive policing activities for crime prevention and the supervision and conduct of all major criminal investigations within the Emerald, Springsure, Anakie, Capella and Tieri Police Divisions. My geographical area of responsibility encompasses and extends from the police division of Springsure, south of Emerald, West to Anakie and northwest to Tieri. The total estimated population for the area of responsibility is 17,041 persons.

6. The Emerald CIB is manned by three staff, with a Detective Sergeant (OIC), and two Detective Senior Constables who report to the OIC. As the OIC I report to the Detective Inspector, Capricornia Crime Services. The current substantive Detective Inspector is Darrin Shadlow.

7. I am responsible for the establishment and maintaining proactive policing activities as it relates to crime prevention, supervision and conduct of criminal investigations. The Emerald CIB is responsible for coordinating and responding to criminal complaints relating to property crime (burglary, theft of motor vehicles), offences against the person (serious assaults, GBH, AOBH, attempt murder), serious drug offences (drug trafficking) and sexual offences (rape, indecent assaults). As there are no dedicated child protection officers between Rockhampton and the Northern Territory boarder, investigators are also responsible for all child protection and juvenile justice matters including child deaths, historical and current child abuse complaints, child harm notification and Child Protection and Offender Registry (CPOR) offenders and offences.

Dylan Peter Brook Witness

Forensic medical examinations of complainants and witnesses

8. In relation to question 6 of the Schedule to the Notice:

(a) Whether a forensic medical examination is arranged is determined on a case-by-case basis. However, generally, a forensic medical examination is always considered for the following offences:

(i) Rape;

(ii) Attempted rape (penetration unknown);

(iii) Indecent treatment.

(b) There are various ways I may be notified of a complaint about an offence for which I would consider a forensic medical examination appropriate. These include being notified by general duties staff attending a complainant's residential address, a complaint may be received at the front counter of a police station, a person may make a complaint via policelink (online or telephone) with a QPRIME task sent advising me of a complaint, or I can be notified by a counsellor, schoolteacher or care giver via phone or in person.

(c) In Brisbane, between 2007 and 2013, a complainant would be initially seen at the Emergency Department of the Royal Brisbane and Women's Hospital (RBWH) and then moved to a dedicated sexual assault clinic with counsellors and medical practitioners to complete the SAIK examination. Direct contact was usually made with the sexual assault clinic and arrangements made for this to occur. Investigators would phone the clinic in advance to advise them that a complainant would be attending for a forensic examination

(d) In Emerald, from 2020 to present day, contact is made with the Emergency Department of Emerald hospital and the SAIK procedure is conducted in a private room within the Emergency Department. Phone contact is made by the investigator or general duties officer with the Emergency department and advice provided that a complainant will be attending with police.

(e) How the complainant is transported to the place where the forensic medical examination will be conducted, and who transports them, is determined in a victim-centric way, on a case-by-case basis. On some occasions, if a rape is

reported immediately, and other injuries have occurred that require treatment, then Queensland Ambulance will attend the scene, provide initial medical treatment and transport the complainant to hospital for treatment before any forensic examination takes place. On other occasions arrangements can be made for investigators to transport the complainant or they might choose to make their own way to the hospital.

(f) If the rape is historical or the victim attends the police station and it is deemed appropriate to conduct a forensic medical examination (using a SAIK), the victim may be transported by police or may travel to the hospital in their own vehicle with family.

(g) In my experience, a SAIK is supplied by the QPS / Investigator to the hospital. The SAIKs are stored on an equipment shelf with the Emerald Criminal Investigation Branch office. To my recollection this was the same process at the Brisbane City CIB.

(h) QPS blood kits are also provided by investigators to medical staff for the purpose of obtaining a blood sample for toxicology purposes.

(i) With respect to the process of the forensic examination at hospital, in my experience, in Brisbane – between 2007 and 2013 – investigators attend with the victim at the dedicated sexual assault clinic within the RBWH. A SAIK procedure was completed by the medical staff at the clinic and the completed SAIK was provided to the Investigator. During this time, the victim was provided with opportunities to speak with counsellors. At no time was I present in the room during the actual procedure. Investigators would remain outside in the clinic in a dedicated waiting area.

(j) From memory, there were minimal delays during this process. I cannot recall having to wait for very long periods of time for the procedure to be completed. The victim would not be required to wait long to see medical staff and a counsellor. I would estimate, on average, between 30 minutes to one hour. However, I can recall waiting for between one to two hours for the process to be completed.

Witness

JUSTICE OF THE PEACE
QUALIFIED

(k) In my experience in Emerald – from 2013 to 2016 - SAIK procedures were generally refused by the Emerald Hospital and not conducted. Investigators had to make arrangements to have complainants transported to the Rockhampton Hospital, a 3½ hour drive away. Dependent upon the circumstances, investigators had to make arrangements to transport the complainants in police vehicles, arrange transport via QAS or otherwise they would travel in private vehicles.

(l) In Emerald, from 2020 to present day, the SAIK is provided to the doctor that has been tasked to complete the SAIK by the investigator.

(m) The doctor is allocated by the Emerald hospital and may be a doctor on duty or may be required to be re-called to duty dependent on the time and workload of the hospital.

(n) Generally, a brief introduction of the complainant to the doctor is completed including name of the victim and reason for attendance i.e., vaginal rape, digital rape. This is dependent on the attending doctor and victim at the time and their wishes, including whether the discussion is to occur privately or in the presence of the victim.

(o) I have never remained in the examination room during the SAIK procedure.

(p) I am aware that on occasions, dependent upon the doctor completing the procedure and victims wishes; the female investigator at Emerald CIB has remained and been present during SAIK procedures.

(q) I am also aware, dependent upon the doctor's experience in completing a SAIK, the female investigator has been asked to remain and assist the doctor in completing the associated documentation for the doctor during the SAIK process.

(r) Dependent upon the Emerald hospital workload, a complainant and investigator can wait for a number of hours (1-3hrs) for the SAIK process to be completed. Delays can be experienced as a result of doctors having to be re-called to duty, other medical emergencies taking priority and doctors having to case manage a high number of patients within the Emergency Department.

[redacted] .....

Dylan Peter Brook

..... [redacted]

Witness

JUSTICE OF THE PEACE QUALIFIED

(s) When delays are experienced, investigators remain with the victims and, on some occasions, that time is used to obtain a victim statement. This is typically done on a laptop computer, with the discussion always occurring in a private setting.

(t) In my experience in both Brisbane and Emerald, the SAIK is handed directly to the investigator by the Doctor to lodge.

(u) The investigator is required to create the SAIK as an exhibit on QPRIME. An individual property tag is allocated and the SAIK is lodged at the station property point. The investigator is also required to complete a QP127, submission of articles for forensic examination.

(v) Dependent upon the circumstances of the complaint (current or historical), a Scenes of Crime Officer (SOCO) may be present, and a verbal request made by the investigator for the SAIK to be added to the forensic register.

(w) If the SOCO is not present, the investigator sends a QPRIME task to the property officer at Emerald for the SAIK to be transported on the next property run to the Rockhampton Police Station. The amount of property for transfer from Emerald to Rockhampton is monitored by the Emerald property officer. Emerald will regularly transfer property to Rockhampton, on average every 2-3 weeks depending upon the amount of property for transfer. Sometimes, this can occur more frequently, e.g. weekly, if staff are travelling to Rockhampton.

The property officer in consultation with the investigator, will make arrangements to ensure the SAIK has been added to the forensic register by the SOCO prior to transport. Once a task is sent, it is the responsibility of the property officer to ensure the SAIK is sent to Rockhampton via property transfer which occurs via road.

(x) It is the responsibility of the investigator to monitor and review the QPRIME occurrence every 28 days to ensure and follow up the exhibits have been transported as requested and no administrative errors occur. A review of all occurrences is also completed by the OIC every 28 days and if any follow up is required, this will be completed by the OIC or another investigator.

(y) Once at Rockhampton Police Station property point, the SAIK is transported via a property transfer to QHFSS, Brisbane. The original QPRIME task is sent by the property officer Emerald, to Rockhampton property office for this to occur. I am aware that property transfers from Rockhampton to Brisbane are ad-hoc and undertaken by road.

9. A determination is made to place a complainant in a protective suit based on the known particulars of the investigation at the time and the way in which it is reported. If it is a historical matter then generally there is no value in seizing clothing or obtaining samples from a victim due to the passage of time which, as I understand things, impacts on the presence of DNA. Hence, there would be no need to place a complainant in a protective suit.

10. If a victim presents at the police station and has showered or washed their clothing, again there is likely no forensic value in seizing clothing or obtaining samples from a victim and no need to place them in a protective suit.

11. If the circumstances involve timely reporting and police attendance at a crime scene with a victim, consideration is given by the investigator in consultation with the scenes of crime officer to seizing the clothing and placing the victim in a protective suit.

12. If a SOCO is available, they will attend and seize the clothing directly from the complainant for examination. If they are unable to attend, direction is provided to the investigators on how to seize clothing i.e., the victim removes clothing and places them directly into brown paper bags taken from an evidence collection kit for examination. The brown paper bags are sealed by the investigator with exhibit tape, and seals signed for continuity. Investigators will wear disposable gloves and a mask to minimise any potential issues for contamination.

13. The clothing is then transported by the investigators where the same property lodgment procedure is completed as outlined above. A forensic officer will ensure the clothing is packaged correctly and added to the forensic register in consultation with the investigator. Investigators do not have access to the forensic register and this is utilized by SOC and scientific staff only.

14. Whether or not an accused's clothing is collected for potential submission for DNA testing is dependent upon the circumstances outlined above in paragraphs 9 to 11. I

have never had a medical practitioner seize clothing. This has always been completed by an attending officer, investigator or scenes of crime officer.

15. The complainant's clothing can be collected in various ways. In some circumstances for example, a victim may identify clothing worn at the time of the offence but has been removed and discarded in a laundry of a home. If a SOC officer is available, they will attend and seize the clothing from the victim. If not, in my experience between 2007-2016, an investigator would seize the clothing, requesting the victim place the clothing in a brown paper bag, sealing it with exhibit tape and signing the seals. The victim is always requested to handle the clothing to reduce likelihood of cross-contamination. Since 2020, Emerald CIB has evidence collection kits & trace DNA kits provided by SOC that enable an investigator or general duties officer to seize clothing to minimise the loss or contamination of DNA if SOC is not available. Gloves, face mask, brown paper bags, exhibit labels and evidence tape are contained within the kit. The victim is always requested to place the clothing in the bag to minimise cross contamination. If, for example, the complainant is wearing the same clothing that they had on during the alleged offence, and if underwear is to be seized, it is removed by the victim and handed to an investigator during the SAIK process with a drop sheet placed to capture any additional forensic evidence.

16. SAIK are ordered through the Child Abuse and Sexual Crime Group, QPS. The OIC of Emerald CIB is responsible for monitoring the numbers of SAIKs available and ordering the same. There is a limit of 15 to be ordered at any one time.

17. The SAIK is provided as a kit. All relevant material is contained within the kit provided. No additional input is required by an investigator or SOCO once the kit is received because it is already compiled before it arrives.

18. In relation to question 11 of the Schedule to the Notice regarding the time typically taken for a SAIK to reach QHFSS for testing:

    (a) In my experience, once a forensic medical examination is completed, I expect it would generally take approximately one month for a SAIK to reach Brisbane for testing. The majority of SAIKs from Emerald do not reach Brisbane within 2 weeks.

[redacted] .... [redacted]

Dylan Peter Brook Witness [redacted]

JUSTICE OF THE PEACE QUALIFIED

(b) I am aware of a rape complaint where an investigator from Brisbane was relieving in Emerald and transported the SAIK personally to Brisbane on her return flight. This allowed a timely examination of the SAIK on this occasion. This occurs very rarely in my experience.

(c) Whether there are delays in the transportation of SAIKs is dependent upon the circumstances. Generally a property run from Emerald to Rockhampton will occur regularly every couple of weeks. As I understand things, there have been some noted delays in property transport from Rockhampton to QHFSS that has resulted in delays of testing.

(d) I am aware of one SAIK that remained in Rockhampton for approximately four months pending a property transfer [redacted] This SAIK was completed [redacted] and transferred from Emerald to Rockhampton [redacted]. It was recorded as received by the Rockhampton property office [redacted] March 2022 and marked for future transfer to Brisbane. The delay in SAIK examination was identified as part of a regular review of sexual offences by the OIC and case officer. Follow up with the case officer was conducted with the property office at Rockhampton and they advised it had not been transported as a property run was yet to be completed during that time. The victim was provided with updates by the case officer and OIC in March 2022 and May 2022. The SAIK was marked as transferred from Rockhampton to Brisbane on 18 August 2022. I am unaware why a property run had not been completed prior to this time. This is an anomaly and the longest delay I am aware of.

(e) I am not personally aware of any other significant delays; however, I have been advised by Emerald Scenes of Crime that they do have regular delays on exhibit transport from Rockhampton to Brisbane. I am unable to provide any further details on this.

19. Generally, a reference DNA sample is taken from the complainant at the time of providing a victim statement. A reference sample is taken by the investigator. The timing of taking the sample is determined on a case-by-case basis, dependent upon the timings of a forensic examination or statement. Generally, a sample is taken within 48 hours after the forensic examination and a statement has been obtained, depending on

the welfare of the complainant. The sample is added to QPRIME as an exhibit, a property tag allocated, and the sample forwarded via registered mail to QHSS by the property officer. A task is sent by the investigator to the Emerald property officer requesting it be forwarded for examination.

20. I am aware that OPM 2.6.3 refers to procedures in relation to Sexual offences.

21. I would estimate that the Emerald CIB investigates 20-25 sexual offences in a year. Of those, about 5-10 offences require the administration of a SAIK.

22. The processes in Emerald differ from those I observed in my previous experiences in Brisbane. As an investigator at the Brisbane City CIB, the SAIK would be transported directly by the investigator and lodged at QHFSS for analysis. This was due to the close proximity of QHFSS to Brisbane City.

23. I am aware that SAIKs were previously transported by air from Emerald to Brisbane on a direct property run by a police officer. This process no longer occurs.

24. In relation to child complainants, there is no capacity at Emerald Hospital for Children to be examined. All child related sex offences require children to be transported to the Rockhampton Base Hospital where they are seen by a paediatric doctor.

25. Investigators are required to contact the child protection liaison officer (clinical nurse) at Rockhampton Base Hospital who co-ordinates with police to have a child examined. This is the local process in place which has occurred over a number of years in consultation with the Emerald Hospital and Rockhampton Hospital.

26. Arrangements are then made to have the child transported to Rockhampton. As previously outlined, this will be in consultation with the child's parents / next of kin and may require police, QAS or family transport.

Forensic medical examinations of suspects/accused persons

27. In relation to question 17 of the Schedule to the Notice:

    (a) I have minimal experience in forensic medical examinations where intimate samples are obtained from suspects. Generally, evidence DNA mouth swabs are taken for analysis by the investigator. The property management processes for the evidence DNA samples are the same for victim samples, as outlined previously above.

(b) I have previously been involved in the application process to a magistrate for an intimate forensic procedure order to be completed on a suspect for a historical child sex offence (photographs of penis only; no samples). Once the order was granted, the suspect was detained in accordance with the order and transported by the investigator and scenes of crime officer to the Emerald Hospital for photos to be obtained. A doctor was present in accordance with requirements of the order and photographs obtained. This was arranged by the investigator with the hospital directly.

(c) I understand that intimate forensic procedures, such as the one discussed above, are conducted in a private room at the Emerald Hospital.

(d) While I am aware of the process, generally, given my limited experience with the forensic medical examination of suspects, I'm unsure who usually conducts the intimate exam. Based on the circumstances of the investigations (i.e. historical rapes, attempted rapes with no penetration, suspects not located until a number of months after the nominated offences) no orders have been applied for in Emerald since 2020.

(e) Speaking generally, if a suspect is required to be transported to the hospital, this would be completed by the police. In doing so, consideration would be given, by investigators, to cross-contamination by investigators so it would be the case that the suspect was not transported in a police vehicle that the complainant may have been in.

(f) Arrangements to conduct the procedures would be the same for a victim, the investigator would be required to contact the Emerald Hospital Emergency Department and provide advice on the need for the examination.

(g) I have had no direct involvement in the use of SAIKs for the purpose of obtaining samples from suspects. However, as stated above, in Emerald SAIKs would be provided to the Doctor by the investigator.

(h) On the occasion where the suspect was required to undergo a forensic medical examination for the purpose of obtaining intimate photographs, the doctor was provided with a briefing on the requirements of the order and the necessity for his attendance.

[redacted] .....

Dylan Peter Brook

..... [redacted]

Witness

[redacted]

QUALIFIED

(i) I was present for an intimate forensic examination, pursuant to a forensic procedure order, at the Brisbane City Watchhouse in approximately 2012. I am aware the suspect in that matter refused to co-operate and was required to be restrained whilst the order was executed, and a sample obtained by the doctor. The suspect in question was a serial rapist.

(j) I am unable to comment from direct experience on what happens to the SAIKs and samples following a suspect's forensic examination as I have never personally been required to process or obtain SAIK samples from a suspect. I am aware from speaking with other investigators and SOCOs the SAIK from a suspect is lodged and processed in the same way as a SAIK obtained from a victim.

(k) I am also unable to comment on delays in transportation and whether or not such samples take longer than two weeks to reach FSS.

28. An evidentiary DNA reference sample is generally taken by the dedicated watchhouse officer at the time of charging the suspect along with fingerprints and photographs. Dependent upon staff resourcing, a sample may be taken by the investigating officer.

29. I am aware that OPM 2.6.3 refers to procedures in relation to Sexual offences. Chapter 17 of the *Police Powers and Responsibilities Act 2000* refers to forensic procedures.

30. Yearly, there are very few cases in Emerald where a forensic examination is conducted on an accused. As detailed above, I can only recall one since I returned to Emerald in 2020.

31. The processes followed have been the same in each of my postings.

Results

32. Generally, a task will be received via QPRIME advising of any DNA results or matches and a supplementary report is completed outlining the results of the testing.

33. My understanding of 'No DNA detected' is that no DNA was detected and no further action could be taken in relation to that DNA sample.

34. My understanding of 'DNA insufficient for processing' is that there is insufficient DNA for testing, however there is some capacity for it to be re-worked for further analysis if a task is sent to the DNA Management Unit. I am aware of this process after consulting

[redacted] ..... [redacted] .....

Dylan Peter Brook Witness [redacted]

QUALIFIED

with a scenes of crime officer (SOCO) during investigations where these results have been received. I became aware of this after receiving some results for a property investigation upon my return to operational criminal investigations at Emerald in 2020. I had cause to consult with the SOCO regarding the investigation and they provided advice in relation to this.

35. Other common results are mixed profile, which outlines mixed contributors to the DNA sample processed, however explanation is usually given that a contributor (victim or suspect) is more likely than not to have contributed.

36. Generally, results of DNA testing are passed on to complainants for sexually based offences as there is a necessity to ensure that they are fully informed. I am aware that some victims' willingness to proceed with a complaint may be based on the results of SAIKs. This is the case for the victim in [redacted]

Other issues

37. I am not aware of the sub-sampling process.

38. Between 2013 and 2016 there were significant issues in obtaining assistance from the Emerald Hospital in relation to medical practitioners completing a SAIK. Contact would be made with the hospital and investigators would be advised that there were no doctors available, trained or willing to complete the SAIK process. Investigators would be directed to make contact themselves with the Rockhampton Hospital. I am aware that numerous attempts were made by Dr Karen Quinn, who was appointed for a period of time as a government medical officer, to rectify this through training, however it was not resolved prior to my transfer in 2016.

39. During this time, investigators would be required to transport victims to Rockhampton via road in police vehicles, QAS or private vehicles.

40. I believe the lack of assistance may have been as a result of no training or a staffing issue within the hospital.

[redacted] .....

Dylan Peter Brook

..... [redacted]

Witness

41. I am aware that [redacted] an investigator was required to enact Ryans Rule'. with the hospital after being advised that an [redacted] rape victim could not be examined at the Emerald hospital. The investigator was advised they had no doctor available and they would have to travel to Rockhampton. After consultation with the medical staff and reference made to Ryan's rule, a doctor was recalled to duty and performed the examination.

42. Since that time, there have been no issues with doctors performing SAIKs at the hospital and the medical staff do a wonderful job assisting QPS and victims with the investigation process given the remote location and staffing levels at the hospital.

43. I have no particular concerns with the SAIK model or current processes, but I believe consistent training, in the use of SAIKs, would be of benefit to investigators and medical staff. I have no experience with Just in Case Kits.

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Dylan Brook

Of: Queensland Police Service

I, Walter Sofronoff QC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Thursday 22 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted], with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 14th day of September 2022

[redacted]

Walter Sofronoff QC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/ 00190

Schedule of topics for statement

Detective Sergeant Dylan Brook

1. State your full name, current position/title and place of work.

Experience and current position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained (if any).

3. Detail your work history.

4. Attach a current CV.

5. Identify the duties/responsibilities of your position.

   (a) Include a description of the geographical area you work in, and identify who you report to and who (if anyone) reports to you.

   (b) Include a description of what types of crime you investigate.

Forensic medical examinations of complainants and witnesses

6. Detail your involvement in the conduct of forensic medical examinations on complainants and witnesses, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

   (a) Identify the types of alleged offences for which you would consider organising a forensic medical examination.

   (b) Identify the different ways you become notified of a person making a complaint about an offence for which you would consider a forensic medical examination appropriate.

   (c) Identify where the forensic medical examinations are conducted, and, if this includes a hospital, identify what area/rooms in a hospital are typically used. What advance contact is made with hospitals/other locations when you are intending to bring a complainant there.

   (d) Explain how the complainant is transported to the place where the forensic medical examination will be conducted, and who transports them.

(e) Identify who supplies the sexual assault investigation kit (**SAIK**) for the examination. Where are SAIKs stored? Identify if any other equipment is used in the examination, and if yes, identify who provides that equipment.

(f) Explain what happens at the location of the forensic medical examination, including who the SAIKs are provided to. Who conducts the examination (and identify if this varies between locations within your area of operation)? Include an explanation of how long a complainant typically waits at a hospital/other location for the examination to be conducted. Explain what information you typically convey to medical practitioners conducting the examination.

(g) Once the forensic medical examination is completed, what happens to the SAIK? Explain the process from when the medical practitioner finishes the examination to when the SAIK is delivered to Queensland Health Forensic and Scientific Services (**FSS**). Identify any property points at which SAIKs are stored, and the method(s) of transportation. Identify who is in charge of seeing that the SAIK is transported successfully.

7. Explain the circumstances in which you place the complainant/witness in a protective suit (that is, a suit or covering that is intended to protect the evidential integrity of samples that may be collected from the complainant/the clothing they are wearing).

8. Explain the circumstances in which clothing that an accused is wearing will be collected for potential submission for forensic DNA testing. In those circumstances, at what point and in what location is the clothing collected from the complainant? Is the clothing collected by an investigating officer, scenes of crime officer, medical practitioner or someone else?

9. Who supplies SAIKs to the QPS stations in the area in which you work? Who is responsible for placing orders for SAIKs?

10. Describe the appearance of a SAIK when it is received by QPS. Is it already fully compiled/put together, or do QPS stations in your area receive individual components of the SAIK and put them together? If the latter, identify whose role it is to put the SAIKs together.

11. In your experience, once a forensic medical examination is completed, how long does it typically take for the SAIK to reach FSS for forensic testing? As part of your answer, addressing the following.

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for a SAIK to reach FSS after it has been administered.

(c) Describe any instances where there have been particularly long delays.

(d) Explain what delays were experienced in transporting a SAIK in the matter of [redacted] he likely reasons for those delays, and whether similar delays have been experienced in other matters.

12. Identify who takes a reference sample from the complainant/witness? Explain when and in what circumstances that reference sample is typically taken.

13. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

14. Provide an estimate of the number of cases each year that you are involved with investigating which also involve the administration of a SAIK.

15. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

16. If any of the processes detailed above vary in the case of child complainants/witnesses, including those aged under 14, identify and explain those differences.

Forensic medical examinations of suspects/accused persons

17. Detail your involvement in the conduct of forensic medical examinations on suspects and accused persons, including your involvement in the lead-up to the forensic examination and the steps taken after the forensic examination. As part of your answer, address the following:

(a) Identify the circumstances leading up to the taking of intimate samples from an accused person, including any necessary authority that must first be obtained.

(b) Identify where the forensic medical examinations are conducted.

(c) Who conducts the examination (and identify if this varies between intimate and non-intimate examinations)? How are they contacted/organised to attend?

(d) What equipment do they use – is it a SAIK? If it is a SAIK, who supplies the SAIK?

(e) Explain what happens at the location of the forensic medical examination, including who the SAIKs/equipment are provided to. Explain what information is typically conveyed to medical practitioners conducting the examination.

(f) What happens if the accused person refuses to consent or cooperate with the examination, even if a court order has been obtained authorising the examination/procedure?

(g) Once the forensic medical examination is completed, what happens to the SAIK/samples? Explain the process from when the medical practitioner finishes the examination to when the samples are delivered to FSS. Identify any property points at which the samples are stored, and the method(s) of transportation.

18. In your experience, once a forensic medical examination is completed, how long does it typically take for the samples to reach FSS for testing? As part of your answer, address:

(a) Whether delays in transportation are sometimes experienced, and the causes for those delays.

(b) In your experience, in what proportion of cases does it take longer than two weeks for the samples to reach FSS after the examination has been conducted?

19. Identify who takes a reference sample from the accused? Explain when and in what circumstances the reference sample is typically taken.

20. Identify what QPS policies or manuals, if any, guide the above actions/decisions.

21. Provide an estimate of how many cases per year you are involved with investigating that involve a forensic medical examination (or similar) of an accused.

22. If any of the processes detailed above are different to processes you followed in your previous positions or postings, identify those differences, and explain how processes have since changed.

Results

23. Are you notified when the samples from a forensic medical examination have been tested, and are you notified of the results? If yes, explain how you are notified.

24. What is your understanding of the result '*No DNA detected*' (or similar)? If you have not seen this result-type before, confirm same.

25. What is your understanding of the result '*DNA insufficient for further processing*' (or similar)? If you have not seen this result-type before, confirm same.

26. What other type of results do you recall receiving? What is your understanding of those results?

27. Are the DNA results of the examination passed onto the complainant/witness? If yes, in your experience, does this have an effect on the complainant's decision to proceed with a criminal complaint? If so, explain how.

Other issues

28. Does sub-sampling of items suspected to contain biological material occur within your area, or does that occur at a QPS laboratory elsewhere?

29. If not already discussed above, outline any difficulties you have had in finding medical practitioners available and/or willing to conduct forensic medical examinations? If yes, provide details, including what you had to do to find a suitable medical practitioner.

30. Identify and detail any of your concerns with, or criticisms of, the current Queensland SAIK model, the just-in-case kits or the current processes for collecting biological material for forensic DNA testing in sexual assault matters (if not already discussed). Attach any supporting documents.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF ADRIAN ROBB

I, **Adrian Robb,** of Queensland Police Service Academy, 72 Rudd Street Oxley state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

1. I am a Senior Sergeant of Police currently attached to Education and Training Services, People Capability Command. In my current role, I am the Officer in Charge of Training Quality.

Qualifications and experience.

2. I hold a Graduate Certificate in Business (Public Sector Management) which was awarded by the Queensland University of Technology in 2015.

3. My work history since commencing in the QPS includes:

   (a) I graduated from the Queensland Police Service Academy as a Constable in August 1995 and was transferred to Rockhampton where I performed general duties.

   (b) In early 2000, I transferred to Gin Gin police station where I continued to perform general duties.

   (c) In January 2002 I was promoted to Senior Constable and transferred to Monto Police Station where I continued to perform general duties.

(d) In November 2003 I was promoted to the rank of Sergeant and subsequently took up duties at the Queensland Police Service Academy in February 2004 within the Education and Training Support Program.

(e) In December 2006, I was promoted to the rank of Senior Sergeant, Coordinator within the Education and Training Support Program. As coordinator, part of my responsibilities involved overseeing the operations of the QPS Registered Training Organisation (QPS RTO).

(f) Since 2006, I have performed various periods of relieving both at level (Senior Sergeant) and at higher duties (Acting Inspector) in a variety of roles within the QPS.

4. Since joining the QPS, I have completed the following nationally recognised vocational qualifications:

(a) PUA50200 Diploma of Public Safety (Policing) (2003);

(b) BSZ40198 Certificate IV in Assessment and Workplace Training (2004);

(c) BSB41407 Certificate IV in Occupational Health and Safety (2013);

(d) TAE40110 Certificate IV in Training and Assessment (2011); and

(e) TAE40116 Certificate IV in Training and Assessment (2019).

5. I do not have a current CV.

Your role and functions

6. As the Officer in Charge of Training Quality, I am responsible for the day-to-day coordination of the following functions on behalf of Education and Training Services:

(a) Recruit Training Curriculum Currency;

(b) Trainer and Assessor Support and Development;

(c) QPS Course Registration within the Learning Management System;

(d) QPS Registered Training Organisation (RTO) Administration;

(e) Flexible Training Product currency and maintenance;

(f) QPS Pay Point Progression Support; and

(g) Educational Evaluation.

7. Attached and marked '**Exhibit 2**' is a copy of the current organisational structure for Training Quality.

8. My position reports to the Manager, Education and Training Services. The substantive occupant of this position is Inspector [redacted] however the position is currently being filled by Acting Inspector [redacted]

9. As outlined in Exhibit 2, the organisational structure, the following sections and section coordinators report to me:

(a) Senior Sergeant [redacted] Course Registration and Product Currency;

(b) AO6 [redacted] Educational Evaluation and Facilitator Development;

(c) Acting PO4 [redacted] Recruit Training Curriculum Currency; and

(d) AO3 [redacted], Pay Point Progression Support.

10. An RTO is an organisation that is approved by the Australian Skills Quality Authority (ASQA) to deliver nationally recognised training in the vocational education and training sector in accordance with the *Standards for Registered Training Organisations (RTOs) 2015* (Cth). To become an RTO, an organisation must make application through the regulator, ASQA, and once approved, the registration as an RTO can be for a period of up to 7 years. To maintain status as an RTO, the organisation must continue to meet the requirements of the *Standards for Registered Training Organisations (RTOs) 2015* (Cth) throughout the duration of its registration.

11. The QPS is a RTO and as such can award nationally recognised qualifications and statements of attainment for training products which it is registered to deliver and/or assess.

12. As an enterprise RTO, that is an RTO that primarily delivers training to its own staff, the QPS largely awards nationally recognised training products via a recognition of prior learning (RPL) pathway. This skills recognition process, or recognition of prior learning process, focusses on the breadth and depth of knowledge and skills acquired by employees as they progress through a range of job related training and development activities as part of their employment. Upon acquiring the relevant knowledge, skills and abilities, through organisational and job-related learnings, the employee may then become eligible to enrol and be awarded a nationally recognized qualification.

13. QPS training programs and products are developed, managed, and reviewed to meet organisational and job role requirements. Programs or products, which provide evidence towards the awarding of nationally recognised training products, fall within the scope of the QPS RTO quality assurance system. My role as Officer in Charge, Training Quality includes the maintenance, implementation and review of the QPS RTO Quality Management System. The Quality Management System includes the QPS RTO Quality Manual and a variety of quality assurance procedures which assist the QPS in maintaining its compliance with the *Standards for Registered Training Organisations (RTOs) 2015* (Cth).

14. The foundational qualification awarded to police officers is the Diploma of Policing. Eligibility to enrol in the diploma is subject to an officer having successfully completed the requirements of the 18-month Initial Services Program. The Initial Services Program comprises the six month Recruit Training Program at the Queensland Police Service Academy and the 12 month First Year Constable Program.

15. Once an officer has satisfied the enrolment eligibility criteria for the Diploma of Policing, they are then enrolled and awarded the qualification via an RPL assessment process. The Diploma of Policing recognises the knowledge, skills and attributes required by a confirmed constable who is able to work independently with little or no supervision. Subsequent policing qualifications awarded by the QPS RTO build upon the foundation knowledge and skills recognised by the Diploma of Policing. In most cases, these qualifications are also awarded via an RPL assessment process using evidence drawn from the relevant QPS training program or programs.

16. The relevant policies, procedures and or guidelines for the QPS RTO are contained in the Quality Manual and QPS Quality Assurance Procedures.

    (a) Attached and marked '**Exhibit 3**' is a copy of the QPS RTO Quality Manual v10.2.

    (b) Attached and marked '**Exhibit 4**' are copies of the QPS RTO Quality Assurance Procedures.

QPS Scenes of Crime Officers (SOCOs) and Scientific Officers

17. The training of QPS Scenes of Crime Officers (SOCOs) is provided through the QPS Scenes of Crime Development Program. This organisational training program is managed and delivered by the QPS Forensic Services Group.

18. The QPS RTO is registered to deliver the POL54115 Diploma of Forensic Investigation. Enrolment in the Diploma of Forensic Investigation is only available to QPS police officers who have successfully completed the Scenes of Crime Development Program or equivalent as determined by the course coordinator and are currently performing scenes of crime duties. The qualification is offered via a Recognition of Prior Learning (RPL) pathway with the evidence relied upon by the qualified assessor being drawn primarily from the QPS Scenes of Crime Development Program or from the workplace for existing officers performing duties as fulltime Scenes of Crime Officers.

19. All assessment decisions for the awarding of the POL54115 Diploma of Forensic Investigation are made by an approved QPS RTO assessor. The approved assessor for the POL54115 Diploma of Forensic Investigation is currently Senior Sergeant Asha Haxton. Part of my role is to validate assessment processes and judgements to ensure that the evidence gathered for QPS employees completing, for example, the Scenes of Crime Development Program, meets the unit of competency requirements for the Diploma of Forensic Investigation.

20. In relation to the training for Scientific Officers (SOs), I do not hold sufficient knowledge or understanding in relation to this matter. Training of SOs Scientific Officers is external to the QPS RTO processes. I have no role in obtaining external

recognition or nationally recognised accreditation for SO training. I understand that SOs are required to obtain a tertiary level qualification.

21. Once a SOCO has obtained the POL54115 Diploma of Forensic Investigation, they do not require further or refresher training which falls with the scope of the QPS RTO. The Diploma of Forensic Investigation is the only qualification that the QPS RTO is currently eligible to award for this particular specialist area.

22. The procedure and guidelines for the POL54115 Diploma of Forensic Investigation are contained in the assessment strategy. Attached and marked '**Exhibit 5**' is a copy of the Assessment Strategy for POL54115 Diploma of Forensic Investigation.

Other matters

23. In accordance with the *Standards for Registered Training Organisations (RTOs) 2015* (Cth), RTOs are required to implement a plan for ongoing systematic validation of assessment practices and judgements that includes each training product on the RTO's scope of registration. To give effect to this requirement, each training product is to be validated at least once every five years, with at least 50% of products validated within the first three years of each five-year cycle.

24. As Officer in Charge of Training Quality, I am responsible for developing and updating the QPS RTO Assessment Validation Schedule to ensure the requirements of the Standards are met.

25. The POL54115 Diploma of Forensic Investigation was added to the QPS RTO scope of registration on 30 October 2015. Since that time, the qualification has been the subject of internal audit and assessment validation conducted by Training Quality staff on three separate occasions namely November 2015, November 2018 and April 2022. Attached and marked '**Exhibit 6**' is a copy of the QPS RTO Assessment Validation Schedule v8.

26. The QPS RTO has not undergone an external site audit by a vocational education and training regulator since 2011. This audit was conducted as part of an RTO re-registration application.

27. My role in relation to the internal audits is outlined in QPSRTO 007 Systematic Validation of Assessment Practices and Judgements v6.0, Section 5.2 Coordinator, Training Quality. Attached and marked '**Exhibit 7**' is a copy of the QPSRTO 007 Systematic Validation of Assessment Practices and Judgements v6.0.

28. I have previously been involved in external QPS RTO re-registration application site audits in 2006 and 2011. My role in these audits was to liaise with the external auditors and provide the relevant evidence they sought in order to determine the application.

29. I conducted the most recent audit of POL54115 Diploma of Forensic Investigation in April 2022. On this occasion, the units of competency from the qualification that were validated were POLFOR025 Process Forensic Evidence, and POLFOR027 Assess and control incident/crime scene.

30. The student records of eight QPS officers who had previously completed the Scenes of Crime Development Program and had subsequently been awarded the POL54115 Diploma of Forensic Investigation were examined during the audit and assessment validation activity.

31. The validation involved the review of assessment records held within the Ignite Learning Management System for the Scenes of Crime Development Program. In addition to the online review, the assessment records for the nominated participants were retrieved and subsequently underwent validation.

32. The audit and assessment validation activity identified minimal issues with the assessment processes and practices. The assessment resources were of a high standard and the administrative practices ensure consistent and quality outcomes. The relevant documents to this audit were the Delivery Unit Assessment Validation Table for POL54115 Diploma of Forensic Investigation, Systems Improvement Plan for POL54115 Diploma of Forensic Investigation, and POL54115 Assessment Validation Report.

    (a) Attached and marked '**Exhibit 8**' is a copy of the Delivery Unit Assessment Validation Table for POL54115 Diploma of Forensic Investigation.

(b) Attached and marked '**Exhibit 9**' is a copy of the Systems Improvement Plan for POL54115 Diploma of Forensic Investigation.

(c) Attached and marked '**Exhibit 10**' is a copy of the POL54115 Assessment Validation Report.

(d) Attached and marked '**Exhibit 11**' is a copy of the finalised Systems Improvement Plan for POL54115 Diploma of Forensic Investigation.

33. I am not aware of any other issues, problems or areas of improvement in the training program for SOCOs. I am not aware of any issues, problems or areas of improvement in the training programs for SOs or any other police officer that might collect samples for DNA testing.

TAKEN AND DECLARED before me at Oxley in the State of Queensland this 12th day of October 2022

Notice number: 2022/00242

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Adrian Robb

Of: Queensland Police Service

I, Walter Sofronoff KC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **12 noon Wednesday 12 October 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 4th day of October 2022

[redacted]

Walter Sofronoff KC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/242

Schedule of topics for statement

Adrian Robb

1. State your current rank and position in the Queensland Police Service (**QPS**).

Qualifications and experience

2. List any tertiary qualifications you hold, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Identify any courses or diplomas you have completed since joining the QPS.

5. Attach a current CV.

Your role and functions

6. State the duties of your current position. Identify what unit you work in, the functions of that unit, and where you sit within that unit. If there is a document outlining the role or duties of your position, identify and attach that document.

7. Identify the person or people (name, rank and position) who you report to.

8. Identify the person or people (name, rank and position), if any, who report to you.

9. If not already explained in response to questions above, explain what a Registered Training Organisation (**RTO**) is, and whether the QPS is an RTO or whether particular units within the QPS are RTOs. If the QPS (or a unit within the QPS) is a RTO, explain what is done to achieve and maintain that RTO status. Explain your role, if any, in achieving and maintaining that status.

10. Provide an overview of the process for a police officer or trainee police officer to obtain external/nationally recognised accreditation for a course or training program they complete with the QPS. Describe the entire process from the point at which they first enrol in or commence the QPS course/training, up until the person receives the external/nationally recognised accreditation.

11. Identify and attach all policies, procedures or guidelines documents relevant to your answers to questions 6 to 10.

QPS Scenes of Crime Officers (SOCOs) and Scientific Officers

12. Explain the qualifications (if any) and training required for the role of a Scenes of Crime Officer (**SOCO**). Identify what organisation or unit conducts any such training.

13. Explain what external recognition or nationally recognised accreditation are received by SOCOs who complete such training. What is your role, if any, in obtaining that external recognition or nationally recognised accreditation.

14. Explain the qualifications (if any) and training required for the role of a Scientific Officer (**SO**). Identify what organisation or unit conducts any such training.

15. Explain what external recognition or nationally recognised accreditation are received by SOs who complete such training. What is your role, if any, in obtaining that external recognition or nationally recognised accreditation.

16. Identify if any further or refresher training programs for SOCOs or SOs are eligible for external/nationally-recognised accreditation.

17. Identify and attach all policies, procedures or guidelines documents relevant to your answers to question 12 to 16.

Other matters

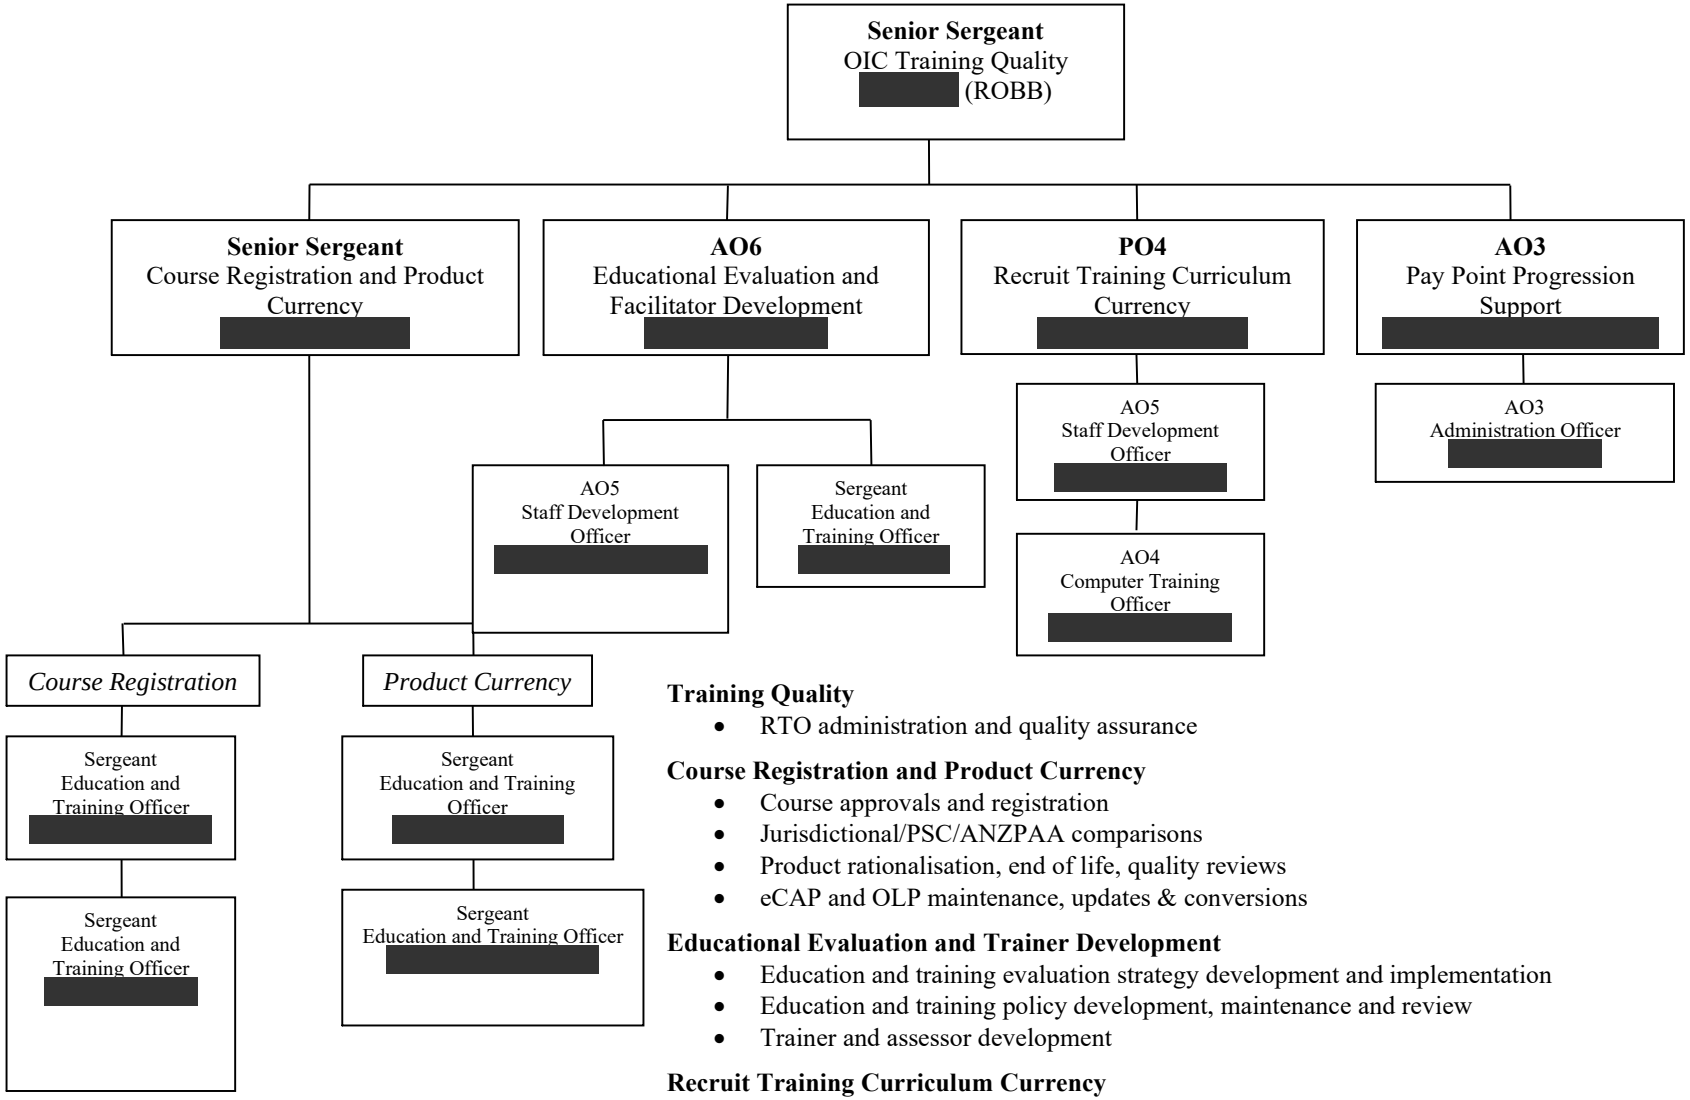
18. Are external or internal audits conducted in respect of training programs delivered by the QPS as part of its RTO function, including the SOCO training program? If yes, how often do they occur and what do they involve?

19. What is your role in each of such external and internal audits?

20. Identify any issues, problems or areas of improvement in the training programs for SOCOs, SOs or any other police officer that might collect samples for DNA testing. Include any such issues you believe exist, or you have been made aware of. Identify and attach any documents as necessary.

EXHIBIT 2

EDUCATION AND TRAINING SERVICES
Training Quality Structure
(as at October 2022)



Training Quality
- RTO administration and quality assurance

Course Registration and Product Currency
- Course approvals and registration
- Jurisdictional/PSC/ANZPAA comparisons
- Product rationalisation, end of life, quality reviews
- eCAP and OLP maintenance, updates & conversions

Educational Evaluation and Trainer Development
- Education and training evaluation strategy development and implementation
- Education and training policy development, maintenance and review
- Trainer and assessor development

Recruit Training Curriculum Currency
- Development, maintenance and review of Recruit Training Program curriculum

Pay Point Progression Support
- Receipt and processing of PPP applications
- Receipt and processing of S/Con progression applications
- Submission preparation and administrative support to the Pay Point Progression Review Committee (PPPRC).

Preface

In order for the Queensland Police Service (QPS) Registered Training Organisation (RTO) to maintain its position as a quality provider of education and training services, it is essential that we consistently meet or exceed our customer's requirements and expectations for quality, performance, timeliness, and cost of the products and services we provide.

This manual defines the RTO policies that reflect the requirements for quality assurance in design, development, production, delivery and review of vocational education and training. Implementation of these policies ensures that we consistently meet the quality and performance requirements of our customers in compliance with national standards and other regulations.

Through the provision of quality education and training we make a strong commitment to continuous improvement in all areas of the QPS. It is the responsibility of every employee to adhere to the defined processes of their job, to initiate action to prevent occurrence of nonconformity and to strive for continuous improvement.

I fully support the provision of this manual and active participation of all personnel in its implementation within all QPS vocational education and training programs.

Inspector Mark Harvey

Quality Policy

Quality Policy

The Queensland Police Service Registered Training Organisation (QPSRTO) provides quality products and services that meet or exceed our client's requirements.

Commitment to Quality

The QPSRTO is committed to providing a quality service to all client's by understanding their education and training needs to achieve quality outcomes.

The following actions are taken to ensure that all personnel understand the commitment to quality:

a) All staff involved in vocational education and training undertake the QPSRTO induction and have access to QPSRTO Quality Management System.

Quality Statement

The QPSRTO adheres to the teaching and learning principles outlined in the QPS Education and Training Best Practice Framework including:

a) The desire to achieve excellence in the provision of products and services that meet or exceed client expectations.
b) A commitment to continuous improvement.
c) Using qualified and skilled staff and appropriate resources to design, develop and improve quality training products.
d) Identifying accountability and ownership of activities and processes.
e) Using appropriately qualified and skilled staff to identify, define, analyse and review quality processes and systems.
f) Using a team based approach to develop and maintain quality products and services.
g) Ensuring QPSRTO processes and practices conform to relevant legislation, regulations, quality standards and ethical practices.

Scope of the Quality Management System

The scope of the QPSRTO Quality Management System includes all personnel who are responsible for the development, planning, delivery, assessment, evaluation and maintenance of QPS education and training products and services that lead to an AQF qualification or VET accredited course outcome.

The scope of the QPSRTO registration is the authorisation to deliver, assess and issue formal certification of qualifications or accredited courses that are recognised within the Australian Qualifications Framework.

Accreditation and Registration Body

The Australian Skills Quality Authority (ASQA) is the national regulator for Australia's vocational education and training sector.

ASQA regulates courses and training providers to ensure nationally approved quality standards are met.

Products and services

The primary source of training products awarded to QPSRTO clients reside within the disciplines of policing and public safety. To achieve the intended objectives within these disciplines, QPSRTO activities are underpinned by the following key elements:

a) Training Projects that provide meaningful specifications for education and training product design and services that are researched and developed to enhance adult learning and the requirements of organisational policies or contractual objectives as governed by the VET Quality Framework.

b) Training Products that provide quality education and training materials that meet or exceed the learning outcomes required by clients and achieve the requirements of a Training Product or accredited course recognised within the Australian Qualifications Framework.

c) Training Services that define the management of training in which resources are identified, defined, managed, reviewed and delivered in compliance with quality standards, organisational policies and the quality system.

d) Delivery and Assessment that provides quality education and training that enhances adult learning experiences and achieves organisational vocational requirements and formal recognition of acquired knowledge and skills within the Australian Qualifications Framework.

e) Certification that formally recognises a client's attainment in the form of a qualification or a statement of attainment for a training product or accredited course that conforms to the requirements of the Australian Qualifications Framework.

Quality System Standards

The QPSRTO Quality System conforms to the requirements of:

a) relevant legislation; and
b) National Vocational Education and Training Regulator Act 2011; and
c) Standards for Registered Training Organisations (RTOs) 2015; and
d) Financial Viability Risk Assessment Requirements 2021; and
e) Data Provision Requirements 2020; and
f) Work Health and Safety Act 2011 (Qld); and
g) Work Health and Safety Regulation 2011 (Qld); and
h) Privacy Act 1988 (Cth); and
i) Queensland Information Privacy Act 2009; and
j) Copyright Act 1968 (Cth); and
k) Australian Qualification Framework, and
l) AVETMIS Standard for VET Providers; and
m) Queensland Government Information Standards; and
n) QPS Education and Training Best Practice Framework: and
o) directives of the Commissioner of Police; and
p) QPS Code of Conduct; and
q) QPS Information Management Manual.

The RTO provides and maintains a documented quality management system and quality records, which assures that training products and services conform to organisational and RTO registration requirements.

VET Quality Framework

The VET Quality Framework consists of:

- Standards for Registered Training Organisations (RTOs) 2015
- Fit and Proper Person Requirements 2011
- Financial Viability Risk Assessment Requirements 2021
- Data Provision Requirements 2020
- Australian Qualifications Framework

Note: The requirements of the VET Quality Framework are recorded in the shaded sections throughout this Quality Manual.

National Vocational Education and Training Regulator Act 2011

Subdivision B—Conditions of registration

21 Complying with conditions

An NVR registered training organisation must:

a) comply with the conditions set out in sections 22 to 28; and
b) comply with any conditions imposed on the organisation's registration under subsection 29(1).

Note: Failure to comply with a condition of registration is a contravention of a civil penalty provision, see section 111.

22 Condition—compliance with the VET Quality Framework

1) An NVR registered training organisation must comply with the Standards for NVR Registered Training Organisations.
   (1A) An NVR registered training organisation must comply with Quality Standards
2) An NVR registered training organisation must comply with the Australian Qualifications Framework.
3) An NVR registered training organisation must comply with the Data Provision Requirements.

22A Condition—commitment and capability to deliver quality vocational education and training

An NVR registered training organisation must demonstrate a commitment, and the capability, to deliver quality vocational education and training.

23 Condition—satisfying Fit and Proper Person Requirements

An NVR registered training organisation must satisfy the Fit and Proper Person Requirements.

24 Condition—satisfying the Financial Viability Risk Assessment Requirements

An NVR registered training organisation must satisfy the Financial Viability Risk Assessment Requirements.

24A Condition – complying with student assistance laws

(1) An NVR registered training organisation that is a VET provider within the meaning of the *Higher Education Support Act 2003* must comply with that Act.

(2) An NVR registered training organisation that is an approved course provider within the meaning of the *VET Student Loans Act 2016* must comply with:

(a) the *VET Student Loans Act 2016*; and

(b) any Act or instrument to the extent that it is included in the definition of ***this Act*** in the *VET Student Loans Act 2016*.

25 Condition—notifying National VET Regulator of material changes

1) An NVR registered training organisation must notify the National VET Regulator, in writing, if:
   (a) an event occurs that would significantly affect the organisation's ability to comply with the VET Quality Framework; or
   (b) the name or contact details of an executive officer or high managerial agent of the organisation change; or
   (c) there are, or are likely to be, other substantial changes to the operations of the organisation.
(2) The notice must be given to the National VET Regulator as soon as practicable after the NVR registered training organisation becomes aware of a matter mentioned in subsection (1).

26 Condition—other information etc. must be provided

(1) An NVR registered training organisation must give the National VET Regulator such information as the Regulator requests, by notice in writing, for the purposes of this Act, so long as the organisation is capable of complying with the request.
(2) A notice under subsection (1) must specify the period within which, and the manner in which, the information requested is to be given.

Production of documents

(3) An NVR registered training organisation must produce to the National VET Regulator such documents as the Regulator requests, by notice in writing, for the purposes of this Act, so long as the organisation is capable of complying with the request.
(4) A notice under subsection (3) must specify the period within which, and the manner in which, the documents are to be produced.

26A Copies of documents

The National VET Regulator may:
(a) inspect a document produced under subsection 26(3); and
(b) make and retain copies of, or take and retain extracts from, such a document.

26B National VET Regulator may retain documents

1) The National VET Regulator may take, and retain for as long as is necessary, possession of a document produced under subsection 26(3).
2) The person otherwise entitled to possession of the document is entitled to be supplied, as soon as practicable, with a copy certified by the National VET Regulator to be a true copy.
3) The certified copy must be received in all courts and tribunals as evidence as if it were the original.
4) Until a certified copy is supplied, the National VET Regulator must, at such times and places as the Regulator thinks appropriate, permit the person otherwise entitled to possession of the document, or a person authorised by that person, to inspect and make copies of, or take extracts from, the document.

27 Condition—cooperation

An NVR registered training organisation must cooperate with the National VET Regulator, at least to the extent that:
(a) it is necessary for the Regulator to perform its functions; or
(b) it is necessary to facilitate the Regulator's performance of the Regulators functions.

28 Condition—compliance with directions given by the National VET Regulator

(1) An NVR registered training organisation must comply with any general directions given by the National VET Regulator, in writing, to organisations on the way in which the VET Quality Framework or other conditions of this Subdivision are to be complied with.
(2) The National VET Regulator must publish a general direction on the Regulator's website.
(3) A general direction under subsection (1) is a legislative instrument.

(4) Despite anything in section 44 of the Legislation Act 2003 , section 42 (disallowance) of that Act applies to a general direction.
(5) Despite anything in section 54 of the Legislation Act 2003 , Part 4 of Chapter 3 (sunsetting) of that Act applies to a general direction.

29 Other conditions
(1) The National VET Regulator may impose other conditions on an NVR registered training organisation's registration. Such conditions need not be imposed at the time of registration.
(2) The National VET Regulator may vary a condition imposed under subsection (1).

30 National VET Regulator to notify NVR registered training organisation of change in conditions of registration
1) The National VET Regulator must, within 30 days of deciding to impose or vary a condition on an NVR registered training organisation's registration, notify the organisation, in writing, of:
   a) the decision; and
   b) the reasons for the decision; and
   c) the period for which the condition is imposed.

Note: Details of conditions imposed on an NVR registered training organisation's registration are included on the National Register, see section 216.

2) The period for which the condition is imposed:
   a) may be a period specified in the notice; or
   b) may be a period ascertained in accordance with the notice.
3) The National VET Regulator must, within 30 days of deciding to remove a condition on an NVR registered training organisation's registration, notify the organisation, in writing, of:
   a) the decision; and
   b) the reasons for the decision.

Note: Details of conditions imposed on an NVR registered training organisation's registration are included on the National Register: see section 216.

Standards for Registered Training Organisations (RTOs) 2015

Standard 1 – The RTO's training and assessment strategies and practices are responsive to industry and learner needs and meet the requirements of training packages and VET accredited courses.

Clause 1.1 – Implement a comprehensive training and assessment strategy

The RTO's training and assessment strategies and practices, including the amount of training they provide, are consistent with the requirements of training packages and VET accredited courses and enable each learner to meet the requirements for each unit of competency or module in which they are enrolled.

Source: Standards for Registered Training Organisations (RTOs) 2015

As an enterprise RTO, the Queensland Police Service (QPS) primarily awards nationally recognised training products via a recognition of prior learning (RPL) pathway. This skills recognition process focusses on the breadth and depth of knowledge and skills acquired by employees as they progress through a range of formal and non-formal learning as part of their employment. Organisational training programs and products are developed, managed and reviewed in accordance with the QPS Education and Training Best Practice Framework. Programs or products which provide evidence towards the awarding of nationally recognised training products fall within the scope of the QPSRTO quality assurance system.

The QPS Training Quality section has developed a training and assessment, and an assessment only, strategy template for use within the delivery units providing nationally recognised training outcomes. Each delivery unit is required to develop a strategy which meets the requirements of the relevant training product and aligns to the respective job role requirements. The strategies are developed by the Course Coordinator in accordance with quality assurance procedure QPSRTO 028 *Industry Relevance of Training Assessment and Delivery.*

Examples of industry input in the development of the strategies can include, but is not limited to:

- QPS as the employer;
- Representation of delivery unit staff on committees involved in the review of the Public Safety Training Package;
- Liaison with counterparts in other Australasian Policing jurisdictions including the Australian and New Zealand Policing Advisory Agency (ANZPAA).

While delivery units are encouraged to use the QPS template for training and assessment/assessment only strategies, delivery units can also use existing documentation and resources which contain the required information. Examples of this can include staff matrices, assessment mapping documentation, trainer/assessor guides, website information and course joining instructions.

Training and/or assessment staff are provided access to the relevant qualification or accredited course strategy during induction. Strategies are also made available to eligible prospective participants in electronic format via the QPS intranet site unless the release of the strategy to persons other than those directly involved with the delivery, assessment or administration of the training product, would compromise the safety or security of the policing sector.

Strategies are considered as a 'living' document and are reviewed as part of an ongoing continuous improvement processes. Evidence of industry engagement and the systematic use of the outcomes of that

engagement are to be maintained in accordance with quality assurance procedure QPSRTO 028 *Industry Relevance of Training Assessment and Delivery*.

Evidence of industry engagement and the outcomes will be reviewed during the internal validation of Training Product/s, conducted by the Training Quality section.

Clause 1.2

For the purposes of Clause 1.1, the RTO determines the amount of training they provide to each learner with regard to:

a) the existing skills, knowledge and the experience of the learner;
b) the mode of delivery; and
c) where a full qualification is not being delivered, the number of units and/or modules being delivered as a proportion of the full qualification.

Source: Standards for Registered Training Organisations (RTOs) 2015

As an enterprise RTO, the primary learners undertaking training with the QPSRTO are employees of the organisation. The QPSRTO ensures that job role requirements and the management of organisational risk continue to be a significant driver when it comes to determining the mode of delivery and amount of training that each learner is required to undertake. As the relevant QPS organisational training programs and workplace experience form the basis from which RPL evidence is drawn, the majority of information provided to participants regarding the programs themselves is made available through the relevant delivery unit websites or hardcopy documentation.

The amount of training to be undertaken by employees will be determined by organisational program and job role requirements. In some instances, the evidentiary requirements to satisfy nationally recognised training products may extend beyond those set by QPS program/course requirements. In practice, this means that participants may successfully complete the training program and be approved to undertake specialist roles/functions on behalf of the Commissioner of Police however may have to provide further evidence (in most cases actual workplace evidence) in order to successfully achieve a nationally recognised outcome.

The Diploma of Policing is the foundation qualification awarded to police officers within the QPS and is awarded via RPL on successful completion of the 18-month Initial Services Program. The Diploma of Policing recognises the knowledge, skills and attributes required by a confirmed constable who is able to work independently with little or no supervision. The Initial Services Program comprises of the Recruit Training Program and the First Year Constable Program. Subsequent policing qualifications awarded by the QPSRTO build upon the foundation knowledge and skills recognised by the Diploma of Policing.

Clause 1.3

The RTO has, for all of its scope of registration, and consistent with its training and assessment strategies, sufficient:

a) trainers and assessors to deliver the training and assessment;
b) educational and support services to meet the needs of the learner cohort/s undertaking the training and assessment;
c) learning resources to enable learners to meet the requirements for each unit of competency, and which are accessible to the learner regardless of location or mode of delivery; and

d) facilities, whether physical or virtual, and equipment to accommodate and support the number of learners undertaking the training and assessment.

Source: Standards for Registered Training Organisations (RTOs) 2015

Staff

The QPSRTO utilises employees capable of meeting the technical, skill and educational requirements of the QPSRTOs scope of registration and operations.

The QPS is an enterprise RTO responsible for the training and assessment and professional development of its own staff. The trainers and/or assessors for QPS training programs are predominately recruited from these staff.

Training personnel involved in training and/or assessment of Training Products are required to provide evidence of vocational experience in a Staff Profile document and provide copies of relevant qualifications, experience and/or industry skills. These are verified through the QPS staff training records or the QPS staff selection process as outlined in the Human Resource policies and the public service Directive No 15/13 Recruitment and Selection. This requirement is monitored during internal validation of the delivery units by the Training Quality section.

The QPSRTO ensures that personnel involved in training and/or assessment of Training Product/s, undertake an induction, in accordance with *QPSRTO 026 Staff Induction,* which provides information about how they are to undertake their assigned duties and activities responsibly, safely, efficiently and effectively.

The information provided on the QPSRTO induction in Ignite (LMS) includes:

a) the quality manual, and
b) legislation that impacts on their duties, and
c) the VET Quality Framework, and
d) relevant quality assurance procedures.

The information provided in a training program induction includes:

a) an overview of the course learning and assessment strategy; and
b) an outline of the qualification or accredited course competency requirements, and
c) the course learning and assessment materials, and
d) local operating procedures that govern how tasks and activities are to be performed, and
e) any supervisory arrangements relating to trainers and/or assessors.

The RTO's policies and procedures are documented on the QPS Intranet site for all staff to access.

Training policy

The QPSRTO views training and development of personnel as an essential management responsibility that is vital to achieving the missions and future requirements of the QPS. The QPSRTO is committed to providing relevant training and development opportunities to optimise personnel effectiveness in an environment of changing standards, technologies and mission requirements in accordance with *QPSRTO 015 Management of Staff Training*.

Delivery units are responsible for ensuring staff maintain vocational currency and staff are responsible for the recording of professional development in their Staff Profile document. Professional development activities may be identified through the annual staff performance appraisal. Trainers/assessors are monitored via the annual performance appraisal process, the internal validation of the delivery units and through the review of client feedback data.

Staff are provided current information on VET through delivery unit network meetings and receipt of VET emails/information that are directed to the delivery units via the Training Quality section. Full records of training and development are maintained as quality records in accordance with the QPS Records Retention and Disposal Schedule.

Facilities and equipment
Facilities and equipment are determined and reviewed by senior management of the Queensland Police Service in accordance with responsibilities outlined in the QPS Operational Procedures Manual. Senior Management decisions relating to facilities and equipment are informed through the experiences of trainers, assessors and the relevant training managers. Purchases are made in accordance with the Administration Manual, Section 3 Procurement and Contracts.

Training materials
Training materials are developed by each delivery unit to meet the requirements of the Queensland Police Service training programs and the respective training product on the QPSRTO scope of registration. Each delivery unit is responsible for the development and review of its training materials in consultation with industry as per the requirements of the Standards for Registered Training Organisations (RTOs) 2015 and QPSRTO 028 *Industry Relevance of Training Assessment and Delivery.*

Student Support
Course coordinators are responsible for determining the types of educational and support services that are available for participants. Details of the support services available, specific to the individual delivery unit, are to be outlined in the Assessment Strategy or relevant QPS program website/s and documentation.

For further information:
Refer to Clause 1.7 - Support Learners and Clause 1.8 - Assessment Materials.

Clause 1.4
The RTO meets all requirements specified in the relevant training package or VET accredited course.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.1

Industry relevance

Clause 1.5
The RTO's training and assessment practices are relevant to the needs of industry and informed by industry engagement.

Source: Standards for Registered Training Organisations (RTOs) 2015

As an enterprise RTO, the QPS is committed to ensuring that training and assessment practices meet the needs of the organisation and the individual. Training and assessment practices must meet job role requirements in order to ensure that organisational outcomes are achieved. Each delivery unit is responsible for the development and review of its training materials in consultation with industry as per the requirements of the Standards for Registered Training Organisations (RTOs) 2015 and *QPSRTO 028 Industry Relevance of Training Assessment and Delivery.*

The Executive Manager of the People Capability Command is the Assistant Commissioner, People Capability Command. All curriculum development conducted within the QPS is to be approved by the Assistant Commissioner, People Capability Command or their delegate. This ensures that there is a consistent and coordinated approach to meeting the strategic education, training and development needs of the QPS and its members.

The QPS Education and Training Sub-Committee (ETSC) provides strategic oversight of curriculum development, maintenance and review within the organisation. The role of the ETSC is supported by the QPS Education and Training Best Practice Framework which is comprised of the QPS Learning Product Development Process and the QPS Learning Development and Assessment Guide.

The engagement of subject matter and workplace specialists when designing, developing and reviewing training and assessment practices is critical in order to ensure the relevancy of the practices. In most instances, subject matter experts and workplace specialists bring with them knowledge of current best practice and are well placed to assist in determining whether individual performance and organisational objectives will be met by the training and assessment practices.

The QPS conducts wider industry engagement with a variety of external stakeholders including other Australasian policing jurisdictions as well as the Australia and New Zealand Policing Advisory Agency (ANZPAA).

The QPS is an enterprise RTO responsible for the training and assessment and professional development of its own staff. The trainers and/or assessors for QPS training programs are predominately recruited from these staff. In addition to meeting the requirements of the Standards for Registered Training Organisations (RTOs) 2015, the selection of trainers and/or assessors is based on the possession and maintenance of their industry currency. For a large number of Training Products, QPSRTO trainers and/or assessors perform not only RTO related activities but fulfill operational police duties directly related to the Training Product they are associated with.

Clause 1.6

The RTO implements a range of strategies for industry engagement and systematically uses the outcome of that industry engagement to ensure the industry relevance of:

a) it's training and assessment strategies, practices and resources; and
b) the current industry skills of its trainers and assessors.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.5

Learner Support

Clause 1.7

The RTO determines the support needs of individual learners and provides access to the educational and support services necessary for the individual learner to meet the requirements of the training product as specified in training packages or VET accredited courses.

Source: Standards for Registered Training Organisations (RTOs) 2015

Educational and Support Services
As an enterprise RTO, the support and welfare of QPS employees including those undertaking training and development is paramount. The recruiting process for police officers includes the completion of psychometric assessments by applicants. This testing not only assesses the individual's suitability to become a police officer but also ensures that they possess the minimum language, literacy and numeracy levels required to complete the Recruit Training Program.

The QPS uses the Wonderlic Assessment to conduct the initial measurement of an applicant's abilities against established criteria for police officers. The test involves a variety of sections which have been designed to examine different skills including:

- English Language – Spelling, Grammar, and Vocabulary
- English Comprehension
- Memory
- Judgment and Reasoning skills
- Observation
- Logic
- Computation

A large proportion of the QPSRTO academic support, for both police officers and staff members, is provided by QPS trainers and assessors involved with the associated training programs. The relevant course coordinators are responsible for determining the types of educational and support services that are available for participants based on the nature and complexity of the training being undertaken. Details of the support services available, specific to the individual delivery unit, are to be outlined in the Assessment Strategy or relevant QPS program website/s and documentation.

Assessment

Clause 1.8

The RTO implements an assessment system that ensures that assessment (including recognition of prior learning):

a) complies with the assessment requirements of the relevant training package or VET accredited course; and
b) is conducted in accordance with the Principles of Assessment contained in Table 1.8-1 and the Rules of Evidence contained in Table 1.8-2.

Source: Standards for Registered Training Organisations (RTOs) 2015

Recognition of Prior Learning
Refer to Clause 1.12.

Assessment materials
The QPSRTO is committed to providing assessment that meets the requirements of the endorsed components of Training Packages or the outcomes specified in a VET accredited course, within its scope of registration. The QPSRTO encourages the use of a range of assessment practices and modes designed to accommodate the diversity of its participants and its courses that are consistent, fair and transparent and achieve the competency outcomes of an AQF qualification or VET accredited course. QPSRTO assessors are qualified and have appropriate vocational experience with access to the necessary resources to undertake assessments of participants in accordance with the assessment requirements of an on-scope AQF qualification or VET accredited course.

The QPSRTO ensures equity in assessment and applies reasonable adjustments to the assessment process or context that meet the individual needs of a participant with a disability, but do not change the competency outcomes of an AQF qualification or VET accredited course.

The QPSRTO places a high priority on providing prompt, informative and constructive feedback to participants on their completed assessment items.

All participants in an AQF qualification or VET accredited course being assessed by the QPSRTO assessor are provided with a fair and reasonable opportunity to appeal an assessment decision.

The QPSRTO maintains the responsibility for the final assessment of each participant in a qualification or course.

Each assessment item completed by a participant in an AQF qualification or VET accredited course is maintained as quality records and retained in compliance with QPS policies and the *Records Retention and Disposal Schedule* and *QPSRTO014 Recordkeeping (Assessment)* procedure.

The final summative assessment result for each unit of competency undertaken by a participant is accurately captured within an approved electronic learning management system in an inviolate and accessible format that are retained in conformance with the VET Quality Framework and policy requirements of the National VET Regulator.

Systematic Validation of Assessment Practices and Judgements

The QPS is committed to the quality of the curriculum and assures assessments are valid, reliable, flexible and fair and achieve a meaningful and transferable credential. Internal audit of delivery units and the validation of assessment practices and judgement is undertaken in accordance with quality assurance procedure *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements.*

Consistent and reliable interpretations ensure that participant assessments conducted in a variety of settings will be fair and reliable and maintain the integrity of the curriculum and the requirements of a qualification or accredited course.

A statistically valid sample of a participant's completed work is validated to ensure that a consistent and reliable interpretation of assessment is performed by assessors to the requirements of the endorsed components of Training Packages or the outcomes specified in accredited courses.

The Course Coordinator is responsible for ensuring that assessors apply the assessment criteria and standards consistently. All training programs moderate their assessment processes, procedures, instructions and instruments at regular intervals as determined appropriate and desirable.

Each delivery unit's process for maintaining industry relevance through engagement and the systematic use of industry engagement outcomes are documented in the relevant training and assessment strategy.

A record of moderation activities are maintained as quality records and retained in compliance with QPS policies and the *Records Retention and Disposal Schedule*.

Clause 1.9

The RTO implements a plan for ongoing systematic validation of assessment practices and judgements that includes for each training product on the RTO's scope of registration:

a) when assessment validation will occur;
b) which training products will be the focus of the validation;
c) who will lead and participate in validation activities; and
d) how the outcomes of these activities will be documented and acted upon.

Source: Standards for Registered Training Organisations (RTOs) 2015

Validation

Validation of assessment practices and judgements is conducted in accordance with quality assurance procedure *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements.* The intended method for validation of training assessment and training delivery must be documented in the Training and Assessment Strategy. The actual conduct of validation of training assessment and training delivery must be consistent with what is documented in the Training and Assessment Strategy.

Benchmarks established must be reviewed, compared and evaluated to ensure consistency in assessment and compliance with industry best practice. All of the assessment tools must be considered when conducting the validation of assessment.

Evidence that validation has been performed consistently with the Training and Assessment Strategy must be retained by delivery units for presentation during an internal or external audit. Should changes to the training assessment and training delivery be identified through the validation process, these should be documented in the Training and Assessment Strategy and how they will be implemented.

When undertaking industry engagement activities, relevant internal and external stakeholders and/or industry experts who are noted in the Training and Assessment Strategy must be consulted.

Systematic Validation of Assessment Practices and Judgements

In relation to each training product on the QPSRTO scope of registration, the annual Systematic Validation of Assessment Practices and Judgements Schedule will identify the following:

- proposed dates for the assessment validation and audit activity;
- the nominated technical representative (if known) to be involved in the validation of assessment tools and practices;
- the nominated technical representative (if known) to be involved in the validation of assessment decisions;

The timing of the Systematic Validation of Assessment Practices and Judgements activity for each training product will be determined whilst taking into consideration of a variety of factors including, but not limited to:

- the outcomes of previous internal audits and assessment validation activities;
- changes to qualification requirements due to training package amendments;
- change of course coordinator and/or training and assessment staff; and
- number of annual enrolments and completions.

All personnel involved in the management, coordination, administration or support of training programs or quality management systems cooperate with personnel assigned to audit training services and systems.

There are two audit schedules developed, one includes all qualifications and accredited courses within the QPS's scope of registration and the other includes the schedule of audit for the RTO's management system.

The QPS ensures that appropriately qualified and experienced personnel independent of the operation being audited conduct the internal audit.

The QPS ensures internal auditors have access to personnel, facilities, resources and information systems to assess the level of compliance with the requirements stated to apply in scope of internal audits.

Scope of internal audits
An internal audit of the delivery of a qualification or accredited course includes an assessment of the level of compliance with the requirements of the RTO's quality system and the VET Quality Framework. If the delivery of a qualification or accredited course is subject to a contractual agreement, the internal audit includes an assessment of the level of compliance with the conditions of that agreement. An internal audit of the management and administration of the RTO includes an assessment of the level of compliance with:

- the conditions of registration; and
- the requirements of any current contractual agreement, and
- the requirements of the RTO's quality system.

Training Quality captures, maintains and reviews completed internal audit tables, internal audit reports and system improvement plans as quality records as outlined in *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements* and *QPSRTO 008 Quality Management System Audit.*

Continuous Improvement
The QPS acts on opportunities for improvement identified by any means to continually improve its products, services and quality systems.
The QPS identifies opportunities for improvement by regularly monitoring the quality of the organisations training products, services and quality systems by:

- Conducting internal audits and assessment validation for delivery in accordance with *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements.*
- Conducting internal audits of the QPSRTO Quality Management System in accordance *QPSRTO 008 Quality Management System Audit.*
- Collecting and analysing participant evaluations in accordance with *QPSRTO011 RTO Evaluation Policy.*
- Engaging with industry to obtain feedback, recording any improvements identified through these meetings in the Continuous Improvement Register and actioning.
- Recording and reviewing complaints and appeals in accordance with *QPSRTO018 Complaints and Appeals.*
- Attending staff meetings to obtain suggestions, recording any improvements identified through these meetings/suggestions in the Continuous Improvement Register and actioning.

Clause 1.10

For the purposes of Clause 1.9, each training product is validated at least once every five years, with at least 50% of products validated within the first three years of each five year cycle, taking into account the relative risks of all of the training products on the RTO's scope of registration, including those risks identified by the VET Regulator.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPSRTO undertakes systematic validation of assessment practices and judgements of training product/s delivered by, or on behalf of, the organisation. All training product/s on the QPSRTO scope of registration undergoes Systematic Validation of Assessment Practices and Judgements activities as per the

approved schedule in order to ensure a systematic and continuous improvement approach to the products and services provided. This occurs in accordance with *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements.*

Additional internal audits or assessment validation activities may be conducted at any time by Training Quality based on factors including, but not limited to:

- changes to qualification requirements due to training package amendments;
- change of course coordinator;
- significant changes to training and/or assessment staff;
- participant complaints or appeals;
- contract or licensing requirements.

Clause 1.11

For the purposes of Clause 1.9, systematic validation of an RTO's assessment practices and judgements is undertaken by one or more persons who are not directly involved in the particular instance of delivery and assessment of the training product being validated, and who collectively have:

a) vocational competencies and current industry skills relevant to the assessment being validated;
b) current knowledge and skills in vocational teaching and learning; and
c) the training and assessment credential specified in Item 2, or Item 5 of Schedule 1.

Industry experts may be involved in validation to ensure there is the combination of expertise set out above.

Source: Standards for Registered Training Organisations (RTOs) 2015

The annual QPSRTO internal audits and assessment validation activities are led and managed by Training Quality (TQ). TQ is independent of delivery units and has a direct reporting line to the Chief Executive Officer. This ensures a separation of roles and supports the organisations commitment to the ongoing delivery and assessment of quality training.

TQ lead auditors possess current knowledge and skill in vocational teaching and learning and must hold a relevant training and assessment qualification. In some instances, the TQ lead auditor may also possess vocational competencies and current industry skills however a suitably qualified technical representative/s is still to be involved in assessment validation activities led by TQ in accordance with *QPSRTO 007 Systematic Validation of Assessment Practices and Judgements.*

Course coordinators are responsible for:

- nominating a suitably qualified technical representative/s to take part in the validation of assessment practices who was not directly involved in the particular instance of the delivery and assessment of the training product being validated;
- nominating a suitably qualified technical representative/s to take part in the validation of assessment judgements who was not directly involved in the particular instance of the delivery and assessment of the training product being validated;

The details of persons involved in assessment validation activities are to be recorded in the QPSRTO 007 F01 Delivery Unit Systematic Validation of Assessment Practices and Judgements table.

Clause 1.12

The RTO offers recognition of prior learning to individual learners.

Source: Standards for Registered Training Organisations (RTOs) 2015

As an enterprise RTO, the Queensland Police Service (QPS) primarily awards nationally recognised training products via a recognition of prior learning (RPL) pathway. This skills recognition process focusses on the breadth and depth of knowledge and skills acquired by employees as they progress through a range of formal and non-formal learning as part of their employment. Organisational training programs and products are developed, managed and reviewed in accordance with the QPS Education and Training Policies. Programs or products which provide evidence towards the awarding of nationally recognised training products fall within the scope of the QPSRTO quality assurance system.

The QPS offers all participants, eligible to enrol in a nationally recognised training product, with the opportunity to be assessed through an RPL process upon enrolment in the relevant training product (refer to *QPSRTO010 Recognition of Prior Learning* procedure).

The QPS is committed to providing adequate information and support to participants who elect to engage in an RPL assessment process for nationally recognised training products (on scope) where RPL is available. The information available to participants prior to enrolment for each AQF qualification or accredited course, where RPL is available, provides clear and practical advice on gathering sufficient, quality evidence for assessment through an RPL process.

As an enterprise RTO, the QPS has an overriding duty to ensure all staff are adequately trained to perform their delegated duties and fulfil job role requirements as determined by the organisation. Whilst the opportunity to apply for RPL will be offered to individual learners at the time of enrolling in a qualification, training product short course or unit/s of competency, participants may still be required to complete all or part of the organisations training program which provides evidence towards the training product outcome.

Each Training Program and Delivery Unit is responsible for determining the level of risk associated with the job role and what influence the awarding of RPL to a learner has on the requirement for that learner to complete all or part of the QPS training program. Where the awarding of RPL for all or part of a training product does not have any effect on the requirement for a learner to complete the entire relevant QPS training program, this information will be provided to participants in its course materials.

Trainers and assessors

Clause 1.13

In addition to the requirements specified in Clause 1.14 and Clause 1.15, the RTO's training and assessment is delivered only by persons who have:

a) vocational competencies at least to the level being delivered and assessed;
b) current industry skills directly relevant to the training and assessment being provided; and
c) current knowledge and skills in vocational training and learning that informs their training and assessment.

Industry experts may also be involved in the assessment judgement, working alongside the trainer and/or assessor to conduct the assessment

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPS procures and recruits employees capable of meeting the technical, skill and education requirements of the RTO's scope of registration and operations. QPS is an enterprise RTO responsible for the training and assessment of its own staff. The trainers/assessors are predominately recruited from these staff.

The QPSRTO ensures that where qualifications are awarded via a delivery and assessment pathway, unit training and assessment staff have the required trainer and assessor qualifications and experience through verification by the relevant course coordinators. Course coordinators are responsible for ensuring that a staff profile is completed and trainer/assessor requirements met prior to that staff member delivering training or conducting assessment on behalf of the RTO. This is done in accordance with quality assurance procedure *QPSRTO 015 Management of RTO Staff Training.*

Trainers and/or assessors are also required to provide evidence of vocational experience and provide copies of relevant qualifications and experience. These are verified through the QPS staff training records or the QPS staff selection process as outlined in the Human Resource policies and the public service Directive No 15/13 Recruitment and Selection. This requirement is monitored during internal audits of the delivery units by the Training Quality Section.

The QPS ensures that personnel involved in training delivery, assessment and support of Training Product/s undertake an induction, in accordance with *QPSRTO 026 Staff Induction,* that provides information about how they are to undertake their assigned duties and activities responsibly, safely, efficiently and effectively.

The information provided in the RTO induction includes:

- the quality manual;
- legislation that impacts on their duties;
- the VET Quality Framework;
- Training and/or Assessment Strategies;
- relevant Quality Assurance procedures.

The information provided in a course induction includes:

- an overview of the course learning and/or assessment strategy; and
- an outline of the qualification or accredited course competency requirements, and
- the course learning and assessment materials, and
- local operating procedures that govern how tasks and activities are to be performed, and
- any supervisory arrangements relating to trainers and/or assessors.

The RTO's policies and procedures are documented on the QPS Intranet site for all staff to access.

Clause 1.14

The RTO's training and assessment is delivered only by persons who have the training and assessment credential specified in Item 2 or Item 3 of Schedule 1.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer Clause 1.13 and quality assurance procedure *QPSRTO 026 Staff Induction*

Clause 1.15

Where a person conducts assessments only, the RTO ensures that the person has the training and assessment credential specified in Item 2, or Item 3, or Item 5 of Schedule 1.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer Clause 1.13 and quality assurance procedure *QPSRTO 026 Staff Induction*

Clause 1.16

The RTO ensures that all trainers and assessors undertake professional development in the fields of the knowledge and practice of vocational training, learning and assessment including competency based training and assessment.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer Clause 1.13 and quality assurance procedure *QPSRTO 026 Staff Induction*

Individuals working under the supervision of a trainer

Clause 1.17

Where the RTO, in delivering training and assessment, engages an individual who is not a trainer or assessor, the individual works under the supervision of a trainer and does not determine assessment outcomes.

Source: Standards for Registered Training Organisations (RTOs) 2015

Where a training product on the QPS scope of registration is awarded via a delivery and assessment pathway, Course Coordinators are responsible for approving those persons who are involved in the delivery of training and assessment for the relevant program they are responsible for. Where a person who is not a trainer or assessor is engaged by the delivery unit to deliver training, the Course Coordinator is to ensure that a suitable supervisory plan has been developed and put in place in accordance with Clause 1.20.

Course Coordinators are to ensure that persons, who are not trainers or assessors but are delivering training on behalf of the QPSRTO, have the necessary industry (technical) or vocational expertise in the field of training being delivered as well as meeting the requirements of Clause 1.18.

Persons who do not meet the requirements of Clause 1.15 are not to determine assessment outcomes for training product/s.

Quality assurance procedure QPSRTO 015 Management of RTO Staff Training refers.

Clause 1.18

The RTO ensures that any individual working under the supervision of a trainer under Clause 1.17:

a) holds the training and assessment credential specified in Item 6 of Schedule 1;
b) has vocational competencies at least to the level being delivered and assessed; and
c) has current industry skills directly relevant to the training and assessment being provided.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.17.

Clause 1.19

Where the RTO engages an individual under Clause 1.17, it ensures that the training and assessment complies with Standard 1.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.17.

Clause 1.20

Without limiting Clauses 1.17 – 1.19, the RTO:

a) determines and puts in place:
   i. the level of the supervision required; and
   ii. any requirements, conditions or restrictions considered necessary on the individual's involvement in the provision of training and collection of assessment evidence; and
b) ensures that trainers providing supervision monitor and are accountable for all training provision and collection of assessment evidence by the individual under their supervision.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.17.

Delivery of the training and assessment qualifications for trainers and assessors

Clause 1.21 to 1.25 - Not applicable to the QPSRTO

Transition of training products

Clause 1.26

Subject to Clause 1.27 and unless otherwise approved by the VET Regulator, the RTO ensures that:

a) where a training product on its scope of registration is superseded, all learners' training and assessment is completed and the relevant AQF certification documentation is issued or learners are transferred into its replacement, within a period of one year from the date the replacement training product was released on the National Register;
b) where an AQF qualification is no longer current and has not been superseded, all learners' training and assessment is completed and the relevant AQF certification documentation issued within a period of two years from the date the AQF qualification was removed or deleted from the National Register;
c) where a skill set, unit of competency, accredited short course or module is no longer current and has not been superseded, all learners' training and assessment is completed and the relevant AQF certification documentation issued within a period of one year from the date the skill set, unit of competency, accredited short course or module was removed or deleted from the National Register; and
d) a new learner does not commence training and assessment in a training product that has been removed or deleted from the National Register.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPSRTO ensures that requests for additions, deletions or amendments to the QPSRTO Scope of Registration are managed in a systematic and consistent way. Training Quality overseas the transition from superseded training packages as well monitoring the requirements for reaccreditation and re-registration of VET accredited courses that the QPS delivers and/or assesses. The management of the QPSRTOs Scope of Registration is conducted in accordance with the quality assurance procedure *QPSRTO 001 Management of the QPSRTO Scope of Registration.*

The QPS ensures that delivery of AQF Qualifications and accredited courses commences only after QPS has received notification of approval for the extension to the QPS scope of registration from the VET regulator. The RTO Chief Executive Officer approves all registration documentation prior to submission to the VET regulator.

All documentation required for registration is captured within the approved records management system and is accessible to managers, trainers, assessors, administration and support staff. Registration records are maintained as quality records and retained in compliance with QPS policies and the Records Retention and Disposal Schedule

The QPS will manage the transition from superseded Training Packages within 12 months of their publication on Training.gov.au and also manage the transition from superseded accredited courses so that it will deliver only current endorsed Training Packages or currently accredited courses.

The QPS will manage this process by:

- monitoring the currency of Training Packages and accredited courses via:
  - subscribing to Training.gov.au updates, and
  - reviewing currency of Training Packages during course reviews/internal audits, and
  - liaising with the Australian and New Zealand Policing Advisory Agency, and
- making application for changes to scope of registration within the 12 months transition period; and

- ensuring that participants training is completed within the required timeframes or they are transitioned into the new training product (if applicable) within 12 months.

Clause 1.27

The requirements specified in Clause 1.26 (a) do not apply where a training package requires the delivery of a superseded unit of competency.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 1.26.

Standard 2 – The operations of the RTO are quality assured.

Clause 2.1 – Implement quality assurance strategies

The RTO ensures it complies with these Standards at all times, including where services are being delivered on its behalf. This applies to all operations of an RTO within its scope of registration.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPS maintains a quality manual that includes:

- a description and scope of the quality system, including any allowable exclusions
- reference to documented procedures; and
- a description of interaction between processes of the quality system.

The Officer in Charge, Training Quality ensures current quality assurance system documentation is available to all persons providing product development, delivery, assessment, support or administration services on behalf of the RTO.

Training Managers ensure personnel under their control have access to current quality system documentation.

Documentation Requirements

The quality system shall be established and maintained in a tiered documentation structure, including those documents required by regulation, the VET Quality Framework, contracts and agreements to ensure effective operations.

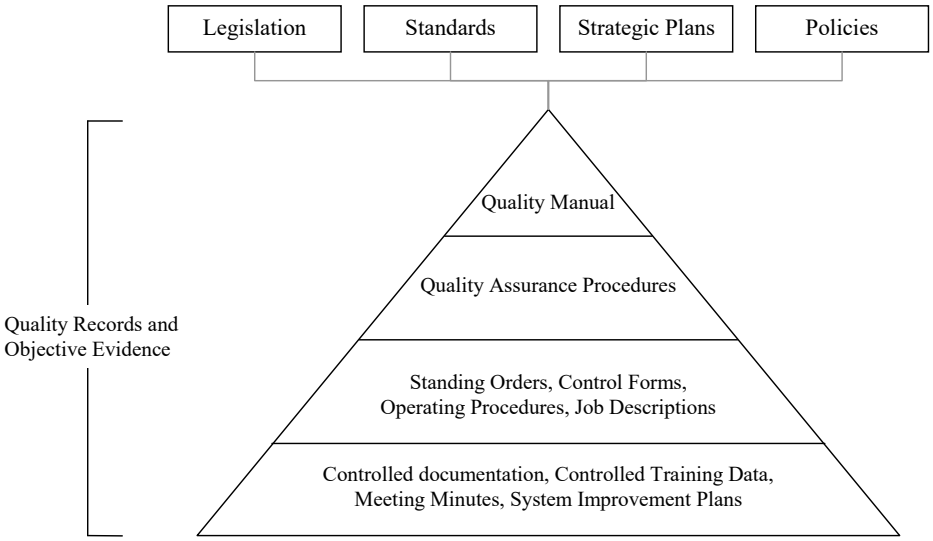
Each lower tier of documents supports the tier above and includes increasing levels of detail. The tiered structure includes:

- a quality manual, containing policies for system requirements;
- the RTO quality assurance procedures, containing descriptions of who, what, when and how activities are to be undertaken to achieve the requirements of the quality system;
- Standing Orders that provide how quality assurance procedures are incorporated into business tasks and activities;
- control forms used to collect quality data;
- training program work instructions that document who, what, when and how quality activities are undertaken within a training program;
- job descriptions that document the responsibilities of staff and provide evidence of the implementation of the requirements of the quality system.

- quality records generated and maintained as a result of complying with the requirements of the quality system.

Structure of Quality System Documentation

Figure 1: Structure of Quality System documentation



Document Approval

Training programs or offices that create or use documentation related to the production of an RTO training product or the operation of the quality system within their area of responsibility maintain local procedures and instructions to control documentation and associated data. Document control elements include:

- Unique document identification number;
- Descriptive document name;
- Details of the document owner;
- Date document was approved;
- Details of the authorised person who approved the document;
- Version or revision number

Procedures or external standard documents on paper, which display 'Not a Controlled Copy' or similar words, are not used to control operations essential to the effective functioning of the quality system. Reference copies are validated against physical or electronic controlled master documents.

A master copy of obsolete or repealed document are retained for at least the life of the training product and as required in the QPS Records Retention and Disposal Schedule.

The use of national or international standards is limited to current versions only unless otherwise required through a contractual agreement. Where the document is developed by and the QPS has custody of the Copyright that the following words are included in the footer area of each page, ‘Copyright State of Queensland (Queensland Police Service)’.

Document changes

Changes to the RTO Management System Documents are processed in accordance with procedure QPSRTO 003 *Development/amendment of RTO Management System Policies, Procedures and Forms*.

Changes to Delivery Unit documents are reviewed and approved by the document owner, unless specifically designated and authorised in writing by the authorised course coordinator.

Change records shall include:

- The unique document identification number;
- Details of the document owner;
- Date the change was approved;
- A description of the change;
- The updated version or revision number;

Document distribution lists show the new version or revision number of the document and the date the changed document became effective.

Approved changes are communicated to appropriate personnel in a timely manner.

Quality Records

Quality records are maintained as evidence of compliance with the requirements of regulations and standards and the effective operation of the quality system.

Quality records are maintained on approved systems only.

Quality records meet the following requirements:

- Legible and identifiable with the product or process involved;
- Stored and maintained to provide reasonable access, in facilities that provides a suitable environment to minimise deterioration, damage or loss.
- Access is managed in accordance with QPS information security policies.
- Useable and readable.
- Electronic records are migrated to new versions of software programs as necessary.
- Backed up when stored on computer-based systems.
- Available for production to Training Quality, external National VET Regulator auditors or as authorised or required by law.
- Retained as quality records for the period of time identified within the QPS Records Retention and Disposal Schedule.
- Assessment records will be retained as per the QPS Records Retention and Disposal Schedule and the requirements of the relevant NVR General Directions.

Quality records include:

- customer agreements;
- partnership agreements;
- training project plans;
- course accreditation documentation;
- registration documentation;
- course outlines;
- Learning and Assessment Strategy;
- industry unit of competency or module descriptor;
- learning materials;
- assessment tools
- work instructions;
- job descriptions of facilitators and administrative staff;
- staff and client induction documentation;
- course joining instructions;
- client enrolment records;
- completed client assessment items [QPSRTO 014 Recordkeeping (Assessment)];
- client unit or module summative assessment results;
- self audits or training program internal review documentation;

- evaluation reports and data records;
- trainer and assessor profiles;
- course validation documentation;
- assessment validation documentation;
- system improvement plans.

Continuous Improvement
Refer to clause 2.2.

Internal audit
Refer to clause 2.2.

Corrective Action

The QPS is highly motivated towards satisfying all of our clients. Any service complaints are reported to the Coordinator, Training Quality for resolution. Complaints and appeals are addressed as per procedure *QPSRTO018 Complaints and Appeals*.

The Coordinator, Training Quality receives copies of all internal audit reports and communicates compliance issues to the management committee.

The relevant Course Coordinator corrects identified issues of non-compliance as soon as is practicable and reports on rectifications to their Training Manager.

The designated team member of Training Quality corrects identified issues of non-compliance as soon as is practicable and reports on rectifications to the Coordinator, Training Quality.

The Training Manager has the responsibility of providing information about all system improvement actions to their functional manager.

The Training Manager submits improvement action plans to the Coordinator, Training Quality for the consideration of the management committee.

The Training Quality captures, maintains and reviews corrective action reports and system improvement plans.

Client feedback
Refer to clause 2.2.

Responsibilities:

Manager, Education and Training Services
The Manager, Education and Training Services is the Legally Authorised Representative of the QPSRTO and is responsible for:

- endorsing the quality policy;
- ensuring that the quality policy is disseminated and clearly understood across the organisation;
- endorsing yearly reviews of the suitability and effectiveness of the quality system;
- monitoring the QPSRTO level of compliance with the Standards;
- approving all course accreditations for submission to the registering body;
- monitoring the standard of QPSRTO products and services;
- approving applications to extend, maintain or reduce the QPSRTO's scope of registration.

Officer in Charge, Training Quality
The Officer in Charge, Training Quality is responsible for:

- monitoring the effectiveness of the quality system;
- ensuring appropriately qualified and skilled personnel are available to conduct internal audits;
- ensuring the quality system satisfies organisational and customer requirements;
- participating in reviews of the suitability and effectiveness of the quality system.

Coordinator, RTO Administration and Training Support
The Coordinator, RTO Administration and Training Support is responsible for:

- documenting and maintaining the quality system;
- obtaining and communicating quality system requirements to training managers and partnering organisations;
- ensuring the quality system satisfies organisational and customer requirements;
- coordinating improvements to the quality system;
- ensuring regular internal audits of training providers are conducted;
- participating in reviews of the suitability and effectiveness of the quality system;
- maintaining a record of all certification issued by the QPSRTO.

Program Training Manager
The Program Training Manager is responsible for:

- implementing the QPS Quality Management System within their area of responsibility;
- obtaining and communicating customer requirements to appropriate personnel and the functional program manager;
- ensuring appropriately qualified, skilled and trained personnel and other resources are available to implement the quality system;
- maintaining the qualifications, skills and currency of staff to deliver and assess AQF qualifications and accredited courses within their area of responsibility;
- ensuring products and services satisfy customer requirements including quality, safety, cost, schedule, performance, reliability, accuracy and maintainability;
- managing quality records of education and training products and services as required by the quality system;
- ensuring staff have access to current quality assurance system documentation;
- ensuring that personnel comply with applicable legislation, standards, regulations, specifications and the quality system.

Course Coordinator
The Course Coordinator is responsible for:

- maintaining the QPS Quality Management System within their area of responsibility;
- delivering training services that achieve customer requirements;
- maintaining their qualifications, currency and skills;
- inducting course staff which includes trainers, assessors, administrative officers and support staff;

- ensuring that the course facilitators are appropriately qualified, and that there are current facilitator profiles for each course facilitator;
- providing participants with any information that affects their participation in the course;
- maintaining quality records of planning, delivery, evaluation and validation that comply with applicable legislation, standards, regulations, specifications and the quality system;
- ensuring participant's results are accurately captured in the approved Learning Management System in accordance with requirements of the quality system;
- requesting formal certification for participants who have attained or are recognised as having the knowledge and skills required for its issuance;
- actively participating in internal and external audits;
- ensuring the quality of their work;
- notifying their Training Manager of requirements not being met.

All personnel involved with the delivery of Training Product/s
All personnel are responsible for:

- ensuring the quality of their work;
- maintaining their qualifications and skills to deliver, assess or to provide training support services;
- operating in conformance with the requirements of the quality system, and;
- notifying their respective Course Coordinator of requirements not being met.

Training Partnerships

Refer to Clause 2.3

Clause 2.2

The RTO:

a) systematically monitors the RTO's training and assessment strategies and practices to ensure ongoing compliance with Standard 1; and
b) systematically evaluates and uses the outcomes of the evaluations to continually improve the RTO's training and assessment strategies and practices. Evaluation information includes but is not limited to quality/performance indicator data collected under Clause 7.5, validation outcomes, client, trainer and assessor feedback and complaints and appeals.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPSRTO undertakes internal audits of the delivery units in order to ensure a systematic and continuous improvement approach to the management of operations. During these audits, training and assessment strategies and practices are monitored in order to ensure ongoing compliance with Standard 1. The outcomes of internal audits are reported to the QPSRTOs Chief Executive Officer on an annual basis.

The QPSRTO will collect the following data for analysis to identify improvements in training and assessment:

- client satisfaction surveys/questionnaires including the Quality Indicator data
- client/industry interviews/meetings
- industry skills councils feedback
- records of staff/planning meetings and agreed actions;
- records of complaints and appeals and their resolution
- internal and external audit reports
- staff performance-appraisal reports
- trainer self-evaluation
- course reviews/assessment validation

This data will be collected and actioned as outlined in the following procedures:

- QPSRTO003 Development/Amendment of RTO Management System (Policies, Procedures and Forms)
- QPSRTO007 Systematic Validation of Assessment Practices and Judgements
- QPSRTO008 Quality Management System Audit
- QPSRTO011 RTO Evaluation Procedure
- QPSRTO015 Management of RTO Staff Training
- QPSRTO018 Complaints and Appeals
- QPSRTO028 Industry Relevance of Training Assessment and Delivery

Clause 2.3

The RTO ensures that where services are provided on its behalf by a third party the provision of those services is the subject of a written agreement.

Source: Standards for Registered Training Organisations (RTOs) 2015

Training Partnerships

A training partner is an individual not employed by the QPS, external organisation or agency that provides delivery and/or assessment services on behalf of the QPSRTO as stipulated within a Partnership Agreement.

A training partner is subject to the requirements of the quality system to the extent that the partnership agreement stipulates and is required to participate in internal and external audits.

A ratified Partnership Agreement is required before a training partner provides training delivery and/or assessment services on behalf of the QPSRTO.

The Partnership Agreement specifies how each party to the agreement will discharge their responsibilities in compliance with the requirements of the VET Quality Framework, the quality system and other conditions stipulated within the agreement.

All training and assessment conducted by external agencies will be reviewed by the QPSRTO to ensure compliance with the VET Quality Framework.

The Partnership Agreement will stipulate the process for the monitoring and review of the training partnership.

Partnership Agreements are maintained as quality records and retained in compliance with the QPS policies and the Records Retention and Disposal Schedule.

A register of partnership agreements will be maintained.

Clause 2.4

The RTO has sufficient strategies and resources to systematically monitor any services delivered on its behalf, and uses these to ensure that the services delivered comply with these Standards at all times.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 2.3.

Standard 3 –The RTO issues, maintains and accepts AQF certification documentation in accordance with these Standards and provides access to learner records.

Clause 3.1

The RTO issues AQF certification documentation only to a learner whom it has assessed as meeting the requirements of the training product as specified in the relevant training package or VET accredited course.

Source: Standards for Registered Training Organisations (RTOs) 2015

Issuing qualifications or statements of attainment

The QPSRTO issues qualifications and Statements of Attainment in accordance with *QPSRTO002 Certification & Issuing Qualifications and Statements of Attainment* procedure.

The QPSRTO formally recognises achievement as follows:

Qualification

- If a participant has achieved exactly the unit of competency required for a qualification:
  - A qualification, naming the qualification achieved; and
  - A separate list of the units of competency of modules that contribute to the qualification called a Memorandum of Results, will be issued.

- If a participant achieves fewer units of competency or modules than required for a qualification:
  - A Statement of Attainment will be issued listing all the units of competency or modules achieved in partial completion of a qualification.

- If a participant achieves more units of competency or modules required for a qualification:
  - A qualification naming the qualification achieved; and
  - A separate listing of the units of competency or modules that contributed to the qualification called a Memorandum of Results; and
  - The extra units of competency or modules achieved over and above those required for the qualification are listed on the same Memorandum of Results if the units of competency or modules are within the packaging rules for that qualification; or
  - If the units of competency or modules are outside the packaging rules for that qualification, a Statement of Attainment is issued listing the extra units.

Accredited Short Course

- If a participant achieves exactly the units of competency required for an accredited short course:
  - A Statement of Attainment will be issued listing all the units of competency or modules achieved in completion of the accredited short course.

- If a participant achieves fewer units of competency or modules than required for an accredited short course:
  - A Statement of Attainment will be issued listing all the units of competency or modules achieved in partial completion of the accredited short course.

The QPSRTO ensures that a participant's final summative assessment result for each unit of competency, module or subject is accurately recorded within the approved Learning Management System before issuing a qualification or statement of attainment.

The QPSRTO keeps a complete and accurate record of a participant's work in accordance with the QPS Records Retention and Disposal Schedule and VET regulator requirements from the date a participant:

- is assessed as having attained the required knowledge and skills for a qualification or course; or
- is recognised as having the required knowledge and skills for a qualification or course.

The QPSRTO issues qualifications within 30 days from the day a participant is assessed as having attained or is recognised as having the knowledge and skills required for its issue.

The QPSRTO issues a statement of attainment in partial completion of a qualification upon receiving a written request from the participant.

The QPSRTO re-issues qualifications, statements of attainment or statement of achievement within 21 days from the date of receiving a written request from a participant for its re-issue.

The QPSRTO keeps sufficient information to re-issue a qualification, statement of attainment or statement of achievement for 40 years from the date a participant attains or is recognised as having the knowledge and skills required for its issue.

Records of qualifications and statements of attainment issued by the QPSRTO are maintained as quality records that are retained in accordance with the QPS Records Retention and Disposal Schedule.

The QPSRTO will retain learners' records of attainment of units of competence and qualifications for a period of 40 years (QPS Records Retention and Disposal Schedule).

***Note:* The QPS is exempt from the unique student identifier requirements.**

Clause 3.2

All AQF certification documentation issued by an RTO meets the requirements of Schedule 5.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPSRTO ensures all qualifications and Statements of Attainment issued for AQF qualifications or accredited courses comply with the Australian Qualifications Framework requirements.

A single unit of competency is the smallest measure of achievement recognised and recorded on a Statement of Attainment or Memorandum of Results.

The QPSRTO issues qualifications and Statements of Attainment in accordance with *QPSRTO002 Certification & Issuing Qualifications and Statements of Attainment* procedure.

Clause 3.3

AQF certification documentation is issued to a learner within 30 calendar days of the learner being assessed as meeting the requirements of the training product if the training program in which the learner is enrolled is complete, and providing all agreed fees the learner owes to the RTO have been paid.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 3.1.

Clause 3.4

Records of learner AQF certification documentation are maintained by the RTO in accordance with the requirements of Schedule 5 and are accessible to current and past learners.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to Clause 3.1.

Clause 3.5

The RTO accepts and provides credit to learners for units of competency and/or modules (unless licensing or regulatory requirements prevent this) where these are evidenced by:

a) AQF certification documentation issued by any other RTO or AQF authorised issuing organisation; or
b) authenticated VET transcripts issued by the Registrar.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPSRTO recognises the AQF qualifications and statements of attainment issued by any other RTOs or AQF authorised issuing organisations. Students will not be charged fees for this recognition process.

Clause 3.6 – Participate in the Student Identifier scheme (QPS Exempt)

The RTO meets the requirements of the Student Identifier scheme, including:

a) verifying with the Registrar, a Student Identifier provided to it by an individual before using that Student Identifier for any purpose;
b) ensuring that it will not issue AQF certification documentation to an individual without being in receipt of a verified Student Identifier for that individual, unless an exemption applies under the *Student Identifiers Act 2014*;
c) ensuring that where an exemption described in Clause 3.6 (b) applies, it will inform the student prior to either the completion of the enrolment or commencement of training and assessment, whichever occurs first, that the results of the training will not be accessible through the Commonwealth and will not appear on any authenticated VET transcript prepared by the Registrar; and
d) ensuring the security of Student Identifiers and all related documentation under its control, including information stored in its student management systems.

Source: Standards for Registered Training Organisations (RTOs) 2015

The QPS is currently exempt from the national Student Identifier requirements.

Standard 4 – Accurate and accessible information about an RTO, its services and performance is available to inform prospective and current learners and clients.

Clause 4.1 – Provide accurate information to learners about services and qualifications

QPSRTO's Management System
QPS is an enterprise RTO and delivers training to its own staff. Staff enrol in training as a result of:

- Applying to become a police officer (Recruit training)
- Ongoing professional development for advancement of their career in the Police Service

Employees undertaking national recognised training with the QPSRTO are able to access a range of information about the QPSRTO through the QPS intranet via their employee computer access. As an enterprise RTO, access to this information is restricted to employees who have been granted the relevant access however the information is made available to employees of approved partnership organisations.

RTO Delivery/Assessment Information
Information regarding the services offered by the QPSRTO is made available to learners via the QPS Intranet site. The information available includes but is not limited to:

- the national code and title of the qualifications or accredited courses, and
- the vocational outcomes of the qualifications or accredited courses, and
- an overview of the delivery and assessment requirements of the qualification or accredited course, and
- entry requirements for qualifications or accredited courses, and
- information about credit transfer arrangements, and
- information about RPL arrangements, and
- validation and moderation arrangements, and
- information about the QPSRTO fee refund policy (where applicable), and
- information about the QPSRTO academic appeals process, and
- information about the RTO complaints process.

In addition to the above information, participants will also be provided with QPS specific course/program information relevant to the training they are undertaking prior to a course commencing. The information provided may include:

- the scheduled start and end dates of the course/program, and
- location details of training venues to be used, and
- equipment and resources to be provided by the participant, and
- training and assessment arrangements, and
- support services.

Also refer to 'Training Partnerships' in clause 2.3.

Standard 5 – Each learner is properly informed and protected.

Clause 5.1

Prior to enrolment or the commencement of training and assessment, whichever comes first, the RTO provides advice to the prospective learner about the training product appropriate to meeting the learner's needs, taking into account the individual's existing skills and competencies.

Source: Standards for Registered Training Organisations (RTOs) 2015

As an enterprise RTO, the primary learners undertaking training with the QPSRTO are employees of the organisation. The QPSRTO ensures that job role requirements and the management of organisational risk continue to be a significant driver when it comes to determining the mode of delivery and amount of training that each learner is to undertake. In most instances, the achievement of national training outcomes are directly connected and dependent upon the successful completion of organisational training programs and courses.

Each delivery unit has developed training and assessment strategies specific to their delivery unit which meet the requirements of the relevant training product and align to job role requirements. The strategies are developed by the Course Coordinator in accordance with quality assurance procedure QPSRTO 028 *Industry Relevance of Training Assessment and Delivery.*

Training and Assessment Strategies are also to be made available to eligible prospective participants in electronic format, such as via intranet sites etc. unless the release of the strategy to persons other than those directly involved with the delivery, assessment or administration of the training product, would compromise the safety or security of the policing sector.

Clause 5.2

Prior to enrolment or the commencement of training and assessment, whichever comes first, the RTO provides, in print or through referral to an electronic copy, current and accurate information that enables the learner to make informed decisions about undertaking training with the RTO and at a minimum includes the following content:

a) the code, title and currency of the training product to which the learner is to be enrolled, as published on the National Register;
b) the training and assessment, and related educational and support services the RTO will provide to the learner including the:
    i. estimated duration;
    ii. expected locations at which it will be provided;
    iii. expected modes of delivery;
    iv. name and contact details of any third party that will provide training and/or assessment, and related educational and support services to the learner on the RTO's behalf; and
    v. any work placement arrangements.
c) the RTO's obligations to the learner, including that the RTO is responsible for the quality of the training and assessment in compliance with these Standards, and for the issuance of the AQF certification documentation.

d) the learner's rights, including:
   i. details of the RTO's complaints and appeals process required by Standard 6; and
   ii. if the RTO, or a third party delivering training and assessment on its behalf, closes or ceases to deliver any part of the training product that the learner is enrolled in;
e) the learner's obligations:
   i. in relation to the repayment of any debt to be incurred under the VET FEE-HELP scheme arising from the provision of services;
   ii. any requirements the RTO requires the learner to meet to enter and successfully complete their chosen training product; and
   iii. any materials and equipment that the learner must provide; and
f) information on the implications for the learner of government training entitlements and subsidy arrangements in relation to the delivery of the services.

Source: Standards for Registered Training Organisations (RTOs) 2015

Refer to clause 5.1.

Clause 5.3

Where the RTO collects fees from the individual learner, either directly or through a third party, the RTO provides or directs the learner to information prior to enrolment or the commencement of training and assessment, whichever comes first, specifying:

a) all relevant fee information including:
   i. fees that must be paid to the RTO; and
   ii. payment terms and conditions including deposits and refunds;
b) the learner's rights as a consumer, including but not limited to any statutory cooling-off period, if one applies;
c) the learner's right to obtain a refund for services not provided by the RTO in the event the:
   i. arrangement is terminated early; or
   ii. the RTO fails to provide the agreed services.

Source: Standards for Registered Training Organisations (RTOs) 2015

A participant who is an employee of the Queensland Police Service is, unless otherwise stipulated, exempt from any application, course, participant and tuition fees for training and assessment services provided by the Queensland Police Service.

An agency making application to enrol a participant/s in a fee for service course must read and understand the fees and charges information and the QPSRTO refund policy before signing a Memorandum of Understanding or similar document.

Clause 5.4

Where there are any changes to agreed services, the RTO advises the learner as soon as practicable, including in relation to any new third party arrangements or a change in ownership or changes to existing third party arrangements.

Source: Standards for Registered Training Organisations (RTOs) 2015

A participant who is an employee of the Queensland Police Service will primarily achieve a nationally recognised training outcome via an assessment only pathway after the completion of the relevant organisational training course or program that produces evidence that meets the requirements of that Training Product. In the event that there are changes to the relevant QPS training program that impacts the achievement of, or linkages to, national training outcomes then the course coordinator is responsible for advising affected participants as soon as practicable.

In instances where there are changes to the agreed services and the training is being delivered to participants of an external agency under the conditions outlined in a Memorandum of Understanding, then the changes must be reflected in an updated or revised Memorandum of Understanding which has been signed by all relevant parties.

Standard 6 – Complaints and appeals are recorded, acknowledged and dealt with fairly, efficiently and effectively.

Clause 6.1

The RTO has a complaints policy to manage and respond to allegations involving the conduct of:

a) the RTO, its trainers, assessors or other staff;
b) a third party providing services on the RTO's behalf, its trainers, assessors or other staff; or
c) a learner of the RTO.

Clause 6.2

The RTO has an appeals policy to manage requests for a review of decisions, including assessment decisions, made by the RTO or a third party providing services on the RTO's behalf.

Clause 6.3

The RTO's complaints policy and appeals policy:

a) ensure the principles of natural justice and procedural fairness are adopted at every stage of the complaint and appeal process;
b) are publicly available;
c) set out the procedure for making a complaint or requesting an appeal;
d) ensure complaints and requests for an appeal are acknowledged in writing and finalised as soon as practicable; and
e) provide for review by an appropriate party independent of the RTO and the complainant or appellant, at the request of the individual making the complaint or appeal, if the processes fail to resolve the complaint or appeal.

Clause 6.4

Where the RTO considers more than 60 calendar days are required to process and finalise the complaint or appeal, the RTO:

a) informs the complainant or appellant in writing, including reasons why more than 60 calendar days are required; and
b) regularly updates the complainant or appellant on the progress of the matter.

Clause 6.5

The RTO:

a) securely maintains records of all complaints and appeals and their outcomes; and
b) identifies potential causes of complaints and appeals and takes appropriate corrective action to eliminate or mitigate the likelihood of reoccurrence.

Source: Standards for Registered Training Organisations (RTOs) 2015

QPSRTO's Management System

The RTO manages complaints and appeals in a fair and timely manner. The QPSRTO will respond to and manage complaints or allegations regarding the conduct of the RTO, RTO staff, third party or partner organisations and learners in accordance with the requirements outlined in the *QPSRTO018 Complaints and Appeals* procedure. This procedure is to be read in conjunction with the QPS complaints and discipline process.

The RTO manages appeals in accordance with the *QPSRTO018 Complaints and Appeals* procedure. Complaints and appeals will be dealt with in a manner which adheres to the principles of natural justice and procedural fairness.

The principles of natural justice and procedural fairness include but are not limited to:

- Ensuring complaints and appeals are dealt with in a timely manner;
- Ensuring the information/evidence relied upon is relevant in the circumstances;
- Ensuring complainants/appellants are provided with copies of all relevant documentation;
- Ensuring complainants/appellants are given the opportunity to respond to issues or matters raised;
- Ensuring complainants/appellants have the opportunity to utilise or access a support person during investigation of the complaint or appeal;
- Ensuring confidentiality is maintained throughout the relevant processes unless legislative requirements require otherwise;
- Ensuring the relevant decision makers act fairly and without bias;

Students are provided information on the complaints and appeals process via the QPS intranet.

Staff are initially made aware of the complaints and appeals process during the staff induction process and then ongoing through meetings and emails.

Clause 6.6 – Not applicable to QPS

Standard 7 –The RTO has effective governance and administration arrangements in place.

Clause 7.1

The RTO ensures that its executive officers or high managerial agent:

a) are vested with sufficient authority to ensure the RTO complies with the RTO Standards at all times; and
b) meet each of the relevant criteria specified in the Fit and Proper Person Requirements in Schedule 3.

Clause 7.2

The RTO satisfies the *Financial Viability Risk Assessment Requirements*.

Clause 7.3

Where the RTO requires, either directly or through a third party, a prospective or current learner to prepay fees in excess of a total of $1500 (being the threshold prepaid fee amount), the RTO must meet the requirements set out in the Requirements for Fee Protection in Schedule 6.

Clause 7.4

The RTO holds public liability insurance that covers the scope of its operations throughout its registration period.

Clause 7.5

The RTO provides accurate and current information as required by the *Data Provision Requirements* as updated from time to time.

Source: Standards for Registered Training Organisations (RTOs) 2015

The position of Manager, Education and Training Services is the Chief Executive Officer of the QPSRTO. The position has the relevant authority, designated or otherwise, to oversee and influence the management of the RTO.

Refer to Standard 8 for further information regarding the role of the Manager, Education and Training Services.

Management Responsibility (Governance)

In this Quality Manual and its implemented procedures, the RTO addresses the following:

- its compliance with the *VET Quality Framework* and any national guidelines, and
- its compliance with the *National Vocational Education and Training Regulator Act 2011* and any guidelines and policies made under the *Act*, and
- its compliance with QPS policies and procedures, and
- management's commitment to achieving compliance, organisational expectations and goals, and
- the needs of the RTO clients.

The QPSRTO management committee (hereafter referred to as the management committee) supports the establishment and maintenance of the quality management system for the management of products and services provided by the RTO that comply with regulatory and other requirements that govern the delivery and assessment of training product/s. Improvements to the quality system are made to enhance the achievement of QPS strategic objectives in support of the QPS Mission Statement and Priorities of the People Capability Command.

The RTO implements internal audits of the quality system to determine the system's effectiveness and suitability. Results of these reviews are provided to management and maintained as quality records.

Emphasis shall be placed on continuous improvement to the Quality Management System including:

a) Identification of processes needed for management of the RTO operations;
b) Determination of the sequence and interaction of processes;
c) Determination of acceptance criteria and methods required to ensure effective operations;
d) Ensuring the availability of information to support operations;
e) Measuring, monitoring and analysing processes and implemented actions to achieve planned results and continuous improvement.

The management committee in partnership with line managers identify and provide adequate resources, including appropriately qualified and trained personnel, for managing and supporting work and internal audit activities.

The organisation ensures the decision making of senior management is informed by the experiences of its trainers and assessors through the collection of the following data:

- Client feedback
- Results of internal audits
- Enrolments and completions
- Number of qualifications and Statements of Attainment issued.

Reports are prepared and passed up through the following chain of command:

- Coordinator, Training Quality
- Manager, Education Services Unit
- Director, Training Strategy.

Management committee

The management committee consists of:

a) Manager, Education and Training Services
b) Officer in Charge, Training Quality
c) Coordinator, RTO Administration and Training Support

The management committee establishes and maintains the RTO Quality Policy and commitment to quality.

The management committee identifies resource requirements and provides adequate resources for personnel involved in management, performance of work, and verification activities.

Resources include suitably trained and qualified personnel, equipment, and supplies.

Verification includes internal auditing.

The responsibility, authority and the interrelation of personnel who contribute to the quality requirements of products and services are defined throughout the quality system documentation.

Information/data is collated by the various members of the management committee in their job roles and forwarded to the Manager, Education and Training Services for consideration.

The management committee has the following functions:

- To support quality education and training provided by the RTO and the quality system;

- To advise and report on matters relating to the education and training products and services provided by the QPSRTO to:
  - the Assistant Commissioner, People Capability Command, and
  - the Australian and New Zealand Police Advisory Agency (ANZPAA),
  - the National Centre for Vocational Education Research (NCVER),
  - the National VET Regulator (NVR).
- To support the development, accreditation and registration of quality training product/s.
- To approve and amend the quality management system as considered desirable and appropriate.
- To ensure that ongoing management is responsive to changing circumstances in relation to quality management.

Financial viability and reporting

The RTO is administered by Queensland Police Service and financial management is undertaken in accordance with QPS Financial Management Practice Manual which is based on the Financial Accountability Act 2009 and the Finanical Performance Management Standard 2009. Financial reporting is undertaken in accordance with the Financial Management Practice Manual.

Fees and charges

QPSRTO does not charge fees for the delivery of training to its own employees. Fees may be charged to outside agencies who engage QPSRTO to deliver training to their staff. The fees to be charged for the training are documented in a MOU between the two parties and not at a student level. The QPSRTO does not collect fees in advance for the provision of nationally recognised training products.

Fees for the delivery of training to external agencies

The QPSRTO may provide nationally recognised training to external agencies for a fee for service. (QPSRTO 019 Student Fees and Refunds). The fee for service may include any or all of the following fees:

Design fee. A fee determined as sufficient to recover staff and resource costs associated with client consultation, research and the design of delivery and assessment materials.

Development fee. A fee determined as sufficient to recover staff and resource costs in developing, amending or revising delivery and assessment materials as required.

Delivery fee. A fee determined as sufficient to recover:

a) the actual cost of providing training to a course participant, and
b) the actual staff, resource, venue and equipment costs incurred as part of providing training and assessment services to a participant.

All fees and charges are calculated by the Business Manager, Business and Resource Management Unit and approved by the Director, Training Strategy.

For the purpose of calculating fees, including fees for recognition of prior learning, the term nominal hours means the nominal hours assigned to the unit of competency or module as detailed in the relevant mapping guide provided by NCVER.

To ensure consistency, the QPSRTO does not make adjustments to fees and charges to reflect variations in timetabling or in instances where a participant completes a course/qualification or module/unit of competency in less time than that specified in the approved course outline.

Fees for course development

The QPSRTO charges fees for the development, accreditation and registration of a nationally recognised education and training product where applicable.

A calculation of the break even cost for a course fee is to be sufficient to recover no more than the actual cost of producing a training product for delivery and assessment and should include:

- development costs, and
- product license fees (if applicable), and
- accreditation fee (if applicable), and
- registration fees (as applicable).

The total cost of developing, accrediting and registering a course is to be determined and reported by the project manager for the information of the Director, Training Strategy.

Payment of fees and charges

The QPSRTO maintains all monies received for delivery and assessment services in a separate account. This account is not accessed until the course commences. A relevant proportion of fees paid remain in that account until the delivery and assessment is completed to ensure refunds are available for eligible participants.

Fees are charged to external departments, organisations or agencies and not to individual learners or prospective learners. The fees and charges associated with training and assessment services provided by the QPS for a fee for service includes:

- a course design fee payable within 30 days of the invoice issue date.
- a course development fee payable within 30 days of the invoice issue date.
- a course delivery fee payable within 30 days of the invoice issue date.

For courses delivered and assessed in blocks or semesters,

- the course/participant fees and charges are calculated on the training and assessment services being offered in the next block or semester, and
- the course/participant fees and charges for the next block or semester is due at least seven days prior to the commencement of the block or semester, and
- a participant who has not paid any applicable block or semester fees and charges prior to the commencement date is not enrolled in that block or semester.

Two attempts at an assessment are included in the participant or tuition fees. If more than 2 attempts are required a further assessment fee applies. The additional assessment fee will be negotiated with the client and recorded in the MOU with the client.

Refunds

If the QPSRTO cancels a course an agency that has paid any fees will receive:

- a full refund of all fees paid, or
- a credit to another course of the same value.

An agency that withdraws from a course being offered by the QPSRTO prior to the signing of a Memorandum of Understanding or similar document by both agencies will be eligible for a full refund of any fees paid.

An agency that withdraws from a course being offered by the QPSRTO, after the signing of a Memorandum of Understanding or similar document by both agencies, but before the course commencement date, will be eligible for a refund of the course delivery fee only.

An agency that withdraws from a course being offered by the QPSRTO after the signing of a Memorandum of Understanding or similar document by both agencies and after the course commencement date will not be eligible for a refund of any design, development or delivery fees.

An application for a refund due to exceptional circumstances must be made in writing as soon as practicable, detailing the exceptional circumstances relied upon with supporting documentation attached, to the Manager, Education Services Unit, [redacted]

Any refund of paid fees and charges must be approved by the Manager, Education Services Unit.

RTO guarantee to students

QPSRTO will provide the appropriate resources to ensure that students have every opportunity to complete the training and/or assessment in which a student has enrolled and commenced. Despite this guarantee, a student must be a current employee of the QPS in order to be eligible to commence or continue undertaking training offered by the QPSRTO (except in instances where training is offered to external students and is documented in a Memorandum of Understanding). In instances where the training and/or assessment services are delivered under a Memorandum of Understanding, the specific guarantee to students will be outlined in that document.

Where a student, who has enrolled and commenced training and/or assessment in a national qualification or accredited course, ends their employment with the QPS (either voluntarily or involuntarily), their enrolment in that training will be cancelled. No further training and/or assessment services will be provided to that student without the approval of the Assistant Commissioner, People Capability Command.

Students who have their enrolment cancelled as a result of their employment ending will be eligible to receive formal recognition for the units of competency they have been awarded at that time in accordance with the 'Issuing qualifications or statements of attainment' policy contained in this manual.

Cost for re-issuing qualifications and statements of attainment

QPSRTO does not charge fees for the re-issuing of a qualification or statement of attainment

The RTO will provide the registering body with a statement demonstrating its financial viability, and/or its annual financial statements, and/or a business plan on request of the registering body. The RTO is administered by Queensland Police Service and financial management is undertaken in accordance with QPS Financial Management Practice Manual which is based on the Financial Accountability Act 2009 and the Financial Performance Management Standard 2009. Financial reporting is undertaken in accordance with the Financial Management Practice Manual.

Queensland Police Service has a Public and Products Liability insurance policy in respect of all of its activities, with the Queensland Government Insurance Fund. The policy has an unlimited sum insured and is renewed annually. The policy provides cover anywhere in Australia.

This policy indemnifies the QUEENSLAND POLICE SERVICE in respect of all sums for which it is legally liable to pay to a third party as compensation for personal injury and property damage as a result of an unexpected and unintended event in connection with its activities, in accordance with the policy terms and conditions.

Standard 8 – The RTO cooperates with the VET Regulator and is legally compliant at all times.

Clause 8.1

The RTO cooperates with the VET Regulator:

a) by providing accurate and truthful responses to information requests from the VET Regulator relevant to the RTO's registration;
b) in the conduct of audits and the monitoring of its operations;
c) by providing quality/performance indicator data;
d) by providing information about substantial changes to its operations or any event that would significantly affect the RTO's ability to comply with these standards within 90 calendar days of the change occurring;
e) by providing information about significant changes to its ownership within 90 calendar days of the change occurring; and
f) in the retention, archiving, retrieval and transfer of records.

Clause 8.2

The RTO ensures that any third party delivering services on its behalf is required under written agreement to cooperate with the VET Regulator:

a) by providing accurate and factual responses to information requests from the VET Regulator relevant to the delivery of services; and
b) in the conduct of audits and the monitoring of its operations.

Clause 8.3

The RTO notifies the Regulator:

a) of any written agreement entered into under Clause 2.3 for the delivery of services on its behalf within 30 calendar days of that agreement being entered into or prior to the obligations under the agreement taking effect, whichever occurs first; and
b) within 30 calendar days of the agreement coming to an end.

Clause 8.4

The RTO provides an annual declaration on compliance with these Standards to the VET Regulator and in particular whether it:

a) currently meets the requirements of the Standards across all its scope of registration and has met the requirements of the Standards for all AQF certification documentation it has issued in the previous 12 months; and
b) has training and assessment strategies and practices in place that ensure that all current and prospective learners will be trained and assessed in accordance with the requirements of the Standards.

Clause 8.5

The RTO complies with Commonwealth, State and Territory legislation and regulatory requirements relevant to its operations.

Clause 8.6

The RTO ensures its staff and clients are informed of any changes to legislative and regulatory requirements that affect the services delivered.

Source: Standards for Registered Training Organisations (RTOs) 2015

Management Representative

The Manager, Education and Training Services is the Chief Executive Officer of the RTO.

The Manager, Education and Training Services:

- ensures that the Quality Management System is established, implemented, and maintained according to legislation, regulations and standards.
- has the authority to make modifications to the RTO Quality Management System as considered appropriate and desirable.
- liaises with external parties on matters related to the Quality Management System.

The Manager, Education and Training Services will ensure that the RTO cooperates with its registering body:

- In the conduct of audits and the monitoring of its operations. The RTO agrees to participate in audits scheduled by the registering body and will cooperate with auditors in the conduct of the audit. The organisation will make available all required documentation and records as required for the audit.
- By providing accurate and timely data relevant to measures of its performance such as the National Quality Indicator data and/or AVETMISS compliant data
- By providing information about significant changes to its operation such as significant changes in management, change of address or company structure. These changes will be reported when they occur using ASQA approved reporting requirements.
- If the RTO ceases to operate it will provide the registering body the records of all students in the format required by the registering body.
- Assessment records will be maintained in accordance with the QPS Records Retention and Disposal Schedule which exceeds the requirements of the ASQA policy for the retention of student assessment records.
- The RTO will provide the registering body with a statement demonstrating its financial viability, and/or its annual financial statements, and/or a business plan on request of the registering body. The RTO is administered by Queensland Police Service and financial management is undertaken in accordance with QPS Financial Management Practice Manual which is based on the Financial Accountability Act 2009 and the Financial Performance Management Standard 2009. Financial reporting is undertaken in accordance with the Financial Management Practice Manual.

The QPSRTO will comply with relevant Commonwealth, State or Territory legislation and regulatory requirements that are relevant to operations and scope of registration. The requirements from the applicable legislation are incorporated into the QPSRTO's Quality Manual, policies, procedures, student information, staff induction material and training materials.

Staff will be fully informed of any legislative requirements, where it affects their duties in vocational education and training, initially via the induction process and ongoing via meetings and emails.

Clients will be fully informed of any legislative requirements, where it affects their participation in vocational education and training, via the student information materials and orientation programs.

The legislation identified as being relevant to operations and scope of registration includes:

- *Acts Interpretation Act 1954* (Qld)
- *Anti-Discrimination Act 1991* (Qld)
- *Copyright Act 1968* (C'wlth)
- *Equal Opportunity in Public Employment Act 1992* (Qld)
- *Evidence Act 1977* (Qld)
- *Fair Trading Act 1989* (Qld)
- *Financial Administration and Audit Act 1977* (Qld)
- *Information Privacy Act 2009*
- *Judicial Review Act 1991* (Qld)
- *National Vocational Education and Training Regulator Act 2011*
- *Police Service Administration Act* 1990 (Qld)
- *Public Records Act 2000* (Qld)
- *Public Service Act 1996* (Qld)
- *Right to Information Act 2009*
- *Work Health and Safety Act 2011*

Definitions

Academic Appeal
A process initiated by a participant when he or she disagrees an assessment result.

Accredited short course
A course accredited by the VET Regulator in accordance with the Standards for VET Accredited Courses that leads to an AQF statement of attainment.

Appeal
The process instigated by the complainant when he/she is not satisfied with a decision made by the QPSRTO.

Approved Partnership Organisation
Organisations or agencies that appear on the QPS register of agreements. The organisation or agency who is responsible for ensuring that the established policies and procedures of the QPSRTO are implemented for all training and assessment services provided on its behalf. Partner organisations must comply with the responsibilities outlined in the written agreement.

Applicant
The person applying to participate in a qualification or accredited course.

Assessors
Persons who assess a learner's competence in accordance with Clauses 1.13 to 1.16 for, or on behalf of, the Registered Training Organisation.

Assessment
Assessment is the process of collecting evidence and making judgements on the nature and extent of progress towards the performance requirements set out in a standard or a learning outcome. The judgement is intended to determine whether competency has been achieved or not. The key features of assessment are validity, reliability, flexibility and fairness.

Assessment guidelines
An endorsed component of a Training Package which underpins assessment and which sets out the industry approach to valid, reliable, flexible and fair assessment.

Assessment method
A particular technique used to gather different types of evidence. This may include methods or techniques such as questioning, observation, practical demonstrations, written assessments, third party reports, interviews, simulations and portfolios.

Assessment strategy
A documented framework to guide and structure the assessment arrangements of a vocational education and training qualifications and statements of attainment. It is the umbrella document that outlines the macro-level requirements for designing the learning and assessment process at the qualification level.

Assessment system
A coordinated set of documented policies and procedures (including assessment materials and tools) that ensure assessments are consistent and are based on the Principles of Assessment contained in Table 1.8-1 and the Rules of Evidence contained in Table 1.8-2 of the RTO standards 2015.

Assessment validation
Is a quality review process. It involves checking that the assessment tool produced valid, reliable, sufficient, current and authentic evidence to enable reasonable judgements to be made as to whether the requirements of the relevant aspects of the Training Package or accredited course have been met. It includes reviewing and making recommendations for future improvements to the assessment tool, process and/or outcomes.

Audit
A planned, systematic and documented process used to assess an RTO's compliance with the Standards for Registered Training Organisations (RTOs) 2015. The National VET Regulator (ASQA) conducts independent audits as a condition of registration. RTOs can conduct internal audits to assess their compliance with the Standards and their own policies and procedures as part of their continuous improvement process. Audits include both the internal audit of QPS Delivery Units and internal audits of the QPSRTO Quality Management System.

Australian Qualification Framework (AQF)
The policy framework that defines all qualifications nationally in post-compulsory education and training in Australia. The AQF defines each qualification, as well as the principles and protocols covering cross-sectoral qualification links and the issuing of qualifications and statements of attainment.

Australian Skills Quality Authority (ASQA)
The national regulator for Australia's vocational education and training sector. ASQA is responsible for monitoring the quality of training and assessment of RTO's operating in compliance with the Standards for Registered Training Organisations (RTOs) 2015.

Client
Is a learner, enterprise or organisation which uses or purchases the services provided by the RTO.

Code
The unique identifier for units of competency, skill sets, VET accredited courses, modules, AQF qualifications or training packages as required by the Standards for Training Packages and Standards for VET Accredited Courses.

Complaint
A formal complaint process undertaken when a student feels aggrieved by a decision/action of the RTO; but does not include the process of appealing an assessment decision.

Competency
The consistent application of knowledge and skill to the standard of performance required in the workplace. It embodies the ability to transfer and apply skills and knowledge to new situations and environments.

Completed Student Assessment Item
The actual piece(s) of work completed by a student or evidence of that work, including evidence collected for an RPL process. An assessor's completed marking guide, criteria and observation checklist for each student may be sufficient where it is not possible to retain the student's actual work. However, the retained evidence must have enough detail to demonstrate the assessor's judgement of the student's performance against the standard required (ASQA General direction: Retention requirements for completed student assessment items).

Continuous improvement
The implementation of appropriate, efficient and systematic improvement processes designed to support the provision of quality education and training products and services to meet or exceed the needs of the organisation, customers and stakeholder groups.

Corporate Records Management System (CRMS)
A computer application approved for PCAP use that captures information about physical documents and digital information so the documents and information can be tracked and retrieved over time. It includes the policy framework for capturing and managing information of continuing value to the QPS.

Corporate Records Management System (CRMS) Data Entry Standard
The standard for naming information captured within a records management system in a consistent format to ensure all records of continuing value are accessible over time.

Course Coordinator
Course coordinators are delegated by the Training Manager to plan, implement and monitor the learning and assessment strategies used to train and assess training products. They ensure that appropriately qualified, skilled and trained personnel and other resources are available to implement the quality system within their area of responsibility. Course Coordinators are answerable to Training Managers.

Credit transfer
Is the assessment of the initial course or subject that the individual is using to claim access to, or the award of credit in, the destination course to determine the extent to which it is equivalent to the required learning outcomes, competency outcomes, or standards in a qualification. This may include credit transfer based on formal learning that is outside the AQF.

Customer
An organisation or individual that enters into a formal agreement with the RTO for the development of vocational education and training products or delivery of training services.

Current industry skills
The knowledge, skills and experience required by VET trainers and assessors and those who provide training and assessment under supervision to ensure that their training and assessment is based on current industry practices and meets the needs of industry. Current industry skills may be informed by consultations with industry and may include, but is not limited to:

a) having knowledge of and/or experience using the latest techniques and processes;
b) possessing a high level of product knowledge;
c) understanding and knowledge of legislation relevant to the industry and to employment and workplaces;
d) being customer/client-oriented;
e) possessing formal industry and training qualifications; and
f) training content that reflects current industry practice.

Documentation (including Course Documentation)
Any document written, electronic or hard-copy, used within the quality system and materials used in the delivery of training programs. This includes information available via electronic means such as via the intranet or websites.

Document changes
Changes to the RTO Management System Documents are processed in accordance with procedure *QPSRTO 003 Development/amendment of RTO Management System (Policies, Procedures and Forms)*. Procedures for version control and instructions to control documentation and associated materials are maintained by the Training Quality (TQ) and will be subject to an internal audit.

Changes to delivery unit documents are reviewed and approved by the document owner, unless specifically designated and authorised in writing by the authorised course coordinator. Procedures for version control and instructions to control documentation and associated materials are maintained by the delivery unit and will be subject to an internal audit to ensure they meet, at a minimum, the objectives of this procedure.

Document owner
Person responsible for keeping and managing a document on behalf of the QPS.

Enrolment
The acceptance of a participant's enrolment in an AQF qualification or accredited course by the QPSRTO.

Enterprise RTO
Where the RTO is embedded within an industry organisation's structure and that organisation's primary function is not training. The RTO is both an operational training organisation and is also representative of the industry in which it is embedded.

Employer
The employer, for the purpose of *QPSRTO011 RTO Evaluation Procedure*, is the supervisor of each individual learner who has completed the nationally recognised training.

Evaluation
As used in the procedure *QPSRTO011 RTO Evaluation Procedure* is a periodic, systematic and impartial assessment of how valid, current and effective the training is for the participant, as provided by the QPSRTO.

Functional manager
The person authorised to direct roles, functions, activities and tasks to individuals outside the manager's direct line of command.

Ignite
The QPS database used for recording training and development for sworn and unsworn QPS staff and personnel.

Industry and Skills Council
The Commonwealth, State and Territory ministerial council established by the Council of Australian Governments (COAG), or its successor.

Industry
The bodies that have a stake in the services provided by RTOs. These can include, but are not limited to:
a) enterprise/industry clients, e.g. QPS as the employer;

b) group training organisations e.g. Representation of delivery unit staff on committees involved in the review of the Public Safety Training Package and Police Training Package
c) industry organisations;
d) industry regulators;
e) industry skills councils such as Government Skills Australia or similar bodies;
f) industry training advisory bodies, other Australasian Policing jurisdictions including the Australian and New Zealand Advisory Agency (ANZPAA); and unions.

Industry engagement
The purposes of Clauses 1.5 & 1.6, may include, but is not limited to, strategies such as:

a) partnering with local employers, regional/national businesses, relevant industry bodies and/or enterprise RTOs;
b) involving employer nominees in industry advisory committees and/or reference groups;
c) embedding staff within enterprises;
d) networking in an ongoing way with industry networks, peak bodies and/or employers;
e) developing networks of relevant employers and industry representatives to participate in assessment validation; and
f) exchanging knowledge, staff, and/or resources with employers, networks and industry bodies.

Industry Engagement Activities
Strategies and activities that establish a connection and sharing of information between the delivery unit and policing industry stakeholders with regards to the expectations and outcomes from QPSRTO training and assessment practices. The type of strategies and activities may vary depending on the particular vocational area however may include engaging with industry groups, national policing bodies and internal networks through meetings or other forums.

Industry Relevance
Ensuring that the training assessment and delivery practices are relevant to the needs of the respective policing industry areas. Industry relevance is supported by engagement with a variety of internal and external stakeholders however these can vary depending on the particular domain of policing.

Internal audit
An audit conducted by, or on behalf of, the RTO itself for internal purposes.

Joining Instructions
A document that provides instructions to a participant upon enrolment that prescribes, where relevant, entry requirements, pre-course work, outcomes of training, residential and administrative arrangements such as travel, accommodation, dress and meals.

Legally Authorised Representative (LAR)
The RTO LAR is the Manager, Education and Training Services.

Learner
A person being trained and/or assessed by the RTO for the purpose of issuing AQF certification documentation.

Line manager
The person authorised to direct the work and control the availability of equipment and resources of another.

Mode of delivery
The method adopted to deliver training and assessment, including online, distance, or blended methods.

Module

A group of learning outcomes in a VET accredited course where it can be established that it is not possible to develop an appropriate unit of competency.

Moderation
The process of bringing assessment judgements and standards into alignment. It is a process that ensures the same standards are applied to all assessment results within the same Unit(s) of Competency. It is an active process in the sense that adjustments to assessor judgements are made to overcome differences in the difficulty of the tool and/or the severity of judgements.

National Register
The register maintained by the Commonwealth Department responsible for VET and referred to in section 216 of the *National Vocational Education and Training Regulator Act 2011*.

National VET Regulator (NVR)
The meaning given by section 3 of the *National Vocational Education and Training Regulator Act 2011*.

Participant
A person who has enrolled and has been approved by the RTO to participate in a qualification or course.

Participant Evaluation
A training evaluation form disseminated to participants at the conclusion of a training program/course to ascertain feedback in relation to training content, resources and assessment processes.

Training Partner
An organisation or agency responsible for ensuring that the established policies and procedures of the RTO are implemented for all delivery and assessment services provided on the RTO's behalf.

Training Project Plan
A document that establishes the overall baseline for implementation as well as the agreements among RTO Managers and customers.

Professional development
Activities that develop and/or maintain an individual's skills, knowledge, expertise and other characteristics as a trainer or assessor. This includes both formal and informal activities that encompass vocational competencies, currency of industry skills and knowledge and practice of vocational training, learning and assessment, including competency based training and assessment. Examples of professional development activities include:

a) participation in courses, workshops, seminars, conferences, or formal learning programs;
b) participation in mentoring, professional associations or other learning networks;
c) personal development through individual research or reading of publications or other relevant information;
d) participation in moderation or validation activities and participation in industry release schemes.

Qualification
Is a formal certification, issued by a relevant approved body, in recognition that a person has achieved learning outcomes or competencies relevant to identified individual, professional, industry or community needs.

In the vocation education and training sector (VET) qualifications are awarded to a person that has satisfied all requirements of the units of competency or modules that comprise an AQF qualification, as specified by:

a) a nationally endorsed Training Package; or

b) an accredited course that provides training for that qualification.

For the purposes of qualifications, the VET sector defines "competency" as the consistent application of knowledge and skills to the standard of performance required in the workplace. It focuses on what is expected of the person in applying what they have learned and embodies the ability to transfer and apply skills and knowledge to new situations and environments.

Quality
The ability of a set of inherent characteristics of a product, system or process to meet specified standards or objectives and fulfil the expectations of customers and interested parties.

Quality framework
The documentation of procedures, specifications, responsibilities and continuous improvement processes needed to implement quality management.

Quality Management
An approach used by managers that focuses on effective teamwork and promotes the concept of continuous improvement across all levels of the organisation.

Quality Policy
The overall intentions and directions of the QPS with regards to quality as formally expressed by the RTO Managers.

Quality Records
A subset of training information that demonstrates conformance to the requirements and effective operation of the quality system. Quality records are those records important enough to be specifically identified as such in the quality system procedures or work instructions.

Quality Management System
Includes the organisational structure, procedures, process and resources needed to implement quality management.

Recognition of Prior Learning (RPL)
A process that assesses an individual's non-formal and informal learning to determine the extent to which that individual has achieved the required learning outcomes, competency outcomes, or standards for entry to, and/or partial or total completion of, a qualification.

Records retention
Relates specifically to the retention and storage of evaluation information sourced from learners and employers. The required duration of retention for the purpose of this policy has been sourced from QPS Retention and Disposal Schedule.

Registered Training Organisation (RTO)
A training organisation registered as an RTO by the National VET Regulator and the registration is entered on the National Register. A training organisation must be registered in order to deliver and assess training product/s and issue nationally recognised qualifications.

The Queensland Police Service training organisation (QPSRTO) is registered by a registering body in accordance with the VET Quality Framework, within a defined scope of registration.

Registration
The formal approval and recognition of a training organisation by the National VET Regulator, in accordance with the Standards for Registered Training Organisations.

Scope of registration
The defined scope for which a training organisation is registered that identifies the particular services and products that can be provided. An RTO may be registered to provide either:
a) training delivery and assessment services and products and issue AQF qualifications and statements of attainment; or
b) assessment services and products and issue AQF qualifications and statements of attainment.

Services
The training, assessment, related educational and support services and/or any activities related to the recruitment of prospective learners. It does not include services such as student counselling, mediation or ICT support.

Skill set
A single unit of competency or a combination of units of competency from a training package which link to a licensing or regulatory requirement, or a defined industry need.

Staff
A person who is responsible for the management, coordination, delivery, assessment, administration or support of a course that leads to a nationally recognised outcome.

Statement of attainment
Formal certification in the VET sector issued by an RTO under the AQF when an individual has satisfied the requirements of the unit/s of competency or accredited short course specified in the statement and that a person has achieved:

a) part of a qualification; or
b) one or more units of competency from a nationally endorsed Training Package; or
c) all the units of competency or modules comprising learning outcomes for an accredited course that does not meet the requirements for a qualification.

Statement of Achievement
Formal certification issued by the QPS that a person has achieved the learning outcomes of an approved training program or course.

Statistically valid
For the purposes of these Standards, a random sample of appropriate size is selected to enable confidence that the result is sufficiently accurate to be accepted as representative of the total population of assessments being validated.

Systematic Validation of Assessment
A planned approach to the quality review of assessment practices to ensure the assessment tool/s and practices produce valid, reliable, sufficient, current and authentic evidence upon which assessment decisions are based.

Systematic Validation of Assessment Judgements
A planned approach to the review of a statically valid sample of assessment decisions for each training product/s on the QPSRTO scope of registration in order to identify opportunities for ongoing improvement to assessment tools and processes.

Supporting documentation
Documentation provided by a course participant as evidence of his or her ability to perform a process or task to a pre-defined standard.

Technical Representative
A technical representative is an individual who possesses broad industry knowledge and experience in one or more vocational areas. The knowledge and experience may have been formally recognised through the awarding of a relevant nationally recognised qualification. In instances where this has not occurred, the individual will have demonstrated vocational competencies at least to the same level. Refer to Vocational Competency for further information.

Third Party or Partner Organisation
Services of individuals or organisations rendered by QPSRTO to deliver training and/or assessment independent of the RTO, but does not include a contract of employment between the RTO and its employee.

In the case where internal processes fail to resolve a complaint or appeal, engagement of third party or partner organisations are parties that are external to and independent of the QPSRTO.

Training
The systematic development of the knowledge/skill behaviour pattern required to adequately perform a given task or job, and maintain and improve that performance.

Training and Assessment Strategy
A framework that guides the training requirements and the teaching, training and assessment arrangements of a vocational education and training qualification. It is the documented process that articulates the approach of and method adopted by a delivery unit with respect to training and assessment designed to enable learners to meet the requirements of the training package or accredited course that outlines the macro-level requirements of the training and assessment process, usually at the qualification level.

Training
The process used by an RTO or a third party delivering services on its behalf, to facilitate learning and the acquisition of competencies in relation to the training product on the RTO's scope of registration.

Training Manager
The person who has the responsibility and authority to accomplish or implement a specific activity or process for providing education and training services of training product/s within the RTO scope of registration in accordance with the RTO quality system.

Training and assessment strategies and practices
The approach of, and method adopted by, an RTO with respect to training and assessment designed to enable learners to meet the requirements of the training package or accredited course.

Training Package
The components of a training package endorsed by the Industry and Skills Council or its delegate in accordance with the Standards for Training Packages. The endorsed components of a Training Package are: units of competency; assessment requirements (associated with each unit of competency); qualifications; and credit arrangements. The endorsed components form part of the requirements that an RTO must meet under these Standards. A training package also consists of a non-endorsed, quality assured companion volume/s which contains industry advice to RTOs on different aspects of implementation.

Training Product
An AQF qualification, skill set, unit of competency, accredited short course and module.

Training Program
A program (also known as a learning program), developed by an RTO, that meets the training and assessment requirements of a qualification from a Training Package, one or more designated units of competency, or an accredited course. The training program may specify such matters as essential and elective units, the sequence and timing of training and assessments, and the resources required. It may form part of a training and assessment strategy.

Training.gov.au
Training.gov.au (TGA) is the database on Vocational Education and Training in Australia. TGA is the official National Register of information on Training Packages, Qualifications, Courses, Units of Competency and Registered Training Organisations (RTOs).

Unit of competency
The specification of knowledge and skill contained within a unit of competency and the application of that knowledge and skill to the standard of performance expected in the workplace.

Validation
The quality review of the assessment process. Validation involves checking that the assessment tool/s produce/s valid, reliable, sufficient, current and authentic evidence to enable reasonable judgements to be made as to whether the requirements of the training package or VET accredited courses are met. It includes reviewing a statistically valid sample of the assessments and making recommendations for future improvements to the assessment tool, process and/or outcomes and acting upon such recommendations.

Version
Indicated by a whole number where a document is new or a major change is made to the document.

Version Control Register
Tracking document of all RTO quality management documents which are in a state of continuous improvement, to know which is the latest version and when each document is due for revision and who is responsible for the document.

VET
Vocational education and training.

VET accredited course
A course accredited by the VET regulator in accordance with the Standards for VET Accredited Courses.

VET Quality Framework
VET quality framework comprises of:

a) the Standards for Registered Training Organisations
b) the Australian Qualifications Framework
c) the Fit and Proper Person Requirements
d) the Financial Viability Risk Assessment Requirements
e) the Data Provision Requirements

VET Regulator
VET regulator is:

a) the National VET Regulator; and
b) a body of a non-referring State that is responsible for the kinds of matters dealt with under the VET legislation for that State.

Vocational Competency

Vocational competency is defined as broad industry knowledge and experience, usually combined with a relevant industry qualification. A person who has vocational competency will be familiar with the content of the vocation and will have relevant current experience in the industry. Vocational competency must be considered on an industry-by-industry basis and with reference to the guidance provided in the Assessment Guidelines of the relevant training Package or Accredited Course.

Training packages or Accredited Courses include advice specific to the industry related to the vocational competencies of trainers and assessors. This may include advice on relevant industry qualifications and experience required for training and assessing against the Training Package or Accredited Course. The Training Package or Accredited Course will also provide specific industry advice outlining what it sees as acceptable forms of evidence to demonstrate the maintenance of currency of vocational competency.

Appendix 2 (Schedules from the Standards for RTOs 2015)

Table 1.8-1: Principles of Assessment

Fairness	The individual learner's needs are considered in the assessment process. Where appropriate, reasonable adjustments are applied by the RTO to take into account the individual learner's needs. The RTO informs the learner about the assessment process, and provides the learner with the opportunity to challenge the result of the assessment and be reassessed if necessary.
Flexibility	Assessment is flexible to the individual learner by: ▪ reflecting the learner's needs; ▪ assessing competencies held by the learner no matter how or where they have been acquired; and ▪ drawing from a range of assessment methods and using those that are appropriate to the context, the unit of competency and associated assessment requirements, and the individual.
Validity	Any assessment decision of the RTO is justified, based on the evidence of performance of the individual learner. Validity requires: ▪ assessment against the unit(s) of competency and the associated assessment requirements covers the broad range of skills and knowledge that are essential to competent performance; ▪ assessment of knowledge and skills is integrated with their practical application; ▪ assessment to be based on evidence that demonstrates that a learner could demonstrate these skills and knowledge in other similar situations; and ▪ judgement of competence is based on evidence of learner performance that is aligned to the unit/s of competency and associated assessment requirements.
Reliability	Evidence presented for assessment is consistently interpreted and assessment results are comparable irrespective of the assessor conducting the assessment.

Table 1.8-2: Rules of Evidence

Validity	The assessor is assured that the learner has the skills, knowledge and attributes as described in the module or unit of competency and associated assessment requirements.
Sufficiency	The assessor is assured that the quality, quantity and relevance of the assessment evidence enables a judgement to be made of a learner's competency.
Authenticity	The assessor is assured that the evidence presented for assessment is the learner's own work.
Currency	The assessor is assured that the assessment evidence demonstrates current competency. This requires the assessment evidence to be from the present or the very recent past.

Schedule 1

Item	Relevant Standard	Training and assessment credentials
1		The following credential: *TAE40110 Certificate IV in Training and Assessment or its successor.*
2	1.11 1.14 1.15 1.24	One of the following credentials: Credential: *TAE40116 Certificate IV in Training and Assessment or its successor* or *TAE40110 Certificate IV in Training and Assessment, and one of the following:* *i. TAELLN411 Address adult language, literacy and numeracy skills or its successor or* *ii. TAELLN401A Address adult language, literacy and numeracy skills* *and one of the following:* *iii. TAEASS502 Design and develop assessment tools or its successor or* *iv. TAEASS502A Design and develop assessment tools or* *v. TAEASS502B Design and develop assessment tools.*
3	1.14 1.15	The following credential: *A Diploma or higher level qualification in adult education.*
4		The following credential: *TAESS00001 Assessor Skill Set*
5	1.11 1.15	One of the following credentials: Credential *TAESS00011 Assessor Skill Set or its successor* or Credential: *TAESS00001 Assessor Skill Set and one of the following:* *i. TAEASS502 Design and develop assessment tools or its successor or* *ii. TAEASS502A Design and develop assessment tools or* *iii. TAEASS502B Design and develop assessment tools.*
6	1.18	One of the following credentials: Credential: *TAESS00007 Enterprise Trainer – Presenting Skill Set* or Credential: *TAESS00014 Enterprise Trainer – Presenting Skill Set or its successor* or Credential: *TAESS00008 Enterprise Trainer – Mentoring Skill Set* or

		Credential: *TAESS00013 Enterprise Trainer – Mentoring Skill Set or its successor* or Credential: *TAESS00003 - Enterprise Trainer and Assessor Skill Set* or Credential: *TAESS00015 - Enterprise Trainer and Assessor Skill Set or its successor*
7	1.23	One of the following credentials: Credential: *TAE50111 Diploma of Vocational Education and Training* or Credential: *TAE50116 Diploma of Vocational Education and Training or its successor* or Credential: *TAE50211 Diploma of Training Design and Development* or Credential: *TAE50216 Diploma of Training Design and Development or its successor* or Credential: *A higher level qualification in adult education.*

Schedule 2

Independent validation requirements for RTOs delivering training and assessment qualifications or assessor skill sets from the Training and Education Training Package (or its successor)

For the purposes of Clause 1.25, the requirements for independent validation will apply as follows:

a) For an RTO applying to extend its scope of registration to include the delivery and assessment of an AQF qualification or assessor skill set from the Training and Education Training Package (or its successor), validation is of:
   i. the RTO's assessment tools, processes and outcomes in relation to other AQF qualifications and/or units of competency on its scope of registration, as directed by the VET Regulator, and
   ii. the assessment system to be adopted in the delivery of the training and assessment qualification or assessor skill set.

b) For an RTO applying for the renewal of its registration where its scope of registration includes the delivery and assessment of an AQF qualification or assessor skill set from the Training and Education Training Package (or its successor), validation is of:
   i. the assessment system for delivery of the training and assessment qualification or assessor skill set, and
   ii. the RTO's assessment tools, processes and outcomes in relation to the training and assessment qualification or assessor skill set.

For the purposes of Clause 1.25, independent validation of AQF qualifications or the assessor skill set from the Training and Education Training Package (or its successor) must be conducted by one or more persons who collectively have:

a) current knowledge and skills in vocational teaching and learning, and
b) the training and assessment qualification or assessor skill set at least to the level being validated.

Schedule 3

Fit and Proper Person Requirements

Criteria for suitability

In assessing whether a person meets the Fit and Proper Person Requirements, the VET Regulator will have regard to the following considerations:

a) whether the person has been convicted of an offence against a law of the Commonwealth or a State or Territory of Australia, or of another country, and if so, the seriousness of the offence and the time elapsed since the conviction was recorded

b) whether the person has ever been an executive officer or high managerial agent of an RTO at a time that the RTO had its registration on the National Register cancelled or suspended by its VET Regulator for having breached a condition imposed on its Registration

c) whether the person has ever been an executive officer or high managerial agent of an RTO at a time that the RTO was determined to have breached a condition of its registration under the *Education Services for Overseas Students Act 2000* or the *Tertiary Education Quality and Standards Agency Act 2011*

d) whether the person has ever become bankrupt, applied to take the benefit of a law for the benefit of bankrupt or insolvent debtors, compounded with his or her creditors or assigned his or her remuneration for the benefit of creditors, and if so, the time elapsed since this event occurred

e) whether the person has ever been disqualified from managing corporations under Part 2D.6 of the Corporations Act 2001, and if so, whether the disqualification remains in place

f) whether the person was involved in the business of delivering courses or other services on behalf of a person that was the subject of regulatory action described in points b) or c) above, and if so, the relevance of the person's involvement

g) whether the person has ever provided a VET Regulator with false or misleading information or made a false or misleading statement to a VET Regulator, and if so, whether it is reasonable to assume that the person knew that the statement made or information provided to the VET Regulator was false or misleading

h) whether the person has ever been determined not to be a fit and proper person as prescribed under any law of the Commonwealth or of a State or Territory of Australia, and if so, whether that determination remains in place

i) whether the public is likely to have confidence in the person's suitability to be involved in an organisation that provides, assesses or issues nationally recognised qualifications

j) whether the person has ever been an executive officer or high managerial agent of an RTO at a time that the RTO was determined to have breached a government training contract, and

k) any other relevant matter

Schedule 4

Conditions of Use of NRT Logo

The Nationally Recognised Training (NRT) Logo is a distinguishable mark of quality for promoting and certifying national vocational education and training leading to AQF certification documentation. The NRT Logo is a registered trade mark.

The following describes a range of situations and conditions for using the NRT Logo.

Advertisements and promotional information in any medium (print, television, radio, banners, internet, etc.)

1. RTOs registered by any VET Regulator may use the NRT Logo to promote nationally recognised training provided that training is within the RTO's scope of registration.
2. Impressions must not be created that may lead an observer to conclude the NRT Logo applies to all training provided by the RTO, if this is not the case. The NRT Logo cannot be used by an RTO where the training is accredited, but is outside the scope of registration of the RTO. Where training is being promoted and does not meet the requirements stipulated in the VET Quality Framework or is outside the RTO's scope of registration, it must be made clear the NRT Logo is not associated with that training.
3. Use of the NRT Logo is only permitted where there is a direct relationship to an AQF qualification and/or unit of competency as specified within training packages or VET accredited courses.

Student information (brochures, course handbooks, prospectuses, etc.)

4. When an RTO is promoting the training it offers and wishes to use the NRT Logo, its promotional material such as brochures, handbooks and prospectuses must clearly distinguish between nationally recognised training within the scope of registration and that which is not nationally recognised.

Corporate stationery, business cards, buildings, training resources and marketing products

5. The NRT Logo must not be used on products such as corporate stationery, business cards, building signage, mouse pads, pens, satchels, packaging around products nor learning resources supporting training.

Certificates, Statements of Attainment and other testamurs

6. The NRT Logo must be depicted on all AQF certification documentation issued by the RTO. These can only be issued by an RTO when the qualification and/or unit of competency are within the RTO's scope of registration. The NRT Logo must not be depicted on other testamurs or transcripts of results.

Schedule 5

Application of the AQF Qualifications Issuance Policy within the VET Sector

RTOs must meet the requirements of the AQF for issuing AQF qualifications and statements of attainment, in addition to the following requirements.

Issuing AQF Qualifications

1. RTOs must include the following information on the testamur, in addition to the requirements of the AQF Qualifications Issuance Policy:
   a) the name, National RTO code and logo of the issuing organisation
   b) the code and title of the awarded AQF qualification, and
   c) the NRT Logo in accordance with the current conditions of use contained in Schedule 4.
2. The following elements are to be included on the testamur as applicable:
   a) the State / Territory Training Authority logo (only where use of the logo is directed by State / Territory Training Authorities, e.g. within User Choice contracts)
   b) the industry descriptor, e.g. Engineering
   c) the occupational or functional stream, in brackets, e.g. (Fabrication)
   d) where relevant, the words, 'achieved through Australian Apprenticeship arrangements', and
   e) where relevant, the words, 'these units/modules have been delivered and assessed in <insert language> followed by a listing of the relevant units/modules.
3. RTOs must not include the learner's Student Identifier on the testamur consistent with the Student Identifiers Act 2014.
4. RTOs will:
   a) retain registers of AQF qualifications they are authorised to issue and of all AQF qualifications issued
   b) retain records of AQF certification documentation issued for a period of 30 years, and
   c) provide reports of Records of qualifications issued to its VET Regulator on a regular basis as as determined by the VET Regulator.

Issuing Statements of Attainment

5. RTOs must include the following information on a statement of attainment:
   a) the name, National RTO Code and logo of the issuing organisation
   b) a list of units of competency (or modules where no units of competency exist) showing their full title and the national code for each unit of competency
   c) the authorised signatory
   d) the NRT Logo

e) the issuing organisation's seal, corporate identifier or unique watermark

f) the words 'A statement of attainment is issued by a Registered Training Organisation when an individual has completed one or more accredited units'

6. The following elements are to be included on the statement of attainment as applicable:

a) the State/Territory Training Authority logo (only where use of the logo is directed by State/ Territory Training Authorities)

b) the words 'These competencies form part of [code and title of qualification(s)/course(s)]'

c) the words, 'These competencies were attained in completion of [code] course in [full title]', and

d) where relevant, the words, 'these units / modules have been delivered and assessed in <insert language>' followed by a listing of the relevant units/modules.

7. RTOs must not include the learner's Student Identifier on the statement of attainment consistent with the Student Identifier Act 2014.

8. RTOs will:

a) maintain registers of all statements of attainments issued

b) retain records of statements of attainment issued for a period of 30 years, and

c) provide reports of its records of statements of attainment issued to its VET Regulator on a regular basis, as determined by the VET Regulator.

EXHIBIT 4

QUEENSLAND POLICE SERVICE

Quality Assurance Procedure

Management of the QPSRTO Scope of Registration

QPSRTO 001

Description:	The procedure for the maintaining the RTO scope of registration including the addition, transition and removal of qualifications, accredited courses and units of competency.
Approval Authority:	Manager, Education and Training Services
Document Custodian:	Coordinator, Training Quality
Objective Number:	
Revision Number:	2.1
Date Approved:	29/4/2021
Date Effective:	29/4/2021
Last Reviewed:	21/9/2022
Next Review:	September 2023

This document is uncontrolled when printed

This quality assurance procedure is reviewed by Education and Training Services at least annually. Only sections that possess controlled copies of this quality assurance procedure will be notified of any modifications or changes. The practice of saving uncontrolled copies of quality assurance procedures on local computer servers or hard drives is discouraged. The most current version of this quality assurance procedure is accessible from the Training Quality intranet site.

Enquiries regarding the application, interpretation or obtaining controlled copies of this quality assurance procedure are to be directed to the Coordinator, Training Quality, [redacted]

3. DEFINITIONS 3
4. REFERENCES 3
5. RESPONSIBILITIES 3
5.1. Manager, Education and Training Services (ETS) 3
5.2. Coordinator, Training Quality (TQ) 3
5.3. Course Coordinator 4
6. PROCESS 4
6.1. Changes to Scope of Registration (NOT PREVIOUSLY OFFERED) 4
6.2. Changes to Scope of Registration (TRANSITIONAL) 6
6.3. VET accredited courses (REACCREDITATION) 6
6.4. VET accredited courses (ADDITION TO SCOPE AFTER REACCREDITATION) 7
6.5. Removal of qualifications and VET accredited courses from the QPSRTO Scope of Registration 7
7. FORMS 8
8. DOCUMENT HISTORY 8

1. PURPOSE

The purpose of this procedure is to ensure that requests for additions, deletions or amendments to the QPSRTO Scope of Registration are managed in a systematic and consistent way. It includes managing the transition from superseded training packages as well as covering the requirements for reaccreditation and re-registration of VET accredited courses that the QPS delivers and/or assesses

2. SCOPE

All Training Product/s or VET accredited courses delivered and/or assessed or intended to be delivered and/or assessed by the QPS.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- National Vocational Education and Training Regulator Act 2011
- Standards for Registered Training Organisations (RTOs) 2015
- Australian Qualifications Framework

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- Approving the addition of qualifications and VET accredited courses to the QPSRTO Scope of Registration
- Approving the removal of qualifications and VET accredited courses from the QPSRTO Scope of Registration

5.2. Coordinator, Training Quality (TQ)

The Coordinator, Training Quality is responsible for:

- Ensuring that the QPSRTO transitions from superseded Training Packages within 12 months of their publication on the National Register.
- Ensuring that the QPSRTO transitions from superseded VET accredited courses so that it delivers only currently endorsed Training Packages or currently VET accredited courses.
- Preparing and submitting documentation required to facilitate additions, deletions or amendments to the QPSRTO Scope of Registration as approved by the Manager ETS.
- Conducting pre-registration compliance audits of QPS delivery units prior to the submission of extension of scope applications.
- Overseeing the reaccreditation of expiring VET accredited courses where continued delivery of the relevant VET accredited course is approved by the Manager ETS.

5.3. Course Coordinator

The Course Coordinator is responsible for:

- In the case of new additions to scope, developing the required delivery, assessment and program management resources necessary to meet the requirements of the relevant qualification or VET accredited course.
- In the case of deletions from scope, ensuring that all teach out and records management requirements are actioned appropriately and no new enrolments in the relevant qualification or VET accredited course occurs.
- In the case the AQF qualification is no longer current and has not been superseded, all learner's training and assessment is completed and the relevant AQF certification documentation is issued within a period of two years from the date the AQF qualification was removed or deleted from the National register.

6. PROCESS

6.1. Changes to Scope of Registration (NOT PREVIOUSLY OFFERED)

6.1.1 A delivery unit seeking registration to deliver an AQF qualification or VET accredited course not previously offered by the QPS is to forward a Business Case via their chain of command to the Manager ETS seeking to gain approval in principle.

The Business Case is, at a minimum, to contain the following information:

a) Project Rationale
b) Strategic Contribution
c) Related Initiatives
d) Options analysis
e) Benefits analysis

6.1.2 The Manager ETS will advise the Coordinator TQ if approval in principle has been granted and that an addition to scope is being sought for the qualification, unit/s of competency or accredited short course.

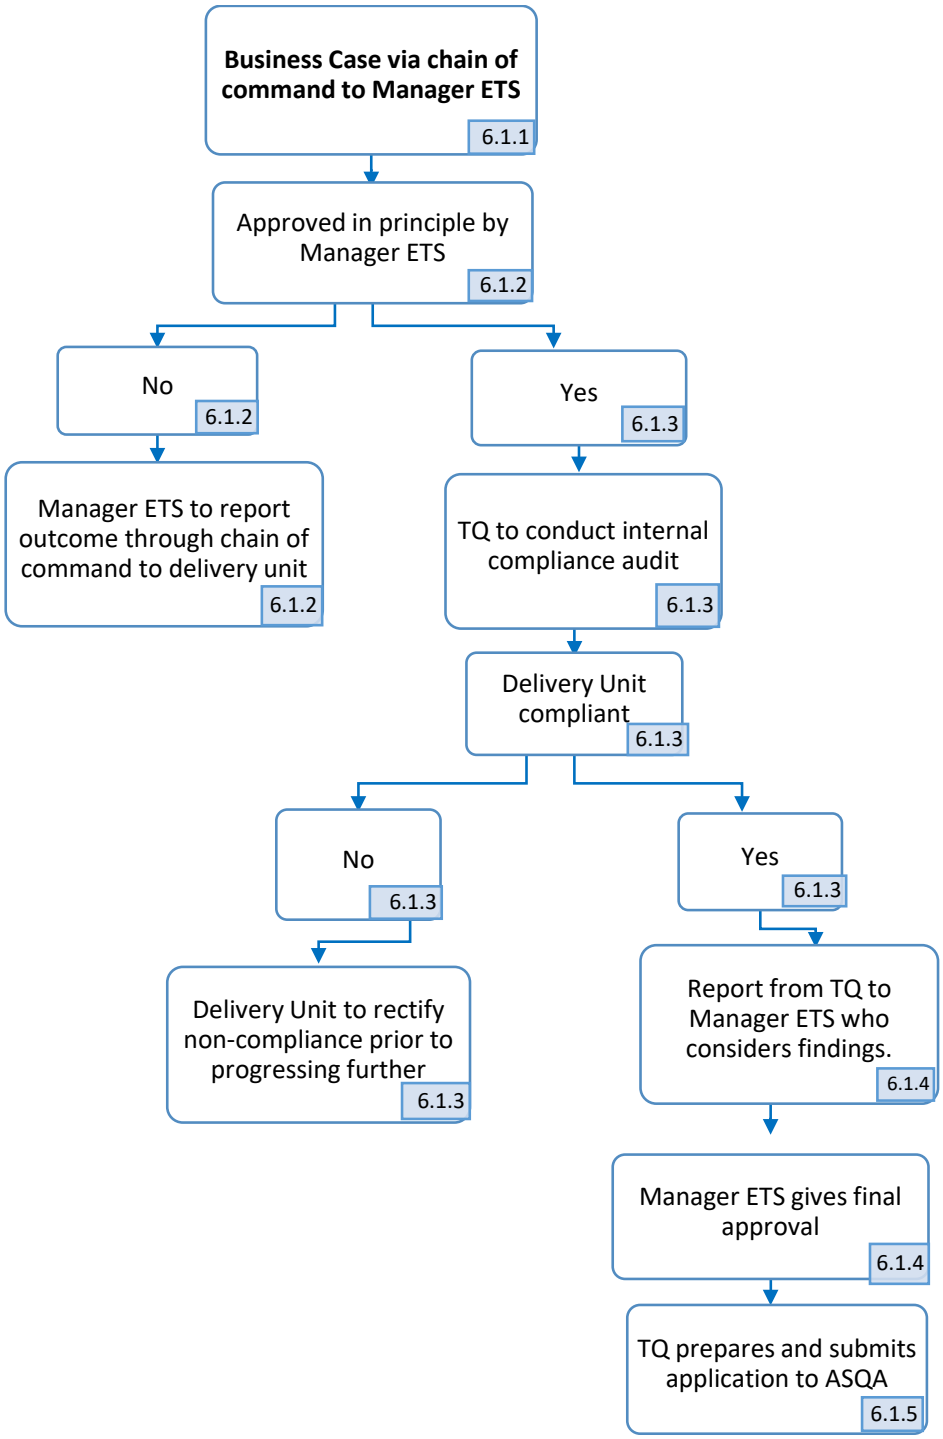
6.1.3 On receiving advice from the Manager ETS, the Coordinator TQ will arrange for an internal audit to be conducted on the intended delivery unit. The audit will assess the delivery unit's compliance with Standards for Registered Training Organisations 2015 and QPSRTO Quality Assurance Procedures. Any non-compliances identified by TQ during the audit process must be rectified prior to an application to add to the QPS scope of registration is submitted.

6.1.4 Once any non-compliances have been rectified, the Coordinator TQ will advise the Manager ETS that the delivery unit has successfully passed an internal pre-registration audit. The Manager ETS will give final approval for an application to be submitted to the Australian Skills Quality Authority (ASQA) to have the relevant qualification, skill set or VET accredited course added to the QPS Scope of Registration.

6.1.5 Once final approval has been received, the Coordinator TQ will manage the submission of the application to ASQA. Upon receiving advice from ASQA that the application has been approved, the Coordinator TQ will advise the delivery unit that training and/or assessment of the qualification or VET accredited course can commence.

QUEENSLAND POLICE SERVICE

Scope of Registration (Not Previously Offered) - Flow Chart



6.2. Changes to Scope of Registration (TRANSITIONAL)

6.2.1 Where a training package qualification on the QPS Scope of Registration has been superseded and the delivery unit is seeking to continue delivering the qualification, the Coordinator TQ has responsibility for ensuring that the relevant QPS delivery units transition to the new training package qualification within 12 months.

6.2.2 TQ will liaise with the relevant Course Coordinator in order to determine equivalency between the existing and replacement qualification/s. This assessment will inform the extent of the body of work which will be required to be undertaken in preparation for registration of the 'new' qualification/s.

6.2.3 The Course Coordinator will then be responsible for preparing a transition plan based on the assessment undertaken in conjunction with TQ. The Course Coordinator will then be responsible for developing all required delivery, assessment and program management resources necessary to meet the requirements of the replacement qualification.

6.2.4 The Course Coordinator is to ensure that all learners' training and assessment is completed and the relevant AQF certification documentation is issued or learners are transferred into its replacement, within a period of one year from the date the replacement training product was released on the National Register.

6.2.5 Where an AQF qualification is no longer current and has not been superseded, all learners' training and assessment is completed and the relevant AQF certification documentation issued within a period of two years from the date the AQF qualification was removed or deleted from the National Register.

6.2.6 Upon receiving notification from the Course Coordinator that the delivery unit has finalised all preparations for delivery of the replacement qualification, TQ is to undertake a pre-registration audit to assess the delivery unit's compliance with Standards for RTOs 2015 and QPS RTO Quality Assurance Procedures. Any non-compliances identified by TQ during the audit process must be rectified prior to an application to change the QPS scope of registration is submitted.

6.2.7 Once any identified non-compliances have been rectified, the Coordinator TQ will forward a report to the Manager, Education Services Unit advising that the delivery unit has successfully passed an internal pre-registration audit. The Manager, Education Services Unit will then provide final approval for a change of scope application to be submitted to ASQA by the Coordinator TQ.

6.3. VET accredited courses (REACCREDITATION)

6.3.1 Where a VET accredited course on the QPS Scope of Registration is due to expire and the delivery unit is seeking to continue delivering the accredited course, the relevant Course Coordinator is to forward a business case via their chain of command to the Manager ETS seeking the necessary approval for reaccreditation.

6.3.2 In order to reduce the duplication of processes, applications seeking approval to reaccredit a course will also be considered as an application for approval to add the new accredited course to scope.

6.3.3 The Business Case is, at a minimum, to contain the following information:

(a) Project Rationale
(b) Strategic Contribution
(c) Related Initiatives
(d) Options analysis
(e) Benefits analysis

(f) Cost analysis

6.3.4 An application to renew an accredited course must be submitted to ASQA at least 90 days prior to the expiry date therefore the business case must be received by the Manager ETS at a minimum 6 months prior to the course expiry date.

6.3.5 If approval to reaccredit the course is granted, the Coordinator TQ is to liaise with the relevant Course Coordinator in order to develop a project plan for the management of the reaccreditation process. The process must be in accordance with the ASQA Standards for VET Accredited Courses.

6.3.6 The Course Coordinator will be responsible for undertaking stakeholder engagement activities and collating all required information necessary for TQ staff to complete the ASQA Application for accreditation (initial or renewal).

6.3.7 The Coordinator TQ will prepare and submit the application for accreditation (initial or renewal) to ASQA and, in conjunction with the Course Coordinator. The Coordinator TQ will monitor the accreditation process and address any rectification matters identified.

6.3.8 Upon receiving notification from ASQA that the course has been reaccredited, the Coordinator TQ will notify the relevant course coordinator. The Coordinator TQ will then commence the process for adding the reaccredited course to the QPS Scope of Registration.

6.4. VET accredited courses (ADDITION TO SCOPE AFTER REACCREDITATION)

6.4.1 Prior to submitting an application to add a reaccredited course to scope, the Course Coordinator will be responsible for developing, updating and/or reviewing all required delivery, assessment and program management resources necessary to meet the requirements of the reaccredited course.

6.4.2 Upon receiving notification from the Course Coordinator that the delivery unit has finalised all preparations for delivery of the replacement qualification, TQ will undertake a pre-registration audit to assess the delivery unit's compliance with Standards for Registered Training Organisations 2015 and QPS RTO Quality Assurance Procedures. Any non-compliances identified by TQ during the audit process must be rectified prior to an application to change the QPS scope of registration is submitted.

6.4.3 Once any identified non-compliances have been rectified, the Coordinator TQ will advise the Manager ETS advising that the delivery unit has successfully passed an internal pre-registration audit. The Manager ETS provides final approval for a change of scope application to be submitted to ASQA by the Coordinator TQ.

6.5. Removal of qualifications and VET accredited courses from the QPSRTO Scope of Registration

6.5.1 Where a delivery unit no longer intends to award an AQF qualification, VET accredited course or part thereof currently listed on the QPS Scope of Registration as an outcome of the training provided, the course coordinator is to forward a report via their chain of command to the Manager ETS requesting that the AQF qualification, relevant units of competency or VET accredited course be removed from scope.

6.5.2 If approved, the Manager ETS will advise the Coordinator TQ that the AQF qualification or VET accredited course is to be removed from the QPS Scope of Registration. The Coordinator TQ will be responsible for preparing and submitting the application to amend to the Scope of Registration via AQSANet.

6.5.3 If the application is not approved by the Manager ETS, relevant advice will be provided to the delivery unit via the chain of command.

6.5.4 Course coordinators are to ensure that all enrolled learners' training and assessment is completed and the relevant AQF certification documentation issued prior to seeking removal from scope.

6.5.5 In instances where a skill set, unit of competency or accredited short course is no longer current and has not been superseded, course coordinators are to ensure that all enrolled learners' training and assessment is completed and the relevant AQF certification documentation issued within a period of one year from the date the product was removed or deleted from the National Register.

1. PURPOSE

The purpose of this procedure is to ensure that the QPS RTO issues to persons whom, it has assessed as competent in accordance with the requirements of the Training Package or accredited course, a qualification or statement of attainment (as appropriate) that:

- Meets the Australian Qualifications Framework (AQF) requirements.
- Identifies the RTO by its name, national RTO code number from the National Register (Training.gov.au) and RTO logo.
- Includes the code and title of the awarded AQF qualification for qualifications.
- Includes a list of units of competency (or modules where no units of competency exist) showing their full title and the national code for each unit of competency.
- Includes the Nationally Recognised Training (NRT) logo in accordance with the current conditions of use contained in schedule 4 of the Standards for RTOs 2015.

2. SCOPE

This procedure applies to all AQF certificates or statements of attainment issued by the QPS RTO. Issuance of compliant documentation is to occur within 30 calendar days of the learner being assessed as meeting the requirements of the training product in which the learner is enrolled is complete.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- National Vocational Education and Training Regulator Act 2011
- Standards for Registered Training Organisations (RTOs) 2015
- Australian Qualifications Framework
- QPS Records Retention and Disposal Schedule
- QPSRTO 014 Recordkeeping (Assessment)

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- approving the content and layout of the QPS RTO Qualification and Statement of Attainment templates (in line with AQF requirements);
- approving the QPS RTO AQF certification documentation signatory.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- dealing with any complaints relating to the issuance of AQF certification documentation by the QPS RTO;
- ensuring that AQF certification documentation is only awarded to learners who are recorded in the Learning Management System as having meet the requirements of the relevant training product;
- ensuring only approved QPS RTO Qualification and Statement of Attainment templates are used when producing AQF certification documentation;

- ensuring that QPS RTO Qualification and Statement of Attainment templates comply with AQSA and AQF requirements;
- ensuring that requests for AQF certification that are to be produced manually are processed by the Training Quality Services Section in a timely manner;
- approving the re-issue of AQF certification documentation;
- ensuring that accurate records of AQF certification documentation issued by the QPS RTO are maintained.

5.3. Course Coordinator

The Course Coordinator is responsible for:

- ensuring that only participants whom have been assessed as meeting the requirements of the relevant training products are recorded as in the Learning Management System as being competent;
- ensuring that only currently qualified assessors determine a participant's competency against the requirements of the relevant training products;
- ensuring that the Learning Management System accurately reflects the qualified assessor/s who determined a participant's competency against the requirements of the relevant training products;
- where AQF certification is not generated within the Learning Management System, requesting AQF certification documentation for eligible participants.

5.4. Administration Officer, Training Quality

The Administration Officer, Training Quality Services Section is responsible for:

- ensuring requests for AQF certification documentation not produced within the Learning Management System are captured in the approved records management systems;
- ensuring approval for the reissue of certification to external or ex-QPS employees is obtained from the Coordinator TQ;
- producing certification using relevant QPS RTO approved AQF documentation template and dispatching in a timely manner;
- capturing records of certification issuance in the approved management systems.

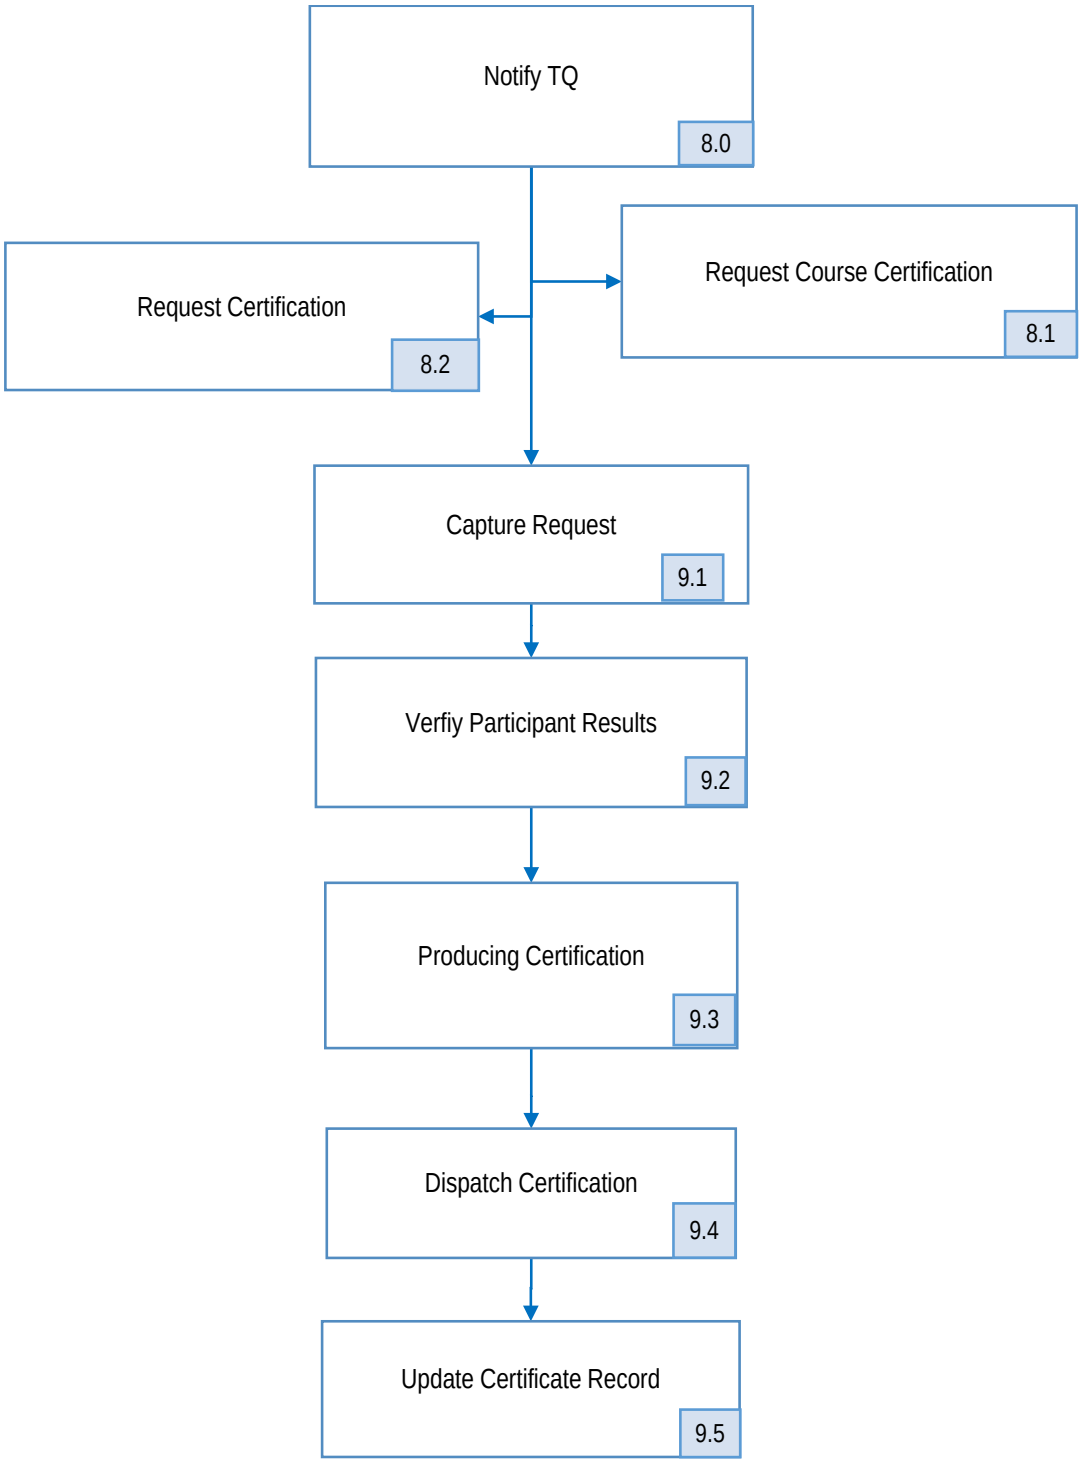
5.5. Participants

A participant is responsible for:

- requesting the reissue of certification in the event of the original having been lost, stolen or destroyed.

6. PROCESS FLOWCHART

CERTIFICATE PRODUCTION WHEN NOT CREATED WITHIN THE LEARNING MANAGEMENT SYSTEM



7. PRODUCTION OF AQF CERTIFICATION

7.1. LMS Produced Certification

The majority of AQF certification documentation awarded by the Queensland Police Service is produced within the Learning Management System (LMS). Linkages between the relevant QPS training programs and the nationally recognised training outcomes are established and monitored by the Coordinator TQ within the LMS.

In accordance with section 5.4, Course Coordinators are responsible for ensuring only qualified assessors determine competency against the requirements of the relevant training products and are recorded against the course milestones linked to the nationally recognised training outcome.

The successful achievement of a milestone linked to a nationally recognised training outcomes will result in the awarding of the associated skills (unit/s of competency) and certification (qualification) where relevant.

8. REQUESTING CERTIFICATION WHEN NOT PRODUCED WITHIN THE LEARNING MANAGEMENT SYSTEM

8.1. Course Coordinator

The Course Coordinator is responsible for notifying the TQ that a participant has either:

a. Attained the competency requirements of a full qualification or VET accredited course, or

b. Has attained competency for individual units of competency for a Statement of Attainment

The notification should be sent by email to TQ at the group email address of [redacted].

The notification should provide the following information:

- Participant employee or student identification number;
- Participant name;
- The code and title of the qualification or accredited course;
- The code and/or title of each unit of competency;
- The final assessment result for each unit of competency;
- The actual end date.

The notification is to be received by TQ as soon as practicable and within 5 working days from the date that a participant:

a. attained the competency requirements of a full qualification or VET accredited course; or

b. attained the competency requirements for individual unit/s of competency of a qualification or VET accredited course for a statement of attainment to be issued.

8.2. Participant

Participants are to notify TQ when seeking reissue of AQF certification documentation.

The notification should be:

a. sent by QPS employees [redacted]

b. sent by external participants or ex-QPS employees to the day to day email [redacted]

c. sent by post to the Training Quality, Education and Training Services, [redacted]

9. ISSUE AND DISPATCH OF CERTIFICATION PRODUCED BY TRAINING QUALITY (NOT LMS GENERATED)

9.1. Capturing Request

Capture the request for certification within the approved records management system in accordance with the data entry standard.

9.2. Verify Participant Results

a) Verify the participant's results for the requested certification within the learning management system; and

b) If the final results are not recorded within the learning management system, notify the requesting course coordinator or delegate that the request cannot be actioned until the results have been entered as detailed in QPSRTO 014 - Recordkeeping (Assessment).

9.3. Producing Certification

a) All certification produced by the Training Quality Services Section is in electronic format.

b) The current approved electronic template can be found at [redacted] Do not use the "Archive Templates".

c) The relevant fields in the certificate template are to be completed using the data for the participant contained in the learning management system.

d) Check the produced certification for accuracy of information.

e) Save produced certification in PDF format.

9.4. Dispatch certification

a) Forward PDF certification via email to requesting area or participant as an attachment.

9.5. Update Certificate record

a) Upload a copy of the certification into the learning management system against the participants 'Top Drawer/Documents' tab.

b) Query and locate the notification record in the approved records management system as detailed in the Objective Users Guide.

Update the record in the approved records management system with:

a. the date that the certification has been produced and;

b. the date that the certification was sent via email.

10. RECORDS RETENTION

Description	Reference	Action
Certification data	ET/TRA/3	Retain for 40 years after last action in a readable, accessible and inalterable form
Requests for certification	ET/TRA/15	Retain for 2 years after action completed

11. DOCUMENT HISTORY

Version No.	Modification	Date
01	Initial Version	30/10/2001
02	References and template updated. Retention period included.	30/10/2005
03	References updated "Master" Template Files are to hold one version of Qualification, Trainee Qualification and 1 set of MOR's "Archive" Templates File is for all old templates and is not to be used Standing Order updated to SO 03.2	02/02/2011
3.1	Minor amendments to authorities, AQF references, training.gov.au, and document history.	20/9/2011
3.2	Procedure review schedule amended from 3 monthly to annually. Amendment to include VET before the term accredited course. National Training Information Service replaced with National Register (Training.gov.au). Vocational Education, Training and Employment Act 2000 replaced with *National Vocational Education and Training Regulator Act 2011*. AQTF Essential Conditions and Standards for Continuing Registration replaced with Standards for NVR Registered Training Organisations	10/8/2012
3.3	Section No. Front cover, Sect 5, Sect 10.3 ESB replaced with PDESB Chief Superintendent replaced with Director, Professional Development and Education Services Branch Qualifications Support Team replaced with Training Quality Services Section Section 10.3 21 days replaced with – within a reasonable timeframe	24//7/2013
3.4	Section No, Sect 9.3, Sect 10.3(b), Sect 12.4, Sect 13, Sect 5.1	23/09/2014

	PDESB replaced with PDESG Assistant Commissioner replaced with Chief Superintendent, Education and Training. Section 9.3 - Physical document to be scanned and placed in records management system. Section 10.3(b) – Traineeship completion date removed. Section 12.4 – Certificate printed double sided with MOR on reverse side and on QPS logo embossed paper Section 13 – Electronic certification for Diploma of Public Safety (Policing). Section 5.1 add 'dispatch certification'	
Version No.	**Modification**	**Date**
4.0	Section No. Front cover, Sect 1, Sect 2, Sect 3 Professional Development and Education Services Group replaced with Training Strategy Group. Curriculum Development Unit replaced with Curriculum Development and Review Unit. Section 1. added the following points: • Includes the code and title of the awarded AQF qualification for qualifications; • Includes a list of units of competency (or modules where no units of competency exist showing their full title and the national code for each unit of competency • Added words 'contained in schedule 4 of the Standards for RTOs 2015' in the 5th bullet point Section 2. replaced 'within a reasonable timeframe after they have been assessed as competent in a nationally recognised training programs or VET accredited courses delivered and/or assessed by the QPS' with '30 calendar days of the learner being assessed as meeting the requirements of the training product in which the learner is enrolled is complete, and providing all agreed fees the learner owes to the QPS RTO have been paid' Section 3. Qualification replaced 'possession and application of both knowledge and skills to defined standards, expressed as outcomes that correspond to relevant workplace requirements and other vocational needs' with 'consistent application of knowledge and skills to the standard of performance required in the workplace'	12/2/2015

	Standards for NVR Registered Training Organisations replaced with Standards for Registered Training Organisations 2015.	
4.1	Reviewed and *Education and Training* replaced with *Training and Development - Police*	Sept 2015
4.2	Responsibilities for CEO, Manager ESU and Coordinator TQSS added. Minor amendments to certificate issue process to reflect current practise.	July 2016
5.0	Procedure updated to reflect production of AQF certification within the Learning Management System.	Oct 2017
5.1	Removal of reference to Standing Order 3.2 for certificate issuance.	October 2019
5.2	Updated to reflect production of electronic certification using manual entry as opposed to mail merge.	August 2020
5.3	Replace approving authority due to CEO change and updated to reflect Training Strategy (now Education and Training Services) internal naming and structures.	29/4/2021

10. DOCUMENT HISTORY 10

1. PURPOSE

To define the process to be used to develop, amend, document and record QPS RTO Management System Policies, Procedures and associated forms and to ensure the processes implementing key policies and procedures are consistent and systematic.

2. SCOPE

This procedure applies to policies, procedures and forms that are specific to the operations of the RTO administration processes. These documents will demonstrate the ongoing continuous improvement of the RTO operations and ensure the RTO consistently operates in accordance with the Standards for Registered Training Organisations (RTOs) 2015.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

4.1. Linked procedures

- QPSRTO 007 Internal Audit & Assessment Validation

4.2. External Information

- National Vocational Education and Training Regulator Act 2011
- Standards for Registered Training Organisations (RTOs) 2015
- Australian Qualifications Framework

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- Authorising of the implementation of Quality Assurance System policies, procedures, forms, registers and templates.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Reviewing changes or amendments Quality Assurance System policies, procedures, forms, registers and templates.
- recommending documentation for authorisation by the Manager, Education and Training Services;
- approving sub-versions of amended procedures.

5.3. Quality Systems Review Officer (QSRO)

The Quality System Review Officer, TQ is responsible for:

- allocating procedure and form codes;
- maintaining registers of procedures and forms (electronic);
- managing storage of and access to electronic copies of procedures and forms;
- re-drafting and resubmission of adjusted procedures, and forms for subsequent consideration for approval;
- managing a program of internal quality audits to ensure procedures and forms are up-to-date and remain accurate;
- developing new procedures identified by the internal quality audit process.

6. DEVELOPMENT / AMENDMENT PROCESS (SEE FLOW CHART)

6.1 Where a procedure needs to be developed or amended as a result of review or other continuous improvement activities, approval is to be sought from the Coordinator TQ via email.

The information to be provided when seeking approval includes, but is not limited to:

a) briefly describing the procedure;
b) identifying any other forms that need to support the procedure;
c) identifying any links or other documents required to inform the procedure.

6.2 The Coordinator TQ is to forward the request to the Quality System Review Officer who will check that:

a) the Policy/Procedure has not previously been developed or amended;
b) is not already in the process of being documented/amended and;
c) check whether other forms are currently available or are in the process of being developed.

6.3 The Quality System Review Officer is to inform the Coordinator TQ of any conflicting situations which have been identified. In such cases, the request for development/amendment should either not be approved if it would become a parallel activity or be returned for adjustment to take into account any existing situations.

6.4 Once approved the Quality System Review Officer should:

For a new policy/procedure/form:

a) allocate a policy/procedure/form code;
b) record the code on the relevant policy/procedure/form register with the status list as UNDER DEVELOPMENT;
c) update continuous improvement register.

For an amended policy/procedure/form:

a) Create a copy of the current document in the relevant DRAFT folder and change the status of the document 'UNDER REVIEW' in the relevant electronic register;
b) amend the version/sub-version number of the document in the respective DRAFT folder in line with RTO version control procedures;
c) update continuous improvement register.

6.5 The Quality System Review Officer will draft the actual procedure ensuring consistency across the RTO Quality management systems referring to the Quality Assurance Style Guide and using:

QPSRTO_PROC TEMPLATE the RTO Quality Assurance Procedure template

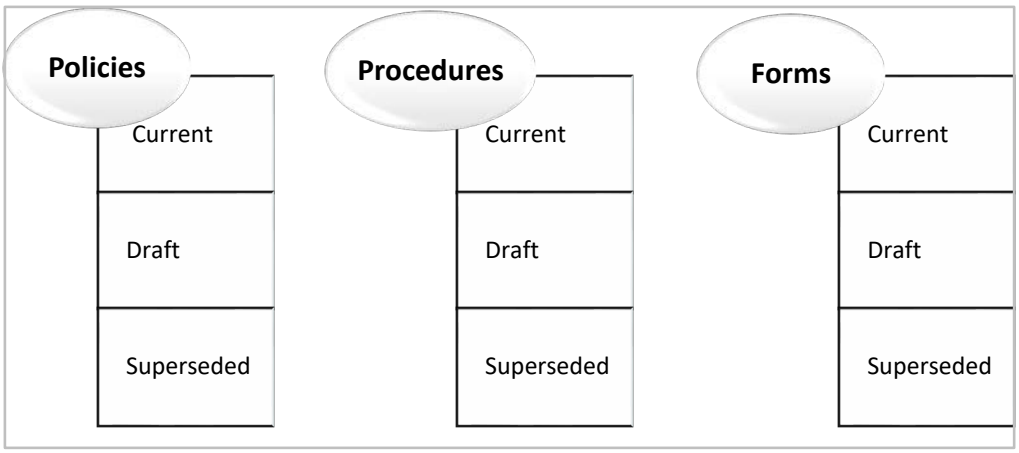
6.6 The Quality System Review Officer will test the procedure and form(s) for validity and clarity with:

a) a member of staff experienced in the area described; and
b) a member of staff whose duties are not usually linked to the area described.

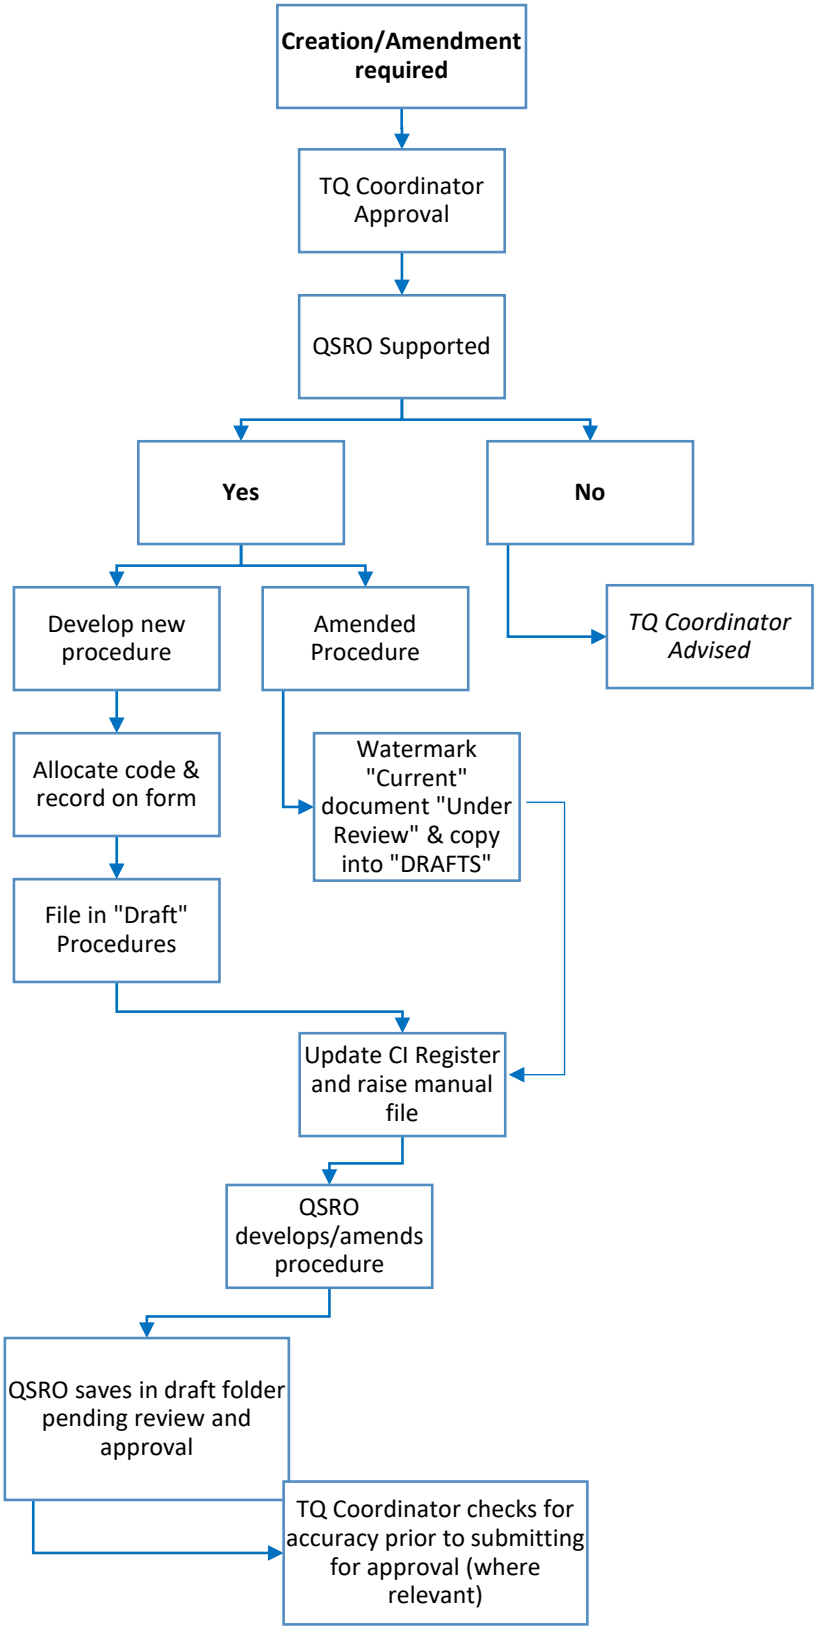
6.7 Amendments to the draft procedure and form(s) are made as required and recommended by the validation process.

6.8 The Quality System Review Officer is responsible for saving the electronic copy of the document in the respective DRAFT file pending review and approval.

Note: Electronic files have been set up in the following structure:



DEVELOPMENT/AMENDMENT PROCESS (Flow Chart)



7. APPROVAL PROCESS

7.1 **Minor Changes**

Submission for approval for any minor amendment to be made to procedures/forms which do not seek to change significant parts of the meaning, layout or content or have a significant impact on the quality systems of the RTO can be approved by the Coordinator TQ.

a) The Quality System Review Officer is to submit the draft policy/procedure to the Coordinator TQ for approval;
b) The amended procedure/form is to be identified through a sub-version change i.e. 6.1 to 6.2;
c) On approval, the Quality System Review Officer to proceed with steps 7.8 and 7.9 below.

7.5 **Major Changes**

Major changes to documents will require a new version. Major changes will occur when:

a) A significant principle in the document has changed; or
b) The format of the document has undergone a significant change; or
c) More than 30% of the document has been changed.

7.6 The Quality System Review Officer will pass the draft of the new/amended policy/procedure/form to the Coordinator TQ.

7.7 The Coordinator TQ will review the documentation provided and upon approval/recommendation forward to Manager ETS for authorisation or further recommendations.

7.8 On receipt of the **approval** to implement from the Manager ETS, the Quality System Review Officer will arrange for:

a) The administration officer to raise a document number in the electronic management system (objective) and copy approved procedures into the system.
b) The objective number to be recorded on the electronic file and moved from 'DRAFT' to respective 'CURRENT' file, the electronic copy of the procedure and form(s) to be uploaded to the QPS's Intranet.
c) Any documents that have been superseded are to be removed from the 'CURRENT' electronic file to the respective 'SUPERSEDED' electronic file.

7.9 The Quality System Review Officer will inform staff of the availability of the new procedure and form(s) through e-mail and/or circular memorandum.

7.10 If the Manager ETS does **not approve** the implementation, the policy/procedure/form(s) will be returned to the Quality System Review Officer for adjustment and resubmission with the direction that the implementation of the procedure and form(s) is not to proceed.

7.11 In the latter case, the Manager ETS will communicate the reasons in a written report to the Coordinator TQ.

7.12 Where there is a recommendation that the documentation is to be adjusted and resubmitted, the Quality System Review Officer will be responsible for the redrafting and resubmission.

Quality Assurance Procedure

Version Control

QPSRTO 004

Description:	Procedure for the RTO to implement version control procedures for managing materials throughout its registration period.
Approval Authority:	Manager, Education and Training Services
Document Custodian:	Coordinator, Training Quality
Objective Number:	
Revision Number:	2.4
Date Approved:	21/09/2022
Date Effective:	21/09/2022
Latest Review Date:	21/09/2022
Next Review Date:	July 2023

This document is uncontrolled when printed

This quality assurance procedure is reviewed by Education and Training Services at least annually. Only sections that possess controlled copies of this quality assurance procedure will be notified of any modifications or changes. The practice of saving uncontrolled copies of quality assurance procedures on local computer servers or hard drives is discouraged. The most current version of this quality assurance procedure is accessible from the Training Quality intranet site.

Enquiries regarding the application, interpretation or obtaining controlled copies of this quality assurance procedure are to be directed to the Coordinator, Training Quality, [redacted]

2. SCOPE 3
3. DEFINITIONS 3
4. REFERENCES 3
5. RESPONSIBILITIES 3
6. PROCESS - Quality Management System Documentation 4
7. Course Documentation 5
8. DOCUMENT HISTORY 6

1. PURPOSE

To implement ongoing version control procedures for managing all documents, applicable to the QPS RTO, using a consistent and systematic approach.

2. SCOPE

This procedure applies to all documents that fall within the scope of QPSRTO Quality Management System including those developed and maintained by QPS delivery units.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- Standards for Registered Training Organisations (RTOs) 2015
- QPS Records Retention and Disposal Schedule
- QPS RTO Quality Manual

4.1. Linked Procedures

- QPSRTO 007 Internal Audit and Assessment Validation;

5. RESPONSIBILITIES

5.1. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Monitoring of version control across RTO operations through audit and validation activities;
- Implementing corrective action processes in instances of incorrect or inconsistent version control practices being identified.

5.2. Quality Systems Review Officer, (QSRO)

The Quality Systems Review Officer, Training Quality Services Section is responsible for:

- Management of version control of Quality Assurance Procedures and associated forms;
- Maintaining and managing the RTO's Quality Assurance Version Control Register and other associated documentation;
- Ensuring the latest version of electronic documents on the file server are updated and monitored;
- Updating the TQ Continuous Improvement Register as applicable;
- Arranging for the latest version of Quality Assurance Procedures and associated forms are on the QPS Intranet where appropriate;
- Communicating changes to appropriate personnel in a timely manner (QPSRTO 003 refers).

5.3. Course Coordinators

Course coordinators are responsible for:

- Implementing and managing the version control of course documentation, including assessment tools and online information in line with this procedure;
- Ensuring that superseded versions of course documentation is maintained in accordance with organizational and legislative requirements;
- Ensuring that only current, and approved, course documentation is available;

- Ensuring that a version control register, or other mechanisms for monitoring and controlling version control records, is maintained for course documentation.

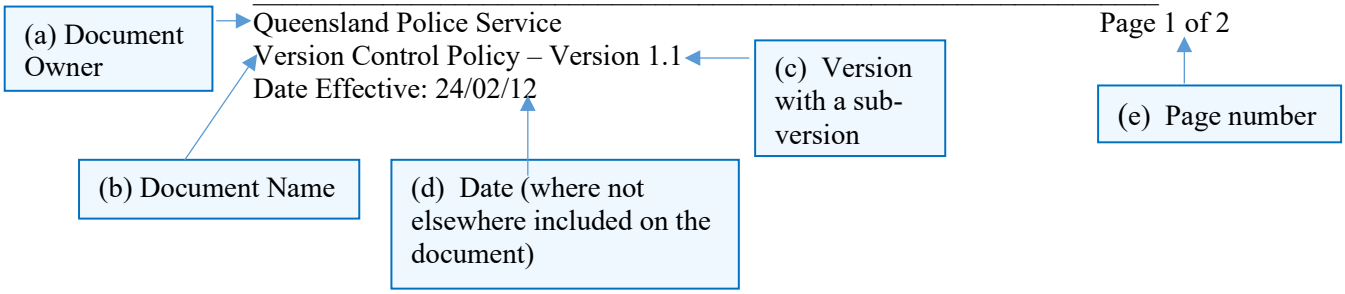
6. PROCESS - QUALITY MANAGEMENT SYSTEM DOCUMENTATION

6.1. For Quality Management System documentation, all documents shall contain the following version control measures in the footer of each document:

a) Document Owner – the details of the document owner;
b) Document Title – the title should reflect the content/purpose of the document;
c) Version – the updated version or revision number of the document shall denote the version and issue and shall be in the form of "Version X.Y";
d) Date Effective – the date the document takes effect and supersedes any prior document (unless effective date is included elsewhere on the document);
e) Page Number – the page number of each page within the document should be noted as either a single page number or in the format of "Page X of Y".

In addition to this information, it may also include the file location for that document.

The format of the information should be similar to:



6.2. **Major changes** to documents will require a new version. Major changes will occur when:

a) A significant principle in the document has changed, or;
b) A work procedure, task or responsibility has been amended, added or deleted as a result of the proposed change;
c) The format of the document has undergone a significant change.

6.3. **Minor changes** to documents will require a sub-version. Minor changes will occur when a proposed change to the document involves changes to content such as references, acronyms or the rectification of grammatical errors. Clarification on version or sub-version changes should be sought from the Coordinator TQ if doubt exists.

6.4. The currency of documents should be reviewed according to the review date and internal audit requirements. Once reviewed:

- If changes are made to the document the date effective and the document version number or sub-version number will be updated to indicate the currency of that document.
- If no changes are made to the document then the date effective, version number and sub-version number will remain the same. A record of the document review will be recorded in the Version Control register.

6.5. Superseded copies of documents or associated forms are to be retained for reference purposes and noted as superseded. Electronic versions are to be moved from "current" into "superseded" file of the relevant document folder on the file server.

6.6. Arrange for current version to be updated on the QPS Intranet if applicable.

6.7. Communicate update to appropriate personnel.

6.8. Continuous Improvement register is to be updated to record actions.

7. COURSE DOCUMENTATION

7.1. For course documentation, all documents should contain the following key version control measures preferably within the footer of the document;

- Document Title – the title should reflect the content/purpose of the document;
- Version – the updated version or revision number of the document shall denote the version and issue and shall be in the form of "Version X.Y";
- Date Effective – the date the document takes effect and supersedes any prior document;
- Page Number – the page number of each page within the document should be noted as either a single page number or in the format of "Page X of Y"

7.2. Changes to versions for course documentation are to be determined and managed in accordance with point 6.2 and 6.3 above.

1. PURPOSE

The purpose of this procedure is to ensure that the QPS RTO undertakes systematic validation of assessment practices and judgements of Training Products offered by the organisation in accordance with the Standards for Registered Training Organisations (RTOs) 2015.

2. SCOPE

This procedure applies to all assessments that contribute to Training Product outcomes which are undertaken by the QPS RTO.

This procedure applies to all persons involved in the delivery, assessment and support of Training Products on the QPS Scope of Registration.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- QPS Quality Manual
- Standards for Registered Training Organisations (RTOs) 2015.
- Qld Police Service Retention and Disposal Schedule.

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- approving, and ensuring the correct and consistent implementation of the quality management system and quality assurance policies across the QPS RTO;
- providing guidance and assistance in relation to disputed assessment validation findings;
- making a final decision in relation to disputed assessment validation findings;
- approving the QPSRTO Assessment Validation Schedule.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- developing and updating the QPSRTO Assessment Validation Schedule;
- identifying and assigning staff to lead and participate in validation activities;
- ensuring that staff (either individually or collectively) assigned to validation activities have;
    - current vocational competencies and current industry skills relevant to the assessment being validated (at least on the first occasion of the product being validated);
    - the training and assessment credential TAE40116 (or as listed in Schedule 1, Item 2 of the Standards for Registered Training Organisations (RTOs) 2015);
    - current knowledge and skills in vocational teaching and learning.
- Identifying a statistically valid sample of completed student assessment records for validation;
- reviewing assessment practices and validation outcomes including recommendations for systems improvements;
- forwarding validation outcome reports including recommendations for systems improvements to the relevant Course Coordinator for action;
- providing assistance to resolve disputed assessment validation findings;
- advise Course Coordinators upon completion of audits; and
- producing the annual report on validation outcomes for the Manager ETS

5.3. Lead Validator

Lead validators will be responsible for:

- preparing for validation activities which they have been assigned by the Coordinator TQ;
- confirming that staff (either individually or collectively) assigned to validation activities have;
    - current vocational competencies and current industry skills relevant to the assessment being validated;
    - the training and assessment credential TAE40116 (or as listed in Schedule 1, Item 2 of the Standards for Registered Training Organisations (RTOs) 2015);
    - current knowledge and skills in vocational teaching and learning.
- leading validation activities for QPS RTO Training Products on scope to identify improvement actions for the delivery unit;
- preparing and monitoring the implementation of system improvement plans where relevant;
- reporting the progress of outcomes of assessment validation to the Coordinator TQ;
- assisting with the resolution of disputed assessment validation findings.

5.4. Course Coordinator

The Course Coordinator is responsible for:

- providing assistance to the validation team in relation to evidence required to be sighted and reviewed during assessment validation activities;
- nominating a suitably qualified technical representative/s to take part in the validation of assessment practices and judgements who was not directly involved in the particular instance of the delivery and assessment of the training product being validated;
- gathering and maintaining participant information, human resource profiles of delivery and assessment staff;
- gathering a statistically valid sample of completed student assessment records for validation;
- responding, developing and implementing any System Improvement actions, relevant to the delivery unit, that were identified during assessment validation activities conducted in accordance with this procedure.

6. PROCEDURE FOR CONDUCTING ASSESSMENT VALIDATION

6.1. QPSRTO Assessment Validation Schedule

The QPSRTO Assessment Validation Schedule will identify the following:

- each Training Product currently on the QPS RTO Scope of Registration;
- when the assessment validation activity for each Training Product is to occur;
- the nominated lead validator (if known) to be involved in the assessment validation;
- the nominated technical representative/s (if known) to be involved in the assessment validation.

The timing of the assessment validation activity for each training product will be based on a variety of factors including, but not limited to:

- the requirements of Standard 1, Clause 1.10 of the Standards for Registered Training Organisations (RTOs) 2015;
- the outcomes of previous assessment validation activities;
- changes to qualification requirements due to training package amendments;
- change of course coordinator and/or training and assessment staff;
- number of annual enrolments and completions;
- number of participant complaints or appeals.

Once developed, the QPSRTO Assessment Validation Schedule is to be stored electronically on the file server under *Audits* within the RTO folder. An additional sub-folder should be produced and named Audit [YEAR]. All correspondence in relation to assessment validation activities will be stored within this folder. Each qualification scheduled for assessment validation will also be

designated a folder. The naming convention for the qualification folders will contain the qualification code. *Example:* POL6115

6.2. Appointment of Lead Validator

The Coordinator TQ will assign a member of the section to undertake the role of lead validator prior to the scheduled assessment validation date. The Coordinator TQ will liaise with the relevant Course Coordinator to identify a suitably qualified technical representative/s to take part in the assessment validation activity and notify the lead validator accordingly.

The following points are supplied as a framework when preparing for, conducting and finalising assessment validation activities.

6.3. Preparing for Assessment Validation Activity

Prior to commencing the assessment validation activity, lead validators should familiarise themselves with the Training Product to be validated. Electronic copies of most Training Products on the QPS RTO scope of registration can be located via the training.gov.au website. In the event that the qualification is from the Police Training Package (POL) and has been deemed "Not For Public Access" (NFPA), access to the units of competency are available from the RTO folder located on the fileserver. This also applies to accredited course information.

At a minimum, lead validators should:

- confirm the relevant Australian Qualifications Framework (AQF) level of the qualification;
- locate the relevant units of competency and packaging rules;
- access the Ignite LMS and familiarise themselves with the program structure noting the composition of core and elective units;
- review relevant assessment guidelines and associated packaging rules.

Lead validators are to access the previous validation reports and system improvement plans where applicable. This information will be located on the server in the audit folder recorded under the corresponding year. A review of the validation report and any system improvements should be undertaken to identify areas for review. The lead validator should ensure that any system improvements identified during previous assessment validation activities have been actioned to a satisfactory level by the delivery unit. This will be done during the site audit.

Prior to conducting any site visits, access the QPS intranet to view any relevant information relating to the relevant Training Product and associated QPS training program. Programs or courses provide varying information however, you may be able to access information which is provided to participants. These documents can be used to commence the assessment validation. As a minimum, the training and/or assessment strategy and previous validation outcomes are to be reviewed before any site visits.

All units of competency which make up the Training Product are to be reviewed during the assessment validation process. It is important that the validators familiarise themselves with the units of competency as this knowledge will assist when the assessment tools and processes are reviewed during the validation activity.

The lead validator is to ensure that the statistically valid sample of student assessment records (as advised by the Coordinator TQ) are reviewed during the validation activity. Details of the student records being validated are to be crossed referenced against Ignite to ensure accuracy and consistency.

6.4. Conducting the Validation of Assessment Practices and Judgements

The lead validator, in conjunction with the nominated technical representative, is to systematically work through the validation table recording details of the sighted evidence presented within the table.

Where a particular portion of the validation was not completed i.e. due to the unavailability of documentation or personnel during a site visit, this is to be noted along with the reasons why. Arrangements are to be made for a follow-up visit or for the relevant evidence to be provided for desktop review.

When conducting the validation of the assessment tools/instruments, the lead validator is to record the overall result for all assessment tools/instruments in the validation table. For example, if all but one of the assessments tools/instruments validated meet the requirements for validity, the overall outcomes recorded in the audit table will be for meeting validity will be 'No'.

The lead validator must record the details of the issue/s identified and refer to the evidence sighted within the Delivery Unit Assessment Validation table. The comments should also contain recommendations with regards to rectifying the identified issue/s.

When conducting the validation of assessment practices and judgements, the lead validator is to record the overall outcome of the review on the QPSRTO 007 F02 *Systems Improvement Plan* form. The lead validator must record the details of the issue/s identified and refer to the evidence sighted. The comments should also contain recommendations with regards to rectifying the identified issue/s.

6.5. Finalising the Validation of Assessment Practices and Judgements

The lead validator is responsible for finalising the validation documentation. The lead validator is to forward a copy of the validation table and systems improvement plan (if applicable) to the Coordinator TQ. The lead validator should discuss recommendations and system improvements as detailed in the validation table with the Coordinator TQ.

The Coordinator TQ will then complete a covering report for dissemination to the delivery unit manager. The report will contain a copy of the completed audit table and systems improvement plan. The completed validation table and associated documentation is to be stored on the file server in the relevant folder as outlined above.

Once a finalised Systems Improvement Plan has been received from a delivery unit, the validation activity can be finalised. The completed Systems Improvement Plan is to be reviewed by the Coordinator TQ and signed off if accepted.

The Coordinator TQ is responsible for capturing the finalised documentation and any other correspondence deemed necessary in the approved records management system.

The Coordinator TQ is to notify the Course Coordinator that the review has been finalised.

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- approving, and ensuring the correct and consistent implementation of the quality management system and quality assurance policies across the QPS RTO;
- overviewing the outcomes of Quality Management System Audits.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- scheduling annual Quality Management System Audits;
- assigning a Lead Auditor to conduct the Quality Management System Audit;
- reviewing the outcomes of Quality Management System Audits;
- implementing any System Improvement actions, relevant to the RTO management systems, identified during an audit conducted in accordance with this procedure;
- advising the Manager ETS upon completion of audits;
- producing the annual report on audit activities for the Manager ETS;
- recording changes to the Quality Management System within the continuous improvement register.

5.3. Lead Auditor

Lead Auditors will be responsible for:

- leading audits of the Quality Management Systems and identifying non-compliances and/or suggested improvement actions for the program;
- reporting the outcomes of the Quality Management System Audit to the Coordinator TQ;
- developing a systems improvement plan;
- monitoring the implementation of system improvement plans;
- reporting progress of audits to the Coordinator TQ;

   6.1. RPL Procedure 6
   6.2. Credit for previously attained units of competency and/or modules 7
7. DOCUMENT HISTORY 8

1. PURPOSE

The purpose of this procedure is to ensure that the QPS RTO has a robust assessment system in place for awarding recognition of previously gained knowledge, skills and competencies towards the achievement of nationally recognised training product (Training Products) outcomes.

It also includes the recognition of knowledge and skills which are gained by an applicant through a combination of formal and informal learning which is directly related to an applicant's employment with the Queensland Police Service or approved partner organisation.

The procedure ensures that recognition of prior learning (RPL) assessments comply with the relevant training package or VET accredited course assessment requirements as well as the Standards for Registered Training Organisations (RTOs) 2015.

2. SCOPE

This procedure applies to all persons involved in the delivery, assessment and support of Training Product/s offered by the QPS RTO.

As an enterprise RTO, the QPS has an overriding duty to ensure all staff are adequately trained to perform their delegated duties and fulfil job role requirements as determined by the organisation. Whilst the opportunity to apply for RPL will be offered to applicants meeting enrolment eligibility criteria for the relevant Training Product, participants may still be required to complete all or part of the organisations training program which provides evidence towards the nationally recognised outcome.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- Standards for Registered Training Organisations (RTOs) 2015

5. RESPONSIBILITIES

5.1. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Ensuring that Training Product certification templates within the Learning Management System (LMS) meet the requirements of the Australian Qualifications Framework and the relevant ASQA Fact Sheet;
- The approval/authorisation of employees endorsed as qualified QPS RTO trainers and/or assessors;
- Issuing nationally recognised certification where certification is not generated within the LMS.

5.2. Course Coordinators

Course coordinators are responsible for:

- Ensuring that only employees approved as QPS RTO assessors conduct an assessment of the evidence provided by the participant (or the evidence previously obtained from a relevant QPS training program/s and/or workplace) to determine the extent to which it meets the evidentiary requirements of the Training Product for which the participant is seeking RPL;
- enrolling eligible participants seeking RPL into the respective qualification (where no direct linkage to a QPS QC course/s has been established);
- receiving and acknowledging the formal application for recognition (where no direct linkage to a QPS QC course/s has been established);

- ensuring the participant is formally advised on the outcome of the assessment and is invited to attend a formal interview to further assess where gaps in the evidence have been identified;
- ensuring the participant is advised of the overall assessment outcome, including in instances where a participant/s is unable to demonstrate competence against the entire Training Product outcome;
- ensuring Learning Management System is updated to reflect recognition of prior learning for units of competency achieved;
- ensuring credit is provided to learners for any previously completed AQF recognised units of competency and/or modules issued by an RTO or AQF authorised issuing organisation.

5.3. Participant

The eligible participant is responsible for:

- submitting a formal application for recognition of prior learning to the Course Coordinator (where no direct linkage to a QPS QC course/s has been established).
- collating evidence to support the application for recognition of prior learning which may include any combination of the following:
  - detailed resume;
  - testimonials from previous employers;
  - certificates of achievement (relevant unrecognised courses – internal or external) certified by a Commissioner of Declarations or Justice of the Peace;
  - qualifications and/or statements of attainment certified by a Commissioner of Declarations or Justice of the Peace;
  - detailed description of tasks and activities undertaken in various job roles and their relationship to the units of competency for RPL is sought;
  - attending formal interviews with an assessor where necessary.

5.4. Assessor

In instances where a direct linkage to a QPS QC course/s has been established, the Assessor is responsible for:

- ensuring that required evidence drawn from the associated course/s or program being relied upon for the assessment decision is full and complete;
- determining whether additional evidence is required and if so, advise the applicant accordingly;
- complying with the relevant training package or VET accredited course assessment requirements as well as the Standards for Registered Training Organisations (RTOs) 2015 when making the assessment determination.

In instances where there is no direct linkage to a QPS QC course/s, the Assessor is responsible for:

- considering and assessing applications for recognition of prior learning assigned to them by the relevant course coordinator;
- determining whether additional evidence is required and if so, advise the applicant accordingly;
- complying with the relevant training package or VET accredited course assessment requirements as well as adhere to the Standards for Registered Training Organisations (RTOs) 2015 when making the assessment determination.

6. PROCESS

6.1 Recognition of Prior Learning

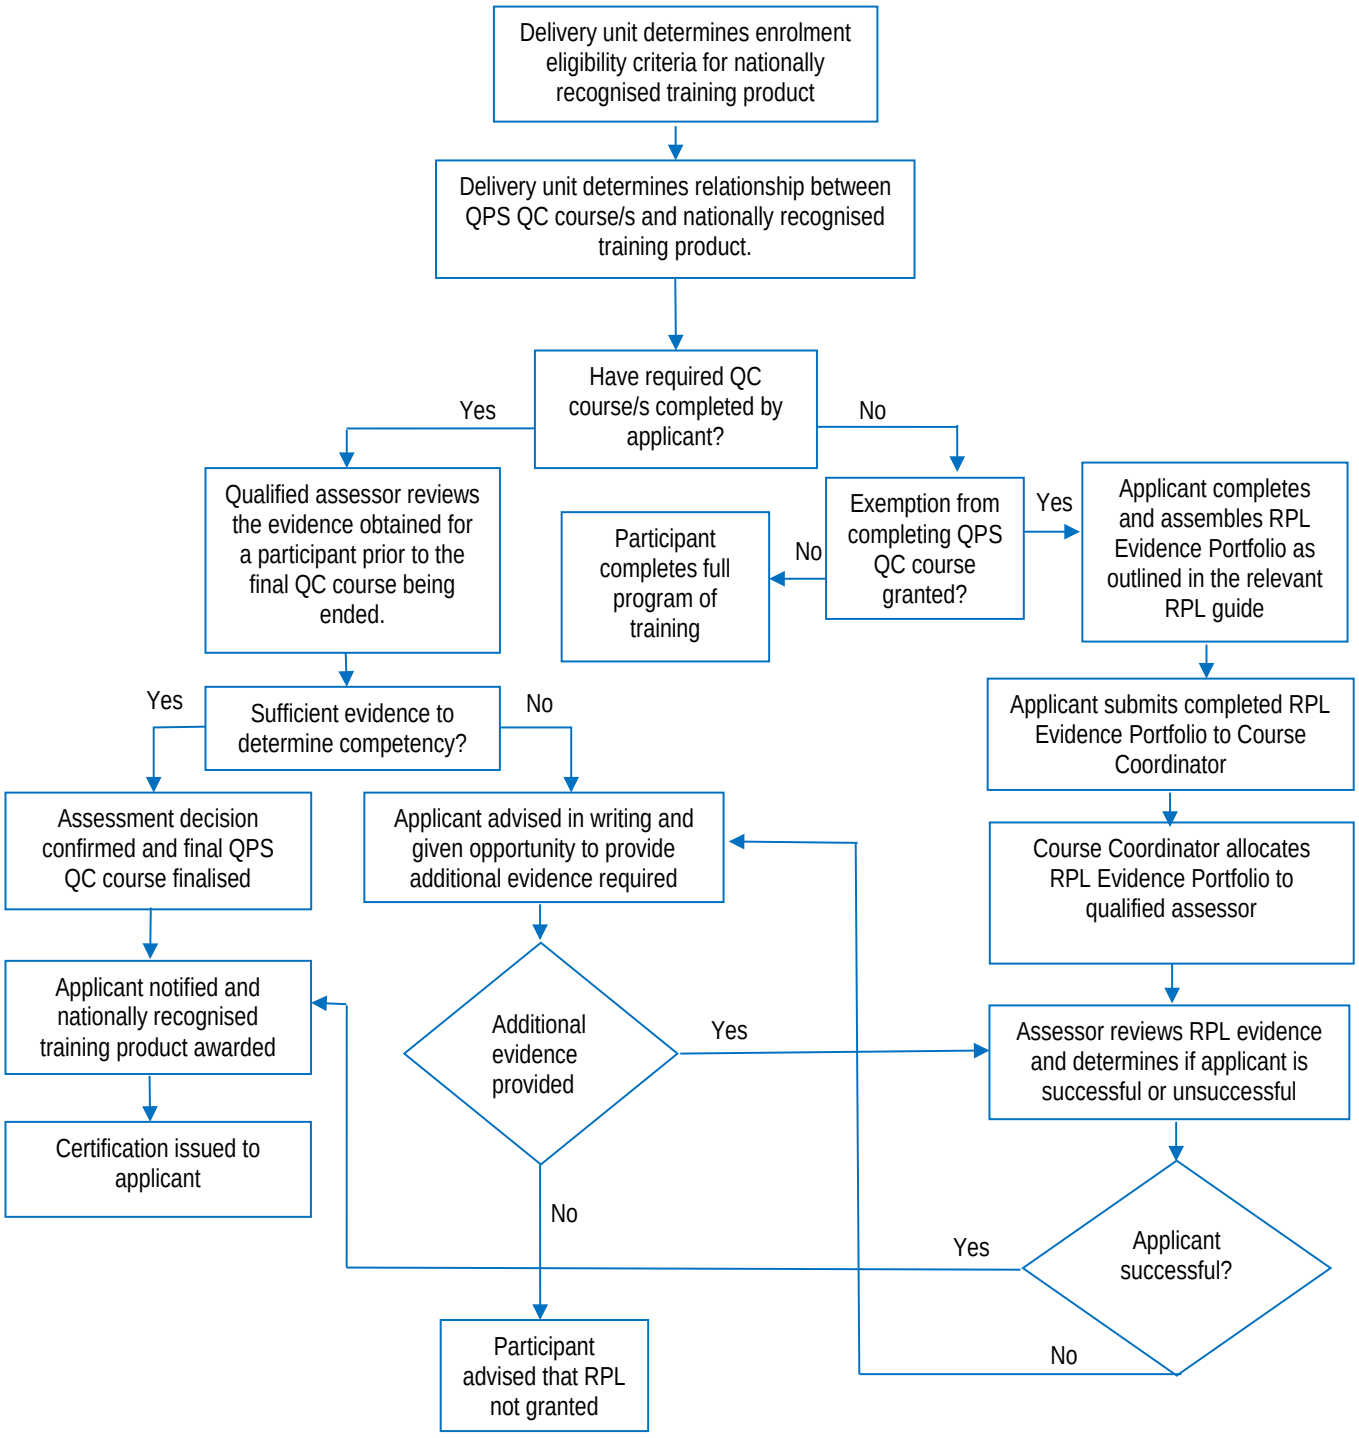
- All nationally recognised training products offered by the Queensland Police Service are to have clearly stated enrolment eligibity criteria. The enrolment eligibility criteria, at a minimum, is to be contained within the relevant Training and Assessment Strategy or Assessment Only Strategy.
- Participants eligible to enrol in nationally recognised training products (where a direct linkage to a QPS QC course/s has been established) via an *assessment only pathway* are to be enrolled in the relevant QC course/s.
- In instances where a single QC course represents the total assessment evidence outcomes for a nationally recognised training product, a qualified assessor is to review the evidence obtained for a participant prior to the QC course being finalised. Only when the assessor is completely satisfied that competency for the nationally recognised training product/s has been achieved by a participant is the QC course to be finalised.
- In instances where multiple QC courses contribute to the assessment evidence outcomes for a nationally recognised training product (i.e F2F course plus additional workplace evidence portfolio), the achievement of the nationally recognised training product is to be linked to the final QC course that must be completed by a participant. A qualified assessor is to review the evidence obtained for a participant prior to the final QC course being finalised. Only when the assessor is completely satisfied that competency for the nationally recognised training product/s has been achieved by a participant is the QC course to be finalised.
- In cases where an eligible RPL applicant has not undertaken a relevant QPS QC course/s, the Course Coordinator is to determine the level of risk associated with the relevant job role and what affect the awarding of RPL has on the requirement for that learner to complete all or part of the QPS training program.
- Where the awarding of RPL for all or part of a nationally recognised training product does not have any effect on the requirement for a learner to complete the entire relevant QPS training program (as part of employment requirements), this information will be provided to participants in the respective course materials.
- In instances where a participant seeks RPL, course coordinators are responsible for compliance and administration of their respective delivery unit's policy and procedure for RPL which involves, but is not limited to the Course Coordinators responsibilities.

6.2 Credit for previously attained units of competency and/or modules

- Providing credit for participants who have previously completed units of competency or modules is not a recognition of prior learning (RPL) process. RPL is a form of assessment of the competence of a person, while providing credit is recognising the equivalence of studies previously undertaken and completed successfully. In some cases, licensing or regulatory requirements may prevent a unit or module being awarded through a credit process.
- Participants are required to provide evidence, in the form of AQF documentation or an authenticated VET transcript, of having successfully completed a unit or module to the Course Coordinator when seeking credit.
- The Course Coordinator is to authenticate the presented documentation by contacting the issuing organisation. Once authenticated, the participant is to be awarded credit towards the relevant components of the nationally recognised training product in which the participant is enrolled.
- Where a determination needs to be made with regards to the equivalency between the completed study (i.e through a university or other AQF authorised issuing authority) and a VET unit or module, the Course Coordinator is to ensure that this process is undertaken by a suitably qualified assessor.

PROCESS FLOW CHART

6.1. RPL Procedure



6.2. Credit for previously attained units of competency and/or modules

1. PURPOSE

The purpose of this procedure is to ensure that the QPS RTO undertakes systematic evaluation of the training and assessment products and services provided by the organisation. Evaluation information includes but is not limited to quality/performance indicator data, validation outcomes, client trainer and assessor feedback and complaints and appeals.

Evaluation, as it relates to the QPS, is to inform those involved in the decision-making process and all stakeholders about aspects of QPS education, training and development activities. As such, evaluation forms a key element of a cycle of continuous improvement in the pursuit of best practice and excellence in police education, training and development in Queensland.

2. SCOPE

This procedure contains the requirements for administering RTO delivery unit evaluations, as well as Quality Indicator learner engagement and employer satisfaction evaluations. The procedure applies to all QPS delivery units providing nationally recognised training outcomes as well as areas involved in administrative functions which support the delivery/assessment of nationally recognised training such as Training Quality (TQ).

Conducting evaluations allows the QPS RTO to assess how valid, current and effective the products and services delivered are for clients and provides quality data upon which continuous improvement is based. It also ensures QPS delivery units providing nationally recognised training are producing learners who have the required skills and knowledge for the relevant job. The QPSRTO retains evidence to show how evaluation has been planned and conducted in a systematic way and that actions match the outcomes of reviews.

3. DEFINITIONS

Refer to Quality Manual for definitions.

4. REFERENCES

- Standards for Registered Training Organisations 2015
- QPS Education and Training Policies
- QPS Information Management Manual

5. RESPONSIBILITIES

5.1 Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- approving, and ensuring the correct and consistent implementation of the quality assurance strategies and quality assurance policies across the QPS RTO;
- ensuring management decisions affecting RTO operations are informed by the analysis of relevant evaluation data.

5.2 Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- developing Learner Satisfaction and Employer Satisfaction surveys within the online survey software at the commencement of each calendar year;
- ensuring that quality indicator learner and employer satisfaction evaluations developed within the online survey software meet the national regulators requirements;
- ensuring that quality indicator learner and employer satisfaction evaluations are distributed to identified students on a biannual basis;

- liaising with students, supervisors and course coordinators for completion of Quality Indicator learner and employer satisfaction evaluation;
- analysing the collected data obtained through learner and employer satisfaction evaluation;
- reporting to the Manager ETS on the survey results to inform decision making in relation to RTO operations;
- facilitating Delivery Unit Network Conferences to discuss evaluation outcomes;
- reporting the results of surveys to ASQA.

5.3 Course Coordinators

Course Coordinators are responsible for:

- administering delivery unit evaluations;
- ensure the collection of learner evaluation data;
- analysing the data to determine whether changes need to be made to training materials (for continuous improvement);
- taking action, where appropriate, based on that data;
- recording any action taken in a continuous improvement register;
- storing completed evaluations as required under the QPS Records Retention and Disposal Schedule;
- making available to the RTO during audits, upon request, all completed evaluations and all related documentation, including data analysis and action relating to continuous improvement.

6. PROCESS

6.1 Quality Indicators

The QPS, as an RTO, is required to collect and report quality indicator data to ASQA on an annual basis to demonstrate a commitment to continuous improvement. These reports are compiled by TQ.

The Quality Indicators are:

- **Learner engagement** - This indicator focuses on the extent to which learners are engaging in the types of activities likely to promote high-quality skill outcomes and includes learner perceptions of the quality of their competency development and the support they received from RTOs (QPS delivery units).
- **Employer satisfaction** - This indicator focuses on employer evaluations of learner competency development and the relevance of learner competencies for work and further training, as well as employer evaluation of the overall quality of the training and assessment.

Learner engagement and employer satisfaction Quality Indicator data are reported against through collection of evaluation data.

6.2 Sampling

In terms of the resources available for administration and follow-up procedures, the QPS as an RTO may target certain students/supervisors to complete evaluations. This is to streamline the expenditure of their energy into getting a high return rate from a small number of learners and employers, rather than dispersing their energy and achieving a lower rate from a larger group. This allows the QPS as an RTO to provide a balance between representative samples of data

and the avoidance of evaluation fatigue. In addition, focusing on a particular group can often result in a higher response rate and better quality data.

7. QUALITY INDICATOR LEARNER ENGAGEMENT EVALUATIONS

7.1 Responsibilities for administering evaluations

- The Coordinator TQ will run a report within the Ignite LMS biannually (June and November) to identify employees who have been awarded nationally recognised training certifications within the preceding survey period;
- The following student information will be ascertained:
  - name of student
  - employee number
- The Coordinator TQ will contact the relevant students via email with a preformatted email (See Appendix B for sample version of email and link to electronic survey) which includes a link to the Learner Satisfaction survey.
- Learner satisfaction responses are captured within the online survey software.

8. QUALITY INDICATOR EMPLOYER SATISFACTION EVALUATIONS

8.1 Coordinator, Training Quality (TQ) Responsibilities

- The Coordinator TQ will identify a cross section of Education and Training Officers (ETOs) who will be requested to complete an Employer Satisfaction evaluation. Selection will be based on an analysis of the location of employees who have completed Learner Satisfaction surveys within the reporting year.
- The Coordinator TQ will contact the relevant ETOs via email with a preformatted email (See Appendix B for sample version of email and link to electronic survey) which includes a link to the Employer Satisfaction survey.
- Employer satisfaction responses are captured within the online survey software.

8.2 Timing of surveys

The Coordinator TQ should ensure that all Quality Indicator employer satisfaction evaluations are forwarded to the ETOs by October of the 'data collection period', to allow time for the surveys to be completed within that data collection period.

8.3 Methodology

In relation to Quality Indicator employer satisfaction evaluations, the Coordinator TQ should ensure that there is an equitable rotation of these evaluations across the RTO scope of registration. This is to ensure that Quality Indicator data is gathered across all delivery units over time.

9. ANALYSIS AND FURTHER ACTION

There is a requirement under the Standards for Registered Training Organisations (RTOs) 2015 to report the results of the surveys to ASQA. The specific guidelines for capturing and managing QPSRTO Quality Indicator data is contained in the RTO file server in the folder titled 'Quality Indicators' which is located in the ASQA folder.

The Coordinator TQ will analyse the results of the surveys to determine if any action is required to improve the training offered by the RTO delivery units. The outcomes of the surveys and

analysis will be communicated and discussed with delivery units during Delivery Unit Network Conferences facilitated by TQ.

10. FORMS

9. DOCUMENT HISTORY 6

1. PURPOSE

The purpose of this quality assurance procedure is to ensure that a full and accurate record of a course participant's assessment undertaken during his or her participation in a training program or course is captured and retained in a way that meets or exceeds the requirements of the ASQA General direction: Retention requirements for completed student assessment items.

2. SCOPE

Queensland Police Service (QPS) records management is governed by the Public Records Act 2002 (the Act) and must comply with a number of standards including Information standard 40: Recordkeeping (IS40) and Information Standard 31: Retention and Disposal of Public Records (IS31). These standards help the QPS meet their record keeping obligations under the Act.

This quality assurance procedure applies to course assessments conducted for, or on behalf of, the Registered Training Organisation.

3. DEFINITIONS

Refer to the QPSRTO Quality Manual and ASQA General direction: *Retention requirements for completed student assessment items* for definitions.

4. REFERENCES

- ASQA General direction: Retention requirements for completed student assessment items
- *National Vocational Education and Training Regulator Act 2011*
- *Public Records Act 2002*
- QPS Corporate Records Management System Data Entry Standard
- QPS Corporate Thesaurus
- QPS Records Retention and Disposal Schedule
- Standards for Registered Training Organisations (RTOs) 2015

5. RESPONSIBILITIES

5.1. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Monitoring compliance to ensure that public records falling within the scope of this procedure are retained in accordance with the Public Records Act 2002 and Information Standards 31 and 40.

5.2. Course Coordinator

The course coordinator is responsible for:

- Ensuring that public records falling within the scope of this procedure are retained in accordance with the Public Records Act 2002 and *Information Standards 31* and *40*.
- Ensuring that all completed student assessment items (including evidence relied upon for RPL assessment decisions) are captured and/or recorded for each student;
- Creating assessment files for each student;
- Linking assessment documents; and
- Filing assessment evidence.

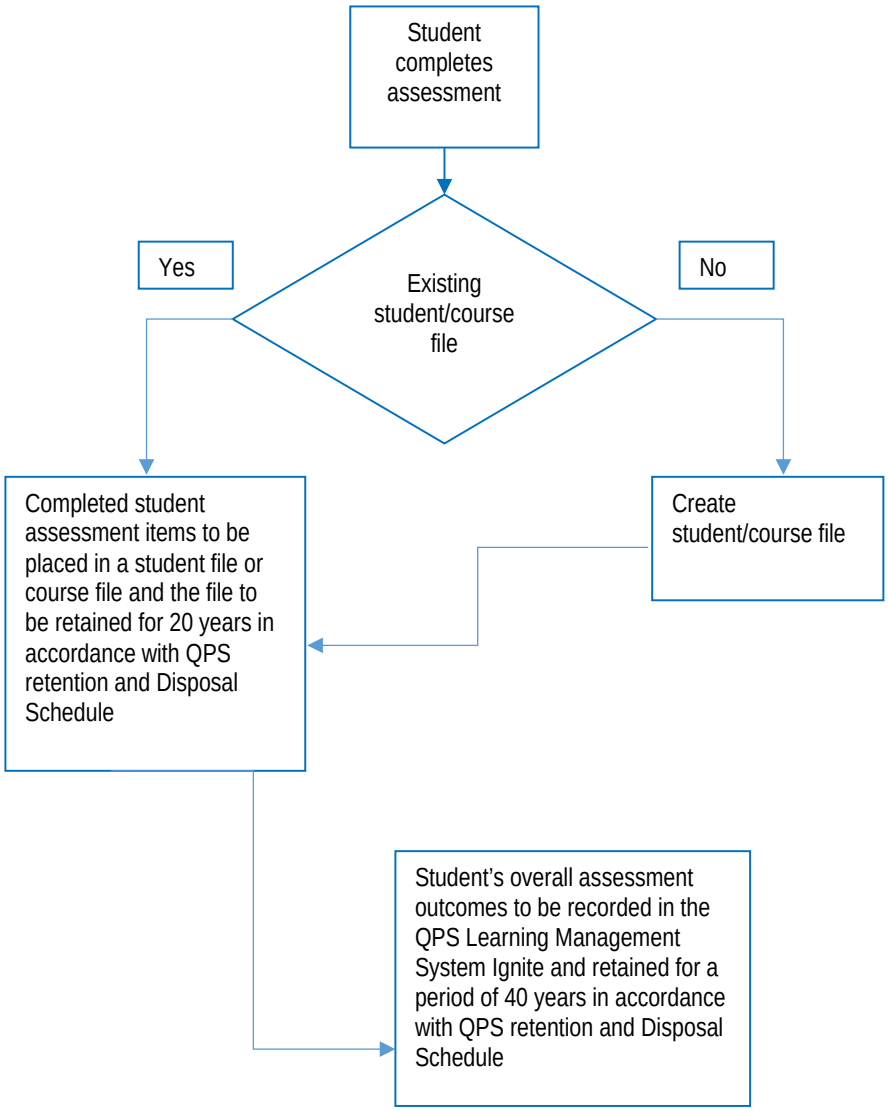
5.3. Assessor

The assessor is responsible for:

- Making the assessment decision;
- Collating assessment.

6. PROCESS

Recordkeeping Process



Note: A Registered Training Organisation is required to keep completed student assessment items in accordance with the ASQA General direction: Retention requirements for completed student assessment items. However QPS retains its assessment records in accordance with QPS Retention & Disposal Schedule which exceeds the requirements of the AQSA General Direction.

7. RECORDS RETENTION

Description of Records	Status	Reference	Disposal Action
Assessment Item	Temporary	ET/TRA/5	Retain for 20 years after last action.
Supporting documentation	Temporary	ET/TRA/5	Retain for 20 years after last action
Results of examination – may be hard copy and/or electronic copy	Temporary	ET/TRA/3	Retain for 40 years after last action.

1. PURPOSE

This RTO Quality Assurance Procedure identifies the requirements for trainer and assessor qualifications and experience and outlines the processes for their induction and ongoing professional development.

2. SCOPE

This RTO Quality Assurance Procedure applies to the training requirements of all trainers and assessors employed by the Queensland Police Service who deliver and/or assess Training Product/s on behalf of the QPS RTO.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- QPSRTO 026 Staff Induction
- QPSRTO 010 Recognition of Prior Learning
- Standards for Registered Training Organisation (RTO's) 2015

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- ensuring qualified and skilled staff perform their duties consistently to meet the quality and performance requirements of our clients in compliance with national standards and other regulations.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- ensuring that the course QC1483 Registered Training Organisation (RTO) Induction is available within the Ignite LMS;
- the approval/authorisation of employees endorsed as qualified QPS RTO trainers and/or assessors.

5.3. Course Coordinator (Assessment only Strategies)

Where nationally recognised training products are awarded via an assessment only pathway, the Course Coordinator is responsible for:

- ensuring that assessment against nationally recognised products is only provided by staff who have current industry skills and knowledge and who can undertake all the tasks defined in the elements of competency to industry standards;
- ensuring that the assessment staff are appropriately qualified, and that there are current assessor profiles for each approved assessor;
- maintaining records of assessor qualifications, experience and industry currency;
- ensuring that all assessors undertake professional development in the fields of knowledge and practice of vocational training, learning and assessment and encourage regular attendance at annual educational training conferences;
- maintaining records of any training / professional development pertaining to the delivery of the RTO on Ignite, and update the Facilitator Profiles with these histories and performing annual reviews on staff profiles;

- ensure and maintain evidence that all assessors are regularly exposed to industry workplaces and participate in workplace tasks;
- record results and evidence of engagement with industry to confirm the required skills and knowledge for assessors; and
- provision of supervision where needed, determining the level of supervision required, any requirements, conditions or restrictions considered necessary on the individual's involvement in the collection of assessment evidence.

5.4. Course Coordinator (Training and Assessment Strategies)

Where nationally recognised training products are awarded via a delivery and assessment pathway, the Course Coordinator is responsible for:

- ensuring that training and assessment against nationally recognised products is only provided by staff who have current industry skills and knowledge and who can undertake all the tasks defined in the elements of competency to industry standards;
- ensuring that the training and assessment staff are appropriately qualified, and that there are current trainer and assessor profiles for each approved trainer and assessor;
- maintaining records of trainer and assessor qualifications, experience and industry currency;
- ensuring that all trainers and assessors undertake professional development in the fields of knowledge and practice of vocational training, learning and assessment and encourage regular attendance at annual educational training conferences;
- maintaining records of any training / professional development pertaining to the delivery of the RTO on Ignite, and update the Facilitator Profiles with these histories and performing annual reviews on staff profiles;
- ensure and maintain evidence that all trainers and assessors are regularly exposed to industry workplaces and participate in workplace tasks;
- record results and evidence of engagement with industry to confirm the required skills and knowledge for trainers and assessors; and
- provision of supervision where needed, determining the level of supervision required, any requirements, conditions or restrictions considered necessary on the individual's involvement in the delivery of training and/or collection of assessment evidence.

6. PROCESS

Staff conducting training and/or assessment for nationally recognised training products are required to have:

a) vocational competencies at least to the level being delivered or assessed;
b) current industry skills relevant to the training and assessment being provided; and
c) current knowledge and skills in vocational training and learning that informs their training and assessment

Staff are to undergo an induction into the RTO and respective work unit and undertake professional development to maintain currency in both training and/or assessment and the relevant technical competencies.

6.1. Induction

Each Course Coordinator should induct new facilitators in accordance with QPSRTO 026.

6.2. Trainer and Assessor requirements

Trainers and assessors are to hold the competencies in accordance with the Standards for Registered Training Organisations (RTO's) 2015.

6.3. Evidence of trainer and assessor competence

Each course coordinator should provide and collect facilitator profiles (QPSRTO_015_F1 — available on RTO intranet site). Each Course Coordinator should obtain certified copies of certificates (for qualifications obtained externally) and file with facilitator profiles as per RTO Quality Assurance audit of registered programs procedures.

6.4. Professional development of trainers and assessors

Trainers and/or assessors must undertake ongoing professional development to maintain currency in relation to the following three areas:

(a) VET knowledge and skills, and

(b) Industry currency, and

(c) Trainer/assessor competence.

The Course Coordinator will record any training / professional development / industry exposure pertaining to the delivery of the RTO on Ignite, and update the Facilitator Profiles with these histories. Quality Assurance Procedure QPSRTO028 Industry relevance of training and assessment defines the requirements to maintain industry knowledge and skills.

Course Coordinators, trainers and/or assessors will also have access to all updated relevant RTO procedures, forms, and associated documentation on the QPS Bulletin Board RTO Web site and attend Delivery Unit Network Conferences on a regular basis.

6.5. Professional development of Training Quality staff

When TQ staff attend training that is internal to QPS, the record of the training will be entered on Ignite by the Course Co-ordinator. For professional development that is attended outside of the QPS, the individual staff member will be responsible for recording this professional development in their Staff Profile document in the Staff Profile file.

7. RECORDS

- All training records, for example certificates of attendance, will be retained on the employee's training file for the duration of their employment.
- All records will be retained for a minimum of forty years.
- All records will be classified as 'Confidential'.

8. FORMS

- QPSRTO_015_F1 Facilitator Profile

1. PURPOSE

This procedure is for the efficient and effective management of all client complaints and appeals in relation to the operation of the QPS Registered Training Organisation (RTO).

2. SCOPE

This procedure ensures the principles of natural justice and procedural fairness are adopted at every stage of the complaint and appeal process without bias. It allows the complainant to be heard with access to all relevant information and with the right of reply and allowing those who have had an allegation made against them to provide a response during the investigation of the complaint or appeal. This applies to all persons involved in the design, delivery, assessment and support of all Training Product/s in the QPS RTO.

This document sets out the complaints and appeals procedure to:

a) manage and respond to allegations involving the conduct of:
   i. the RTO, its trainers, assessors or other staff;
   ii. a third party providing services on the RTO's behalf, its trainers, assessors or other staff (if applicable) or;
   iii. a learner of the RTO;

b) manage requests for a review of decisions, including assessment decisions, made by the RTO or a third party providing services on the RTO's behalf.

c) where the complaint is in relation to the behaviour of a member of the Queensland Police Service, the complainant must follow the QPS Complaint and Client Service Reporting requirements located on the Ethical Standards Command (ESC) website.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- QPS Complaint and Client Service Reporting Procedures
- Standards for Registered Training Organisation (RTO's) 2015

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- Ensuring that complaints and appeals in relation to RTO activities which fall outside the scope of the QPS Complaint and Client Service Reporting requirements are dealt with in a timely and fair manner;
- Overviewing the outcomes of any formal complaints and appeals that are dealt with by the QPS RTO.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- reviewing the contents of the complaint and forwarding it on to the appropriate authority for action;
- conducting analysis/investigations into appeals against decisions made by the QPS RTO;
- publishing the staff profile form on the Training Quality intranet site and maintaining currency;
- making recommendations on the outcomes of appeals against decisions;
- recording details in the complaints and appeals register;

- capturing the complaint/academic appeal/appeal against a decision within Objective;
- allocating complaint to relevant person for action; and
- the forwarding of complaints in relation to members of the Queensland Police Service direct to the Complaints Manager in accordance with QPS Complaint and Client Service Reporting requirements.

5.3. Course Coordinator

The Course Coordinator is responsible for ensuring:

- initial complaint is confirmed with the complainant to ensure that all of the details on the complaint form are correct and accurate;
- the complainant is provided with an opportunity to present their case and provide any further evidence to support their case;
- investigations into the complaint are conducted with regard to all allegations and recommendations are made where necessary;
- any discussions and investigations in relation to the complaint are documented;
- the provision of written confirmation of the outcomes of the complaint to the complainant;
- records of the complaint investigations are forwarded to the Training Manager where necessary;
- outcomes of complaints/appeals are forwarded to complainant; and
- a copy of the complaint and outcomes are forwarded to the Coordinator TQ.

5.4. Training Manager

The Training Manager is responsible for ensuring:

- initial enquiries are made to the Course Coordinator in relation to the current status of investigations into the complaint;
- further enquiries are undertaken with the complainant, if necessary;
- further investigations into the complaint allegations are conducted and recommendations are made where necessary;
- written confirmation on the outcomes are passed to the complainant;
- records of complaint investigations are forwarded to the Coordinator TQ where necessary.

5.5. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- convening and chairing formal appeal hearings;
- making final determinations on formal appeals;
- providing written responses of appeal outcomes to appellants.

6. COMPLAINT

6.1 It is recommended that complaints or allegations concerning the delivery unit with reference to 6.2 are to be managed and resolved with the Course Coordinator and/or Training Manager where possible. Actions taken at the local level maximises the potential for early resolution of the issue. If the complainant is dissatisfied with the decision made through local action, then the complainant may progress the complaint to the Coordinator TQ for internal review.

6.2 To register a complaint or allegation involving the conduct of:

a) the QPS RTO, its trainers, assessors or other staff;
b) a third party providing services on the QPS RTO's behalf, its trainers, assessors or other staff or;
c) a learner of the RTO;

The complainant is required to submit a formal complaint in writing using the *Appeals and Complaints Notification Form (QPSRTO 018 F01* and email or post the Form, to the Coordinator, Training Quality or the relevant Course Coordinator. The Coordinator TQ confirms receipt of the application via written correspondence, records details and allocates the complaint to the appropriate person for investigation i.e. the delivery unit (if evidence of 6.1 has not been provided) or TQ.

6.3 The form requests the following information to be provided by the complainant:

a) full name
b) student number and/or payroll number
c) training program attended
d) subject matter
e) name of facilitator
f) date of lodgement of complaint

6.4 The complaint is investigated by appropriate persons to determine a course of action and must be finalised as soon as practicable. A timeframe of thirty (30) calendar days is considered acceptable to resolve the complaint.

6.5 Complaints requiring more than sixty (60) calendar days to process and finalise the complaint from initial receipt of application, notice must be provided to:

a) inform the complainant in writing, including reasons why more than 60 days are required, and
b) regular updates should be provided to the complainant on the progress of the matter.

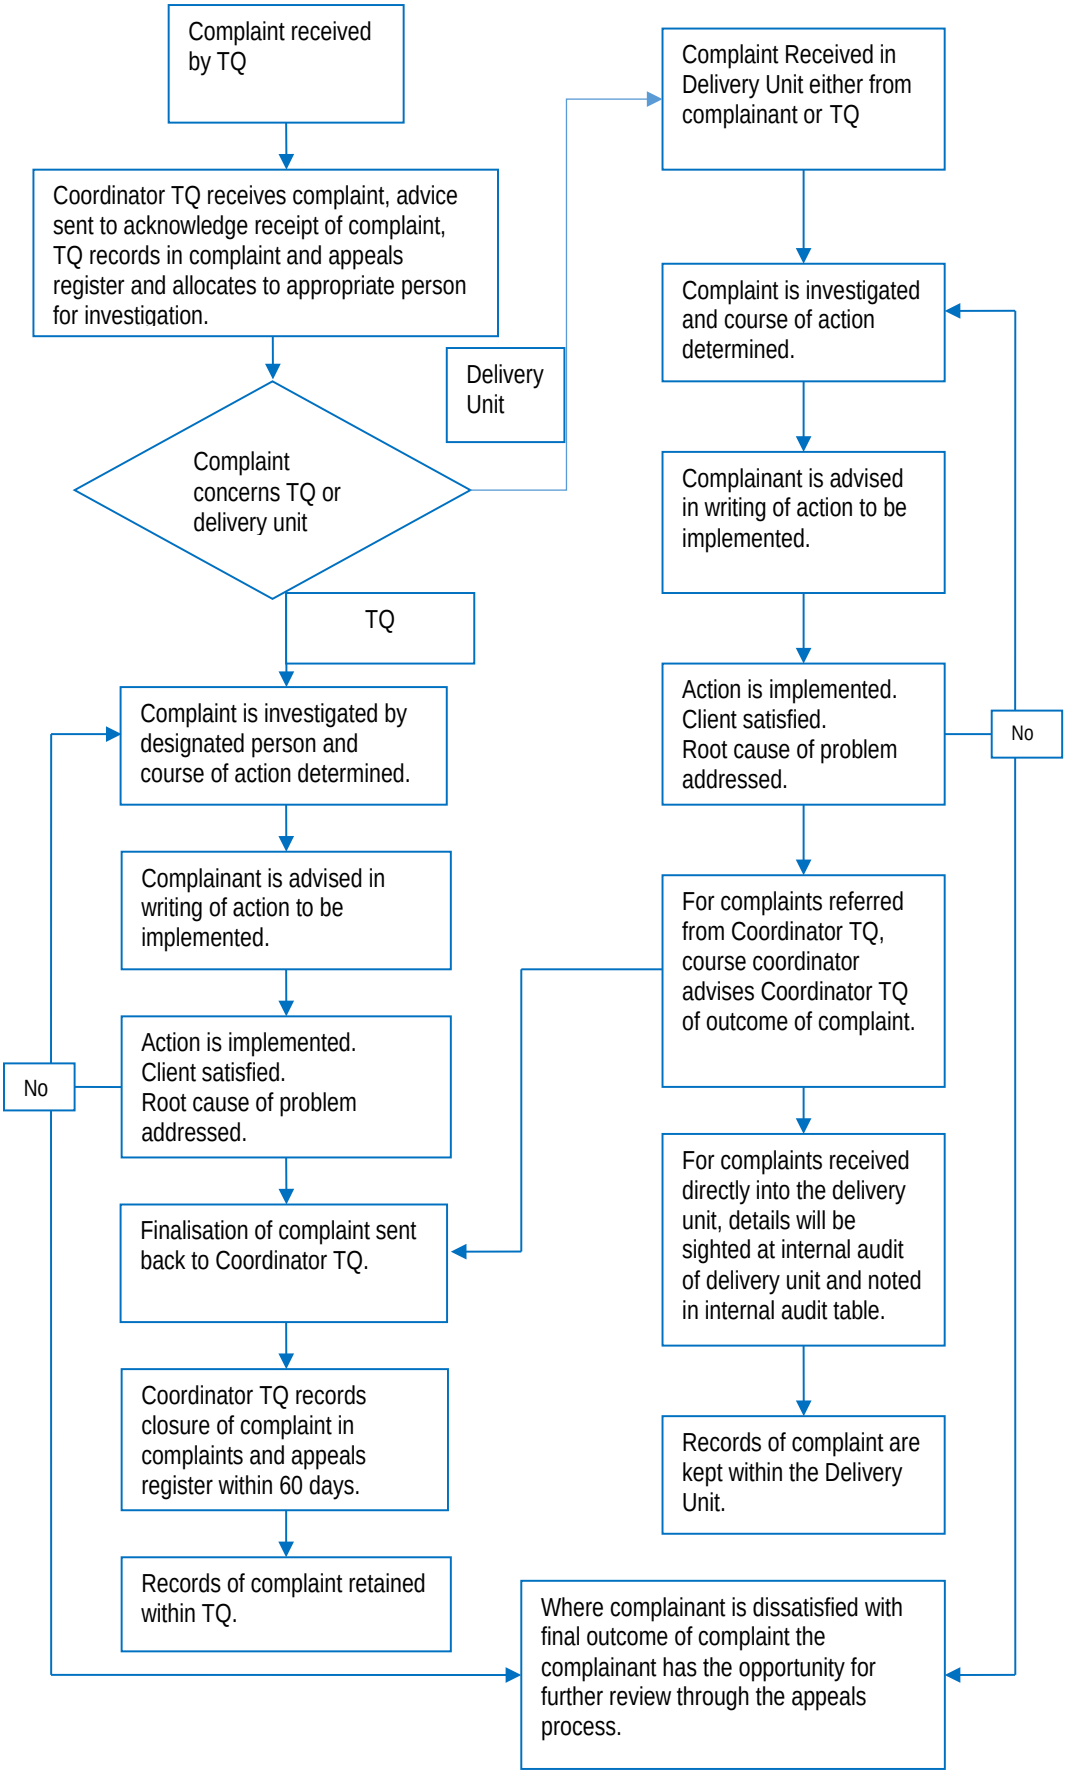
6.6 The complainant is informed of the outcome in writing and TQ records closure ofthe complaint in the complaints and appeals register.

6.7 Complaints received and resolved directly by the delivery unit, will be recorded at local level for sighting at internal audit. Records of complaints will remain within the delivery unit.

6.8 If the complainant is dissatisfied with the decision made at review they may submit a formal appeal within 28 days of the decision being made, by email or post, using the *Appeals and Complaints Notification Form (QPSRTO 018 F01)*, to the Coordinator TQ.

6.9 The complaint is actioned in accordance with the “Complaints flow chart”.

Complaints Flow Chart



7. ACADEMIC APPEAL

7.1. Where the complainant is dissatisfied with an assessment decision by the QPS RTO, third party or partner organisation providing services on behalf of the QPS, the complainant must approach the assessor who made the original assessment decision to discuss the result and negotiate for re-assessment where applicable/necessary.

7.2. The complainant must negotiate with the assessor for a suitable time and place to conduct a re-assessment where applicable/necessary.

7.3 Where the assessor determines that the original assessment decision stands and the appellant remains dissatisfied, he/she may submit a formal appeal against the academic decision using the *Appeals and Complaints Notification Form (QPSRTO 018 F01)*, to Coordinator, Training Quality within 28 days of the original decision being made. The Coordinator TQ confirms receipt of the application via written correspondence, records details and allocates to the appropriate person for investigation i.e. the Course Coordinator or Training Manager (where the Course Coordinator is the original assessor).

7.4 When submitting a formal appeal against an academic decision, the student must provide:

a) their full name
b) student number and/or payroll number
c) training program attending
d) subject matter under appeal
e) date of the assessment
f) name of the assessor
g) reasons in full for the appeal

7.5 The appeal is investigated by appropriate persons to determine a course of action and must be finalised as soon as practicable. A timeframe of thirty (30) calendar days is considered acceptable to resolve the appeal.

7.6 Appeals requiring more than sixty (60) calendar days to process and finalise the appeal from initial receipt of application, notice must be provided to:

a) inform the appellant in writing, including reasons why more than 60 days are required, and
b) regular updates should be provided to the complainant on the progress of the matter.

7.7 The appellant is informed of the outcome in writing and all records are returned to the Coordinator TQ for capturing in the complaints and appeals register.

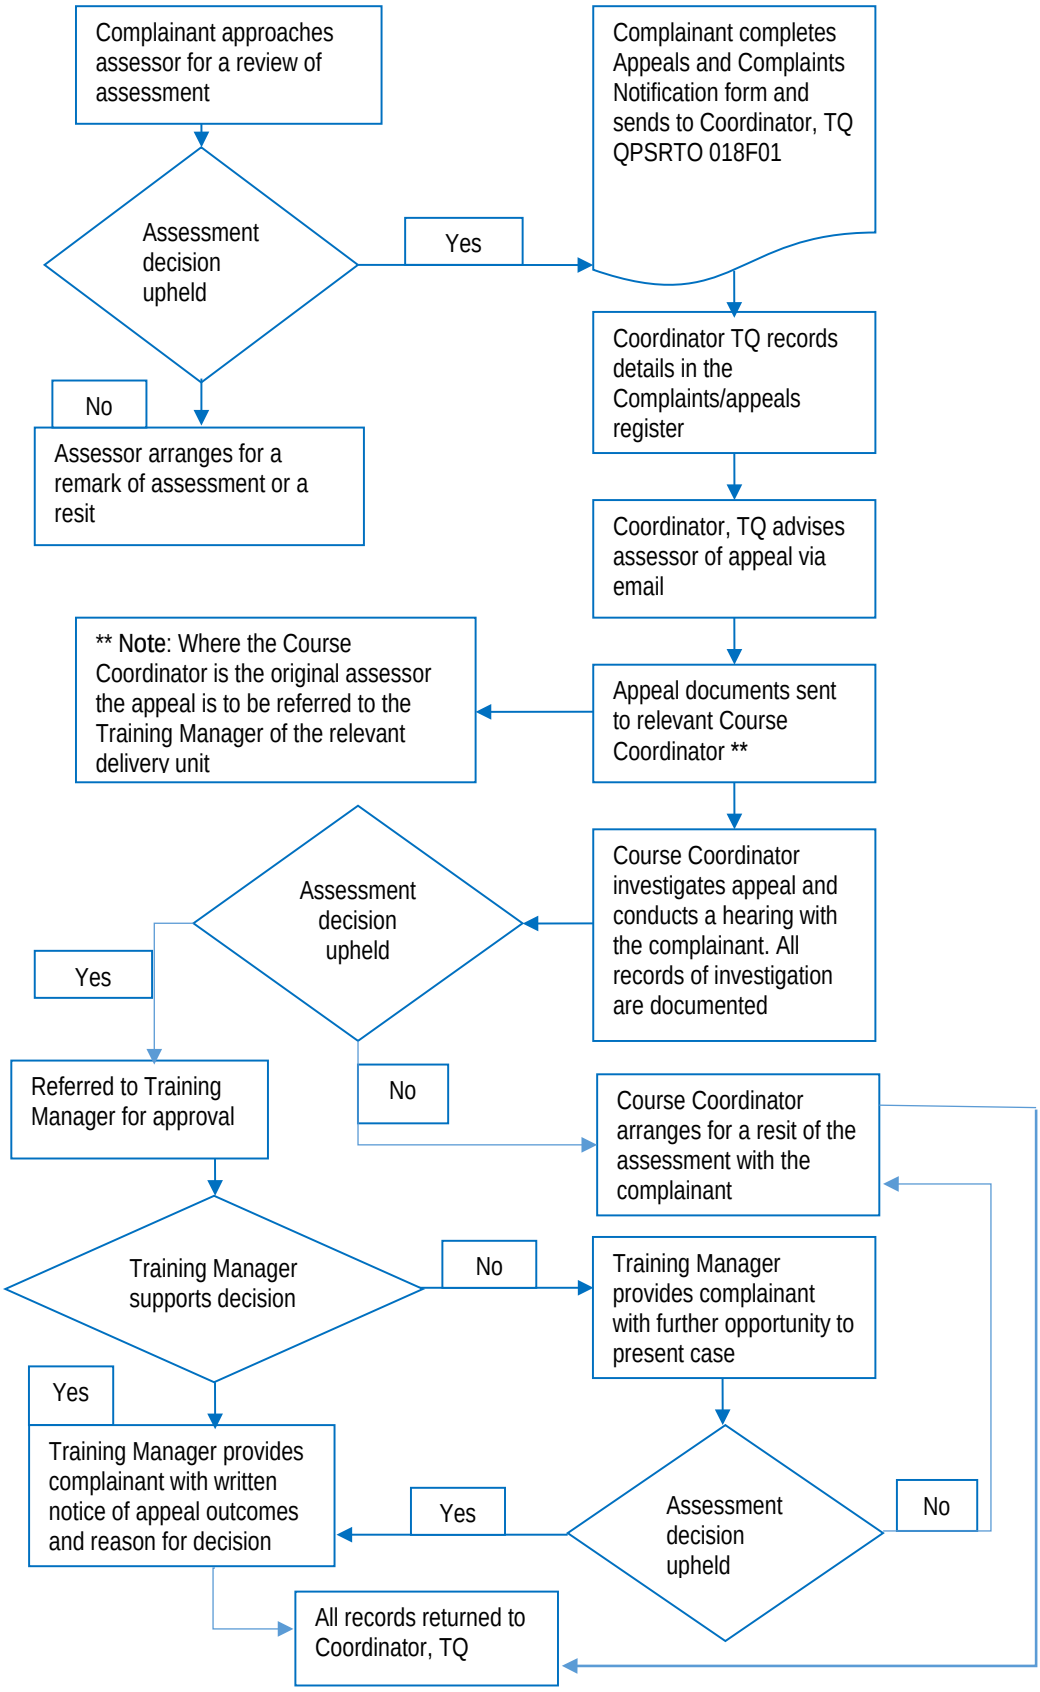
7.8 If the appellant is dissatisfied with the decision made at review by the QPS RTO and have exhausted all avenues through the internal appeal handling procedure, they may refer their grievances to the following external agencies: ASQA (online complaints form) or the National Training Complaints Hotline, phone number 13 38 73 for an independent review.

7.9 The Academic Appeal is conducted in accordance with the "Academic Appeal Flow Chart".

Note: Where a re-assessment is required, the Training Manager must request that the Course Coordinator find an appropriately qualified assessor to conduct a re-assessment of the

complainant. This may be conducted by the Course Coordinator if they are suitably qualified. They must then negotiate and mutually agree suitable arrangement for the re-assessment with the complainant.

Academic Appeal Flow Chart



8. APPEAL

8.1 Where a complainant is not satisfied with a decision made by the QPS RTO, third party or partner organisation providing services on behalf of the QPS (including unresolved complaints or academic appeals) the appellant may submit a formal appeal within 28 days of the decision being made, by email or post, using the Appeals and Complaints Notification Form (QPSRTO 018 F01), to the Coordinator, Training Quality.

8.2 The student must provide:

a) their full name
b) student number and/or payroll number
c) training program attending
d) decision under appeal
e) date of the decision
f) name of the original decision maker
g) reasons in full for the appeal

8.3 The Coordinator TQ confirms receipt of the application via written correspondence, records details and forwards the appeal to the Manager ETS to arrange for a formal hearing between the appellant and Coordinator TQ.

8.4 The Manager ETS may make a decision on the day of the hearing or within 5 days of the hearing. However a timeframe of thirty (30) days is considered acceptable to resolve an appeal, and every effort is made to finalise the process as soon as practicable.

8.5 If an appeal cannot be resolved within sixty (60) days of the appeal initially received, notice must be provided to:

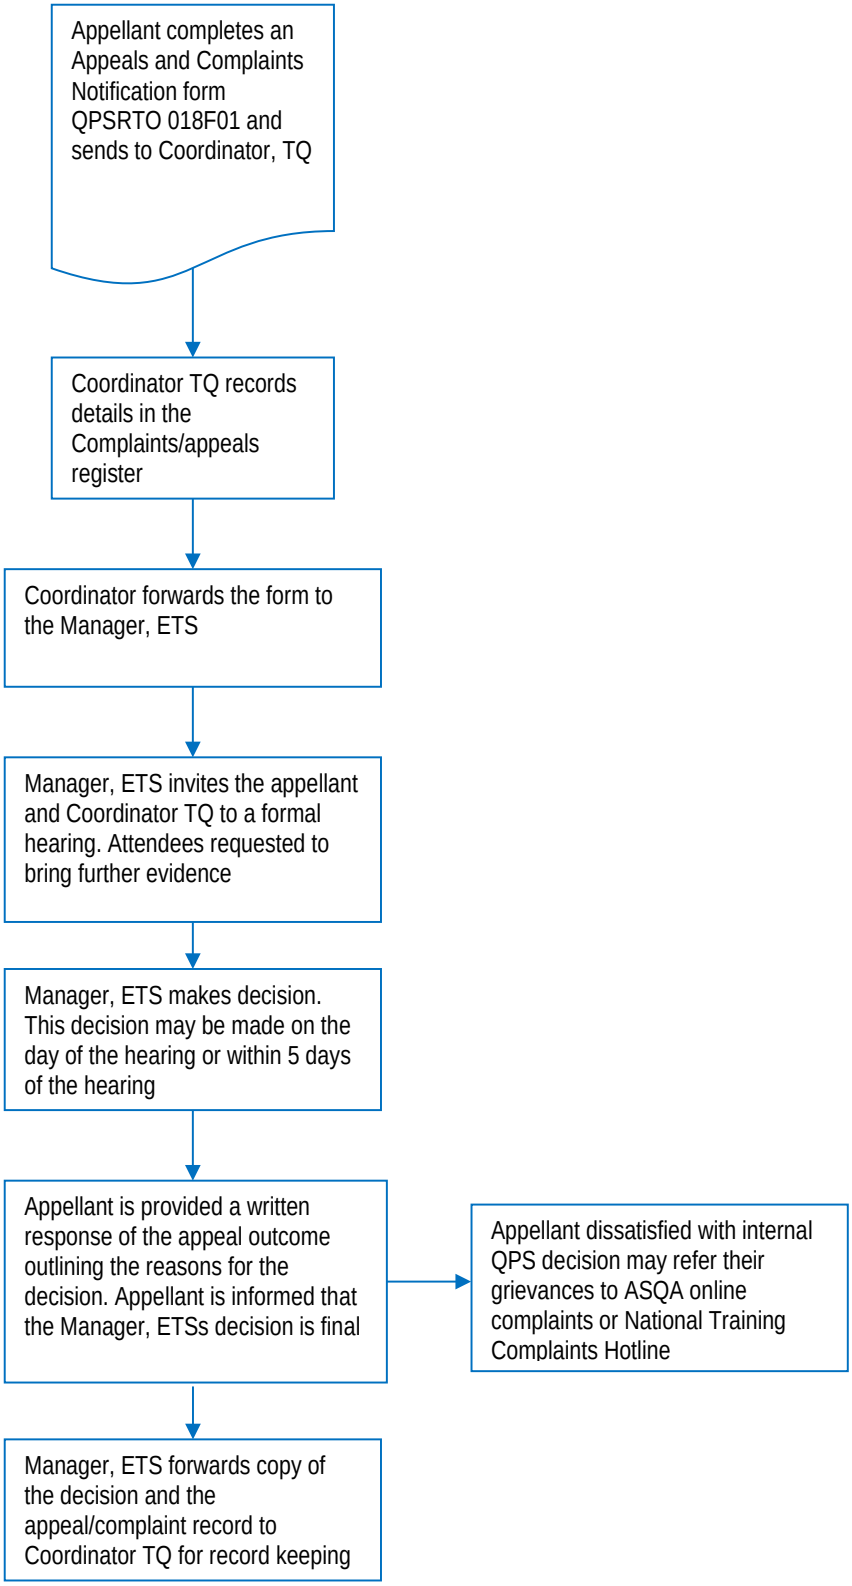
a) inform the appellant in writing, including reasons why more than 60 calendar days are required, and
b) regular updates should be provided to the appellant on the progress of the matter.

8.6 The appellant is informed of the outcome of the decision in writing and all records are returned to Coordinator TQ for capturing in the complaints and appeals register.

8.7 If the appellant is dissatisfied with the decision made at review by the QPS RTO and have exhausted all avenues through the internal appeal handling procedure, they may refer their grievances to the following external agencies: ASQA (online complaints form) or the National Training Complaints Hotline, phone number 13 38 73 for an independent review.

8.8 The Appeal will be conducted in accordance with the “Appeal Flow Chart”.

Appeal Flow Chart



9. FORMS

- QPSRTO 018 F01 Appeals and Complaints Notification Form

10. RECORDS

The QPS RTO securely maintains records of all complaints and appeals and their outcomes, and identifies potential causes of complaints and appeals and takes appropriate corrective action to eliminate or mitigate the likelihood of reoccurrence. This is captured in the continuous improvement register.

The Coordinator TQSS records details in the complaints/appeals register and the following records are maintained by the QPS RTO:

a) Completed complaint files
b) Completed Academic Appeal files
c) Completed Appeal files

7. DOCUMENT HISTORY 4

1. PURPOSE

The purpose of this procedure is to outline the process for negotiating fees and fee refunds in circumstances where the QPS Registered Training Organisation delivers Training Product/s within its scope of registration to approved external clients.

2. SCOPE

This procedure only applies to approved external clients where the QPS RTO charges a fee for the delivery of training.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- Standards for Registered Training Organisations (RTOs) 2015

5. RESPONSIBILITY

5.1. Manager, Business and Partnerships (BP)

The Manager BP is responsible for:

- Negotiating and establishing the fee and refund clauses of the Memorandum of Understanding for the provision of vocational education and training to external clients; and;
- Ensuring that the Memorandum of Understanding is signed by authorised signatories prior to the delivery of vocational education and training.

6. PROCESS

6.1. Establishment of memorandum of understanding

a) The Manager BP will ensure that a Memorandum of Understanding has been developed and signed by the authorised signatories prior to the delivery of vocational education and training to external clients.

b) Memorandums of Understanding are to be developed in accordance with the QPS Administration Manual.

6.2. Fees and refund arrangements

a) The Manager BP is to ensure that the Memorandum of Understanding clearly outlines the fee and refund arrangements established in relation to the delivery of the vocational education and training.

b) Where possible, the fee and refund arrangements are to be established by the Manager BP in consultation with the relevant external department, organisation or agency.

c) Fees for the design and development of training products are managed separately from fees associated with training delivery.

d) Fees are charged to external departments, organisations or agencies and not to individual learners or prospective learners.

e) Refunds will be processed in line with the requirements of the Financial Management Practice Manual.

6.3. Tuition Fees

a) The QPS does not charge its employees tuition fees.

b) For training provided to external participants, specific arrangements relating to tuition fees (if any), will be included in the Memorandum of Understanding.

6.4. Protection of fees paid in advance

Any fees paid to the QPS in advance by external departments, organisations or agencies for vocational education and training will be deposited into a bank account in the name of the Queensland Police Service.

1. PURPOSE

The purpose of this quality assurance procedure is to outline the process required for the induction of persons who are involved in training, assessments or client services on behalf of the QPS RTO.

2. SCOPE

This procedure applies to all persons involved in the delivery, assessment and support of Training Product/s within the QPS RTO. This procedure should be read in conjunction with the QPS Standard: Induction and Orientation.

3. DEFINITIONS

Refer to Quality Manual for definitions.

4. REFERENCES

- Standards for Registered Training Organisations (RTOs) 2015
- QPS Standard: Induction and Orientation

5. RESPONSIBILITIES

5.1. Course Coordinator

Course Coordinators are responsible for:

- Ensuring that all employees involved in training and/or assessment or client service of Training Product/s on behalf of the QPS RTO undertake an appropriate induction which at a minimum includes completion of QC1483 Registered Training Organisation (RTO) Induction;
- Ensuring staff have access to the delivery unit policies, procedures and documentation;
- Ensuring that work instructions established in delivery units are used to implement the requirements specified in the RTO procedures, and that new employees involved in training and assessment have continual access to the latest versions;
- Any work instructions developed to implement the induction program are documented; and the
- Ensuring the roles and responsibilities of the new employee in the delivery unit, are clearly documented.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Ensuring that the course QC1483 Registered Training Organisation (RTO) Induction is available within the Ignite LMS;
- Monitoring that staff involved in the management and maintenance of RTO operations complete course QC1483 Registered Training Organisation (RTO) Induction. Ensuring that the information materials within the course QC1483 Registered Training Organisation (RTO) Induction are monitored and updated from time to time.

6. PROCESS

6.1. Conduct Induction – Delivery Units

Course Coordinators are to ensure that all new staff involved in the delivery, assessment or administration of training products offered by the QPS complete the course QC1483 Registered Training Organisation (RTO) Induction. This induction program includes information on:

a) the requirements of the Standards for Registered Training Organisations (RTOs) 2015;
b) the requirements of the AQF;
c) competency based training and assessment;
d) training packages (specifically those within the QPS RTO scope of registration);
e) vocational education and training requirements;
f) responsibilities for access and equity;
g) accredited courses;
h) policies and procedures of the QPS RTO;
i) learning and assessment strategies of the qualifications applicable to the delivery unit; and
j) relevant legislation.

6.2. Training Quality Staff Induction

The Coordinator TQ is to monitor that all new TQ staff complete the course QC1483 Registered Training Organisation (RTO) Induction as soon as practicable after commencing duties within the section.

6.3. Capture record

Course Coordinators are to ensure that staff profiles for approved trainers and/or assessors are updated to record completion of the course QC1483 Registered Training Organisation (RTO) Induction.

- Standards for Registered Training Organisations (RTOs) 2015
- QPSRTO002 Certification & Issuing of Qualifications and Statements of Attainment

5. RESPONSIBILITIES

5.1. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Ensuring requests for the creation of enrolment records for non-QPS participants within the Ignite Learning Management System are processed in a timely manner.

5.2. Coordinator, Ignite Service Centre (ISC)

The Coordinator ISC is responsible for:

- Ensuring requests for the creation of non-QPS participant record in the non-Aurion system are submitted and processed in a time manner;
- Advising the Coordinator TQ when the relevant request has been actioned.

5.3. Course Coordinator

The Course Coordinator is responsible for:

- Ensuring the QPS enrolment process for approved applications for a qualification or accredited course from QPS employees is carried out in accordance with this procedure;
- Ensuring that enrolment requests for approved non-QPS participants are forwarded to the Coordinator TQ as soon as reasonably practicable after the enrolment is accepted;
- Ensuring that all required information is provided or available to participants prior to enrolment or the commencement of training, whichever comes first;
- Ensuring that records of a participant progress are kept up to date within the approved training database.

6. PROCESS

6.1. Enrolment Process (QPS Employees)

- Enrolment records for nationally recognised training outcomes are captured within the associated QPS training program (QC) Ignite courses.

- A milestone within the QPS training program (QC) Ignite course records both the acceptance of enrolment into, and the subsequent assessment outcome for the Training Product/s or accredited course for a participant.
- Only participants meeting the relevant enrolment eligibility criteria (based on job role requirements) are to be enrolled in a Training Product/s or accredited courses.
- The relevant QPS course coordinator maintains final approval regarding the acceptance of a participant's enrolment in Training Product/s or accredited courses.
- Current and accurate information regarding the training and assessment or assessment only pathway for the Training Product/s is available for prospective participants prior to enrolment in the qualification or accredited course via the Training Quality intranet site.

6.2. Enrolment Process (Non-QPS Employees)

- Only approved participants from partner organisations, who meet the relevant enrolment eligibility criteria (based on job role requirements), are to be enrolled in a Training Product/s or accredited courses.
- Course Coordinators are to forward requests for the creation of a profile within the Ignite LMS for all approved non-QPS employees to the Coordinator ISC for processing.
- Upon notification that the profile has been created, the Course Coordinator will complete the required data entry tasks associated with the non-QPS employee's enrolment, including the distribution of a participant's certification.
- The Coordinator TQ will monitor all non-QPS employee's enrolments to ensure they comply with established quality assurance procedures.

7. PARTICIPATION RECORDS

- Participant's records within the Ignite LMS are to be updated in line with the achievement of Training Product (i.e. units of competency, accredited courses) within a reasonable time after the relevant assessment decision has been made.
- Upon the achievement of all required components of a Training Product, the participant's record in the approved training database is to be updated as soon as practicable.
- Marking of the relevant milestone within the QPS training program (QC) Ignite course will capture the assessment decision as well as generate the nationally recognised certification within the Ignite Learning Management System.

   6.2. Utilisation of industry engagement outcomes 4
7. INDUSTRY ENGAGEMENT FLOW CHART 5
8. ISSUE/RETENTION OF DOCUMENTS 5
9. FORMS 5
10. DOCUMENT HISTORY 5

1. PURPOSE

The purpose of this procedure is to outline the process for maintaining, revising and updating training and/or assessment strategies and practices to ensure continued industry relevance.

Evidence of industry engagement, and how the outcomes of industry engagement have been systematically utilised to ensure the relevance of training and assessment, is required to be presented during an internal audit conducted by the Training Quality (TQ) or during an external audit by the Australian Skills Quality Authority (ASQA).

2. SCOPE

This procedure applies to QPS course coordinators that are responsible for industry engagement activities and ensuring the industry relevance of training programs they administer.

Any work processes, guidelines or instructions developed by QPS delivery units used to validate training assessment and training delivery strategies must adhere to the scope of this quality assurance document.

3. DEFINITIONS

Refer to Quality Manual for definitions

4. REFERENCES

- Standards for Registered Training Organisations (RTOs) 2015.
- QPS RTO Delivery Unit Training and/or Assessment Strategy.
- QPS_RTO_014 Record Keeping (Assessment).

5. RESPONSIBILITIES

5.1. Course Coordinators, Delivery Units

The Course Coordinator is responsible for ensuring that:

- industry engagement activities are conducted in accordance with this quality assurance procedure;
- the actual procedure for industry engagement activities is conducted in accordance with the procedure outlined in the Training and/or Assessment Strategy for the relevant training product;
- the outcomes of industry engagement activities are recorded in an Industry Engagement Log (or similar document) and systematically utilised by the training program to assist in maintaining industry relevance;
- evidence of industry engagement and the outcomes can be produced during an internal audit conducted by the Training Quality or during an external audit conducted by ASQA.

6. PROCESS

6.1 Maintaining industry relevance

To maintain industry relevance of training and assessment strategies, practices and resources:

- Industry engagement activities must be conducted at least annually.

- The intended method/s for industry engagement must be documented in the delivery units Training and/or Assessment Strategy.
- The actual conduct of industry engagement activities must be consistent with what is documented in the Training and/or Assessment Strategy.
- Evidence that industry engagement has been performed consistently in line with the Training and/or Assessment Strategy, must be retained for presentation during an internal or external audit or validation activity.
- Evidence of the systematic use of industry engagement outcomes must be retained for presentation during an internal or external audit or validation activity.
- Should changes to training and assessment practices be identified through the industry engagement process, these are to be captured and recorded within established continuous improvement processes.

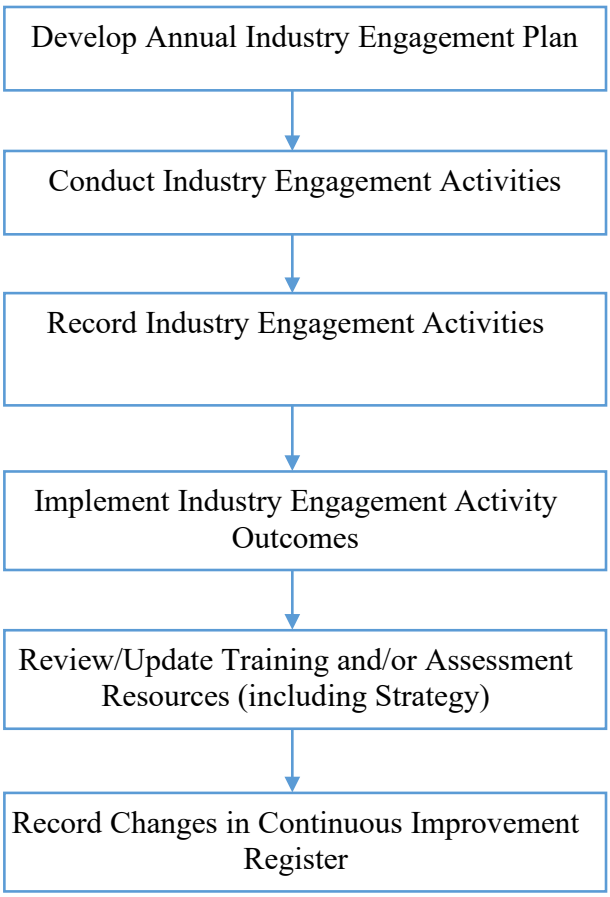
6.1. Process for industry engagement

- When conducting industry engagement, relevant internal and external stakeholders and/or industry experts who are noted in the Training and/or Assessment Strategy, must be consulted.
- Records of industry engagement activities are to be recorded in the Industry Engagement Log (or similar document).
- Delivery and assessment methodologies and processes and resources must be reviewed, compared and evaluated to ensure consistency in assessment and compliance with industry best practice.
- All aspects of training and assessment strategies and practices, including the currency of trainers and assessors, must be considered when conducting industry engagement activities.
- Documentary evidence of industry engagement activities outlined in the Training and/or Assessment Strategy, and subsequent outcomes, must be kept.
- Documentary evidence may include but is not limited to:
    a) records/minutes of industry engagement meetings with nominated stakeholders;
    b) documented feedback from clients regarding assessment methodologies and tools;
    c) methods for ongoing reviews (e.g. guidelines, work instructions);
    d) copies of meeting minutes, memos and emails explaining the changes to training and assessment practices and instruments;
    e) documented approvals.

6.2. Utilisation of industry engagement outcomes

- The outcomes of industry engagement activities are to be used to ensure the ongoing industry relevance of training and/or assessment strategies.
- Information collected from industry engagement activities is to be analysed in order to identify opportunities for improvement in training and/or assessment practices.
- Amendments are to be made to the relevant training and/or assessment documentation (if required) to reflect the improvements made as a result of the outcomes of industry engagement activities.
- Previous versions of the training and/or assessment documentation are to be maintained to show changes/improvements.

7. INDUSTRY ENGAGEMENT FLOW CHART



8. ISSUE/RETENTION OF DOCUMENTS

- Superseded copies of materials for training delivery and/or assessment must be retained by QPS and approved partnership delivery unit's accordance with the QPS Records Retention and Disposal Schedule.

9. FORMS

- QPSRTO 028 F01 Industry Engagement Log

Quality Assurance Procedure

Unique Student Identifier

QPSRTO029

Description	This procedure identifies the requirement and management of unique student identifiers by the QPSRTO in accordance with the Standards for Registered Training Organisations (RTO) 2015
Approval Authority	Manager, Education and Training Services
Document Custodian	Coordinator, Training Quality
Revision Number:	1.3
Date Approved	29/4/2021
Date Effective	29/4/2021
Last Review Date:	26/9/2022
Next Review Date:	December 2023

This document is uncontrolled when printed

This quality assurance procedure is reviewed by Education and Training Services at least annually. Only sections that possess controlled copies of this quality assurance procedure will be notified of any modifications or changes. The practice of saving uncontrolled copies of quality assurance procedures on local computer servers or hard drives is discouraged. The most current version of this quality assurance procedure is accessible from the Training Quality intranet site.

Enquiries regarding the application, interpretation or obtaining controlled copies of this quality assurance procedure are to be directed to the Coordinator, Training Quality, [redacted]

   5.1. Manager, Education and Training Services (ETS) 3
   5.2. Coordinator, Training Quality (TQ) 3
6. UNIQUE STUDENT IDENTIFIER (USI) 3
7. PROCESS 4
8. PROCEDURE 4
9. DOCUMENT HISTORY 4

1. PURPOSE

The purpose of this procedure is to identify the requirements and process for the management of Unique Student Identifiers (USI) by the QPS RTO.

The USI scheme allows learners to access a single online repository of their Australia-wide VET achievements.

2. SCOPE

The QPS RTO is currently exempt from reporting on USI data. This means that any nationally recognised training undertaken by learners under the scope of the QPS RTO will not be recorded against individual learners' USIs.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- Standard for Registered Training Organisations (RTOs) 2015
- Australian Government USI website

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- Monitoring the USI exemption provided to the QPS and approving the submission of further exemptions applications as necessary.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- Ensuring that information regarding the USI exemption provided to the QPS and its impact on a participants national VET transcript is readily available and current to QPS RTO clients.

6. UNIQUE STUDENT IDENTIFIER (USI)

The USI scheme came into effect as of 1 January 2015 all students undergoing nationally recognised training need to have a Unique Student Identifier (USI). This includes students doing Vocational Education Training (VET) in schools. The USI will be able to capture information as of 1 January 2015 and will be unable to capture information about training undertaken before 1 January 2015. As such information is retrospective to the commencement of the scheme and the system is not designed to back-capture training completed before 2015.

The Unique Student Identifier (USI) is a reference number made up of numbers and letters and can be created for free on the USI website. The USI is a secure online record of a learner's nationally recognised training that can be accessed anytime and anywhere. The USI is linked to the National Vocational Education and Training (VET) Data Collection, which means that nationally recognised training and qualifications gained anywhere in Australia from different training organisations will be kept together for individual learners. (www.usi.gov.au/)

7. PROCESS

7.1 Obtaining a USI

Individuals are able to obtain a Unique Student Identifier by logging onto the USI website www.usi.gov.au. Individuals requiring a USI are responsible for creating their own, the USI website provides detailed information on how to achieve this simple process.

7.2 Individual Exemptions for Students

Individuals who have a genuine personal objection to being assigned a USI can apply for an exemption to the Student Identifiers Registrar. Further information and how to obtain an individual exemption can be found on the USI website (www.usi.gov.au).

7.3 QPS RTO USI exemption

Presently the QPS RTO has an exemption from reporting on USI data. This means that any nationally recognised training undertaken by learners under the scope of the QPS RTO will not be recorded against individual learners' USI.

Nationally recognised training undertaken outside of the QPS (e.g. First Aid training) will require learners to provide a verified USI number prior to any certificate or qualification being issued. In some cases this may mean that you can complete the training but will not receive your qualification or certificate until you provide your USI number to the RTO.

The QPSRTO will continue to issue VET qualifications and statement of attainments.

The QPSRTO will continue to maintain records.

8. PROCEDURE

The QPSRTO currently issues VET qualifications and statement of attainments to learners and maintains records in compliance with the Standards for Registered Training Organisations RTOs) 2015 in an approved training database.

If an individual who has been issued with a USI chooses to record their USI number within the Ignite LMS they are able to do so via the following:

- Login to the Ignite LMS as a participant;
- Click on their name in the right-hand top corner;
- Open the Personal Profile tab;
- Click on the Other Info. tab;
- Click the modify button;
- Enter the Unique Student Identifier in the relevant field;
- Click save.

9. DOCUMENT HISTORY

Version No.	Modification	Date
1.0	New procedure	18/11/15
1.1	Updated to reflect ability for participants to record USI in Ignite LMS.	21/11/2017

1.2	Section 8 amended to remove reference to having had to complete NRT with QPS prior to being able to record USI in Ignite system.	25/11/2019
1.3	Replace approving authority due to CEO change and updated to reflect Training Strategy (now Education and Training Services) internal naming and structures.	29/4/2021

10. DOCUMENT HISTORY 8

1. PURPOSE

The purpose of this procedure is to ensure that the QPS RTO undertakes systematic validation of assessment practices and judgements of Training Products offered by the organisation in accordance with the Standards for Registered Training Organisations (RTOs) 2015.

2. SCOPE

This procedure applies to all assessments that contribute to Training Product outcomes which are undertaken by the QPS RTO.

This procedure applies to all persons involved in the delivery, assessment and support of Training Products on the QPS Scope of Registration.

3. DEFINITIONS

Refer to Quality Manual for Definitions.

4. REFERENCES

- QPS Quality Manual
- Standards for Registered Training Organisations (RTOs) 2015.
- Qld Police Service Retention and Disposal Schedule.

5. RESPONSIBILITIES

5.1. Manager, Education and Training Services (ETS)

The Manager ETS is responsible for:

- approving, and ensuring the correct and consistent implementation of the quality management system and quality assurance policies across the QPS RTO;
- providing guidance and assistance in relation to disputed assessment validation findings;
- making a final decision in relation to disputed assessment validation findings;
- approving the QPSRTO Assessment Validation Schedule.

5.2. Coordinator, Training Quality (TQ)

The Coordinator TQ is responsible for:

- developing and updating the QPSRTO Assessment Validation Schedule;
- identifying and assigning staff to lead and participate in validation activities;
- ensuring that staff (either individually or collectively) assigned to validation activities have;
    - current vocational competencies and current industry skills relevant to the assessment being validated (at least on the first occasion of the product being validated);
    - the training and assessment credential TAE40116 (or as listed in Schedule 1, Item 2 of the Standards for Registered Training Organisations (RTOs) 2015);
    - current knowledge and skills in vocational teaching and learning.
- Identifying a statistically valid sample of completed student assessment records for validation;
- reviewing assessment practices and validation outcomes including recommendations for systems improvements;
- forwarding validation outcome reports including recommendations for systems improvements to the relevant Course Coordinator for action;
- providing assistance to resolve disputed assessment validation findings;
- advise Course Coordinators upon completion of audits; and
- producing the annual report on validation outcomes for the Manager ETS

5.3. Lead Validator

Lead validators will be responsible for:

- preparing for validation activities which they have been assigned by the Coordinator TQ;
- confirming that staff (either individually or collectively) assigned to validation activities have;
    - current vocational competencies and current industry skills relevant to the assessment being validated (at least on the first occasion of the product being validated);
    - the training and assessment credential TAE40116 (or as listed in Schedule 1, Item 2 of the Standards for Registered Training Organisations (RTOs) 2015);
    - current knowledge and skills in vocational teaching and learning.
- leading validation activities for QPS RTO Training Products on scope to identify improvement actions for the delivery unit;
- preparing and monitoring the implementation of system improvement plans where relevant;
- reporting the progress of outcomes of assessment validation to the Coordinator TQ;
- assisting with the resolution of disputed assessment validation findings.

5.4. Course Coordinator

The Course Coordinator is responsible for:

- providing assistance to the validation team in relation to evidence required to be sighted and reviewed during assessment validation activities;
- nominating a suitably qualified technical representative/s to take part in the validation of assessment practices and judgements who was not directly involved in the particular instance of the delivery and assessment of the training product being validated;
- gathering and maintaining participant information, human resource profiles of delivery and assessment staff;
- gathering a statistically valid sample of completed student assessment records for validation;
- responding, developing and implementing any System Improvement actions, relevant to the delivery unit, that were identified during assessment validation activities conducted in accordance with this procedure.

6. PROCEDURE FOR CONDUCTING ASSESSMENT VALIDATION

6.1. QPSRTO Assessment Validation Schedule

The QPSRTO Assessment Validation Schedule will identify the following:

- each Training Product currently on the QPS RTO Scope of Registration;
- when the assessment validation activity for each Training Product is to occur;
- the nominated lead validator (if known) to be involved in the assessment validation;
- the nominated technical representative/s (if known) to be involved in the assessment validation.

The timing of the assessment validation activity for each training product will be based on a variety of factors including, but not limited to:

- the requirements of Standard 1, Clause 1.10 of the Standards for Registered Training Organisations (RTOs) 2015;
- the outcomes of previous assessment validation activities;
- changes to qualification requirements due to training package amendments;
- change of course coordinator and/or training and assessment staff;
- number of annual enrolments and completions;
- number of participant complaints or appeals.

Once developed, the QPSRTO Assessment Validation Schedule is to be stored electronically on the file server under *Audits* within the RTO folder. An additional sub-folder should be produced and named Audit [YEAR]. All correspondence in relation to assessment validation activities will be stored within this folder. Each qualification scheduled for assessment validation will also be

designated a folder. The naming convention for the qualification folders will contain the qualification code. *Example:* POL6115

6.2. Appointment of Lead Validator

The Coordinator TQ will assign a member of the section to undertake the role of lead validator prior to the scheduled assessment validation date. The Coordinator TQ will liaise with the relevant Course Coordinator to identify a suitably qualified technical representative/s to take part in the assessment validation activity and notify the lead validator accordingly.

The following points are supplied as a framework when preparing for, conducting and finalising assessment validation activities.

6.3. Preparing for Assessment Validation Activity

Prior to commencing the assessment validation activity, lead validators should familiarise themselves with the Training Product to be validated. Electronic copies of most Training Products on the QPS RTO scope of registration can be located via the training.gov.au website. In the event that the qualification is from the Police Training Package (POL) and has been deemed "Not For Public Access" (NFPA), access to the units of competency are available from the RTO folder located on the fileserver. This also applies to accredited course information.

At a minimum, lead validators should:

- confirm the relevant Australian Qualifications Framework (AQF) level of the qualification;
- locate the relevant units of competency and packaging rules;
- access the Ignite LMS and familiarise themselves with the program structure noting the composition of core and elective units;
- review relevant assessment guidelines and associated packaging rules.

Lead validators are to access the previous validation reports and system improvement plans where applicable. This information will be located on the server in the audit folder recorded under the corresponding year. A review of the validation report and any system improvements should be undertaken to identify areas for review. The lead validator should ensure that any system improvements identified during previous assessment validation activities have been actioned to a satisfactory level by the delivery unit. This will be done during the site audit.

Prior to conducting any site visits, access the QPS intranet to view any relevant information relating to the relevant Training Product and associated QPS training program. Programs or courses provide varying information however, you may be able to access information which is provided to participants. These documents can be used to commence the assessment validation. As a minimum, the training and/or assessment strategy and previous validation outcomes are to be reviewed before any site visits.

All units of competency which make up the Training Product are to be reviewed during the assessment validation process. It is important that the validators familiarise themselves with the units of competency as this knowledge will assist when the assessment tools and processes are reviewed during the validation activity.

The lead validator is to ensure that the statistically valid sample of student assessment records (as advised by the Coordinator TQ) are reviewed during the validation activity. Details of the student records being validated are to be crossed referenced against Ignite to ensure accuracy and consistency.

6.4. Conducting the Validation of Assessment Practices and Judgements

The lead validator, in conjunction with the nominated technical representative, is to systematically work through the validation table recording details of the sighted evidence presented within the table.

Where a particular portion of the validation was not completed i.e. due to the unavailability of documentation or personnel during a site visit, this is to be noted along with the reasons why. Arrangements are to be made for a follow-up visit or for the relevant evidence to be provided for desktop review.

When conducting the validation of the assessment tools/instruments, the lead validator is to record the overall result for all assessment tools/instruments in the validation table. For example, if all but one of the assessments tools/instruments validated meet the requirements for validity, the overall outcomes recorded in the audit table will be for meeting validity will be 'No'.

The lead validator must record the details of the issue/s identified and refer to the evidence sighted within the Delivery Unit Assessment Validation table. The comments should also contain recommendations with regards to rectifying the identified issue/s.

When conducting the validation of assessment practices and judgements, the lead validator is to record the overall outcome of the review on the QPSRTO 007 F02 *Systems Improvement Plan* form. The lead validator must record the details of the issue/s identified and refer to the evidence sighted. The comments should also contain recommendations with regards to rectifying the identified issue/s.

6.5. Finalising the Validation of Assessment Practices and Judgements

The lead validator is responsible for finalising the validation documentation. The lead validator is to forward a copy of the validation table and systems improvement plan (if applicable) to the Coordinator TQ. The lead validator should discuss recommendations and system improvements as detailed in the validation table with the Coordinator TQ.

The Coordinator TQ will then complete a covering report for dissemination to the delivery unit manager. The report will contain a copy of the completed audit table and systems improvement plan. The completed validation table and associated documentation is to be stored on the file server in the relevant folder as outlined above.

Once a finalised Systems Improvement Plan has been received from a delivery unit, the validation activity can be finalised. The completed Systems Improvement Plan is to be reviewed by the Coordinator TQ and signed off if accepted.

The Coordinator TQ is responsible for capturing the finalised documentation and any other correspondence deemed necessary in the approved records management system.

The Coordinator TQ is to notify the Course Coordinator that the review has been finalised.

3. Training and Assessment Materials			☒ **Yes**	☐ **No**

COMMENTS:

The assessment strategy for POL54115 clearly indicates the enrolment and assessment arrangements for the qualification. The Strategy outlines the structure of the QPS Scenes of Crime Development Program (SCDP). The Strategy was reviewed and updated in November 2021 in response to changes to the SCDP.

Sighted continuous improvement and industry engagement documentation. Outcomes from participant feedback data evaluation to the captured in the continuous improvement register also moving forward.

☒ **Compliant**	☐ **System Improvement**

Delivery Unit Assessment Validation Table

Delivery and Assessment				
	Procedure	Clause		
1. Are the units of competency from the relevant qualification or accredited course being assessed to the latest version? **[NOTE: Please check on *Training.gov.au* to confirm this.]**	007	1.1	☒ **Yes**	☐ **No**
2. Do the assessments comply with the requirements of the relevant training package?	007	1.8	☒ **Yes**	☐ **No**
3. Do the assessments include marking guides and/or observation checklists that define the evidence being gathered to deem participants as competent?	007	1.8	☒ **Yes**	☐ **No**
4. Do assessment tools contain clear, concise instructions for the student and assessor including: • the nature of the assessment activity • conditions of the assessment • required materials and equipment • assessment criteria to be used • sequencing, timing and location of the tasks	007	1.8	☒ **Yes**	☐ **No**
5. Do the assessments meet the principles of assessment?			☒ **Yes**	☐ **No**
• Validity – assessment covers the broad range of skills and knowledge that are essential to competent performance, assessment of knowledge and skills is integrated with their practical application, assessments collect evidence that supports that a candidate could apply knowledge and skill in other similar situations, assessments are aligned to the unit/s of competency and associated assessment requirements.	007	1.8-1	☒ **Yes**	☐ **No**
• Reliability – assessment evidence is consistently interpreted and outcomes comparable irrespective of the assessor conducting the assessment.	007	1.8-1	☒ **Yes**	☐ **No**
• Flexibility – assessment reflects the candidate's needs, draws on a range of assessment methods and uses those that are appropriate to the context, the unit of competency and associated assessment requirements.	007	1.8-1	☒ **Yes**	☐ **No**
• Fairness – assessment considers individual candidate's needs including reasonable adjustment where appropriate, all candidates are treated in the same way and no-one is disadvantaged due to a bias in assessment practices (candidate's needs are addressed and catered for).	007	1.8-1	☒ **Yes**	☐ **No**

Delivery Unit Assessment Validation Table

Delivery and Assessment				
6. Are all delivery locations associated with assessing the qualification using identical assessment tools?	007	1.3,1.8	☒ **Yes**	☐ **No**
7. Does the collection of assessment evidence meet the rules of evidence?				
• Validity – assessment confirms that the candidate has the skills, knowledge and attributes as described in the module or unit of competency and associated assessment requirements.	007	1.8-2	☒ **Yes**	☐ **No**
• Authenticity – To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.	007	1.8-2	☒ **Yes**	☐ **No**
• Currency – assessment evidence demonstrates 'current' competency and is from the present or the very recent past.	007	1.8-2	☒ **Yes**	☐ **No**
• Sufficiency – relates to the quality, quantity and relevance of the assessment evidence considered by an assessor in determining competency.	007	1.8-2	☒ **Yes**	☐ **No**
8. Do the assessments incorporate the required knowledge evidence and performance evidence (and/or required skills and knowledge) identified within the unit/s of competency?	007	1.8	☒ **Yes**	☐ **No**
9. Are the assessment conditions required by the unit/s of competency being addressed in the assessment?	007	1.8	☒ **Yes**	☐ **No**
10. Do the assessment practices and tools produce consistent assessment decisions across different assessors and locations (if applicable)? (Note: The validation outcomes of a statistically valid sample of assessment decisions is to be recorded on the relevant QPSRTO form in line with procedure QPSRTO 007 Internal Audit and Assessment Validation)	007	1.8	☒ **Yes**	☐ **No**
11. Do the assessment samples demonstrate that the evidence provided by the students indicates the instructions were sufficient and easy to follow?	007	1.8	☒ **Yes**	☐ **No**
12. Is there evidence that indicates the amount of training provided to participants was sufficient to allow competency to be achieved?	007	1.2	☒ **Yes**	☐ **No**
13. Is there evidence to demonstrate that participants are provided with & acknowledge feedback after the assessment decision/s?	007	1.8	☒ **Yes**	☐ **No**

Delivery Unit Assessment Validation Table

Delivery and Assessment					
14. Are participants being provided with information regarding the purpose and context of the assessment?		007	1.8	☒ **Yes**	☐ **No**
15. Is there a process in place for the Recognition of Prior Learning (RPL)?		007	1.8, 1.12	☒ **Yes**	☐ **No**
16. Does the RPL process meet the principles of assessment and the rules of evidence?		007	1.8	☒ **Yes**	☐ **No**
17. Is there information contained within the RPL process that will enable participants to collect sufficient evidence and participate collaboratively in the RPL process?		007	1.3, 1.8	☐ **Yes**	☒ **No**
18. Has an RPL application been received within the last 12 months? (If yes, auditor should consider reviewing a finalised RPL application as part of the audit process.)		007	1.8	☐ **Yes**	☒ **No**
19. Are the learning and assessment materials and resources detailed in the training and/or assessment strategy current and readily available to all trainers and assessors?		007	1.3	☒ **Yes**	☐ **No**
20. Where training and/or assessment occurs in the workplace (including the gathering of assessment evidence), is there evidence of delivery unit engagement with workplace representatives?		007	1.3, 1.5	☒ **Yes**	☐ **No**
21. Has a formal, systematic assessment validation been conducted within the last 12 months?		007	1.9, 1.10	☒ **Yes**	☐ **No**
22. Has the delivery unit conducted validation of assessment judgements?		018	1.9, 1.10	☒ **Yes**	☐ **No**
23. Have any complaints or appeals been received by the delivery unit?		018	6.1, 6.3	☐ **Yes**	☒ **No**
24. Was the complaint/appeal dealt with in accordance with the QPSRTO Complaints and Appeals procedure?	☒ **N/A**	018	6.1,6.2, 6.4, 6.5	☐ **Yes**	☐ **No**

COMMENTS:

A review of the assessment tools (both knowledge and practical) indicate clear instructions are provided to participants undertaking the assessment. Written assessments are accompanied by a marking guide. The Industry Engagement log shows evidence of engagement with staff collecting evidence on behalf of the qualified assessor.

The assessment files clearly show participants are receiving and acknowledging feedback with regards to the assessments.

Delivery Unit Assessment Validation Table

Delivery and Assessment	
On the SOCDP website, it states that after successful completion of the 12 month program participants will be awarded the nationally recognised Diploma of Forensic Investigation. It is recommended that this be changed to '*participants will be enrolled in the nationally recognised Diploma of Forensic Investigation. Please refer to the QPS RTO Training Programs and Qualifications website for further information'.* This also applies to the information (Page 5) in the Student Responsibilities section of the SOC Development Program Student Information and Workbook. Whilst the qualification is awarded via a structured assessment only pathway based on the SOC Development Program, there is still a cohort of existing SOC officers who may seek the qualification via an RPL and haven't completed recent versions of the training program. It is recommended that the RPL pathway for officers who haven't recently completed the SOC Development Program be reviewed and updated.	
☐ **Compliant**	☒ **System Improvement**

Delivery Unit Assessment Validation Table

Training and Assessment Staff				
	Procedure	Clause		
1. Is there evidence that training and assessment staff are provided with RTO Induction (QD0174 or QC1483) and Course Induction information?	015	1.13	☒ **Yes**	☐ **No**
2. *For those staff who are conducting assessment against nationally recognised training outcomes*– Is there evidence of possessing the Certificate IV in Training and Assessment (TAE40116), a diploma or higher level qualification in adult education or the TAESS00011 Assessor Skill Set?	015	1.15	☒ **Yes**	☐ **No**
3. *For those staff who are delivering training as part of a Delivery and Assessment Strategy for a nationally recognised training outcome* – Is there evidence of possessing the Certificate IV in Training and Assessment (TAE40116) or a diploma or higher level qualification in adult education?	015	1.14	☒ **Yes**	☐ **No**
4. Is there evidence of the vocational competence/experience of training and assessment staff relevant to the units of competency being trained and/or assessed?	015	1.13	☒ **Yes**	☐ **No**
5. Is the delivery unit verifying the qualifications and experience of trainers and assessors?	015	1.13	☒ **Yes**	☐ **No**
6. Are trainer and assessor profiles being created and maintained (QPSRTO-015-F1)?	015		☒ **Yes**	☐ **No**
7. Do the profiles demonstrate that the trainers and assessors are accessing professional development opportunities or updating their competency that are/is relevant to the units of competency in which they are training/assessing? (QPSRTO-015-F1)	015	1.16	☒ **Yes**	☐ **No**
8. Do the profiles demonstrate that the trainers and assessors are accessing professional development opportunities to continue developing their Vocational Education and Training (VET) knowledge and skills? (QPSRTO-015-F1)	015	1.16	☒ **Yes**	☐ **No**

COMMENTS:

S/Sgt Haxton has completed the RTO Induction Course (QC1483).

S/Sgt Haxton completed TAE40116 on 4/11/2021 and has the relevant vocational competencies. At the time of assessment for the student files reviewed, S/Sgt Haxton had completed the TAESS00011 Assessor Skill Set requirements on 7/10/2021. The participants were deemed competent against the qualification requirements on 11/10/2021.

TO:	**Inspector, Quality Management Section** **Forensic Services Group**
CC:	**Manager, Education and Training Services**
FROM:	**Manager, Training Quality** **Education and Training Services**
SUBJECT:	**Internal Audit and Assessment Validation of POL54115 Diploma of Forensic Investigation**

1. Between [redacted] staff from Training Quality undertook and internal assessment validation activity for the POL54115 Diploma of Forensic Investigation (the qualification). In addition to the review of completed student files, the validation activity also examined assessment processes and procedures.

2. The qualification is offered to eligible employees via a Recognition of Prior Learning (RPL) pathway only. The evidence relied upon by the qualified assessor is drawn primarily from the QPS Scenes of Crime Development Program (SCDP) or from the workplace for existing officers performing duties as fulltime Scenes of Crime Officers.

3. The QPS Scenes of Crime Development Program is conducted over a 12-month period to train and develop police officers in becoming professional forensic officers. The program is divided into the following five phases:

   [redacted]

4. Between [redacted], 7 participants were awarded the qualification. Due to the relatively small number of participants, all assessment records for this cohort were included in the validation activity.

5. The validation involved the review of assessment records held within the Ignite Learning Management System for the SCDP. In addition to the online review, the assessment records for the nominated participants were retrieved and subsequently underwent validation.

6. The audit and validation activity identified minimal issues with the assessment processes and practices. The assessment resources are of a high standard and the administrative practices ensure consistent and quality outcomes.

7. A number of minor recommendations were made with regards to information provided to participants. Overall, the Course Coordinator and program staff are to be commended for their commitment to ensuring ongoing compliance with the Standards for Registered Training Organisations (RTOs) 2015.

8. The outcomes of the audit and assessment activity have been documented in the attached Delivery Unit Assessment Validation Table. A Systems Improvement Plan identifying the relevant recommendations is also attached.

RECOMMENDATIONS

9. It is recommended that this report and attachments be forwarded to the Senior Sergeant Quality Management Section for attention and actioning.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF LETITIA EVERIST

I, **Letitia Everist,** of 200 Roma Street, Brisbane, Queensland state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked '**Exhibit 1**' is a copy of that notice.

1. I am the Senior Sergeant, Quality and Training Officer for the Scientific Section, in the Forensic Services Group (FSG) of the Queensland Police Service (QPS).

Qualifications and Experience

2. I am the holder of the following tertiary qualifications:

   (a) Bachelor of Science from Griffith University 1995;

   (b) Master of Science – Forensic Science from Griffith University 2008.

3. I was sworn into the QPS in November 1996 as a Constable of Police. Since that time, I have held the following positions:

   (a) Between November 1996 and December 1999, I was a Constable performing general duties at Maroochydore and Redcliffe Police Stations.

   (b) Between January 2000 and July 2003, I was a Scenes of Crime Officer at Maryborough Scenes of Crime Section, Maryborough Police Station. During this time, I progressed to the rank of Senior Constable.

   (c) Between July 2003 and January 2017, I was a Scientific Officer at the Physical Evidence Unit (now known as the Major Crime Unit), Scientific Section Brisbane. During this time, I progressed to the rank of Sergeant.

(d) Since January 2017 I have held my current role as the Senior Sergeant, Quality and Training Officer for Scientific Section.

Identify any courses or diplomas you have completed since joining the QPS.

4. Since joining the QPS, I have completed the following courses relevant to my role as a Scientific Officer:

(a) Internal Auditor Training (QPS);

(b) NATA Technical Assessor Course;

(c) Shoemark Digital Workflow (SAPOL);

(d) Advanced Footwear Impression;

(e) TAE40110 Cert IV in Training;

(f) Hair Identification Workshop (AFP);

(g) Advanced BPA Course (QPS);

(h) DNA Tapelift Training QPS (2008);

(i) Digital Camera Conversion (QPS);

(j) Diploma of Fire Investigation (QFRS);

(k) Bomb Scene Refresher Workshop (QPS);

(l) Semen Detection Workshop (SAPOL);

(m) Fingernail Scrapings (QPS);

(n) Polilight Application (AFP);

(o) Scenes of Crime Training (QPS);

(p) Diploma of Public Safety from QPS (2003);

(q) Diploma of Fire Investigation from Qld Fire and Rescue Service (2006).

5. I do not have a curriculum vitae (CV).

Your Role and Functions

6. I currently work in the Forensic Services Group, specifically in the Scientific Section based in QPS Police Headquarters. I am a Senior Sergeant performing the role of the Quality and Training Officer.

7. My duties as the Quality and Training Officer of the Scientific Section (as cited in FTC07 Position Description Senior Sergeant Forensics) include:

   (a) Overview forensic examinations including monitoring of compliance with procedure to ensure the accuracy and reliability of reported results.

   (b) Manage and maintain the administrative, financial, strategic planning and quality management activities and processes within the area of responsibility.

   (c) Coordinate, monitor and review the education, training and development of staff, participate in performance assessments and ensure subordinates comply with the Service Code of Conduct.

   (d) Participate in and/or coordinate multidisciplinary teams involved in ongoing monitoring of forensic services NATA compliance practices (where applicable).

   (e) Provide advice including submissions and briefings on administrative and operational activities, relevant legislation, policies, practices and procedures.

   (f) Establish and maintain communication channels with internal and external clients and stakeholders and represent the Service on various committees and advisory bodies.

   (g) Initiate and promote the development, research and implementation of innovative processes and practices.

8. Attached and marked '**Exhibit 2**' is a copy of position description for Senior Sergeant Forensics.

.....[redacted].....

Letitia Everist

[redacted]

9. I report to Inspector Darren Pobar, Forensic Manager of the Scientific Section in the Forensic Services Group.

10. The following people report to me:

    (a) Administration Officer [redacted]; and

    (b) Technical Officer [redacted]

QPS Scientific Officers

11. The role of a Scientific Officer (as cited in the current position description FTS01 Forensic Scientist) includes:

    (a) Performing forensic procedures and examinations as authorised by the Superintendent, Forensic Services Group;

    (b) Providing forensic science services and advice to operational police in relation to crime scene examination, blood stain pattern analysis, fire investigation, marks comparison and other forensic services;

    (c) Conducting forensic examinations and identify, record, collect, examine and interpret physical evidence as required by investigating and forensic police and courts of law;

    (d) Preparing reports and statements on forensic science matters;

    (e) Providing evidence to courts of law on forensic science matters;

    (f) Successfully participating in internal and external training programs, as required, and develop skills and knowledge relevant to the provision of Forensic Services; and

    (g) Complying with the requirements of the QPS Forensic Services Quality System, including adherence to forensic procedures and maintenance of a case information management system as approved by the Superintendent, Forensic Services Group.

12. Attached and marked '**Exhibit 3**' is a copy of the position description for a Forensic Scientist.

13. Typical duties of a Scientific Officer attached to the Major Crime Unit or a regional Scientific Section, relevant to biological evidence, include performing presumptive screening tests and the detection, collection and recording of other biological samples, including, but not limited to: blood, seminal fluid, hair, and suspected saliva stains. These examinations may be conducted at a crime scene or within a laboratory.

14. The role of a Scientific Officer, as outlined above, encompasses those officers also attached to the Ballistics Unit. For the purposes of this statement, I will provide information relevant to the Major Crime Unit and regional Scientific Officers whose role involves detection, collection, recording of biological evidence. Officers attached to the Ballistics Unit are not involved with biological evidence.

15. All officers who obtain positions within the Scientific Section must possess an undergraduate science degree, or equivalent, and a minimum of two years sworn service.

16. The training that Scientific Officers are required to undertake for their role includes:

    (a) QPS Scenes of Crime Training Course (if not already completed prior to obtaining a position within the Scientific Section) provided by the Quality Management Section. I cannot provide the information relevant for the units of study of this course.

    (b) Griffith University Graduate Certificate in Crime Scene Investigation. This course includes theory and practical study relating to biological and non-biological evidence. This program is delivered and assessed mostly by QPS Scientific Officers with some presentations provided by external units/organisations.

    (c) QPS Basic Hair Examination (human vs non-human) which is only undertaken by a small number of Scientific Officers based in southeast Queensland.

Letitia Everist

(d) Scientific Officers also undertake other training programs relating to non-biological evidence which are delivered by subject matter experts within the QPS. They include:

(i) Detection and Collection of impression evidence

(ii) Soil

(iii) Entomology

(iv) Diatoms

(v) Bloodstain Pattern Analysis (BPA)

(vi) Marks Comparisons (shoe/tyre comparisons)

(vii) Skeletal Recovery

(viii) Bomb Scene Examination (delivered by Explosive Ordinance Response Team)

(ix) Anatomy/Pathology

(x) Fire Scene Examination

(xi) Basic Microscopy

(xii) Physical Match

(xiii) Cannabis Identification

(xiv) Expert Evidence

(xv) Crime Scene Management/Reconstruction.

17. As part of their training, Scientific Officers also receive information sessions from relevant subject matter experts (within and external to the QPS) regarding the following units and topics:

(a) Document Examination Unit

(b) Analytical Services Unit

(c) DNA Unit

(d) Forensic Imaging Section

(e) Ibutton

(f) Bias

(g) QA/Quals

(h) Forensic Chemistry

(i) QHFSS Biology

18. The DNA-related training components of the Griffith University Graduate Certificate in Crime Scene Investigation are as follows:

(a) Introduction to Forensic Alternate Light Sources

(b) Saliva and other biological fluids (faeces, urine, vomit)

(c) Hair:

(i) Overview of hairs – features

(ii) Detection/collection/packaging

(iii) Awareness of types of examinations

(d) Seminal Fluid:

(i) Semen physiology and function

(ii) Semen Visible detection

(iii) Chemical Screening for seminal fluid

(iv) Effects of water and Washing

(v) Immuno diffusion detection P30

(vi) Sampling and reporting on Semen

[redacted]

.....[redacted].....

Letitia Everist

(e) Blood:

(i) Blood Intro

(ii) Visual Detection

(iii) Presumptive screening TMB and Combur

(iv) Hematrace

(v) Luminol

(vi) LCV and Amido Black

(vii) Collection, packaging and reporting

(f) Queensland Health and Forensic Scientific Services – Forensic Biology lecture

19. DNA-related training which do not form part of the Graduate Certificate in Crime Scene Examination include the QPS Hair Examination course. Components of the Hair Examination course are as follows:

(a) Basic light microscopy

(b) Introduction to hair examination

(c) Identification of human and non-human hair features

(d) Human hair examinations

(e) Acceptance Criteria

(f) Use of Leica microscope/software

20. Scientific Officers are trained in the collection and sampling of biological material via the previously mentioned training courses. These courses include theoretical content and involve practical application and assessments. Training materials reflect and refer to the content of FSG Technical Procedures relating to collection of biological samples. The FSG Technical Procedures are listed in paragraph 35 of this statement.

21. The role of a Scenes of Crime Officer (SOCO) is to perform forensic procedures and examinations. Typical duties of a SOCO are to conduct a forensic examination at volume crime offences and some major crime offences. SOCOs will assist Scientific Officers at major crime scenes.

22. The role of a SOCO differs to that of a Scientific Officer in that Scientific Officers attend mostly major crime scenes, have been trained in a larger number of presumptive screening tests and have available to them some equipment that SOCOs do not have (for example forensic light sources). Scientific Officers also provide opinion evidence in relation to some forensic disciplines. SOCOs generally attend to examination of volume crime scenes and assist with examination of major crime scenes.

23. In regards to external standards for the training programs, I cannot comment on the compliance with external standards for the SOCO training program. For the Scientific Officer training, the Graduate Certificate in Crime Scene Investigation is awarded by Griffith University.

24. Whilst I am not aware of any particular standards that Griffith University must comply with, I am aware that the Griffith University Graduate Certificate in Crime Scene Investigation is informed by the ANZPAA Education and Training Guidelines for Crime Scene Investigation and also the ANZPAA Graduate Certificate in Crime Scene Investigation.

25. The training program that all Scientific Officers complete complies with ISO IEC 17025 General requirements for the competence of testing and calibration laboratories and AS5388 Forensic Analysis.

26. Documents relevant to paragraphs 17(c), 18 and 19 are listed in the Schedule attached and marked '**Exhibit 4**'. Copies of the documents were provided to this Commission pursuant to Notice to Produce issued to the Commissioner of Police.

27. Scientific Officers and SOCOs are attached to the Forensic Services Group. Scientific Officers are attached to a Scientific Section of which there are 5 located in major centres throughout Queensland, being Coomera, Brisbane, Rockhampton, Townsville and

Cairns. SOCOs are distributed within 36 facilities throughout the state, both in regional and metropolitan locations.

28. Scientific Officers do not undertake any routine refresher training relevant to the collection of biological evidence.

29. Scientific Officers undertake a number of proficiency tests, however, there are no specific tests relevant to biological evidence. Officers however undergo Scene Assessments every two years which involves the direct observation and assessment of routine work procedures by another suitably qualified forensic practitioner.

30. Scientific Officers perform technical reviews on all case files.

31. One Scientific Officer per Scientific Section is required to submit a response to the annual major crime 'After the Fact' (AtF) test which is an online virtual crime scene assessment test.

32. Court testimony of each Scientific Officer is monitored in any 12-month period that testimony is given.

DNA Collection

33. Scientific Officers generally attend major crime scenes which are deemed to be offences against the person (e.g. homicide, attempted murder, rapes, serious assaults) and other major crime scenes such as fire/explosion scenes and Cannabis crops.

34. Scientific Officers attend the majority of homicides, however, do not attend in every instance. This may be due to the context of the scene, the type of evidence within the scene and what type of skills or techniques are required to examine the scene. Attendance at any scene by a Scientific Officer is at the request of the Forensic Coordinator or Forensic Manager after consultation with SOCOs and Investigating Officers with consideration given to geographical location/environmental conditions and any potential threat to the preservation and integrity of evidence.

35. The collection of DNA material is regulated by procedure CSE101 – Biological Evidence. More broadly the collection of DNA evidence is regulated by the following procedures:

(a) CSE100 – Crime Scene Examination

(b) CSE105 – LCV Detection and Enhancement of Bloodstains

(c) CSE111 – Hair and Fibre Detection and Collection

(d) CSE115 – Use of Combur Test Strips

(e) CSE119 – ABAcard Hema-Trace

(f) HEX100 – Hair Examination and Comparison

(g) PST100 – Tetramethylbenzidine (TMB) Screening Test for Blood

(h) PST101 – ABAcard P30 Test for Seminal Fluid

(i) PST102 – Luminol Detection and Enhancement of Bloodstains

(j) PST104 – Seminal Fluid Screening and Sampling Protocols

(k) PST105 – Forensic Light Sources

36. To my knowledge, there have been no departures from policy or policies concerning the collection of biological material on more than one occasion.

37. The FSG Quality Manager in the recent past has provided approval for the temporary use of expired swabs or tapelifts due a supply issue. I am however unaware of the frequency, or if at all, in which a Scientific Officer has had to use an expired swab or tapelift during this time.

38. The Quality Management Unit of the FSG does not have oversight over the work of SOCOs and Scientific Officers except for the periodic oversight during internal audits.

.....

Letitia Everist Witness

Other issues

39. There are no problems or issues that have been raised to me in relation to the collection of biological evidence. I am not aware of any areas of improvement for QPS Scientific Officers.

Notice number: 2022/243

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Letitia Everist

Of: Queensland Police Service

I, Walter Sofronoff KC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **12 noon Wednesday 12 October 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 5th day of October 2022

[redacted]

Walter Sofronoff KC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/243

Schedule of topics for statement

Senior Sergeant Letitia Everist

1. State your current rank and position in the Queensland Police Service (**QPS**).

Qualifications and Experience

2. List any tertiary qualifications you hold, the year obtained, and the institute from which the qualifications were obtained.

3. Provide your work history since you commenced in the QPS. Include the year you commenced, each position you held, and the location and year(s) each position was held.

4. Identify any courses or diplomas you have completed since joining the QPS.

5. Attach a current CV.

Your Role and Functions

6. Do you work in the Forensic Services Group (**FSG**)? Identify the section and unit you work in, and where you sit in that section and unit.

7. Outline the duty of your position. If there is a document outlining the role or duties of your position, identify and attach that document.

8. Identify the person or people (name, rank and position) you report to.

9. Identify the person or people (name, rank and position), if any, who report to you.

QPS Scientific Officers

10. Explain the role and typical duties of a Scientific Officer.

11. Explain the qualifications (if any) and training required for that role, all units of study (theory and practical). Identify what organisation or unit conducts any such training.

12. Outline how, if at all, Scientific Officers are trained or instructed in policies concerning the collection and sampling of biological material.

13. Explain the role and typical duties of a Scenes of Crime Officer (**SOCO**). How is the role of a SOCO different to that of a Scientific Officer?

14. Identify what external standards the training programs for SOCOs and Scientific Officers comply with.

15. Explain what group, sections and/or units within the QPS contain SOCOs and Scientific Officers.

16. Outline all ongoing refresher training and proficiency testing that Scientific Officers are required to undertake. As part of your answer, address whether Scientific Officers undertake technical reviews, scene assessments, 'After the Fact', and/or 'Train the Trainer', and court testimony monitoring.

17. Identify and attach all policies, guidelines, training manuals and similar documents relevant to any of your answers to questions 10 to 16.

DNA Collection

18. What type of crime scenes do Scientific Officers attend? Do Scientific Officers currently attend every instance of a homicide? Why/why not?

19. Identify which QPS policy or policies (if any) regulate Scientific Officers' collection of DNA material, and which policy or policies regulate the collection of DNA evidence more broadly.

20. Outline any departures from policy or policies concerning the collection of biological material that have occurred on more than one occasion.

21. Does the Quality Management Unit of the FSG have oversight over the work of SOCOs and Scientific Officers?

Other issues

22. Are there are any other problems, issues or areas of improvement for QPS Scientific Officers you are aware of?

Exhibit 2

Queensland Police Service

Position Description

With Honour We Serve

Rank	Senior Sergeant	**Role Code**	FTC07	**Function**	Senior Sergeant Forensics Forensic Services Group
Role Scope	This generic position will manage, plan, coordinate, monitor and review operational and administrative activities within the area of responsibility in support of a timely, efficient and effective provision of forensic services. These services may be in the areas of: • Scientific • Fingerprints • NATA accreditation • Electronic Recording • Vehicle Inspection Unit • Quality Management				

Selection Criteria

Are you the right person for the job?	All members are expected to espouse, practice and fulfil their duties in a manner consistent with the: ▪ QPS Values of Integrity, Professionalism, Community and Respect and Fairness; ▪ QPS Purpose to Prevent, Disrupt, Respond and Investigate; and ▪ Leadership Competencies for Queensland (LC4Q). Your application will be assessed against the Selection Criteria and Rank Profile Criteria.	
Integrity Criteria	**1**	A standard of personal integrity as required by the Commissioner of the Queensland Police Service.
Qualification Criteria	**2**	Existing appointment at the rank of Senior Sergeant or higher; OR Successful completion of Management Development Program (MDP) Level 2; or alternatively Successful completion of Leadership Capability Program (LCP), Level 2 in [redacted] (Note: Officers at a higher rank who are appointed to a position designated at a lower rank are required to take a voluntary reduction in rank in order to take up the new position.)
Role Specific Criteria	**3**	Holds, or has held, a Forensic Authorisation in Crime Scene Examination, or alternatively has, or has been, certified as an expert practitioner in a recognised forensic discipline (**this is required for all roles**). Possession of a Graduate Certificate in Forensic Investigation or equivalent (**this is only required for the role of Senior Forensic Scientist**). A qualified expert in Firearm Science **(this is only required for the role of Senior Forensic Scientist – Ballistics).** A qualified expert in Fingerprint Science **(this is only required for the role of Senior Fingerprints Expert).**

		Current registration as an Approved Inspector for the issue of safety certificates OR expertise in vehicle identification **(this is only required for the role of Senior Vehicle Inspector).**	
Rank Profile Criteria *These criteria reflect the LC4Q and are consistent for each rank.* *Your response should address the Leadership LC4Q competencies in the context of the Key Accountabilities for this position and with regard to the associated Locality Profile.* *The LC4Q stream for* ***Senior Sergeant*** *is* ***Program Leader.*** *For assistance with the QPS context for these criteria please refer to the link below to the Leadership Centre.*	**4**	**Vision:**	▪ Leads strategically ▪ Stimulates ideas and innovation ▪ Leads change in complex environments ▪ Makes insightful Decisions
	5	**Results:**	▪ Develops and mobilises talent ▪ Builds enduring relationships ▪ Inspires others ▪ Drives accountability and outcomes
	6	**Accountability:**	▪ Fosters healthy and inclusive workplaces ▪ Pursues continuous growth ▪ Demonstrates sound governance

Key Accountabilities

Role Context Key Accountabilities outline specific roles and responsibilities for this position	▪ Overview forensic examinations including monitoring of compliance with procedure to ensure the accuracy and reliability of reported results. ▪ Manage and maintain the administrative, financial, strategic planning and quality management activities and processes within the area of responsibility. ▪ Coordinate, monitor and review the education, training and development of staff, participate in performance assessments and ensure subordinates comply with the Service Code of Conduct. ▪ Participate in and/or coordinate multidisciplinary teams involved in ongoing monitoring of forensic services NATA compliance practices **(where applicable).** ▪ Provide advice including submissions and briefings on administrative and operational activities, relevant legislation, policies, practices and procedures. ▪ Establish and maintain communication channels with internal and external clients and stakeholders and represent the Service on various committees and advisory bodies. ▪ Initiate and promote the development, research and implementation of innovative processes and practices.

Additional Information

Notes	For training roles, Certificate IV in Training and Assessment is highly desirable.
Supporting Documentation	In preparing your application it is essential you consider: ▪ The LC4Q in the QPS context is outlined in a document hosted by the Leadership Centre titled 'QPS Leadership Competencies' and is available at:

	[redacted] ▪ Please refer to the notes section for this vacancy to access Locality Profile information. Copy and paste the link into a browser to access the Locality Profile relevant to this vacancy.

Privacy Collection Statement

The Queensland Police Service (QPS) is collecting information for the purpose of processing your application for an advertised internal QPS vacancy. The collection of this information is authorised by the Police Service Administration Act 1990.

In the matter of the *Commissions of Inquiry Act 1950*
Commissions of Inquiry Order (No. 3) 2022
Commission of Inquiry into Forensic DNA Testing in Queensland

STATEMENT OF TAYLA JADE SMITH

I, **Tayla Jade Smith,** of 57-59 Sydney Street, Mackay state as follows:

The following statement is provided in response to a notice I received from the Commission of Inquiry into Forensic DNA Testing in Queensland requiring me to give information in a written statement regarding my knowledge of matters set out in the Schedule attached to that notice. Attached and marked **'Exhibit 1'** is a copy of that notice.

1. My name is Tayla Jade Smith and I am a Plain Clothes Senior Constable currently attached to the Mackay Criminal Investigation Branch.

Qualifications and position

2. I currently hold the following qualifications:

   (a) Graduate certificate in Police Prosecution (2019) Nationally Accredited Training program through QPS; and

   (b) Graduate Certificate of Domestic Violence (2019) Attained from the Queensland University of Technology.

3. I commenced employment with Queensland Police Service on the 21st of September 2014 and have held positions in the following locations:

   (a) Recruit at the Queensland Police Academy 21/09/2014 – 21/04/2015;

   (b) Constable at Cairns Police Station 21/04/2015 – 21/04/2016;

   (c) Constable at Cooktown Police Station 21/04/2016 – 27/03/2017;

   (d) Senior Constable Prosecutor Cairns 21/03/2017 – 01/03/2019;

   (e) Sergeant Prosecutor Thursday Island 01/03/2019 – 15/11/2019;

   (f) Plain Clothes Constable Mackay Child Protection and Investigation Unit 15/11/2019 – 20/03/2022; and

[redacted]

(g) Plain Clothes Senior Constable Mackay Criminal Investigation Branch 20/03/2022 – Present.

4. I do not have a CV, my work history is outlined above.

5. My current role is as an investigator with the Mackay Criminal Investigation Branch. My responsibilities in this role include identifying and investigating a wide variety of criminal offences for the purposes of identifying an offender and commencing proceedings though the court system.

6. I work in the Mackay District in the Central Queensland Region. I report directly to [redacted], the Officer in Charge of Mackay Criminal Investigation Branch. I have no staff reporting to me.

7. I investigate a variety of offences including drug offence, offences against the person, property related offences and fraud offences.

DNA Testing Results

8. During investigations, I am notified of the results of the forensic DNA testing of submitting samples through QPRIME. Whenever I have received a confirmation of a DNA match, I receive an 'FYI' task to my task list. As a result of this task, I check QPRIME which shows an entry for the relevant results.

9. In respect of the result '*No DNA detected*' (or similar), I have not seen this result type before. My understanding of this result is that there is no DNA detected on a sample. I am not aware that further testing options available.

10. In respect of the result '*DNA insufficient for further processing*' (or similar), my understanding of this result type is that there was not enough sample to conduct a DNA test.

11. Up until 1st September 2022, I was not aware that further testing options are available upon receiving this result, as I take the result to mean what it states, that the DNA sample obtained was not able to be further tested.

12. On the 1st of September 2022, I received a phone call from Alicia QUARTERMAIN from the Forensic DNA Analysis team in Brisbane regarding one of my recent case files. I had previously observed on the file that the offender I had charged had returned a positive match on a DNA sample take at the scene. However, when speaking to Alicia

[redacted]

QUARTERMAIN, she informed me that there were samples that could be further tested. Alicia QUARTERMAIN advised that she was able to do further testing on the DNA sample obtained from the crime scene in this matter that would potentially enable a stronger comparison for court. After her explanation and recommendation on the process, given that she is qualified in the role of DNA processes, I agreed to this further testing.

13. I do not recall receiving any further types of DNA results aside from those already mentioned above.

14. I generally do not communicate with staff or scientists at the Queensland Health Forensic and Scientific Services (QHFSS) regarding specific cases. One time I recall speaking with someone at QHFSS was in relation to a statement for court.

15. In my experience, I do not disclose the details of the investigation or any DNA results to a victim prior to a formal statement and complaint being received. Therefore, it does not impact a victim's decision on whether they wish to commence proceedings.

16. Each case is different and unique, there are occasions where during the process of an investigation I have advised a complainant of the results of a DNA sample comparison obtained as part of an update in an investigation.

17. DNA is often useful in establishing a strong case in conjunction with other forms of evidence. In my experience it is not often used as a stand alone piece of evidence to prove the elements of an offence, rather assists in either identifying a suspect that results in a targeted investigation on a particular suspect, or strengthening the evidence already held by the investigator.

18. An example of DNA identifying a suspect might be related to a burglary type offence, where police have a statement describing an offender and also CCTV depicting an offender. Successful DNA results that are taken from the door on which the offender used to enter the dwelling, for example, can assist in strengthening the identification of the offender for a successful prosecution.

19. As stated above each investigation is different and may require different investigative methods be considered. Therefore, the role DNA plays in these investigations also varies. I am not in a position to rank different types of evidence in order of importance.

STATEMENT OF TAYLA JADE SMITH
INDEX TO EXHIBITS

Exhibit no.	Description
1.	Notice number 2022/00223 Requirement to give information in a written statement

Notice number: 2022/00223

COMMISSION OF INQUIRY INTO FORENSIC DNA TESTING IN QUEENSLAND

Section 5(1)(d) of the *Commissions of Inquiry Act 1950*

REQUIREMENT TO GIVE INFORMATION IN A WRITTEN STATEMENT

To: Plain Clothes Senior Constable Tayla Smith

Of: Queensland Police Service

I, Walter Sofronoff KC, Commissioner, appointed pursuant to Commissions of Inquiry Order (No. 3) 2022 to inquire into certain matters pertaining to forensic DNA testing in Queensland require you to attend to give a written statement to the Commission pursuant to section 5(1)(d) of the *Commissions of Inquiry Act 1950* in regard to your knowledge of the matters set out in the Schedule annexed hereto.

YOU MUST COMPLY WITH THIS REQUIREMENT BY:

Giving a written statement signed and witnessed as a declaration in accordance with the *Oaths Act 1867* to the Commission of Inquiry on or before **5.00 pm Tuesday 27 September 2022**, by delivering it to Level 21, 111 George Street, Brisbane.

A copy of the written statement must also be provided electronically by email at [redacted] with the subject line "Requirement for Written Statement".

If you believe that you have a reasonable excuse for not complying with this notice, you will need to satisfy me of this by the above date.

DATED this 23rd day of September 2022

[redacted]

Walter Sofronoff KC
Commissioner
Commission of Inquiry into Forensic DNA Testing in Queensland

Notice 2022/00223

Schedule of topics for statement

Plain Clothes Senior Constable Tayla Smith

1. State your full name, current position/title and where you work.

Qualifications and position

2. List your tertiary qualifications, the year you obtained them, and the institute from which the qualifications were obtained.

3. Detail your work history.

4. Attach a current CV.

5. Identify the duties/responsibilities of your position. As part of your answer:

   (a) Include a description of the geographical area you work in, and identify who you report to and who (if anyone) reports to you.

   (b) Include a description of what types of crime you investigate.

DNA Testing Results

6. Are you notified of the results of the forensic DNA testing of submitted samples? If yes, explain how you are notified. Explain if this varies between the type of sample submitted or type of result received.

7. In respect of the result '*No DNA detected*' (or similar):

   (a) What is your understanding of the result? If you have not seen this result-type before, confirm same.

   (b) What is your understanding of the options for further testing available to you on receiving this result, if any?

   (c) Identify if your understanding of the result or the options for further testing has changed at any point. Identify the reason for any change and date of any change.

8. In respect of the result '*DNA insufficient for further processing*' (or similar):

   (a) What is your understanding of the result? If you have not seen this result-type before, confirm same.

(b) What is your understanding of the options for further testing available to you on receiving this result, if any?

(c) Identify if your understanding of the result or the options for further testing has changed at any point. Identify the reason for any change and date of any change.

9. What other type of results do you recall receiving? What is your understanding of those results?

10. Do you typically or occasionally communicate with staff or scientists at Queensland Health Forensic and Scientific Services about particular matters or samples?

11. Are DNA results ever passed onto complainants or witnesses? If yes, in your experience, does providing the result have an effect on the complainant's decision to proceed with the criminal complaint? If so, explain how.

12. Do you find DNA evidence is often or sometimes important in identifying an offender, deciding how to investigate a case or building a case against an accused? If yes, provide examples. Provide details if other types of evidence are typically more important than DNA evidence.

STATEMENT OF JAN CONNORS

I, Jan Mary Connors, Director of the Child Protection and Forensic Medical Service of the Queensland Children's Hospital, 501 Stanley St, South Brisbane, do solemnly and sincerely declare that:

Heading : Qualifications and experience:

Question 1 –State your full name and current position/title at Queensland Health (QH)

1. My name is Jan Mary Connors. My substantive position is Director of the Child Protection and Forensic Medical Service (CPFMS) for Children's Health Queensland, based at the Queensland Children's Hospital. I am currently acting in a higher-level position as Acting Director and Medical Lead for the Division of Medicine, Children's Health Queensland. I have been doing so for approximately the past two and a half years. During this time, I have maintained a role as a senior medical officer in CPFMS

Question 2 –List your tertiary qualifications, the year you obtained them and the institute from which the qualifications were obtained.

2.

Qualification	Name of University / College	Country of Qualification	Year Obtained
MBBS	Uni of Qld	Australia	1980
Dip Child Health	Royal College of Physicians, London	United Kingdom	1985
FRACP	RACP	Australia	1990
MPH	Uni of Qld	Australia	2003
FFCFM (RCPA)	RCPA	Australia	2015
(Masters of Forensic Medicine)	Monash University and Victorian institute of Forensic Medicine	Australia	2015

[redacted] ... [redacted]

Your name Witness

Question 3:- Detail your work history since you graduated from University.

3.

a) 1981-1983: Resident/registrar, Townsville General Hospital
b) 1984-1985: Paediatric SHO/registrar, Basingstoke District Hospital/ Addenbrookes Hospital, Cambridge, UK
c) 1986- 1990: Paediatric registrar, Mater Children's Hospital (MCH) South Brisbane and Royal Women's Hospital Brisbane.
d) 1991-1996: Paediatrician, Child Development and General paediatrics, MCH.
e) 1991-2003: Private Practice; General Paediatrics/ Developmental and Behavioural Paediatrics.
f) 1996-2003: Community Paediatrician
g) 2001-2006: Paediatrician Child Protection Unit (CPU), MCH; Community Child Protection Paediatrician,
h) 2006-2014: Director and senior Paediatrician, CPU, MCH
i) 2013-2014: Director Paediatric Health Servcies, MCH
j) 2015- currently: Director, CPFMS
k) 2019 (Feb-Sept): Acting Medical Director and Medical lead, Division of Medicine, QCH
l) 2020- (July-currently): Acting Medical Director and Medical lead, Division of Medicine, QCH

Question 4: Detail your appointments to any boards and/or committee, and the purpose of the boards/ committee.

4. I do not hold any board appointments.
5. I have until recently (May 2022) been a committee member of the Chapter of Community Child Health, of the Royal Australasian College of Physicians (RACP). The Chapter represents the area of community child health within the College which oversees child protection training and represents the College for matters related to child protection, particularly in the area of community paediatrics.

6. I was the inaugural Chair and am the current Chair of the State-wide Child Protection Clinical Partnership. The Partnership supports QH clinicians across Queensland in relation to child protection practice.

Question 5: Attach a current CV

7. Please see **Exhibit JC-01 – Curriculum Vitae**

Your role and Unit:

Question 6: Provide an overview of your responsibilities, and the role and function of the unit that you work in.

8. I answer this in relation to my substantive role as Director, CPFMS.
9. As Director of CPFMS, I have the overarching operational responsibility for the service. All professional streams report to me operationally as outlined below.

Question 7: Outline who you report to, who reports to you, the staff you are responsible for and their positions, roles and responsibilities.

10. CPFMS is a multidisciplinary team consisting of medical (Paediatricians, Fellows in training, registrars), nursing, allied health (social work and psychology) and administrative staff. We have a program manager. All staff report to me operationally and have additional professional oversight.
11. The service provides a 24-hour medical officer service for acute care.
12. Medical staff are responsible for the medical assessment and management of children referred for concerns that are in some way related to the child protection system.
13. This includes acute assessment of children presenting with concerns about abuse and neglect. Referrals can come from within the hospital e.g., the emergency department or from referral by QPS or Child Safety. Occasionally referral will come from external sources such as general practice.
14. In general, we see children who live within the catchment of QCH which approximates to the Greater Brisbane area.
15. Referrals can be for physical abuse, sexual abuse, neglect, illness fabrication and induction.

16. CPFMS also provides ambulatory service for children linked to the Department of Children, Youth Justice and Multicultural Affairs (Child Safety), providing medical assessment and management plans for general health, developmental and behavioural concerns.
17. CPFMS provides QH core medical representatives to numerous Suspected Child Abuse and Neglect (SCAN) Team meetings.
18. Paediatricians provide supervision and training for the junior medical staff of Fellows and registrars.
19. Nursing staff support medical assessments and fulfill the roles of Child Protection Liaison officers.
20. Psychology and social work assist in the assessment and management of children referred to the service.

Question 8: Explain what the role of a child protection advisor is and what type of practitioner undertakes that role. Explain when and how those positions were created, and whether they exist Queensland-wide.

21. In 2004, there was a Crime and Corruption Commission inquiry "Protecting children: An Inquiry into abuse of children in foster care".
22. This led to widespread changes across the child protection system.
23. In 2005, there was an injection of resources to QH to support the provision of child protection services with a focus of funding new designated roles at all hospitals where children could be admitted.
24. Child Protection Advisors (CPAs) are designated positions who have a child protection responsibility in each HHS. These positions are predominantly held by medical officers but in some circumstances may be covered by nursing or social work.
25. Child Protection Liaison Officers (CPLO) were also established, and these have predominantly been filled by nursing staff but also by social workers.
26. The main expectation of these positions was to support SCAN teams, but they have taken on the role of designated child protection clinicians for HHSs, playing a key role as a contact point for child protection matters, providing education, training and consultative advice.

27. There has been no further funding to these positions since 2005 despite increasing demands on services.
28. Also, at the time of the creation of these positions, equipment (Colposcopes) was provided across the state with expectation that sexual abuse cases could be expertly managed at the HHS where the victim presented.

Question 9: Attach a copy of the Child Protection Capability Framework document (or similar).

29. Please see **Exhibit JC-02 – Child Protection Capability Framework**
30. Microsoft Word - Attachment 1 - Queensland Health Child Protection Capability Framework
31. This document was created to support clinicians across QH to understand what level of responsibility they have for child protection and to outline the responsibilities of the HHS to support staff with training and resources. It is not a credentialling document.

Question 10: Who is responsible for the collection of biological material for forensic DNA testing from children under 14 years? What are the reasons for designating responsibility in this way? What policies, procedures and/or guidelines set out this responsibility? Attach a copy of the policies, procedures and/or guidelines.

32. It is the responsibility of paediatricians to collect biological material for forensic DNA testing for children under 14 years.
33. This age cut off is a guideline only and is open to discussion on a case-by-case basis.
34. Paediatricians have a specific skill set around the assessment and treatment of children. Queensland Health Paediatricians have varying levels of training in the area of child protection and even more varied training in forensic assessment.
35. Responsibility for seeing children who have been sexually abused does sit with local HHS paediatricians, but training for this is driven by the desire of that clinician to upskill. Many take this responsibility very seriously and do all they can to provide a high-quality service. Some elect not to take up available training. This can lead to inadequate after hours cover.

36. This can lead to delays in service and movement of the child and family between HHSs to seek forensic examination.
37. For older young people (14years and above) it is likely that presentations will be more in keeping with sexual assault (compared to child sexual abuse) which is usually managed by adult sexual assault services. This requires specific clinical capability, services, support and training which are not traditionally the remit of paediatrics.
38. In all cases there is the opportunity for a case-by-case discussion and individual considerations to achieve best outcomes for the young person.
39. **Exhibit JC-03:** Conducting child sexual assault examination (health.qld.gov.au)
40. **Exhibit JC-04:** Acute medical care of paediatric patients who have experienced alleged sexual abuse/assault (health.qld.gov.au)

Question 11: Who is responsible for the collection of biological material for forensic DNA testing from children aged between 15 and 17 years? Why?

41. Adult sexual assault services and forensic medical officers as per the reasons outlined above.

Question 12: For the collection of biological material in each of the ways referred to in the two paragraphs immediately above, are sexual assault investigation kits (SAIKs) used? If yes, are they the same SAIKs used for adults?

42. Yes, SAIK kits are used and as far as I know they are the same kits that are used by adults but not all components of the kit will be required. E.g., it is usually not possible to do a high-vaginal or cervical swabs in a child.

Question 13: Are there any other key differences in equipment used or records kept in relation to SAIKs conducted on children compared to SAIKs conducted on adults?

43. It is generally held that best practice for children is to do photo documentation of the genital examination. This allows for peer review of any changes that may or may not be relevant to the allegation. Children can show a number of anatomical variations in the genital area prior to puberty, and it is important not to misinterpret these findings.

44. This photo documentation is often done using a video colposcopy machine or other video camera and/or still photography if required.
45. I understand that it is usual practice with older children post puberty and adults to use a speculum to assist in examination and collection of swabs e.g., high vaginal or cervical swabs. This is not a skill that paediatricians generally hold.

Question 14: Does the SAIK contain equipment to take a reference sample from the child?

46. Yes, there is ability to take DNA reference material using a buccal swab. This is not usual practice and is done on specific request from QPS.

Question 15: Are there any minimum qualifications a practitioner must hold to perform a SAIK on a child, whether agreed under 14 years or aged between 15 and 17 years? If yes, identify those minimum qualifications.

47. Under 14 years, the expectation is that this will be done by, or supervised by, a Paediatrician. However, this is more in keeping with current best practice and it may be the case in more geographically remote areas that local medical officers will need to medically assess the child or young person and to collect required specimens.
48. It is advised that where medical staff examining the child or young person is not experienced in the forensic collection of specimens that the SAIK be done in collaboration with forensic medical officers and adult sexual assault services.
49. We hope to promote the role of nursing staff in completing SAIK administration for children under 14 years of age. Currently there is no training available to paediatric nurses to do this. CPFMS at CHQ has employed the first Paediatric Nurse Practitioner in training in Queensland with aim to develop this role.

Question 16: Are there optional qualifications or training programs related to forensic medicine that paediatricians can undertake? If yes, identify those programs.

50. As mentioned above, Paediatricians who have the responsibility of assessing and managing children and young people with allegations of sexual abuse, are encouraged to obtain additional training in this area.
51. In recent years, COVID19 has limited the ability to run and attend a number of the usual activities that have been available. It is hoped that these activities will become available again soon.
52. Paediatricians often seek this out of their own accord.
53. Starship Children's Hospital, Sydney Children's Hospital together with Westmead Children's Hospital, and Royal Children's Hospital Melbourne, all regularly run courses in the assessment and management of sexual abuse. These are usually short courses of approximately 3 days that do not lead to any specific qualification.
54. CPFMS offers the following supports:
    a) On site professional development activities on request where the paediatrician can spend some time in an observership at CPFMS
    b) 24 hours on call support for clinicians across the state
    c) Peer review of examinations and interpretation of findings on request. Secure pathways for sharing sensitive information have been developed to facilitate this.
    d) Regular workshops/symposia to provide professional development and upskilling. This has been done in the past by a nurse and Paediatrician providing upskilling at a number of HHSs across the state.

55. Formal qualifications in Forensic Medicine are available through Monash University in conjunction with the Victorian Institute of Forensic Medicine. Completion of this course leads to the qualification of Master of Forensic Medicine, or Graduate Diploma in Forensic Medicine if a shorter course is completed. Some clinicians have elected to do only some of the available modules that are relevant to paediatrics. A number of Paediatricians have elected to do these courses. Preference for employment at CPFMS is given to paediatricians who have completed or are doing one of these courses.
56. Doing a formal forensic medicine course is not a pre-requisite to doing SAIK assessment. To do so would greatly limit the available workforce.

Question 17: Broadly, what skills and experience are necessary to correctly conduct a forensic medical examination?

57. These skills can be divided into skills for the examination and skills to interpret the finding and provide a forensic report.

    a) Examination skills:

    Paediatricians have expertise in engaging with children and examining them in a manner that is not confronting. A purely sterile approach can be confronting to the child. Child friendly approaches to the examination are taken including making the examination area as comfortable as possible. For this reason, invasive interventions including the taking of blood for reference DNA, buccal swabs for DNA, are limited to situations where this is specifically requested by QPS.

    Paediatricians have expertise in the examination of the pre-pubertal genital area. This is required in general paediatric practice for a number of medical conditions. They do not hold expertise in use of speculum examinations. They understand paediatric genital anatomy and how to visualise the hymen without causing pain and how to interpret anatomical variations that may no longer be visible past puberty.

    b) Learning to examine a child as described above is not a difficult skill to acquire and maintain. There is however additional skill in interpreting the findings and providing a high-quality forensic report. With good photo documentation it is possible for the examination to be done by a general paediatrician with the required training at the site the child presents, and for clinicians with more expert forensic training to assist with interpretation and report writing.

Question 18: Do you think that a paediatrician is able to competently administer a SAIK on a child if they have no specific training in conducting forensic medical examinations? Are there any resources a paediatrician can consult in such a circumstance?

58. As mentioned above there is a level of training that is required but can be easily achieved by the paediatrician, and should be expected when employing a new paediatrician to a HHS.

59. Should a paediatrician need assistance they should be able call upon the Forensic Medical Service (FMS) or adult sexual assault service colleagues to assist in the forensic specimen taking.
60. The CPFMS based at QCH provides 24 hour on call support.

Question 19: Do nurses conduct SAIKs on children? If yes, what qualifications must they have and/or what courses must they complete, if any? If no, are there any plans to enable nurse practitioners to conduct SAIKs on children?

61. Currently there is no capability for nurses to conduct sexual abuse examinations. I understand that there has been a Sexual Assault Nurse Examiner (SANE) course developed for adult services, but this has not been extended to services for children under 14 years.
62. As mentioned above CPFMS is undertaking the training of our first paediatric Nurse Practitioner. It is hoped that this will be the first step in increasing the nursing capability in this area which may be of greatest benefit in more regional and remote areas where there can, at times, be quite significant staff turnover in Paediatricians or lack of paediatrician cover.

Question 20: What policies, procedures and guidelines does QH have that address the methods, procedures and systems for the using a SAIK on children? Attach a copy of any documents you identify.

63. On the central QH intranet site, QHEPS, there is the guideline on examination for sexual abuse:
64. This can be found as **attachment JC-03**

Question 21: What policies, procedures and guidelines does QH have that address the training, testing or auditing of staff in regard to using a SAIK on children? Attach a copy of any documents you identify.

65. I am not aware of any policies, procedures or guidelines that cover this area.

Question 22: Do you or your staff undertake forensic medical examinations on children suspected or accused of having committed a crime?

66. Not as a general rule. There may be the rare case where we will be asked to do this by police.

Question 23: Apart from instances of alleged sexual assault, are there other scenarios where biological evidence is collected from children for the purposes of forensic DNA testing?

67. Swabs for DNA may be taken from fresh bite marks in a physical assault.

Question 24: Have any problems or concerns been identified or raised with you regarding the methods, systems or processes used by QH in conducting forensic examinations on children? If yes, when, by who, how and what was the problem or concern? If no, confirm same. Do you consider there is any need to change the composition of the current SAIK used on children in Queensland?

68. Concerns have been raised to us by QPS and by HHSs who have told CPFMS that they have no one who can see children and young people who present to their service.
69. There is concern about the inability or unwillingness of some HHSs to commit to providing the sexual abuse service after hours, despite a memorandum being issued to all HHS of the need to see victims of abuse or assault at the facility they present to. It is still the case that QPS, families and victims are, at times, required to present to multiple facilities, delaying the time it takes for the victim to have their assessment and management.
70. **Exhibit JC-05:** Caring for people disclosing sexual assault | Health service directive | Queensland Health
71. It is important that the victim can receive adequate holistic assessment and management at the medical facility they present at as much as possible. Like all areas of medical care, small services without in-house paediatric cover will need to refer to their nearest facility that does have 24 hour paediatric cover and a Child Protection Unit.

Structure and Organisation:

Question 25: In a typical Hospital and Health Service, is there a paediatrician dedicated to, or in charge of, overseeing the collection of biological material from children for forensic DNA testing?

72. In most HHSs the responsibility for the provision of paediatric care will sit with the Director of Paediatrics.
73. All hospitals where children are admitted have a Child Protection Unit with Child Protection Advisor (CPA) and Child Protection Liaison Officers.
74. The CPA is a designated child protection position and is expected to be skilled in carrying out SAIK procedures. They will report to the Director of Paediatrics.
75. The CPA cannot however cover 24 hours a day and for full coverage there needs to be skills attained by all paediatrician on call or a separate dedicated on call group for child protection and forensic assessments.

Question 26: Is the structure of the QH child protection services in the Gold Coast and Brisbane different to other areas? If so, how?

76. Both CPFMS at QCH and the Gold Coast service have Paediatricians committed specifically to child protection with Directors of Child Protection and paediatricians with formal forensic training.

Question 27: Do you have oversight of practitioners conducting SAIKs on children aged under 14 years around Queensland? If no, who does have oversight?

77. While CPFMS provides support across the state in ways already mentioned, we have no jurisdiction over the provision of services in other HHSs outside of Children's Health Queensland.
78. The only visibility we have of the work done outside our own service is when other paediatricians ask for our support and advice.
79. The Director of Paediatrics at each HHS would be responsible for the services provided at that HHS.

Physical facilities:

Question 28: Describe the physical facilities or rooms at the Queensland Children's Hospital where SAIKs are administered on children. Do you oversee the procedures used in cleaning those rooms/facilities? Provide details of what equipment is used and to what standard (if any) they are cleaned?

80. We have one examination room that holds a colposcope that has recording capability.
81. This room in within the CPFMS and children presenting to the emergency department will be brought to this room.
82. We do not have a formal cleaning policy, but cleaning occurs to a routine medical standard.
83. This is currently being reviewed and a cleaning guideline being developed by our Nurse Practitioner in training and one of our forensic paediatricians.

Question 29: Explain what type of facilities or rooms are typically used for forensic examinations on children outside of Brisbane.

84. I am not specifically aware of what these facilities look like.

Other issues:

Question 30: Does your unit or do your staff receive any communication or feedback from the QHFSS or Queensland Police Service about the SAIKs you conduct in particular cases and the quality of biological samples that are taken in those cases?

85. No

Question 31: Would you be assisted by the provision of such feedback? Why/why not?

86. It would be helpful to know if there are any concerns and we would welcome the feedback.

Question 32: Identify and detail any other concerns, criticisms or feedback you have of the current Queensland SAIK model or the current; processes for collecting biological material for forensic DNA testing from children. Would the quality of forensic services be improved if your unit had greater visibility or a great role across the state? Attach supporting documents if necessary.

87. I have no additional concerns to what has been outlined above.
88. To support the principle that a victim of sexual abuse/assault should be managed at a facility close to where they present and in a timely manner, there needs to be capability built in each HHS. Ideally there should be a consistent response, both medically and from a psychosocial perspective, to allegations of assault or abuse, independent of where the victim presents. It is important to minimise trauma to the victim by involving the minimum number of personnel possible in the clinical care and forensic examination: having the right care at the right place.
89. For over 20 years, HHSs employing Paediatricians have had the opportunity to make sexual abuse training an expectation of employment and to build this capability.
90. Some HHSs have done this very well, showing that it is very achievable. Other HHSs have elected not to.
91. The alternative to this would be to build hub and spoke models across the state and have the victims travel to those hubs. This would need increased resourcing at those sites.
92. CPFMS would welcome an increased role in oversight of forensic services across the state (for all aspects of abuse). Currently, we hear from clinicians who want our support, but there are many cases that we do not hear about, with no expectation of peer review.
93. Since 2005 there has been little to no funding to QH child protection services despite increasing demands. Building further capacity across the state needs resourcing to support an already overstretched health system.

All the facts and circumstances declared in my statement, are within my own knowledge and belief, except for the facts and circumstances declared from information only, and where applicable, my means of knowledge and sources of information are contained in this statement.

I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of the *Oaths Act 1867.*

TAKEN AND DECLARED before me at ## in the State of Queensland this ## day of ## [month] 2022

Curriculum Vitae

Personal Information:
Full name: Dr Jan Connors
Contact details: [redacted]

Qualifications Obtained (Primary & Postgraduate):

Qualification	Name of University / College	Country of Qualification	Year Obtained
MBBS	Uni of Qld	Australia	1980
Dip Child Health	Royal College of Physicians, London	United Kingdom	1985
FRACP	RACP	Australia	1990
MPH	Uni of Qld	Australia	2003
FFCFM (RCPA)	RCPA	Australia	2015
(Masters of Forensic Medicine)	Monash University and Victorian institute of Forensic Medicine	Australia	2015

Employment history:

Dates	Feb 2019 – Sept 2019 July 2020 - present
Position Title	Acting Medical Director and medical lead, Division of Medicine CHQ: 0.5 FTE
Responsibilities	• Medical Director and lead of the leadership team Division of Medicine CHQ • Line management and budget responsibilities for services within the Division of medicine. •
Facility/facilities	CHQ
City/State	Brisbane
Country	Australia

Dates	Nov 2015 - current
Position Title	Director, Child Protection and Forensic Medical Service (CPFMS) fulltime
Responsibilities	• Management of a multidisciplinary service with responsibility for the identification and protection of children presenting to the MCH and for support and training of staff of the MCH. • Professional and operational line management for all medical staff within the CPFMS… junior and senior registrars and consultant staff.

	• Operational line management for all staff including allied health, nursing staff and administrative staff. • Budget accountability for the CPFMS cost centre. • Promotion of organisational strategic direction. Patient safety and quality initiatives and KPIs. • Professional appraisal and development of medical staff within the CPFMS. • Promotion of education, including state-wide tele-health education and support for the research officer. • Development and review of policy related to child protection. • Clinical Child protection services including forensic assessment, reports and court appearances. • Community child protection for Inala in CHQ community health.
Facility/facilities	CPFMS, Lady Cilento Children's Hospital, CHQ From 2018, no longer LCCH: name change to Queensland Children's Hospital
City/State	Brisbane
Country	Australia

Current:

Dates	2013 to Nov 2014
Position Title	Director Paediatric Health Services, Mater Children's Hospital 0.5FTE (provision of backfill for this position intermittently through 2012-13)
Responsibilities	• Line management of Directors of Paediatric Medical Specialties including: General Paediatrics; Respiratory and Sleep medicine; Neurology; Radiology; Infectious Diseases; Endocrinology; Metabolic medicine; Rheumatology; Cardiology; Dermatology; Haematology; Child Development; Child Protection; Emergency Medicine. • Report to Executive Director of Mater Adults Women's and Children's Hospitals. • Budget accountability for Division of Medicine, MCH, through reporting lines of cost centre managers. • Accountable for accreditation standards including mandatory training and patient safety and quality initiatives. • Management of human resource practices including performance appraisal and professional development of reporting directors. • Promotion of professional and behavioural standards that are in keeping with the values of the organisation. • Promotion of organisational strategic direction and indentified KPIs. • Supporting amalgamation processes for the development of the QCH workforce. • Member of the MCH Executive Committee. • Chair of the MCH Directors meeting which also includes Directors of Paediatric Surgery, Critical Care, PICU and CYMHS.

	• Member of Mater Health Services (MHS) Patient Safety and Quality meeting chaired by CEO of MHS. • Member of the Ambulatory and OPD Executive Committee • Member of the MCH patient flow and safety management group. • Member of the Collaborative Care steering committee for children with complex needs. • Member of the medication safety committee • Actively involved in Patient safety and Quality review of incident reports and investigations including RCAs.
Facility	Mater Children's Hospital, South Brisbane
City/State	Brisbane, Queensland
Country	Australia

Current:

Dates	May 2006 – Nov 2014
Position Title	Director, and Senior Paediatrician, Child Protection Unit (CPU). MCH: fulltime until addition of above position in June 2013.
Responsibilities	• Management of a multidisciplinary service with responsibility for the identification and protection of children presenting to the MCH and for support and training of staff of the MCH. • Professional and operational line management for all medical staff within the CPU...junior and senior registrars and consultant staff. • Operational line management for all staff including allied health, nursing staff and administrative staff. • Budget accountability for the CPU cost centre. • Promotion of organisational strategic direction. Patient safety and quality initiatives and KPIs. • Professional appraisal and development of medical staff within the CPU. • Promotion of education, including state-wide tele-health education and support for the research officer. • Development and review of MCH policy related to the CPU. • Clinical Child protection services including forensic assessment, reports and court appearances. • General paediatrics OPD. • Community child protection for Inala in CHQ community health.
Facility/facilities	CPU, MCH
City/State	Brisbane
Country	Australia

Dates	July 2003 – May 2006
Position Title	Fulltime combined appointment: Community Paediatrician/MCH
Responsibilities	Clinical services across community and hospital. • Child development and child protection QEII Health Service District and • Child Protection and general paediatrician MCH.
Facility/facilities	Queensland Health
City/State	Brisbane
Country	Australia

Dates	March 2001- July 2003
Position Title	Part time community Paediatrician
Responsibilities	Child Development Child Protection
Facility/facilities	Queensland Health • Inala Community Health • Mt Gravatt Child Development service.
City/State	Brisbane
Country	Australia

Dates	August 2001 – July 2003
Position Title	Relieving Paediatrician CPU, MCH
Responsibilities	Child protection paediatrician
Facility/facilities	MCH
City/State	Brisbane
Country	Australia

Dates	Jan 2001- Aug 2002
Position Title	Relieving Development paediatrician
Responsibilities	Developmental Paediatrics
Facility/facilities	MCH
City/State	Brisbane
Country	Australia

Dates	Oct – Dec 2000

Position Title	Relieving community paediatrician
Responsibilities	Child Development
Facility/facilities	Pine Rivers Child Development Service
City/State	Brisbane
Country	Australia

Dates	March 1998- Aug 2002
Position Title	Relieving Community Paediatrician
Responsibilities	General/community Paediatrics
Facility/facilities	Riverton Early parenting Centre
City/State	Brisbane
Country	Australia

Dates	Nov 1996- June 1997
Position Title	Temporary part time visiting community paediatrician
Responsibilities	Child development
Facility/facilities	Child Youth and family health, Inala, QEII health service district
City/State	Brisbane
Country	Australia

Dates	1991- 2003
Position Title	Private Practice
Responsibilities	General paediatrics Child development
Facility/facilities	
City/State	Brisbane
Country	Australia

Dates	1991 – 1996
Position Title	Relieving Paediatrician
Responsibilities	Child development General paediatrics
Facility/facilities	MCH
City/State	Brisbane
Country	Australia

Dates	1990
Position Title	Senior registrar neonatology
Responsibilities	Neonatology
Facility/facilities	RBWH
City/State	Brisbane
Country	Australia

Dates	1987-1989
Position Title	Paediatric registrar
Responsibilities	Paediatric training, basic and advanced
Facility/facilities	MCH
City/State	Brisbane
Country	Australia

Dates	1986
Position Title	Senior House Officer
Responsibilities	Paediatric Surgery
Facility/facilities	MCH
City/State	Brisbane
Country	Australia

Dates	1984-1985
Position Title	Paediatric SHO/Registrar
Responsibilities	General paediatrics
Facility/facilities	Basingstoke District Hospital Addenbrookes Hospital and Rosey maternity hospital, Cambridge
City/State	Basingstoke and Cambridge
Country	United Kingdom

Dates	1981-1983
Position Title	Resident /registrar
Responsibilities	All areas
Facility/facilities	Townsville General Hospital
City/State	Townsville
Country	Australia

Current & All Previous Medical Licensing Authorities:

Licensing Authority	Country of Registration	Registration Number
AHPRA/ Medical Board of Australia	Australia	MED0001351386

Professional development:

Masters of Public Health (MPH): 2003:

- Health care delivery systems
- Introduction to Epidemiology
- Introduction to Biostatistics
- Principles of Epidemiology
- Social and Behavioural Determinants of Health
- Qualitative Research
- Applied Statistical Methods
- Applied Study Design
- My Master of Public Health Dissertation was: 'The Impact of Child Abuse on Queensland Women Prisoners'.

Masters of Forensic Medicine through Monash University, Melbourne. I completed course work to Masters level in 2015. As well as specific forensic paediatric subjects I have done 'Medical Evidence' and 'Ethics, Medicine and the Law'.

2014: 'Leadership of Quality and Safety in Health Care' QUT: Brisbane

- A framework for Quality and Safety Leadership
- Leadership in complex and chaotic environments
- Organisational Leadership for Quality and safety
- Organising for Quality and Safety Improvement
- Developing integrated teams
- Advanced change management
- Person centred care
- Engaging clinicians in quality and safety improvement
- Measuring Quality: developing meaningful clinical indicators
- Applying quality improvement principles.

Networks/ organisations:

2004-2013: Clinical Chair of the Southern Queensland Child Protection Network and then Chair of the Steering Committee for the State-wide Child Protection Clinical Partnership (SCPCP). 2013-2014 Chair SCPCP

Current Chair of SCPCP

Member of the steering committee of the State-wide Child Youth Clinical Network (SCYCN).

Past member of the Queensland Paediatric Quality Council, a subgroup of the SCYCN which reviews child deaths.

Chair of the Child Protection Special Interest group of the RACP - past three years finishing may 2022

Current Qld representative on the RACP Chapter Community Child Health Committee

Member of the Clinical Ethic Consultation service of CHQ

Member of the Morbidity and Mortality Committee of CHQ.

Member of the Credentialing Committee CHQ

Inaugural Chair and now member of the Steering committee for the Child Protection Practitioners Association of Australasia.

Education and research:

I have been actively involved in the Child Protection workshops for Child Protection Advisors and Child Protection liaison officers since 2005.

I have presented at a number of state-wide Child Protection forums.

I have chaired a working party that developed and provided a Child Protection education module to sites across Queensland.

I have supervised RACP trainees in submitting projects for their RACP advanced training requirements since 2000.

Other papers/presentations/:

- State: 2009: PACT (Protect all children today) Conference on the "Medical Aspects of Child Protection"
- National: 2003: Australian National Public Health Conference: MPH Dissertation: "The Long term impact of child abuse on women prisoners".
- International: 2004: ISPCAN Conference. "Child protection significance of childhood ingestions".
- 2012: National RACP workshop presentation on clandestine drug laboratories.
- Presentation at the International Shaken Baby Syndrome Conference in Paris, May 2014. "Temporary Brittle Bone Disease and Abusive Head Trauma: lack of evidence for a fundamentally flawed belief system"
- Regular presenter at Child Protection Advisor workshops for the past 10 years;
- Presentation at national Chapter of Community Child Health Satellite meeting Brisbane, 2012: "Medical assessment of Children exposed to illicit Drug labs"

Aboriginal and Torres Strait Islander children are over-represented in child protection and out-of-home care services compared to non-Indigenous children. The reasons for this are complex and are connected to past policies and the legacy of colonisation. Poverty, assimilation policies, intergenerational trauma and discrimination and forced child removals have all contributed to the over-representation of Aboriginal and Torres Strait Islander children in care, as has a lack of understanding of the cultural differences in child-rearing practices and family structure.[1 2]

Aboriginal and Torres Strait Islander children are 37.3% of the total out-of-home care population, including foster care, but only 5.5% of the total population of children. Aboriginal and Torres Strait Islander children are now 10.2 times more likely to be removed from their families than non-Indigenous children.[3]

The percentage of children in out-of-home care who identified as Aboriginal and Torres Strait Islander people rose from 39.3% to 42.7%. Between 2014/15 and 2018/19, compared with non-Aboriginal and Torres Strait Islander children and young people, Aboriginal and Torres Strait Islander children and young people were on average:

- 8.1 times more likely to be subject to children protection orders
- 5.1 times more likely to be subject to a notification
- 8.3 times more likely to be subject to short terms orders
- 7.9 times more likely to be subject to long terms order.[4]

A message from the Director-General

The safety and wellbeing of all children in Queensland is a priority for Queensland Health. We are committed to promoting and maintaining a culture that provides a safe environment for children and that promotes every health contact as an opportunity to support a family and protect a child.

We recognise that promoting the safety and wellbeing of children and supporting families is a shared responsibility across government and community. Everyone shares the responsibility of preventing abuse, neglect and exploitation. That is why Queensland Health requires the commitment, support and cooperation of all staff, volunteers and external contractors who help to deliver our services. We all have a role to play in promoting a culture of care and protection for all children. A key element of this is understanding what constitutes abuse and neglect and what creates risks of harm to children.

As part of our commitment, Queensland Health will:

- publish this Child Protection Capability Framework on QHEPS
- continue to develop contemporary education resources to support Hospital and Health services to better equip staff to be aware of, and comply with, our child protection requirements, and
- incorporate the Royal Commission's Child Safe Standards in Queensland Health policies, procedures and guidelines.

Every person within Queensland Health who comes into contact, or works with children, must seek to uphold the rights and dignity of all children and commit to establishing safe and supportive relationships with families.

We regularly undertake internal reviews of our Statewide child protection policies and guidelines to ensure they always support a culture and practice that puts the safety of children at the centre of our thinking and action. Everyone is encouraged to take action to improve and enhance policies, guidelines or practices that seek to improve the safety and wellbeing of children.

Dr John Wakefield
Director-General
Department of Health

Foreword

Children and young people rely on responsible adults to help them be safe from abuse and neglect.

Meeting our legal responsibilities and achieving clinical excellence in our response to child protection across Queensland requires a statewide guiding framework for individuals and Hospital and Health Services (HHSs). This framework must align with relevant Queensland legislation, policy, and guidelines.

The current child protection reform agenda, Supporting Families Changing Futures 2019 – 2023, and the recommendations from the Royal Commission into Institutional Responses to Child Sexual Abuse provide an overarching strategic direction to help embed a culture to keep children safe, at all levels of organisations. Principle 7 of the National Child Safe Standards states, "Staff and volunteers are equipped with the knowledge, skills, and awareness to keep children and young people safe through ongoing education and training."[5]

We, the Statewide Child Protection Clinical Partnership (SCPCP), have embarked on this journey to develop a statewide child protection capability framework (the framework) in partnership with clinicians and the Social Policy and Legislation Branch, Department of Health. Our goal is to enhance the existing resources that guide child protection practice standards for Queensland Health staff. Consultation, involvement, and collaboration have been at the heart of its development, with input from staff across all 16 HHSs and the Mater Misericordiae.

The release of this capability framework signifies the completion of Phase One, which outlines the knowledge, skills, and capability needed for Queensland Health staff to safeguard children and effectively support vulnerable children and families. Phase Two will involve the development of contemporary resources which will be made available to all HHSs to help support local implementation of the framework.

We encourage you to use the capability framework as an essential component of your local strategy for embedding clinical excellence in child protection practice in your HHS.

Dr Jan Connors
Clinical Chair
Statewide Child Protection Clinical Partnership

1. Introduction

The safety and wellbeing of children and young people and their protection from abuse and neglect is an important, shared responsibility in the community. All of Queensland's Hospital and Health Services (HHSs) have a duty outlined in legislation for staff to recognise and respond (refer or report) to concerns about the safety and wellbeing of a child, and to work cooperatively with other agencies to protect children.

The continuum of Queensland Health services across primary, secondary, and tertiary care offers many opportunities to identify children and young people at risk, initiate early care, and prevent or reduce the impact of adverse childhood experiences that can last a lifespan. The right response at the right time can make all the difference to the safety and wellbeing of a child.

Effective responses and positive outcomes rely upon Queensland Health staff possessing knowledge and skills in child protection responses, and having the confidence to liaise with colleagues, seek appropriate advice, and work with children and families when there are concerns about their safety and wellbeing. All Queensland Health staff who encounter children, young people, and parents or carers must know what to do if they have any concerns about child abuse or neglect. These staff members must also understand that it is their responsibility to recognise risks and respond appropriately. Appropriate response may also come from health services where children are not seen in person, but there are concerns about how adult issues may be impacting on the care and safety of a child.

The Child Protection Capability Framework (capability framework) outlines five levels of capability for Queensland Health staff across the continuum of care. Its primary aim is to ensure that all Queensland Health staff, clinical and non-clinical, have a common understanding of their responsibilities to enable them to recognise risk factors for abuse and neglect and respond appropriately, within the scope of their role, to any suspicions of a child in need of protection.

The capability framework has been endorsed by the Social Policy and Legislation Branch, Department of Health, as best practice. Further, it is fully supported by all Queensland Health child protection policies and guidelines. All HHSs are encouraged to implement this framework and incorporate it into their own workforce development strategies.

Throughout this document, we use the term 'Queensland Health staff' to include all Queensland Health employees, volunteers, and external contractors working within Queensland Health HHSs, including employees of Health Support Queensland. The term 'child' is used to refer to infants, children, and young people aged under 18 years. 'The framework' is used throughout this document to refer to this document, the *Child Protection Capability Framework*.

2. Legislative responsibilities

All children have a right to grow up in an environment free from neglect and abuse. As enshrined in the *United Nations Convention on the Rights of the Child 1989*, the best interests of children are paramount.

The protection of children and the duties of Queensland Health staff are contained within several areas of legislation. Specifically, these responsibilities fall under the following:

- *Child Protection Act 1999*
- *Civil Liability Act 2003*
- *Public Health Act 2005*
- *Right to Information Act 2009*
- *Information Privacy Act 2009*
- *Hospital and Health Boards Act 2011*
- *Child Protection Reform Amendment Act 2017*
- *Human Rights Act 2019*, and
- *Working with Children (Risk Management Screening) Act 2000.*

Queensland Health staff have a duty to *'protect children who have been harmed or are at risk of harm when the children present at health service facilities'.*[6] The *Child Protection Act 1999* is the overarching legislation relating to the protection, welfare, and best interests of children and young people, and is administered by the Department of Child Safety, Youth, and Women (Child Safety). Queensland Health staff have both mandatory and non-mandatory obligations under the *Child Protection Act 1999* to report any reasonable/reportable suspicions of child abuse and neglect. The paramount principle for administering the act is to ensure the safety, wellbeing, and best interests of a child, both throughout childhood and for the rest of the child's life.

Importantly, under Part 2A, Chapter 2 of the *Civil Liability Act 2003*, Queensland Health, as a public entity, would be in breach of its duty to prevent child abuse for children under its care or the care of a person associated with the public authority, unless it is proven that the public entity has taken all reasonable steps to prevent the abuse. The requirement to take all reasonable steps to prevent abuse follows recommendations under the *Royal Commission on Institutional Responses to Child Sexual Abuse 2017.*

The recent *Human Rights Act 2019* places further duties on Queensland Health staff to consider the protection of families and children, where relevant, as part of their decision-making functions.

Appendix one provides a detailed overview of the relevant legislation.

[6] Public Health Act, 2005

3. Key principles

The capability framework is underpinned by the following key principles for child protection practice:

- All children have a right to be safe, cared for, protected, and able to reach their full potential.
- Every health contact is an opportunity to support a family and protect a child.
- Queensland Health staff have a legal responsibility to protect children who have been harmed or are at risk of harm.
- All Queensland Health staff have a role to play in protecting children and can achieve this through child and family-centred care and child aware practice, even when only working with adults who are parents/carers.
- Queensland Health staff play an important role in the continuum of care for children. These staff members are in a unique position to identify risks and support needs at an early stage, then respond promptly so children and families can thrive, and harm can be prevented.
- All Queensland Health staff should know how to respond when they identify concerns about a child's care, safety, or wellbeing, and have the skills to take all reasonable steps to protect the child.
- A working partnership between Queensland Health and the wider service system can help to ensure a coordinated and collaborative response to the protection, safety, health, and wellbeing needs of children, young people, and their families.
- A Commitment by all Queensland Health HHSs to create a culture of innovation and continuous improvement in relation to services provided to children and their families as a strategy to prevent child abuse and neglect to children. This includes the importance of reporting on the finding of reviews and quality improvement initiatives on a regular basis.
- Supporting and outlining expectations around child protection capability can help increase the confidence of Queensland Health staff, thus encouraging them to recognise and respond appropriately to suspicions of child abuse and neglect and help facilitate the correct level of help for children and families at the right time.

4. Aims

The overarching goals of the framework are multi-faceted, and aim to:

- Support Queensland Health's shared commitment to the safety and wellbeing of children and prioritisation of the health needs of vulnerable children and young people.
- Promote clinical excellence in Queensland Health Child Protection Unit models within HHSs that strive to deliver child-focussed practice, integration, and clinical multidisciplinary care.
- Define the capabilities, knowledge, and skills of Queensland Health staff that will best support HHSs to effectively respond to the care, safety, wellbeing and protection needs of children in Queensland.
- Provide a common understanding of mandatory and non-mandatory obligations of Queensland Health staff to report a reasonable/reportable suspicion of child abuse and neglect and instil confidence about how to correctly fulfil these in practice.
- Encourage a workforce that is proactive and responsive to early warning signs to at risk and vulnerable children and identifies every health contact as an opportunity to support a family and protect a child.
- Provide a common language around child-aware practice and child protection to support a greater consistency in communication and training across diverse teams and regions of the state.

- Provide a common understanding of the full care continuum and pathways available to support the safety and wellbeing of children and their families in Queensland, and the role of Queensland Health staff within this.
- Continue to develop contemporary statewide education resources to support local implementation of the framework. Contribute to instilling a child-focussed, child-safe organisational culture and workforce within Queensland Health.

5. What is a capability?

Each level within the framework identifies a set of capabilities relevant to staff at that level. Capability, in this context, refers to a combination of skills, knowledge, and experience recommended for individual staff working within that level.

The framework aims to ensure that these qualities inform child protection responses and practice in a way that is commensurate with an individual's occupational role and level of responsibility.

Capability involves individuals being able to critically reflect on and evaluate their own skills, knowledge, and practice, being open to exploring alternative approaches, and being willing to undertake additional learning and development activities to build on existing knowledge and skills.

6. Structure of the Framework

About the capability levels

The framework outlines five capability levels for Queensland Health staff across the continuum of care. Each of these levels contains a distinct set of knowledge and skills.

The five capability levels are outlined in table one:

Table one: Child Protection Capability Framework levels

Capability Level		Focus	Target group	Description	Levels included
Capability Level one	**Foundational**	Knowledge	Non-clinical staff, volunteers and contractors.	Basic awareness of child protection responsibilities.	1
Capability Level two	**Fundamental**	Knowledge	All Queensland Health clinical staff.	Awareness of prevention, early intervention, child protection, and the care continuum.	1 and 2
Capability Level three	**Intermediate**	Skill	All Queensland Health clinical employees working predominantly with children and/or with adults (who may be parents/carers) in higher risk areas for child protection.	Moves beyond awareness to application of knowledge of prevention, early intervention, child protection, and the care continuum, with some support from experienced and specialist staff.	1, 2 and 3
Capability Level four	**Experienced**	Experienced skill	Experienced clinical staff who work predominantly with children and/or parents/carers and can provide additional assessment, coaching, advice, and support to clinical staff regarding early intervention, child protection, and the care continuum.	Builds on levels one, two, and three, focussing on in-depth assessment, coaching, advice, and support to children, parents/carers, and other staff members.	1, 2, 3 and 4
Capability Level five	**Specialist**	Specialist and leadership	All clinical employees in dedicated specialist Child Protection roles, including Child Protection Liaison Officers, Child Protection Advisors, and Paediatricians providing child protection services.	Applies knowledge and skills at a specialist level, providing education, training, advice, and guidance to Queensland Health staff. Also, working regularly with internal and external stakeholders to manage effective child protection responses.	1, 2, 3, 4 and 5

The capability levels are designed as a step-up model with progression of the knowledge and skills being cumulative, as outlined in the table above.

Below are some example scenarios to illustrate the step-up model and progression of knowledge and skills between levels:

- A physiotherapist in an aged care ward at level two will work towards the knowledge and skills outlined in levels one and two.
- An emergency registrar in a paediatric ward at level three will work towards the knowledge and skills outlined at levels one, two, and three.
- A senior social worker at level four will work towards the knowledge and skills outlined in the framework at levels one, two, three, and four.
- A Child Protection Liaison Officer identified as level five will work towards the knowledge and skills outlined in the framework at levels one, two, three, four, and five.

Minimum levels

It is critical that all Queensland Health staff have a base level understanding of the legal requirements of Queensland Health staff to protect children and take all reasonable steps to prevent child abuse. As such, the framework sets out the recommended minimum levels of knowledge and skill for all Queensland Health staff, clinical and non-clinical, to assist with meeting their legal responsibilities. This aligns with current Professional Child Protection Capability Requirements Guideline.

Table two below sets out the recommended minimum levels within this framework.

Table two: minimum levels recommended

Minimum level knowledge and skill recommended			
Non-clinical staff, volunteers, and contractors	Level one	Foundational	Basic awareness of child protection responsibilities
All Queensland Health clinical staff	Levels one and two	Fundamental	Awareness of the care continuum and child protection

7. How to use the Capability Framework

The framework can be used as an effective tool to support workplace training and professional development. Each HHS is best placed to decide the most appropriate level for each role. Similar roles can vary considerably in their work functions across HHSs, according to local arrangements.

The capability framework levels do not correspond to professional grades/levels due to differences in the structure of health services, roles, and how services are provided across the state. The framework has been designed with flexibility for HHSs to consider the size of the region, structure of the health services, scope of practice within each role and facility, and the knowledge, skills, and experience of their individual staff members.

Staff will not always fit neatly into one level. The framework has been designed with fluidity between levels which encourages staff to develop knowledge and skills that extend into the next or higher level. For example, mental health staff working exclusively with children on child protection orders (e.g. Evolve Therapeutic Services) are likely to be working towards level four capability, with some staff members requiring some of the specialist level knowledge and skills of level five. In these circumstances, where not all capabilities are relevant at the higher level, service managers are encouraged to work with individuals and teams to identify the specific capabilities at the higher level that is relevant to them in their particular role to effectively encourage the local training and professional development of these staff members.

Application of the framework

In applying the framework, HHSs are encouraged to consider ways to identify a mix of staff across all levels at each facility. HHSs may also consider how to implement a combination of staff within the higher risk areas for child protection within their facilities – especially where there are a higher prevalence of vulnerabilities and/or child protection concerns.

Examples of higher risk areas for child protection include:

- Emergency departments - adult and paediatric
- Social Work and after-hour services
- Maternity services
- Paediatric services
- Community health services including child health and school-based youth health nurses
- Aboriginal and Torres Strait Islander health services, such as Aboriginal and Torres Strait Islander maternity services
- Child and youth mental health services
- Adult mental health services
- Alcohol and other drug services

This list is not exhaustive and may contain different elements within each facility.

Queensland Health continues to maintain key specialist child protection positions in all HHSs to provide support to frontline staff. This strategy helps to ensure that children, young people, and their families in the child protection system are provided with the best possible service response. Those who give such responses include Child Protection Liaison Officers, Child Protection Advisors, Child Protection Social Workers, and Paediatricians who assume some of the responsibilities of Child Protection Advisors, without the designated title. These staff members hold a substantial degree of professional responsibility and autonomy to act on child protection concerns and work extensively within a multi-agency context.

To fulfil their roles and responsibilities effectively, it is recommended that these groups of staff are supported in their efforts to obtain the specialist knowledge and skill outlined at level five. This ensures the in-depth knowledge and

understanding recommended for Queensland Child Protection systems. These actions also encourage the acceptance of policies, legislation, and processes that lead to professional leadership across health care services. Liaison with external agencies and the ability to provide high-quality advice and guidance to other health staff also furthers the goals that have been stated.

The simplest way to identify the appropriate level for each individual is to examine the descriptive titles for each level, as noted in table one. A 'What level am I?' guidance tool has been included in appendix three to assist individuals in identifying which level of the framework they are working towards.

8. The capability levels

Capability level one: Foundational

Who: All Queensland Health staff

Capability at level one has been designed to provide a foundational awareness of child protection and the legal responsibilities of Queensland Health staff to protect children. Level one includes information about what constitutes vulnerability, risk factors, child abuse and neglect, and what to do if the staff members have any concerns about the safety of a child.

This is the minimum recommended level for all non-clinical staff, including administration staff, volunteers, and all external contractors working for Queensland Health. It is recommended that all clinical staff aim for knowledge and skills at levels one and two, thus providing them with a more detailed awareness and understanding of the care continuum including secondary support service pathways, child protection, and their legal responsibilities.

Capability level one – Basic awareness of child protection responsibilities

1. Responsibilities to protect children
2. Nature of child abuse and risk factors
3. Responsive action, advice, and support

Capability Level One: Foundational
Basic awareness of child protection responsibilities
Who? *All Queensland Health Staff*
This is the minimum level recommended for all non-clinical staff, volunteers, and external contractors.

No.	Capability	Knowledge recommended	Skills required
Capability one	**Responsibilities to protect children.**	Knowledge of: • the rights of children to be safe and protected from harm and to achieve their full potential in life • the Queensland care continuum that supports the safety and wellbeing of children and their families • key principles of the overarching legislation guiding Queensland Health responsibilities to protect children including the key principles of the *Child Protection Act 1999* • mandatory and non-mandatory reporting requirements • the responsibility of all Queensland Health staff to promote the safety of children	Ability to: • describe why protecting children is everyone's responsibility • describe their legal responsibilities to safeguard children within the scope of their role • recognise whether they are a mandatory or non-mandatory reporter based on their role.

		• one's own role, and the role of others within the organisation, in implementing child protection policies and procedures • the duty of care to report any concerns about the conduct of colleagues towards children or parents/carers with an appropriate staff member • the requirement for all Queensland Health facilities to be child-safe organisations.	
Capability two	**Nature of child abuse and risk factors.**	Knowledge of: • the prevalence of child abuse and neglect in Queensland • the types of risk factors, social factors, and vulnerabilities that may impact on a child's care, safety, and wellbeing • the definition of child abuse and neglect in all forms including physical, emotional, and sexual abuse and neglect • key terms from the *Child Protection Act 1999* including 'child in need of protection' and 'child in out-of-home care.'	Ability to: • describe the vulnerabilities and risk factors that may impact on the care, safety, and wellbeing of a child • describe what constitutes child abuse and neglect.
Capability three	**Responsive action, advice, and support.**	Knowledge of: • the importance of responding to concerns promptly to ensure an adequate response and manage risks • whom in the organisation to talk to if there are concerns about a child and/or adult, during and after hours • the role of specialist child protection staff in the HHS and how to contact them • the importance of seeking personal support from a line manager and/or employee support service if a child protection concern has had a personal impact, and how to access the Employee Assistance program.	Ability to: • describe the steps to take when concerned about the safety and wellbeing of a child • locate the specialist child protection staff in the organisation • seek appropriate advice and guidance promptly • seek personal support including the Employee Assistance program.

Capability level two: Fundamental

Who: All Queensland Health clinical staff (level one and two)

Level two is the minimum level of knowledge and skills recommended for all clinical staff working in Queensland Health settings including a thorough understanding of the required knowledge contained in levels one and two.

Level two has been designed to incorporate the knowledge and skills outlined in the current Queensland Health *Child abuse and neglect education module: Responsibility, recognising and reporting* to help all clinical staff understand the minimum knowledge and skills recommended to meet their legal responsibilities as mandatory and/or non-mandatory reporters of children in need of protection.

Level two covers a more detailed understanding of the continuum of care, benefits of early intervention, and role of Queensland Health to act to prevent child abuse and neglect, the indicators of harm, abuse, and neglect of a child, and a more detailed overview of how to respond (refer or report).

Capability level two – Awareness of early intervention, child protection, and the care continuum

1. Prevention, early intervention, and the continuum of care

2. Indicators and risks of harm to a child
3. Policy and procedures for the responsive care and protection of children.
4. Appropriate responsive care and protection of children
5. Information sharing and record-keeping

Capability level two: Fundamental
Awareness of early intervention, child protection and the care continuum
Who? *All Queensland Health clinical staff*
This is the minimum level recommended for all clinical staff.

No.	Capability	Knowledge recommended	Skills recommended
Capability one	Prevention, early intervention, and the continuum of care.	Knowledge of: • the definitions of prevention, early intervention, child and family-centred care and child-aware practice in the context of protecting children • the domains of wellbeing for children and young people including being healthy, using services, having material basics, learning, being loved and safe, and participation • the benefits of routinely enquiring about the care arrangements of children who are not seen • the full Queensland care continuum, including secondary support services available to support a child's care, safety, and wellbeing • how early intervention can help prevent child abuse and supports families to address issues • whom to contact in the HHS (e.g. social work service) and in the local community to help assess additional needs of a child and/or family • principles for consent from families when providing early intervention support (FACC/IFS), referrals, and information-sharing. • availability of the escalation pathway for medical officers concerned about Child Safety's decision-making related to the immediate safety of the child upon discharge (in development - available 2021), including contacts within the HHS for assistance navigating the pathway	Ability to: • describe the factors that can assist with the prevention of child abuse and neglect • describe the definition and benefits of early intervention • describe own role in prevention and early intervention of child abuse and support for families • routinely enquire about the care arrangements, safety, and wellbeing of unseen children when working with parents/carers • identify the domains that contribute to a child's safety and wellbeing • describe the care continuum in Queensland • describe the secondary support services available to support families with multiple, complex needs.
Capability two	Indicators and risks of harm to a child.	Knowledge of: • the legal definition of harm and/or risk of harm to a child • potential indicators of harm in all forms including physical and emotional abuse, sexual abuse, neglect, child sexual exploitation, grooming, and the signs to look for • potential impact that a parent/carer's physical and mental health can have on the	Ability to: • describe the types of risk factors and possible indicators of safety and wellbeing concerns for children • describe how adult issues can potentially impact on children • recognise inadequate care and/or possible harm and risks of harm to children.

		care, safety, and wellbeing of a child (e.g. problematic substance use, domestic and family violence, homelessness, and disability/chronic illness).	
Capability three	Policy and procedures for the responsive care and protection of children.	Knowledge of: • how and where to access the Queensland Health policies, guidelines, and procedures to support child protection responses • the threshold for reporting suspicions of a child in need of protection to Child Safety services within the Child Protection Act 1999 including an understanding of the terms a reportable suspicion, a reasonable suspicion, significant harm, and a parent able and willing • the different thresholds and options available to support decision-making around whether to refer a family to secondary support services or to report concerns to Child Safety • the process to report to Child Safety in writing a reasonable suspicion of child abuse and neglect • legislative protections you have in reporting your suspicion of child abuse and neglect within the *Child Protection Act 1999.*	Ability to: • locate Queensland Health policies and procedures • find the contact details for the HHS Child Protection Unit, Child Safety after-hours, and Child Safety Regional Intake Service teams • describe the threshold for reporting concerns of significant harm to Child Safety • describe the steps to take when deciding an appropriate response (referral or report) • describe the steps required to make a report to Child Safety.
Capability four	Appropriate responsive care and protection of children.	Knowledge of: • the urgency of escalating immediate concerns about the safety and wellbeing of a child to ensure safety measures are initiated in a timely way • how to access and use the *Queensland Child Protection Guide* to support decision-making about a course of action to respond (refer or report) concerns • how and when to consult with specialist child protection staff in the local HHS • how children in need of protection and who may become in need of protection, and their families, should receive coordinated services that meet their needs in a timely and effective way • how and when to involve culturally appropriate service providers, including Indigenous Liaison Officers, when working with Aboriginal and Torres Strait Islander children and families, culturally and linguistically diverse families and/or refugees.	Ability to: • escalate any immediate concerns with urgency to instigate safeguarding measures • use the *Queensland Child Protection Guide* to help inform decision-making • escalate any immediate concerns with urgency to instigate safeguarding measures • access appropriate advice and guidance to determine whether concerns require a referral to support services or meet the threshold for a report to child safety • know when to involve other appropriate staff members and/or service providers when identifying and responding to care, wellbeing, and safety needs of children • with guidance, make a report to Child Safety and refer a family for further assessment to appropriate secondary support services within the HHS and/or local community – includes

			cases where needs are identified but do not meet the threshold for reporting to Child Safety.
Capability five	Information sharing and record-keeping.	Knowledge of: • information-sharing guidelines that determine what information can be shared and with whom • confidentiality and consent requirements when child protection concerns are identified • the importance of sharing all relevant information about a child and family with an appropriate staff member • the importance of documenting any concerns about a child's care, safety, and/or wellbeing • how written documentation contributes to the assessment, treatment, and ongoing care of a child • what information is relevant to the document in a Child Safety online e-report • the need to record any decisions to report suspected child abuse and neglect and keep a copy of the report on the clinical record.	Ability to: • abide by information-sharing policies • record all observations, facts, identified risks, concerns, and actions in the clinical record, including the name of the person consulted with and any conversations with Child Safety • differentiate between fact and opinion in a written and verbal report • document all concerns about a child in the appropriate record • follow record-keeping procedures.

Capability level three: Intermediate

Who: All Queensland Health clinical employees working predominantly with children and all clinical employees working with adults (who may be parents/carers) in higher risk areas for child protection

Level three capabilities build upon the knowledge and skills contained in levels one and two for staff that work predominantly with children and adults who are parents/carers. A high level of contact with vulnerable children and families provides these clinicians with increased opportunities to identify vulnerabilities, risks, and indicators of harm. The clinicians can then take action that protects children and supports families. It is recommended that clinicians at level three develop and practice their skills in how to routinely enquire about children, have difficult conversations with children and families, and sensitively discuss a range of concerns and family issues.

Capability level three – Moves beyond awareness to application of knowledge of early intervention, child protection, and the care continuum, with some support, as needed, from experienced and specialist staff members.

1. Culturally safe, trauma-informed engagement with children and families
2. Assessment and identification of risk and harm
3. Collaborative and coordinated care to protect children and support families

Capability Level Three – Intermediate
*Builds on level one and two – **Moves beyond awareness to application of knowledge of early intervention, child protection, and the care continuum, with some support, as needed, from experienced and specialist staff members.***
Who? *All Queensland Health clinical employees working predominantly with children and/or clinical employees working with adults (who may be parents/carers) in higher risk areas for child protection*

No.	Capability	Knowledge recommended	Skills recommended
Capability one	Culturally safe, trauma-	Knowledge of:	Ability to:

	informed engagement with children and families.	• the long-term impact of adverse childhood experiences • the impact of intergenerational trauma on the care, safety, and wellbeing of Aboriginal and Torres Strait Islander children and their families • the importance of trauma-informed responses with children and parents/carers • culturally safe and responsive approaches to engaging with Aboriginal and Torres Strait Islander communities • cross-cultural competence skills such as the use of interpreters to support families from culturally and linguistically diverse backgrounds • communication strategies that build and promote respect, trust, and engagement • the rights of children to participate in decisions that affect them • how own beliefs, experience, and attitudes influence professional involvement in working with vulnerable families and children.	• work sensitively from a trauma-informed perspective, recognising the impact of adverse childhood experiences • be aware of the cultural and respect-based need to consult and collaborate with internal and/or external Aboriginal and Torres Strait Islander services in an appropriate manner, such as Indigenous Health Liaison Officers, Aboriginal and Torres Strait Islander Health Services and Aboriginal and Torres Strait Islander Family Wellbeing Services • provide a thoughtful and sensitive response to cultural and language-based barriers that may arise and create obstacles to the full understanding and participation of families from culturally or linguistically diverse backgrounds • engage with children, young people, and families in a caring, respectful, and trauma-informed way.
Capability two	Assessment and identification of risk and harm.	Knowledge of: • the physical, developmental, psychosocial, and mental health needs of children • what constitutes risk to a child's safety and wellbeing, now and in the future, and how to differentiate immediate risk • the definition of cumulative harm and how risk factors and parental vulnerabilities (e.g. mental health, domestic and family violence, problematic substance use, long term chronic conditions) may combine to cause harm or increase risk of harm to a child • the increased vulnerabilities of certain groups of children and young people such as those who have a disability, are Aboriginal or Torres Strait Islander, and/or culturally and linguistically diverse • how the presence of risk factors does not necessarily lead to child abuse and neglect • the additional complexities and risks for children, young people, and	Ability to: • identify additional support needs of children and families and make timely and appropriate referrals, with consent, to assist families to increase parenting capacity and address vulnerabilities • identify risks to a child's safety and wellbeing, now and in the future • recognise clinical presentations that may give rise to suspicions of child abuse and/or neglect • identify patterns of risk and/or increased risk including cumulative harm, including missed appointments • describe the additional complexities and risks of vulnerable groups • identify multiple and complex needs of children and families who would benefit from additional support • identify cumulative harm and how risk factors and vulnerabilities may be combining to increase risks to a child • identify strengths and protective factors of families • sensitively enquire about a family's circumstances, including any concerns of injuries or harm, with support from appropriate colleagues where required

		families who are already involved in the child protection system • the cultural norms and components of child-rearing in Aboriginal and Torres Strait Islander families and communities • the types of protective factors that can help moderate risk or adversity and promote healthy development and child and family wellbeing • the risks of harm to unborn children and what to do if there are concerns about an unborn child • the basics of forensic procedures and advice that are available to assist with assessment of injury and/or harm • whom to contact within the HHS to arrange forensic services.	• respond to concerns about an unborn child • liaise with experienced and/or specialist health staff to undertake a more thorough assessment of injury/harm/risk factors.
Capability three	Collaborative and coordinated care to protect children and support families	Knowledge of: • the legal framework around information-sharing, confidentiality, and consent related to children and young people under 18, adults, and caregivers -- including Gillick Competency guidelines • the importance of collaboration and partnership in working to protect children and support families • culturally appropriate service delivery and engagement with Aboriginal and Torres Strait Islander service providers and other culturally-focussed providers • what to do if there are differences in opinion about how to respond to child protection concerns and where to seek further support and advice • Queensland Health domestic and family violence information-sharing requirements.	Ability to: • appropriately share information with other professionals to ensure a joined-up response • provide culturally safe responses in partnership with Aboriginal and Torres Strait Islander children, families, and internal services, such as Indigenous Liaison Officers, Aboriginal and Torres Strait Islander Maternity Services and/or external service providers, such as Institute for Urban Indigenous Health, Aboriginal and Torres Strait Islander Family Wellbeing Services • work appropriately with culturally and linguistically diverse children and families while remaining attuned to their cultural and language needs • act as an effective advocate for children and young people to ensure any additional needs are met • follow escalation procedures and challenge decisions where health staff have ongoing concerns for a child's safety and/or the outcome of a child protection report • respond to domestic and family violence concerns in line with Queensland Health policy and guidelines.

Capability level four: Experienced

Who: Experienced clinical staff who work predominantly with children and/or parents/carers. These staff members provide additional assessment, coaching, advice, and support to clinical staff regarding early intervention, child protection, and the care continuum.

Capability at this level is aimed at staff who work in roles where they can provide additional assessment, coaching, advice, and support regarding the care continuum and responses of Queensland Health staff to either refer or report concerns.

Clinicians working at this level are confident in their ability to deal sensitively with children and families to help assess risk factors, to support an appropriate response, and to contribute to effective risk management plans. Clinicians at this level provide coaching, advice, and support to other clinical staff members who are less experienced in child protection, supporting them in risk assessment and decision-making about the most appropriate response to take. Clinicians at this level are likely to have some contact with other agencies in the course of responding to complex needs and safety concerns, including family support services, Child Safety, and/or other internal and external support services.

Capability level four – Builds on levels one, two, and three, focussing on in-depth assessment, coaching, advice, and support to children, parents/carers and other staff members.

1. Information-gathering and assessment of need and risk
2. Responsive risk-management and health care management of vulnerable children
3. Coaching, advice, and support to staff

Capability Level Four - Experienced
Builds on levels 1, 2, and 3 by providing additional assessment, advice, and support to children and families and/or with other staff members at levels one, two, and three

Who? *Experienced clinical staff at level four who work predominantly with children and/or parents/carers and can provide additional assessment, coaching, advice, and support to other clinical staff regarding child protection concerns*

No.	Capability	Knowledge recommended	Skills recommended
Capability one	Information-gathering and assessment of need and risk	Knowledge of: • information-gathering and assessment tools, including psychosocial and clinical assessment, to help assess risks and protective factors relating to a child's safety and well being • risk assessment frameworks and HHS child protection management plans • indicators of health presentations that warrant further consultation and investigation • psychosocial factors and parental/care capacity limitations that may impact on the safety and wellbeing of a child in an adult/parent's care • how to assess risk and protective factors.	Ability to: • undertake an in-depth psychosocial and/or clinical assessment of a child and/or family • undertake risk assessments • undertake further investigations regarding concerns of injury and/or harm (medical staff only) • assess the safety and wellbeing of a child e.g. physical examination, developmental, mental health and psychosocial assessment • recognise suspected child abuse and neglect that presents within the health context including antenatal risk factors, medical neglect, cumulative effects of harm, unexplained injuries, or harm that warrants further consultation with specialist child protection teams, reflect on observations and information available to assess risk of and/or actual harm and or neglect in determining risk and reporting obligations.

Capability two	Responsive risk management and health care management of vulnerable children.	Knowledge of: • the importance of clinical review of a child and/or parent/carer with timeliness that reflects the seriousness/complexity of the concern • how to contribute to, formulate, and/or communicate effective management plans for children when there are concerns about their safety and wellbeing, within a multidisciplinary approach including escalation as part of this process • the forensic procedures and services available locally for identifying physical abuse, sexual abuse, and emotional harm -- and who to refer to for arranging these to occur • the main features of commonly used statutory court orders applied for by Child Safety to protect children e.g. temporary assessment order, and how these apply to clinical situations including children's inpatient admissions and contact with parents/carers. • Child Safety multiagency meetings and processes including multiagency Suspected Child Abuse and Neglect (SCAN) team to enable coordinated responses to the protection needs of children • the complex care needs of children in out of home care and evidence informed practice to ameliorate vulnerabilities.	Ability to: • initiate measures to reduce immediate risks of harm to a child and manage risk, including high risk and complex needs, in an ongoing way • escalate concerns about risk to a child and consult appropriately trained paediatricians for clinical review and decisions on presenting concerns, including physical injuries, for forensic medical examinations • identify and communicate risk management strategies and/or plans for children within a multidisciplinary approach • communicate sensitively, ethically, and effectively with children and families • consultations with children to ensure that they can participate in decisions affecting them, as appropriate to their age and ability • appropriately manage risks for inpatients that arise from parental contact for children undergoing child protection investigations and/or under child protection orders via liaison with HHS Child Protection Units/services • identify and outline the health management of children in need and those subject to child protection investigations • contribute to assessments of parenting capacity and children's needs, and to the planning and evaluation of interventions • participate in and/or lead the care coordination of vulnerable clients, including children in or out of home care, as appropriate to role.
Capability three	Coaching, advice, and support to staff	Knowledge of: • the importance of providing accurate advice and support to staff members to ensure the right response is made at the right time • strategies for critical thinking, coaching, and support of staff members • the potential personal impact of child protection cases on staff and strategies for mitigation to support them	Ability to: • communicate a staff member's legal responsibilities to respond to child protection concerns, including mandatory reporting requirements • support and coach clinical staff to apply professional and/or clinical knowledge and skills to identify and respond to suspicions of child abuse and neglect • support less experienced health staff to have sensitive and difficult conversations with children and parents/carers

- strategies for communicating risk assessments and management plans to colleagues and external agencies.
- advocate for clinical staff to routinely enquire about parental/care arrangements to assess risks to the safety and wellbeing of children in their care, including the safety and wellbeing of unborn children
- support staff to make considered judgements about how to act to proactively reduce risks and protect and promote a child's wellbeing
- coach staff on the steps involved in escalating safety and wellbeing concerns about a child, even if the child is not their patient
- contribute to child protection-related quality improvement activities such as audit, case discussion, peer review, and supervision.

Capability level five: Specialist

Who: Clinical staff in specialist Child Protection roles -- including Child Protection Liaison Officers (CPLO), Child Protection Advisors (CPA), Child Protection Social Workers, Managers of Child Protection Units, and Paediatricians designated to provide child protection services.

Capability at level five requires in-depth specialist knowledge and understanding of Queensland Child Protection systems, policies, legislation and processes, professional leadership across health care services, and liaison with external agencies. This includes the ability to provide high-quality advice and guidance to health staff at all other levels across the HHS in assessing risk, deciding what response should be made, and in coordinating the protection needs of children.

Staff at this level hold professional and/or organisational authority and a substantial degree of personal responsibility and autonomy to act on child protection concerns as a primary point of contact for the HHS. They work extensively within a multi-agency context as a conduit between HHSs and other key government and non-government agencies, including Child Safety, the Queensland Police Service, and Education Queensland, in helping to manage the day-to-day protection needs of children. Staff at level five have a responsibility within their HHS to lead and/or assist in the delivery of education and training to other Queensland Health staff, particularly staff at levels one and two of the capability framework.

The skill-mix of specialist staff differs across each HHS and is dependent on the size, structure, and reporting within each HHS child protection unit. Each HHS is best placed to determine which capabilities relate to staff within their child protection unit.

This group of staff have responsibilities for responding to child protection issues and promoting the welfare of vulnerable children.

Capability level five – Applies knowledge and skills at a specialist level, providing education, training, advice, and guidance to Queensland Health staff and working regularly with internal and external stakeholders to manage effective child protection responses. Key elements of this role include knowledge and skill in:

1. Child protection pathways, thresholds, legislation, policies, and guidelines.
2. Child Safety and service system interagency processes.
3. Specialist advice, guidance, and support.
4. Leadership in child protection quality improvement.
5. Record-keeping and management of sensitive child protection information.
6. The expert's role in key stages of the court processes, including the role and powers of the different courts, the standard and the burden of proof (Child Protection Advisors/ Child Protection Paediatricians only).

Capability Level Five - Specialist

Applies knowledge and skills at a specialist level, provides education, training, advice, and guidance to staff at levels one, two, three, and four, and works regularly with internal and external stakeholders (e.g. Child Safety, Queensland Police Service) to manage effective child protection responses.

Who? *Clinical staff in specialist Child Protection roles including Child Protection Liaison Officers (CPLO), Child Protection Advisors (CPA), Child Protection Social Workers, Managers of Child Protection Units, Paediatricians designated to provide child protection services.*

No.	Capability	Knowledge recommended	Skills recommended
Capability one	Child protection pathways, thresholds, legislation, policies, and guidelines	In-depth knowledge of: • all relevant legislation, policies, guidelines, directives, and best practice for child protection practice • policies, guidelines, and best practice for children in out-of-home care • the legal framework around information-sharing related to the protection of children, including the relevant sections of the Act, Instrument of Delegation, and consent • the legislative and policy provisions in relation to unborn children, who may be at risk of harm after birth, and unborn high-risk alert procedures • the Queensland Health Care and Treatment Order for protecting children and noting who is the local Designated Medical Officer • the role of the Suspected Child Abuse and Neglect (SCAN) Team System and Queensland Health Representatives. • policy and service delivery provisions in the escalation pathway for medical officer concerned about Child Safety's decision-making related to the immediate safety of the child upon discharge e	• Ability to: • work within the bounds of the legislation, working with a high degree of autonomy, using professional judgement and consulting where appropriate • facilitate information sharing with key agencies that is accurate, cooperative, timely, and compliant with legislative requirements in a way that protects a child's privacy • provide specialist advice and support to staff on legislative and policy requirements relating to child protection and child-safe responses • identify organisational risk within the HHS regarding relevant statewide legislation and policy • recognise when further legal advice is required and where to obtain this • contribute to the development of local and statewide child protection policy, guidelines, educational resources, and protocols to support practice. • assist colleagues—in particular, medical officers—with navigating the escalation pathway, including steps required by Queensland Health policy, Hospital and Health Service procedures, engagement with Child Safety and legislative provisions
Capability two	Child Safety and service system and interagency processes involved in responding to child protection concerns	Specialist knowledge of: • the roles and responsibilities of Child Safety, the processes activated, and possible outcomes when a child protection report is made • the different types of statutory child protection court orders that can be made and other non-statutory Child Safety interventions	Ability to: • facilitate liaison, communication, and information-sharing regarding child protection matters between Queensland Health and other agencies • establish collaborative and productive partnerships with key members of the service system • respond to Unborn Child High Risk Alerts on behalf of Queensland Health and liaise with local Child Safety Officers to develop safety plans for families of

		• the roles and responsibilities of partner agencies in responding to child abuse and neglect • the contribution required of health staff within Child Safety investigations • court and criminal justice systems, the role of the courts, burden of proof, and the role of professional and expert witnesses • local models and systems for interagency approaches to the care and protection of children, including processes for the SCAN team system, family meetings, and coordinating a child's plan • SCAN team system manual and forms • consent, guardianship, visitation, and information-sharing for staff delivering healthcare to children under Child Protection Orders and appropriate safety management plans for inpatients subject to these orders • statutory interventions and Child Safety plans to reduce risks to children and how to provide coordinated and appropriate responses to concerns of child abuse and neglect • Child Safety case planning processes and engagement in the development of risk management plans to enhance the safety and wellbeing of children.	unborn children, effectively represent Queensland Health at interagency child protection meetings including SCAN team meetings and SCAN business meetings, participate in multi-agency discussions and respond to recommendations • participate as a representative in SCAN and SCAN team meetings as an Agency Stakeholder • participate in and/or help facilitate internal or interagency case reviews and provide information and guidance to Queensland Health Staff regarding this process • contribute to interagency assessments, the gathering and sharing of information, and, where appropriate, analysis of risk when there are concerns about the safety and wellbeing of a child • advise other agencies, as appropriate to role, about the health management of individual children in child protection cases • review child protection reports and Child Safety outcome reports to identify and assess unmet risk, respond to recommendations, and support needs • escalate any disagreement on a child protection report child concern report outcome and follow appropriate child safety escalation procedures • communicate advice and guidance to clinical staff regarding child protection orders and the implications.
Capability three	Specialist advice, guidance, and support	Specialist knowledge of: • HHS organisational structures, policies, procedures, and practice in order to advocate where required • statutory interventions and Child Safety plans to reduce risks to children and how to provide coordinated and appropriate responses to concerns of child abuse and neglect • the complex care needs of children in out-of-home care and the *National Clinical Assessment* framework for children in out-of-home care	Ability to: • provide high level advice and guidance to clinicians to support effective and appropriate management of child protection concerns • provide child protection advice and education to clinicians and senior managers regarding child protection policy, legislation, and practices • confidently challenge practice and support colleagues by challenging perceived views offered by other professionals • work in collaboration with relevant health staff and external agencies to develop comprehensive management plans to

		• after-hours clinical paediatric consultant, child safety after-hours, local procedures, and local contact details. •	ameliorate vulnerability, with the aim of reducing the likelihood of harm to a child • consult with specialist Paediatricians to manage forensic examination responses appropriately • help coordinate the complex care needs of children in out-of-home care by liaising with relevant internal and external stakeholders.
Capability four	Record-keeping and management of sensitive child protection information	In-depth knowledge of: • documentation and storage of child protection information policies, guidelines, and practices • Queensland government policies, directives, and governance practice regarding information of a sensitive nature and the management of that information, including how long to retain corporate, administrative, and clinical records • who in the HHS to liaise with regarding advice on information management.	Ability to: • review and analyse clinical notes and information and present a comprehensive account of relevant information to support interagency information requests and decision-making • assess the sensitivity of child protection information to ensure appropriate and secure storage and transfer of highly sensitive documents, images and forensic evidence • apply a risk-based approach to information management of sensitive records • maintain local data bases and corporate, administrative and clinical records related to the provision of child protection services • clarify and follow information management policies, statewide directives and governance practices regarding incidents and allegations of child abuse, sexual assault and vulnerable persons.
Capability five	Leadership in child protection education, quality improvement, and data management	Knowledge of, or working towards knowledge of: • quality improvement activities to enhance child protection responses • datasets and data definitions to support quality improvement activities • how to identify best available evidence, research, system reviews, and reform action plans • national and statewide commissions of inquiry and reform programs that inform child protection and Queensland Health responses.	Ability to lead and/or contribute to: • lead awareness-raising initiatives -- for example, child protection week initiatives. • facilitate education and training of Queensland Health staff regarding the Queensland care continuum and child protection responses • identifying, assessing, implementing, managing, and reporting on changes to the scope of the CPLO role and HHS requirements relevant to new child protection legislation and statewide policy, reform, and initiatives • collecting, administering, and reporting quantitative and qualitative data to inform continuous improvement in policy development and service delivery

			• service planning and quality improvement activities related to the provision of child protection services.
Additional capability **For Child Protection Advisors and/or paediatricians providing designated child protection services only**	The expert's role in key stages of the court process	Knowledge of: • forensic medical clinical practice and the procedures and investigations required when there are suspicions of harm to children • indicators of fabricated and/or induced illness • the role and responsibilities of a SCAN Core Representative • court and criminal justice systems and the potential for assessments and documentation to be used as evidence in court processes • the expert's role in key stages of the court process, including the role and powers of the different courts, the standard and the burden of proof • the requirements of Queensland Health facilities to respond to children and young people who have experienced sexual assault or sexual abuse.	Ability to: • analyse information, present a well-documented overview/assessment of evidence, and communicate recommendations in writing and verbally • act in the expert witness role within the family and criminal justice system, as well as civil proceedings and judicial reviews • interpret and influence solicitor's instructions • respond to cross-examination • provide an honest and balanced presentation of opinions on causation • undertake high quality forensic practice when relevant • undertake forensic medical examinations and photo-documentation where physical abuse, sexual abuse, and/or sexual assault is suspected • document history taken and physical examinations in a manner that is appropriate for child protection and legal processes • support and work collaboratively with Child Protection Liaison Officers • act as the after-hours contact for clinicians where there are issues regarding child protection concerns • respond to suspicions of fabricated and/or induced illness • participate as a representative in SCAN and SCAN team meetings as a Core Representative • provide medical and professional opinions regarding concerns about a child in need of protection and effectively advocate for the protection of children.

9. Conclusion

The capability framework has been designed to provide a set of guidelines describing the practice capabilities recommended for all Queensland Health staff in fulfilling their responsibilities to protect children and promote their welfare. It has been informed by and built upon a wealth of expertise by clinicians across HHSs.

The framework provides a guide for Queensland Health individuals, teams, and work areas within HHSs regarding child protection capability.

HHSs are encouraged to consider the full range of the framework and how it may apply locally. This includes consideration of how the framework aligns with local child-safe organisation policies and practices and how it may support local workforce development strategies, including the induction of new staff.

Over time, this framework will continue to evolve to meet any changes in statewide child protection legislation and policy. Comments and additions will be welcomed and included in future editions by contacting the SCPCP (statewide_child_protection_clinical_partnership@health.qld.gov.au).

HHSs are encouraged to support and adopt this framework to help achieve the best possible outcomes for children and young people in Queensland. The SCPCP and Social Policy and Legislation Branch, Department of Health will work collaboratively to progress the development of contemporary statewide educational resources which will be made available to all HHSs in the future.

Appendix one – Legislation

The following provides a summary of the legislation relevant to the protection of children in Queensland and the duties of Queensland Health Staff in this context.

Act	Key messages	Link
Child Protection Act 1999	• To report, under mandatory and non-mandatory obligations, any reasonable suspicions that a child (including an unborn child) may need protection or has suffered, is suffering, or is at risk of suffering significant harm, and there may not be a parent willing and able to protect the child from harm • collaborate and contribute to multi-disciplinary service delivery • share relevant information about health services provided to children with identified safety and wellbeing concerns.	https://www.legislation.qld.gov.au/view/pdf/inforce/current/act-1999-010
***Civil Liability Act 2003* (CL Act)** **Div 2, Part 2A, Chapter 2**	• A public entity is taken to breach its duty to prevent child abuse for children under its care or the care of a person associated with the public authority, unless it is proven that the public entity has taken all reasonable steps to prevent the abuse.	https://www.legislation.qld.gov.au/view/pdf/inforce/current/act-2003-016

Public Health Act 2005	• The object of the PH Act includes *'protecting children who have been harmed or are at risk of harm when the children present at health service facilities'.*
	• Guiding principles for Part 3 – this part is to be administered under the principle that *the welfare and best interests of a child are paramount.* The following principles apply:
	  o *Every child has the right to protection from harm;*
	  o *Families have the primary responsibility for the physical, psychological, and emotional wellbeing of their children;*
	  o *The preferred way of ensuring a child's wellbeing is through the support of the child's family;*
	  o *Powers conferred under this part should be exercised in a way that is open, fair, and respects the right of people affected by their exercise, and in particular, in a way that ensures –*
	  o *the views of a child and the child's family are considered; the child and the child's parents have the opportunity to take part in making decisions affecting the wellbeing of the child.*
	• Person in charge of health service facility is taken to have custody of the child held at the facility and has -
		https://www.legislation.qld.gov.au/view/pdf/inforce/current/act-2005-048

	○ the right to have the child's daily care; and ○ the right and responsibility to make decisions about the child's daily care. • Designated medical officers may make a care and treatment order for a child to hold the child at a health service facility if it is reasonably suspected the child has been harmed, is at risk of harm, or is likely to be harmed if taken from the facility.	
Information Privacy Act 2009	• The Information Privacy Act 2009 (Qld) (IP Act) regulates how public sector agencies must collect, manage, use, and disclose personal information.	https://www.legislation.qld.gov.au/view/html/inforce/current/act-2009-014
Hospital and Health Boards Act 2011	• Disclose confidential information for the protection, safety, and wellbeing of a child by a designated person.	https://www.legislation.qld.gov.au/view/pdf/inforce/current/act-2005-048
Human Rights Act 2019	• It is unlawful for a public entity – (a) to act or make a decision in a way that is not compatible with human rights; or in making a decision, to fail to give proper consideration to human rights relevant to the decision. • Protection of families and children	https://www.legislation.qld.gov.au/view/pdf/inforce/current/act-2019-005

Appendix three – What level am I? Guidance tool

The 'What level am I?' guidance tool can be used by individuals to assist them in determining what level they are working towards in the Child Protection Capability framework. Please note, this is a guidance tool and there is no requirement for individuals to complete this.

Question number	Question	Capability Level
Clinical and non-clinical staff including volunteers, students, external contractors		
1.	Minimum level/s recommended for all staff: Are you in a non-clinical role? Are you in a clinical role?	 Non-clinical – level one only. Clinical – Levels one and two.
Clinical staff only		
2.	Do you work predominantly with children?	If yes, levels one, two, and three. Please also consider questions at 3. And 4. If no, levels one and two only.
	Do you work predominantly with children and/or adults in a higher risk area for child protection including: • Emergency departments - adult and paediatric • Social Work and after-hour services • Maternity services • Paediatric services • Community health services including child health and school-based youth health nurses • Aboriginal and Torres Strait Islander health services • Child and youth mental health services • Adult mental health services • Alcohol and other drug services	If yes, levels one, two, and three. Please also consider questions at 3. And 4. If no, levels one and two only.
3.	When answering the following questions, please consider your scope of practice in working with children, families, and clinicians. You do not need to be in a supervisor or senior role to answer yes to the questions below.	If yes, levels one, two, three, and four. If no, remain at the level as per your previous answers.
	a) In the scope of your role, can you provide further assessment of a child and/or family's circumstances, presenting concerns, needs, and/or risk factors?	If yes, levels one, two, three, and four. If no, remain at the level as per your previous answers.
	b) In the scope of your role, can you provide advice, coaching, and/or support to other staff members when they have identified concerns about the safety and/or wellbeing of a child?	If yes, levels one, two, three, and four. If no, remain at the level as per your previous answers.
4.	Are you in a specialist role that delivers designated child protection services within your	If yes, levels one, two, three, four, and five.

	HHS? Examples: Child Protection Liaison Officer, Child Protection Advisor, Manager of a Child Protection Unit, Child Protection Social Worker, Paediatrician undertaking designated child protection and/or forensic services.	If no, remain at the level as per your previous answers.

Glossary

Term	Definition/Explanation	Source
Assessment	An assessment is the dynamic process of analysis through which the best course of action is decided to meet the protective needs of the child following an examination and evaluation of all relevant historical and current evidence and information gathered.	Department of Child Safety, Youth and Women Practice Manual https://www.csyw.qld.gov.au/resources/childsafety/practice-manual/pg-assess-risk-of-harm.pdf
Child	For the purposes of this document, a child is 'an individual under 18 years of age' and includes all infants, children, and young people.	s.8 *Child Protection Act 1999*
Child abuse	Child abuse is an action or inaction that causes injury, death, emotional harm or risk of harm to a child. There are four forms of abuse – physical, sexual, emotional abuse, and neglect.	https://www.qfcc.qld.gov.au/sites/default/files/For%20professionals/factsheets/03aboutchildabuseandharm.PDF
Child aware	In terms of being Child Aware, child and family-centred care approaches require taking into account a client's role as a parent and how their own presenting issues (e.g., drug and alcohol misuse, mental health) may influence this. It also involves a consideration of the practical requirements of parenting (e.g., planning meetings around child care availability) and an understanding of how other family members or the broader family context may support the client in their parenting and in addressing their concerns. See also child and family-centred care below.	https://aifs.gov.au/cfca/publications/good-practice-guide-child-aware-approaches-keeping-children-safe-and-wel/child-aware
Child in need of protection	A child in need of protection is a child who: a. has suffered harm, is suffering harm, or is at unacceptable risk of suffering harm; AND b. does not have a parent able and willing to protect the child from the harm.	s.10 *Child Protection Act 1999*
Child and family centred care	Child and family-centred care is an approach to health care that is respectful of, and responsive to, the preferences, needs, and values of children and families. It recognises that the child or patient is at the core of all that we do, and that the family is central in the child's life and therefore central to our care processes. Child and family-centred care, also known as family-sensitive approaches or child aware approaches, recognise the centrality and importance of family life for most people. They take into consideration the familial and broader social context of the client and understand that a client's "parenting role may be both a motivator for change as well as a potential stressor" (Australian Centre for Child Protection, 2012). Family-sensitive approaches support clients in their parental role, as well as taking into consideration the needs of their children, in order to improve treatment outcomes and maintain the safety and wellbeing of the clients' children	https://aifs.gov.au/cfca/publications/good-practice-guide-child-aware-approaches-keeping-children-safe-and-wel/child-aware
Child Protection Advisor	The Child Protection Advisor is a nominated HHS position. They play a key role in the provision of child safety and protection services, both at an HHS and inter-agency level. Persons who hold these positions have expertise in matters of child protection.	Department of Health - Child Safety Fact Sheet
Child Protection Guide	The Child Protection Guide—an online tool to support professionals, such as teachers, doctors and nurses, child care workers, and others working with children and families, in deciding where to refer or report concerns about a child's safety or wellbeing. It is not mandatory to use the Child Protection Guide when making decisions about where to refer or report child protection concerns. The guide is designed to complement critical thinking and does not preclude or replace any course of action a professional reasonably believes is appropriate.	https://www.csyw.qld.gov.au/resources/campaign/supporting-families/child-protection-guide.pdf
Child Protection Liaison Officer	Child Protection Liaison Officers are employees who provide a single point of contact regarding child protection matters for HHS staff, the Queensland Police Service, and the Department of Child Safety regarding HHS clients. Persons occupying these positions can be from a variety of disciplines (e.g. nursing, social work, psychology, medicine).	*Department of Health - Child Safety Fact Sheet*
Child Safety	Child Safety services (Child Safety) is part of the Department of Child Safety, Youth and Women (DCSYW). The role of CSS is to: • investigate reports that allege a child has been significantly harmed or is at risk of significant harm and may not have a parent who is able and willing to protect the child from harm • ensure an ongoing provision of services to children who have been significantly harmed or are at risk of significant harm and may not have a parent able and willing to protect the child from harm.	https://qheps.health.qld.gov.au/__data/assets/pdf_file/0019/362305/educationmodule.pdf

	• act as the lead agency in facilitating a whole-of-government response to child protection issues, including the Suspected Child Abuse and Neglect (SCAN) team system and Information Coordination Meeting (ICM). The Director-General of CSS (also the Chief Executive) and all child safety officers from CSS are authorised officers under section 149 of the Child Protection Act 1999. They have the power to investigate allegations of harm or alleged risk of harm to a child, and assess the child's need of protection or take appropriate action under the Child Protection Act 1999.	
Clinical assessment	This procedure refers to a physical, psychiatric, psychological, or dental examinations that result in a judgment being made about the patient. It can include forensic examination and an examination or assessment carried out by a nursing or other appropriately qualified health practitioner. This term also refers to a biopsychosocial assessment undertaken by a multidisciplinary mental health team.	Department of Health Guideline – Reporting a Reasonable/Reportable Suspicion of Child Abuse and Neglect
Cumulative harm	Cumulative harm is defined as harm experienced by a child as a result of a series or pattern of harmful events and experiences that may have occurred in the past or are ongoing. There is a strong possibility of multiple inter-related risk factors existing over critical developmental periods. The effects of cumulative harm can diminish a child's sense of safety, stability, and well-being.	Department of Child Safety, Youth and Women Practice Manual https://www.csyw.qld.gov.au/resources/childsafety/practice-manual/pg-assess-risk-of-harm.pdf
Cultural competency and cultural safety	The multicultural nature of Australian society requires a thoughtful approach to interaction between diverse origins, traditions, and languages. Since it applies to both professional and personal interactions, cultural competence is the ability to act in an appropriate, ethical, and respectful manner while honouring the cultural differences of others. Cultural safety equates to acting in a way that respects and recognises other cultures, traditions, and familial or social norms. This approach is especially relevant to the indigenous cultures within Australia, most often as it relates to medical care or social welfare issues. Ongoing research is attempting to address the imbalance of power between medical or service providers and the citizens they are meant to be serving.	https://www.mja.com.au/journal/2017/207/1/embedding-cultural-safety-australias-main-health-care-standards Australian Health Ministers' Advisory Council (2016). Cultural Respect Framework 2016-2026; For Aboriginal and Torres Strait Islander Health.
Department of Child Safety, Youth and Women (Child Safety)	The Queensland Government's lead agency for child safety and adoption services. Child Safety focuses on safety, belonging and wellbeing, and supporting the delivery of services to build families' capacity to care for and nurture their children.	https://www.csyw.qld.gov.au/child-family
Early intervention	Strategies, services, and supports that families experiencing 'low risk' issues and vulnerabilities can access -- either early in a child's life, or early in the 'life' of a problem. These can include counselling, mental health services, home help, and financial support.	https://www.napcan.org.au/wp-content/uploads/2019/09/2019-NAPCAN-Prevention-Framework-300819.pdf
Emotional abuse	Emotional abuse occurs when a child's social, emotional, cognitive or intellectual development is impaired or threatened. It can include emotional deprivation due to persistent: • rejection • hostility • teasing/bullying • yelling • criticism • exposure of a child to domestic and family violence.	https://www.csyw.qld.gov.au/child-family/protecting-children/what-child-abuse
External contracted services (example)	Those members who are working on HHS sites/premises for/to/on behalf of a HHS or its patients and clients. These include: • HHS employees who are not in the HHS payroll system (e.g. seconded but not transferred staff, specialty or consultancy service staff on contracts, etc) • employees of Agency or Contractors • Students in placement • Observers and Sponsored Work Experience / Honorary Workers • Volunteers • HHS Facility Tenants • Non-Government Organisation (NGO) service partners.	CHQ Organisational Development
Harm	Harm is the detrimental impact on the child caused by abuse.	*Section 9, Child protection Act*

	In section 9 of the Child Protection Act 1999 'harm' to a child is defined as: any detrimental effect of a significant nature on the child's physical, psychological, or emotional wellbeing. It is immaterial how the harm is caused. Harm can be caused by: • physical, psychological, or emotional abuse or neglect. • sexual abuse or exploitation. • a single act, omission, or circumstance; or a series or combination of acts, omissions, or circumstances.	
Clinician	A person registered under the Health Practitioner Regulation National Law to practise, other than as a student, in any of the following— (i) the dental profession as any of the following— (A) dentist; (B) dental therapist; (C) dental hygienist; (D) oral health therapist; (ii) the nursing and midwifery profession as a nurse; (iii) the medical profession; (iv) the occupational therapy profession; (v) the optometry profession; (vi) the physiotherapy profession; (vii) the psychology profession; or (b) a person who is eligible for practising membership of The Speech Pathology Association; or (c) a person who is eligible for membership of the Australian Association of Social Workers.	*Schedule 3, Child Protection Act 1999*
Neglect	Neglect occurs when a child's basic necessities of life are not met, and their health and development are affected. Basic needs include: • food • housing • health care • adequate clothing • personal hygiene • hygienic living conditions • timely provision of medical treatment • adequate supervision.	https://www.csyw.qld.gov.au/child-family/protecting-children/what-child-abuse
Out-of-home care	A child or young person in 'out-of-home care' is a child or young person who is placed in the care of another person or entity (other than a parent) under the Child Protection Act 1999 and who has not been reunified with a parent. Out-of-home care arrangements are varied and include: foster or kinship care placement, residential care placement (including therapeutic residential services), transitional care arrangements, or supported independent living.	*Child Protection Act*
Parent	A parent of a child is – (1) The child's mother, father or someone else having or exercising parental responsibility for the child; or (2) The Chief Executive Child Safety Services, for a child who is in the custody or guardianship of the Chief Executive Child Safety Services under the *Child Protection Act 1999* (3) a person in whose favour a residence order or contact order for the child is in operation under the *Family Law Act 1975* (Cwlth); (4) a person, other than the chief executive, having custody or guardianship of the child under— (i) a law of the State, other than this Act; or (ii) a law of another State; (5) a long-term guardian of the child. The following also applies: (1) A parent of an Aboriginal child includes a person who, under Aboriginal tradition, is regarded as a parent of the child. (2) A parent of a Torres Strait Islander child includes a person who, under Island custom, is regarded as a parent of the child. (3) A reference in this part to the parents of a child or to one of the parents of a child is, if the child has only one parent a reference to the parent.	*Ss.11;13;23 Child Protection Act 1999*

Physical abuse	Physical abuse occurs when a child has suffered, or is at risk of suffering, non-accidental physical trauma or injury. Physical abuse can include: • hitting • shaking • throwing • burning • biting • poisoning. Physical abuse does not always leave visible marks or injuries. It is not how bad the mark or injury is, but rather the act itself that causes injury or trauma to the child.	https://www.csyw.qld.gov.au/child-family/protecting-children/what-child-abuse
Prevention	Child abuse and neglect is preventable. Prevention of child abuse and neglect refers to strategies that seek to stop child abuse and neglect before it happens Public health models aim to prevent problems before they occur and comprise three platforms; primary, secondary and tertiary services.	Australian Institute of Family Studies (2017). Prevention of child abuse and neglect. Commonwealth of Australia: Victoria
	A public health approach can be used to prevent child abuse and neglect with the aim of reducing the need for statutory protection services. The public health model is a concept with currency in many areas, including health, education and welfare. It attempts to prevent or reduce a particular illness or social problem in a population by identifying risk factors	Sanders, M. Higgins, D. & Prinz, R. (2018). A population approach to prevention of child maltreatment in: Family Matters No. 100
Protective factor	Protective factors are attributes or conditions that can occur at individual, family, community or wider societal level. Protective factors moderate risk or adversity and promote healthy development and child and family wellbeing (Child Welfare Information Gateway, 2014). They serve as safeguards that can help parents find resources or supports and encourage coping strategies that allow them to parent effectively, even under difficult circumstances.	https://aifs.gov.au/cfca/publications/risk-and-protective-factors-child-abuse-and-neglect
Queensland care continuum	An inclusive and integrated approach to health, wellness, and safety that covers the full spectrum of ages within the population of Queensland. In the sections that are specifically related to children's issues, this approach is fully documented and enforceable by the relevant authorities and practitioners. The most up-to-date initiatives and instructions are found within the link in the right column.	https://www.qld.gov.au/ data/assets/pdf file/0030/86970/fags-carers-care-services.pdf
Reasonable suspicion of child abuse and neglect	This may include suspicion of harm arising from physical abuse and physical neglect, emotional abuse and emotional neglect, sexual abuse, and exploitation. The harm caused to children is often on a continuum from mild to life-threatening.	Department of Health - Child Safety Fact Sheet
Reportable suspicion	A reportable suspicion about a child is a reasonable suspicion that the child: • has suffered, is suffering, or is at unacceptable risk of suffering, significant harm caused by physical and sexual abuse and • may not have a parent able and willing to protect the child from the harm.	*S13E Child Protection Act 1999*
Risk Assessment	Risk assessment is the purposeful process of gathering information on the child, the parent, the family, and their environmental context to determine the probability and degree to which a child may be harmed in the future. A safety assessment, as part of a risk assessment, is an analysis of current attitudes, behaviours, and family functioning to identify the presence of any threats to the child's immediate safety - that is, indicators that may be operating at a more intense, threatening, immediate, or dangerous level - and the immediate interventions needed to protect the child from the present danger.	https://www.csyw.qld.gov.au/resources/childsafety/practice-manual/pg-assess-risk-of-harm.pdf
Risk factor	Risk factors for child maltreatment are the measurable circumstances, conditions or events that increase the probability that a family will have poor outcomes in the future. When combined with limited protective factors, they increase the probability of children experiencing child abuse or neglect	https://aifs.gov.au/cfca/publications/risk-and-protective-factors-child-abuse-and-neglect
Secondary support services	Secondary Family Support services are required to reduce harm or risk of harm to children and young people, prevent crises or problems within families from arising or escalating, and stabilise or maintain family wellbeing. It is expected that Secondary Family Supports services will: improve the wellbeing and safety of children, young people, and their families, build the capacity of families to care for and protect their children, provide linkages to local universal support services and community groups that enable families to access the resources they need to build their capacity, solve problems, and make positive choices/changes, prevent entry or re-entry to the statutory child protection system.	https://www.csyw.qld.gov.au/about-us/partners/child-family/our-community-partners/family-support

	Queensland secondary support services include Family and Child Connect, Intensive Family Support Services, and Aboriginal and Torres Strait Islander Family Wellbeing Services.	
Sexual abuse/sexual assault	Sexual abuse and/or sexual assault occurs when an adult, stronger child, or adolescent uses their power or authority to involve a child in sexual activity. Sexual abuse can be physical, verbal, or emotional and can include: • kissing or holding a child in a sexual manner • exposing a sexual body part to a child • having sexual relations with a child under 16 years of age • talking in a sexually explicit way that is not age or developmentally appropriate • making obscene phone calls or remarks to a child • sending obscene mobile text messages or emails to a child • fondling a child in a sexual manner • persistently intruding on a child's privacy • penetrating the child's vagina or anus by penis, finger, or any other object • oral sex • rape • incest • showing pornographic films, magazines, or photographs to a child • having a child pose or perform in a sexual manner • forcing a child to watch a sexual act • child prostitution.	https://www.csyw.qld.gov.au/child-family/protecting-children/what-child-abuse
Trauma informed	Trauma informed practice is a strengths-based approach to an understanding of, and responsiveness to, the impacts of trauma. It emphasises physical, psychological, and emotional safety for people seeking help and for the helpers. It also creates opportunities for people affected by trauma to rebuild a sense of control and empowerment. It recognises the prevalence of trauma and is sensitive to and informed by the impacts of trauma on the wellbeing of individuals and communities.	https://healingfoundation.org.au//app/uploads/2020/07/HF_Glossary_of_Healing_Terms_A3_Poster_Jul2020_V1.pdf
Wellbeing domains	Wellbeing provides a holistic view of a child or young person's life, based on six areas of wellbeing: Loved and Safe, Healthy, Participating, Positive Sense of Identity & Culture, Material Basics and Learning.	https://www.aracy.org.au/the-nest-in-action/common-approach-resources

Department of Health

Guideline

Document Number # QH-GDL-943:2015

Conducting Child Sexual Assault Examinations

1. Purpose

This Guideline provides consistency and best practice for conducting child sexual assault examinations.

2. Scope

This Guideline provides information for all employees, contractors and consultants within Queensland Health and Hospital and Health Services (HHS).

3. Related documents

Procedures, guidelines and protocols:

- Guideline for Care and Treatment Order for a Child
- Guideline for Consent in Child Protection and Management of Complex Care Cases and End of Life Decision Making
- Guideline for Health Professionals Child Safety Capability Requirements
- Guideline for Information Sharing in Child Protection
- Guideline for Reporting a Reasonable/Reportable Suspicion of Child Abuse and Neglect
- Guideline for Responding to an Unborn Child High Risk Alert.

4. Guideline for conducting child sexual assault examinations

4.1 Conducting sexual assault examinations

4.1.1 All medical practitioners shall comply with the informed consent requirements detailed in the *Queensland Health Guide to Informed Decision-Making in Healthcare*, prior to conducting sexual assault examinations in children and young people.

4.1.2 For child victims of sexual assault, under the age of 14 years, sexual assault medical and forensic examinations should be performed by a medical officer with appropriate paediatric skills including child protection and/or sexual assault medical examination training or skills.

4.1.3 For child victims of sexual assault, 14 years of age and over, forensic sexual assault examinations should be performed by a Forensic Medical Officer, Government Medical Officer, Forensic Nurse Examiner or a Medical Officer appropriately skilled to conduct forensic medical examinations.

5. Review

This Guideline is due for review on: 01 June 2020

Date of Last Review: 01 June 2018

Supersedes: Nil

6. Business Area Contact

7. Definitions of terms used in the guideline and supporting documents

Term	Definition / Explanation / Details	Source
Child	For the purposes of this document, a child is 'an individual under 18 years of age'.	s.8 *Child Protection Act 1999*
Forensic nurse examiner	Forensic nurse examiner means a nurse who is appointed by the chief executive (health) to perform the role of a forensic nurse examiner. They are employed by the Clinical Forensic Medicine Unit.	Forensic scientific services
Forensic sexual assault examination	This is a specific examination undertaken utilising the Sexual Assault Investigation Kit (SAIK) performed at the request of investigating police.	Forensic scientific services
Informed consent	For consent to be informed, the patient or decision maker needs to be fully aware and have an understanding of the condition, the nature and purpose of the available and proposed healthcare, and potential consequences of each option. Furthermore the patient should be aware of what is likely to occur should they choose not to receive the healthcare. This results from a process of shared decision making and the provision of information in a manner appropriate to the needs of an individual patient or decision-maker.	Queensland Health Guide to Informed Decision-Making in Healthcare (2012)
Government medical officer	A medical officer employed as a government medical officer has the ability to perform procedures under the *Coroners Act 2003*	Queensland Health Human Resources Policy C3
Medical examination	A medical examination is a physical, psychiatric, psychological or dental examination, assessment or procedure and includes forensic examination and an examination or assessment carried out by a health practitioner.	*Schedule 3 Child Protection Act 1999*

8. Approval and implementation

Acute medical care of paediatric patients who have experienced alleged sexual abuse/assault

Document ID	CHQ-GDL-02603	Version no. 4.0	Approval date	27/04/2022
Executive sponsor	Executive Director Medical Services		Effective date	27/04/2022
Author/custodian	Director, Child Protection and Forensic Medical Service		Review date	27/04/2025
Supersedes	3.0			
Applicable to	Children's Health Queensland staff who may interact with patients who disclosure suspected sexual abuse/neglect			
Authorisation	Executive Director Clinical Services			

Purpose

Children's Health Queensland is committed to promoting the protection, safety, health and wellbeing of children and young people who are at risk of harm or have experienced harm from child abuse and neglect.

Child Protection and Forensic Medical Service (CPFMS) aims to support patients who have experienced sexual assault and their families using a trauma-informed approach.

This guideline will outline the processes for children presenting to the Queensland Children's Hospital (QCH) following an alleged acute sexual assault. It will provide recommendations for the acute assessment, risk stratification, medical management and follow-up of children post sexual assault. It contains information on emergency contraception, vaccination considerations, and antibiotic prophylaxis for sexually transmitted diseases.

Scope

This guideline is relevant for staff in the QCH Emergency Department (ED), CPFMS, Clinical Safety Nurses and After-Hours Social Work. However it is applicable for all Child Health Queensland employees (permanent, temporary and casual) and all organisations and individuals acting as its agents (including Visiting Medical Officers and other partners, contractors, consultants and volunteers) who may interact with patients who disclose suspected sexual abuse/neglect.

- CHQ-WI-00726 Management of Paediatric Patients with near hanging or strangulation (health.qld.gov.au)

Guideline

ALERT

Every child who presents following a suspected sexual assault should be discussed with the Child Protection and Forensic Medical Service On-call Paediatrician or Fellow to help guide forensic assessment and child protection decision making.

Determine if a sexual assault examination is required

Every child who presents to the QCH Emergency Department with suspected sexual abuse or following a sexual assault should be discussed with the **Child Protection and Forensic Medical Service** (CPFMS) On-call **Paediatrician or Fellow** (3068 2660 or via switch afterhours) to help guide forensic assessment and child protection decision making.

The decision to conduct a sexual assault examination will be informed by the nature and timing of the alleged assault, the age of the patient, and any symptomatology. CPFMS conducts both forensic (within 72 hours of alleged sexual assault) and therapeutic sexual assault examinations for children outside the forensic window and **under the age of 14 years**. The decision to conduct an examination resides with the CPFMS Consultant.

Forensic sexual assault examinations are performed at the request of Queensland Police Service (QPS), and require the involvement of QPS in a timely manner before the medical assessment can be performed. Social work (ED, SWEWPHS or CPFMS) can assist in supporting the family to make a statement to QPS.

Children **over the age of 14 years** are not routinely seen for forensic sexual assault examinations by the CPFMS Paediatricians and are usually referred to an adult service. Each case should **still** be discussed with the CPFMS Paediatrician to determine the most appropriate pathway. While in the QCH Emergency Department, they should be offered opportunistic sexual health screening and treatment (*as detailed below*), as well as holistic psychosocial support with involvement of a social worker.

If external agencies (e.g. QPS), GPs or external hospitals contact Emergency or CATCH regarding an alleged sexual assault of a Paediatric patient, they should be directed to contact CPFMS Intake during work hours (3068 2660) or the CPFMS on-Call Paediatrician to determine urgency of clinical review, and to ensure appropriate legislative mandatory reporting requirements have been met. Clinicians with concerns of child sexual abuse have a mandatory requirement to report to The Department of Children, Youth Justice and Multicultural Affairs (DCYJMA) (Child Safety). More information can be found within CHQ-GDL-02611 Reporting a reasonable / reportable suspicion of child sexual abuse or assault.

Changes to the Criminal Code Act 1899 (Qld) were made in July 2021 to strengthen the protection of children from offences of a sexual nature, such that it is an **offence for any adult not to report sexual offending** by another adult against a child to QPS, even if the offence was historical. Dual reporting is not required if a report to Child Safety has already been made. More information can be found within Reporting sexual offending against a child (under 18 years) to Queensland Police Service (health.qld.gov.au)

CPFMS reviews for sexual assaults require the assistance of CPFMS nursing and social work staff. For urgent assessment required afterhours, the SWEWPHS and Safety Clinical Nurse Consultant provide this support role, with ongoing follow up psychosocial support handed over to the CPFMS social work team.

Emergency medical management following an acute sexual assault

Initial Assessment

Presentations of children following an acute sexual assault can be complex and require a holistic assessment and a multi-disciplinary approach. While it is important to minimise contamination of the patient's history prior to a police statement, the Emergency assessment still needs to consider the acute medical and psychological needs and safety of the patient. Patients may have comorbid physical injuries (e.g. complications of strangulation, bruising, etc, see Appendix 4) and the history taking and examination should screen for other non-genital acute injuries, as well as genital injuries that may require urgent surgical intervention (e.g. significant vaginal bleeding). Consideration of intoxication and psychological state may also impact on the ability of the patient to consent to have a sexual assault assessment or make a statement to police. Senior clinical staff and social workers should be involved early in the process to direct appropriate care.

Sexual Assault Assessment

When responding to paediatric patients following an acute sexual assault, the following process should be followed, with consultation with the On-Call CPFMS Paediatrician/Fellow.

(1) Assess level of risk to child

(2) Determine the appropriate screening investigations

(3) Identify need for

- (a) Antibiotic prophylaxis
- (b) Emergency contraception
- (c) Immunisation
- (d) HIV post exposure prophylaxis
- (e) Medical follow up

(4) Involvement of the social work team to ensure patient and family have psychosocial supports and onwards referrals for counselling and Victims Assist supports

Assess level of risk to child

Sexual assault presentations can be assessed as low or high risk for medical sequelae based on the nature of the assault, risk factors of the alleged perpetrator, and history and examination findings.

Low Risk	Touching or non-penetrative acts (with no concern of exchange of bodily fluids)
High Risk (Any one or more of the following):	Child has symptoms or signs of sexually transmitted infection (STI). (symptoms or signs of STI may include genital discharge, pain, bleeding, itchiness, presence of a lesion). Penetration or concerns of recent or healed genital injury from penetration. Penile/seminal contact with any body orifice. Perpetrator characteristics: (1) Alleged offender unknown to victim (stranger) (2) Alleged offender has known or historical STI, or engages in behaviours at high risk of STI (e.g. multiple partners, men who have sex with men (MSM), intravenous drugs) or from high risk community for blood borne viruses (3) Multiple alleged offenders Already diagnosed with one STI. Sibling or other child/adults in household have STI. High community rates of STIs. Indigenous child or offender.

Patients screened as "low risk" will generally not require STI or pregnancy related medical interventions, but may still require psychosocial support, and involvement of statutory agencies (QPS and Child Safety) depending on the nature of the assault/abuse. "High risk" patients should have appropriate medical screening and interventions for STI and pregnancy-related risks, as outlined below. Screening/treatment is also recommended where there is child or family preference or if otherwise medically indicated, or if recollection of events is compromised due to intoxication, etc.

Screening investigations

Depending on the nature of the alleged assault, consideration needs to be given to the risk of STIs and pregnancy resulting from the assault.

Suggested STI screening includes:

- **Bloods:** Hepatitis B serology, Hepatitis C serology, HIV serology, Syphilis Serology, B-HCG (if bedside test not performed)
- **Urine:** B-HCG, Chlamydia trachomatis PCR, Neisseria gonorrhoea PCR, Urine Culture
- Genital swabs if discharge (includes at meatus of urethra for boys)
- Directed investigations depending on symptoms (e.g. lower abdominal pain)

Appropriate counselling regarding the implications of the above testing also needs to be discussed with the family. With consent of the patient and family, consider copying the General Practitioner into the above results to ensure adequacy of follow up, particularly if prophylaxis is declined. Baseline STI screening is opportunistic and may not reflect infections acquired at the time of the assault.

Identify the need for:

Antibiotic prophylaxis

Ceftriaxone IV or IM (gonorrhoea prophylaxis)

- Dose: Infants, children and adolescents:
  - 50 mg/kg (maximum 500 mg) as a single dose intramuscularly or intravenously.
  - For patients weighing more than 150 kg: give 1,000 mg as a single dose.
- For intramuscular dose preparation and administration information, refer to the RCH Paediatric injectable guidelines and Guidelines for Maximal Amounts of solutions to be Injected into Muscle Tissue within CHQ-PROC-01039 Medication - Administration.

AND

Azithromycin Oral (chlamydia prophylaxis)

- Dose: Infants, children and adolescents: 60 mg/kg (Maximum 1,000 mg) as a single dose

Emergency contraception

Options for oral emergency contraception include levonorgestrel (LAM listed) and ulipristal (requires individual patient approval before supply). In some patients, a copper IUD may be another method of emergency contraceptive to consider that can be used up to 120 hours after exposure.

ALERT

Give either Levonorgestrel or ulipristal.

Do not administer both as effectiveness is reduced.

Levonorgestrel (Postinor-1) 1.5 mg single dose.

- Efficacy decreases with time, so give as-soon-as-possible following contact.
- Reduced efficacy after 72 hours, but can be used up to 120 hours (5 days) after exposure.
- If vomiting occurs within 2 hours of taking dose, repeat ASAP.

- Can use antiemetic (ondansetron) prior to dose to minimise nausea.
- Effectiveness can be reduced if taken with inducers of CYP3A4 medications (for example many anti-epileptics) – contact pharmacy for review of drug interactions.
- Consumer information: Postinor-1 - NPS MedicineWise

Ulipristal (EllaOne) 30 mg single dose

- Better efficacy compared to levonorgestrel up to 120 hours (5 days) after exposure
- Less emetogenic than levonorgestrel, but nausea can still occur.
- Can repeat the dose if vomiting occurs within 3 hours of dose.
- Effectiveness can be reduced if used with progestogen contraceptive – patients should be advised to wait at least 5 days before taking hormonal contraception, and should use a barrier method during this time and for a week after recommencing hormonal contraception.
- Effectiveness can be reduced if taken with inducers of CYP3A4 medications (for example many anti-epileptics) – contact pharmacy for review of drug interactions.
- Note: Ulipristal is not listed on the Queensland Health List of approved medicines (LAM) and requires an Individual patient approval before supply can be ordered.
- Consumer information: EllaOne - NPS MedicineWise

Immunisation

Hepatitis B

For unimmunised children, provide **Hepatitis B vaccination**, as soon as possible after exposure (within 14 days). Hepatitis B vaccination can be given the same time as Hepatitis B immunoglobulin at a separate site.

Recommended schedule:

Age	Dose	Repeat Schedule
All children	Paediatric Engerix B (10 microgram) 0.5 mL IM	Repeat dose at 1 month and 6 months
11- 15 years	Adult Engerix B (20 microgram) 0.5 mL IM	Repeat dose at 6 months

If alleged perpetrator known to be Hepatitis B positive and high-risk assault, also consider **Hepatitis B immunoglobulin IM.** Treatment is recommended as soon as possible after exposure, preferably within 72 hours of last sexual contact (but can be up to 14 days).

To obtain HBIg at QCH contact Blood Bank on 3068 3555.

Recommended schedule:

Weight	Dose
Less than 30kg	100 international units (IU)
30 kg or more	400 international units (IU)

HBIg comes in vials of 100 IU and 400 IU (concentration is approximately 100 IU per mL)

For immunised children with HBsAb less than 10 IU/mL (or if uncertain that serology will be followed up), a **booster dose of Hepatitis B vaccination** is recommended (as soon as possible, but within one week). If a high-risk exposure and sero-conversion is uncertain consider if Hepatitis B immunoglobulin is also required.

Human Papillomavirus (HPV)

For unimmunised children > 9 years of age who have been exposed to genital contact (even if not penetrative), consideration should be given to earlier commencement of HPV vaccination course (4,5). Involvement of the patient's GP to facilitate this vaccination course may be preferred for patients presenting afterhours.

Recommended schedule:

Age	Dose	Repeat Schedule
9-14 year	Gardasil 9 (9vHPV) 0.5 mL IM	Repeat dose at 6-12 months (2 dose schedule)
15 to 18 years (or immunocompromised patients of any age)	Gardasil 9 (9vHPV) 0.5 mL IM	Repeat dose at 2 months, and a third dose at 6 months (3 dose schedule)

- Additional doses may be required if provided at shorter dose intervals
- Families should be advised that Gardasil is included as part of the Year 7 School Vaccination Program, and they will need to opt out of Gardasil as part of this program if commencing the dosing regimen early

HIV post exposure prophylaxis

Consult the HIV PEP guideline CHQ-GDL-65664 Post-Exposure Prophylaxis for HIV for risk assessment and treatment information. If high risk exposure and requires PEP or if further advice is required, please discuss with Infectious Diseases on-call clinician.

Medical Follow Up

In addition to ensuring the appropriate follow up of the above testing, recommended additional screening includes:

- Urine chlamydia and gonorrhoea in 2 weeks
- Blood tests for Hepatitis B and Hepatitis C, HIV and syphilis serology at 3 months and 6 months

The above recommendations (and any immunisation follow up) should be included in a discharge letter to the GP which is provided to the patient prior to leaving the Emergency Department. A generic GP letter is included in Appendix 3.

Psychosocial Supports

Paediatric patients who are reviewed in the context of an alleged sexual assault require ongoing psychosocial evaluation and support and should be referred to appropriate services, e.g. Bravehearts. They may also be eligible for financial support from Victims Assist Medical Certificate - Victim Assist Queensland - Financial assistance application forms - victims of crime | Publications | Queensland Government. Early involvement of social work support is essential for these presentations, as well as handover to the CPFMS social work team to follow up with the family in the days that follow the acute assessment.

Consultation

Key stakeholders who reviewed this version:

- Paediatric Consultant, Child Protection & Forensic Medicine Service
- Paediatric Fellow, Child Protection & Forensic Medicine Service
- Senior Social Worker, Child Protection & Forensic Medicine Service
- Clinical Nurse Consultant, Child Protection & Forensic Medicine Service
- Acting Director of Infection Management and Prevention service
- Paediatric Infection Specialist (IMPS and QSIS)
- Senior Pharmacist – Immunisation (QSIS)

__/__/__

Dear Dr _____

RE: _____ DOB: _____

Thank you for following up with the above patient. They presented to QCH ED on __/__/__ and had the following performed: [SELECT THOSE THAT APPLY]

- ❑ STI screen (urine chlamydia and gonorrhoea, blood serology)
- ❑ STI prophylaxis
- ❑ Pregnancy test
- ❑ Emergency contraception

They have been recommended to follow up with their general practitioner for ongoing care. The recommended follow up investigations include:

- Urine Chlamydia and Gonorrhoea at 2 weeks
- Blood serology (HIV, HBV, HCV, Syphilis) at 3 months and 6 months

As part of their medical review, their vaccination status with respect to HPV and HBV was discussed, with ongoing follow up as per the Immunisation Schedule with their GP.

Vaccinations administered during the review were:

Queensland Health

Caring for people disclosing sexual assault

Directive number: QH-HSD-051:2019

Effective date: 22 July 2019

Review date: 22 July 2022

Supersedes: New

On this page:

- Purpose
- Scope
- Principles
- Outcomes
- Mandatory requirements
- Related or governing legislation, policy and agreements

Purpose

This Health Service Directive requires Hospital and Health Services to take a consistent approach to managing the clinical and psychosocial needs of people who have experienced sexual assault. This includes the person-centred provision of forensic examinations.

Scope

This directive applies to all Hospital and Health Services (HHSs).

Principles

- Compassion—everyone disclosing sexual assault will be treated with respect, courtesy, compassion and dignity and their clinical care and any forensic examination will be responsive to their particular needs including access to, or referral to counsellors and support services.
- Person-centred care—everyone disclosing sexual assault will have access to trained clinicians who can provide timely and confidential clinical care and forensic examinations after presentation to hospital.
- Information—everyone disclosing sexual will be given clear information about their options relating to having a forensic examination and the level of involvement of police.
- Collaboration—HHSs will work effectively with the Queensland Police Service, other government agencies as well as community organisations to ensure a responsive, supportive and integrated approach to caring for people disclosing sexual assault.

Outcomes

Hospital and Health Services included in the scope of this directive shall achieve the following outcomes:

- Compliance with Queensland Government Interagency Guidelines for Responding to People Who Have Experienced Sexual Assault.
- Compliance with the Queensland Health Guideline: Guideline for management of care of people 14 years and over disclosing sexual assault
- Compliance with the Department of Health Guideline: Conducting Child Sexual Assault Examinations (*Document Number # QH-GDL-943:2015*)
- Compliance with the informed consent requirements detailed in the Queensland Health Guide to Informed Decision-Making in Healthcare
- In doing so, HHSs will provide consistently high-quality, compassionate and person-centred services to people disclosing sexual assault who present to public hospitals.

Mandatory requirements

Hospital and Health Services (HHS) will:

- Provide 24-hour access to clinical care and forensic examinations for people 14 years and over disclosing a sexual assault in accordance with the Guideline for the management of care of people 14 years and over disclosing sexual assault.
- Ensure everyone who discloses that they are the victim of a sexual assault is informed of their choices about forensic examinations and reporting the assault to police, including the benefits of early reporting.
- Provide forensic examinations to victims of sexual assault when victims choose to have a forensic examination regardless of whether victims decide to report the matter to police or decide to defer this decision.
- Ensure adherence to informed consent for all aspects of caring for people disclosing sexual assault, including clinical treatment, forensic examinations, evidence collection and storage, police involvement, referrals and the release of information to third parties.
- Provide clear information about the storage, access and destruction of forensic examination samples to victims of sexual assault who have a forensic examination but choose to defer the decision to report the assault to police.
- Provide a suitable model of care for managing paediatric sexual assault patients (under 14 years of age) within each HHS.
- Report all suspected child sexual assaults to Child Safety Services in line with the mandatory reporting and duty of care responsibilities of clinicians.
- Ensure all patients are referred to (with patient consent) and/or provided information regarding sexual assault counselling and support services.

Review

This Health Service Directive will be reviewed at least every three years.

Date of last review: 22/07/2019

Supersedes: New Directive

Approval and implementation

Directive Custodian

Chief Executive Officer, Health Support Queensland

Approval by Chief Executive

Director-General
Queensland Health

Approval date: 17/07/2019

Issued under section 47 of the *Hospital and Health Boards Act 2011*.

Definitions of terms used in this directive

Term	Definition / explanation / details	Source
Hospital and Health Service	Hospital and Health Services are statutory bodies and are the principal providers of public sector health services.	*Hospital and Health Boards Act 2011*
Forensic Examination	The forensic examination consists of obtaining a history as to the nature of the assault to guide the subsequent physical examination. It also includes interpretation of injuries and the collection of forensic samples as it relates to the alleged sexual assault. (A Sexual Assault Investigation Kit (SAIK) is used to collect DNA evidence)	Queensland Government Interagency Guidelines for Responding to People Who Have Experienced Sexual Assault.
Child	Under the age of 18 years For child victims of sexual assault, under the age of 14 years, sexual assault medical and forensic examinations should be performed by a medical officer with appropriate paediatric skills including child protection and/or sexual assault medical examination training or skills.	Department of Health Guideline: Conducting Child Sexual Assault Examinations (Document Number # QH-GDL-943:2015)
Trained Clinicians	Forensic Examinations can be provided by: • Forensic Physician • Medical Officers who have received training in sexual assault	

	examination • Senior Medical Officers accessing phone support from Clinical Forensic Medicine Unit • Government Medical Officers • Forensic Nurse Examiners (postgraduate qualification in Forensic Medicine) • Sexual Assault Nurse Examiners. Nurses trained in sexual assault examinations having completed a recognised short-course eg SANE 40CPD short course)

Curriculum Vitae Dr Adam Griffin
(MBBS, M.Forens.Med, FFCFM(RCPA), FACLM)

AHPRA: **MED0001399231**

Director
Senior Forensic Physician
Clinical Forensic Medicine Unit
51 Herschel Street
Brisbane Qld 4000

As at August 2022

1. My name is Dr Adam Griffin. I am a legally qualified medical practitioner registered in Australia to practice in the State of Queensland, and based in Brisbane. I am a Senior Forensic Physician and the Director of the Clinical Forensic Medicine Unit in Queensland.

2. I have a medical degree from the University of Queensland (MBBS) and qualified in 1996. I have a Masters in Forensic Medicine through Monash University, Melbourne. I am currently studying law through the Queensland University of Technology.

3. I am a Fellow of the Australasian College of Legal Medicine (ACLM) and President of the College since 2019. This professional College is the pathway through which Clinical Forensic Medicine is recognised as an area of advanced credentialed practice in Queensland.

4. I have been working as a Forensic Medical Officer or Forensic Physician since August 2007, Deputy Director of the Unit from 2009 to 2012 and Director of Queensland's Clinical Forensic Medicine Unit from 2013 to date. Prior to this I worked extensively in Acute and Emergency Medicine.

5. I am a foundation Fellow of the Faculty of Clinical Forensic Medicine (FFCFM) within the Royal College of Pathologists of Australasia (RCPA).

6. I am a member of Forensic and Clinical Toxicology Australia (FACTA) and the Australian and New Zealand Forensic Sciences Society (ANZFSS).

7. The principal function of the Clinical Forensic Medicine Unit is to provide clinical forensic medical services. These range of services include:

    - Examination of victims of crime and of alleged offenders with a view to obtaining, documenting and interpreting medical evidence.
    - Examination and treatment of sexual assault victims.
    - Providing toxicological advice to police and the Courts in relation to traffic and other offences.
    - Providing medical (including toxicological) advice to the Coroner.
    - Providing a medical service (telephone advice, examination and treatment) to police detainees in watch houses.[1]
    - Advising police, ambulance and doctors at suspicious death scenes to provide advice to police.
    - Appearing in Court to give objective, impartial expert evidence.

8. I provide supervision and training to doctors on the professional pathway to Fellowship in the Australasian College of Legal Medicine. I provide lectures to Detectives in Clinical Forensic Medicine each quarter, with a separate lecture series relating directly to sexual assault investigation and drug facilitated crime.

9. I provide a peer review service to the Medicine and Law Journal. I have spoken at national and international medical and legal conferences relating to Clinical Forensic Medicine, particularly in relation to health care related death, death investigation and toxicology in Clinical Forensic Medicine.

[1] This particularly involves the care of those with drug addiction, suffering intoxication or withdrawal syndromes, mental health conditions and general medical issues.

Queensland Health Sexual Offences Medical Protocol (confidential)

Please print this document and action/ complete applicable components

References to police throughout the document are not relevant to Just in Case (JIC) examinations. Some sections of this document are not applicable for Just in Case examinations – this is indicated throughout.

Notes regarding use of this Medical Protocol.

Sexual Assault Investigation Kits (SAIK: provided by Queensland Police) have been assembled to assist in the forensic examination of victims of sexual assault and should be used according to these instructions. This will ensure that the patient is appropriately examined, and laboratory specimens correctly collected, the medico-legal requirements will be fulfilled if all details are completed. Discard all unused material.

Security

The silver tape of the transport bag should be removed, and the edges of the tamper-proof bag stuck down. Blood and/or urine taken for toxicology must be placed in Police Traffic transport kits. Reference samples are collected by Police and must be kept separately from the medical evidence samples (not applicable for JIC)

Police

The Police are responsible for rapid transport of medical specimens and duplicate Medical Protocol pages to DNA Analysis Unit (and Forensic Toxicology if a sample taken).
Reference samples must be kept separate.

Enquiries regarding SAIK contents

DNA Analysis Unit or Forensic Toxicology
39 Kessels Rd
COOPERS PLAINS QLD 4108
[redacted]

Queensland Government

Room cleaning

- Prior to a sexual assault examination, the clinician should perform a routine clean of the work area including work benches/trolley and examination couch to minimize the risk of DNA cross-contamination.

- This should include initial spraying of the work areas with 0.05% bleach solution which should be left for 5 minutes before wiping down with a clean disposable paper towel. This is followed by spraying with 70% ethanol solution to dry bleach residue, followed by wiping down with a clean disposable paper towel.

Consent

- Consent for a sexual assault examination is not implied and needs to be obtained. Do not assume that the complainant fully understands what the examination entails. Discuss all aspects of the examination such as history, general physical examination, genital examination, the taking of forensic specimens and photographing of injuries (not genitals) as well as obtaining consent for release of protocol and specimens to police and therefore for Court purposes.

- Consent must be given freely and be valid (capacity to give consent). Furthermore, the complainant needs to know that consent may be withdrawn at any stage.

- If there are concerns that the complainant does not have capacity to consent a Statutory Health Attorney (if appointed) or the Office of the Public Guardian may be contacted to obtain consent. (This is not relevant for Just In Case: such cases should all require investigation).

- Obtain the name and signature of the witness to the examination (preferably same sex as complainant, and unrelated to the complainant).

History

- Elements of history are recorded on pages 1 and 2 of the SAIK examination sheets. This will need to be photocopied for your records as the originals are placed in the sealed SAIK bag that is sent for DNA analysis.

- Record your details and those of requesting police officer. Date and time of alleged assault and date and time of examination; type of assault; previous/ relevant sexual history of the complainant; date of last menstrual period etc., as well as whether complainant has subsequently showered, douched, cleaned teeth etc.

- A brief summary of the assault can then be recorded, remembering that this is a contemporaneous summary for subsequent provision of a statement. Record all elements of the assault that will direct you to where you will examine for injury and take specimens.

Examination—general

- The complainant is directed to the examination room and asked to disrobe onto a drop sheet if clothing is required for forensic examination. Clothing is then placed one item at a time into individual paper bags (provided by the Queensland Police) which are sealed and identified (not for Just In Case).[1] The drop sheet is then folded inwards and placed into the plastic bag provided.

- A head to toe general examination is made documenting any acute injuries. Note the mood and demeanour of the complainant and if clothing is damaged or stained (if worn during the assault). If the history suggests kissing/biting/licking or if ejaculate was alleged to have been deposited on the skin, then the relevant area needs to be swabbed (wet swab followed by a dry swab). A swab is moistened with sterile water and rolled across the area. The swab is immediately replaced inside its sheath. A second (dry) swab is then rolled over the area. All swabs should be sealed before packaging.

- Specific areas that should be observed are scalp, inner oral mucosa, behind ears and hands/wrist areas looking for injuries. Fingernail scrapings may be taken by Scenes of Crime Officers (Queensland Police) if the complainant reports scratching their alleged attacker (not applicable for Just In Case).

- Injuries can be detailed on the general examination page and body charts are provided in the appendix to graphically document injuries.

Examination—genital

- **Female genital examination** needs to record whether the external genitalia is mature, pubertal or prepubertal and whether there is any blood, discharge or lubrication present on inspection.

- Inspect the mons and labia majora looking for injuries; separate the labia majora and inspect the labia minora, hymen and posterior fourchette areas looking for injuries such as abrasions and tears. Note any injuries to clitoris and urethral areas. Examine the inner thighs looking for injuries such as bruising; as well as perineal area. An anatomical diagram is provided in the appendix to assist with documenting genital injury.

- Swabs are taken from inner labia majora (formerly recorded as ‘vulval’); lower vaginal area (just inside labia minora) and high vaginal area (preferably from the posterior fornix under direct vision with the aid of a speculum if practicable, inserted carefully ‘blind’ if not, or cervical os swab if assault greater than 3 days and less than 7 days). Swabs are best performed in a rolling action of the cotton tip. The external labia majora area should be swabbed in the case of attempted penetration/sexual assault.

- **Male genital examination** includes examination of the external genitalia for signs of injury as well as anal/rectal area as dictated by the history of the alleged assault.

- In cases where examination is of an alleged offender, wet and dry swabs are obtained of the shaft of the penis; the base of the penis and the glans penis including coronal sulcus under the glans. (Not relevant for Just in Case)

[1] There is no provision for clothing retention in Just In Case examinations.

Anorectal examination

- Inspect the perianal area for recent or old injuries including bruising and abrasions noting any tears and their position, likely age, tenderness etc. A dry swab can be obtained remembering that, in females, ejaculate can migrate from the vulvovaginal area.

- Inspect the anal canal for tears, abrasions and bruises, if possible with the aid of a proctoscope.

- Inspection of the rectum can only occur via a proctoscope. A rectal swab can be taken via the proctoscope avoiding contact with the wall of the instrument. Tenderness may prohibit use of the proctoscope: please note this in the record.

Other specimens

- Swabs may be taken from the oral mucosa if there is a history of penile penetration with or without ejaculation. The swab should cover all areas of the oral mucosa, particularly in the gutter between the inner cheek and lower molars and under the tongue.

- In the absence of oral penetration and if the complainant has full recall of the incident a reference DNA swab may be taken from the mouth of the complainant by attending police. (Not for Just In Case)

- Fingernail scrapings or clippings may be taken if the history suggests that the complainant scratched the alleged offender. These can be arranged through QPS Scenes of Crime Officers. (Not for Just In Case)

- At the end of the examination it is recommended that a swab be taken of the work surface to exclude potential DNA contamination.

Toxicology

- Use police traffic kits: one for blood and one for urine. Complete details in the Sexual Assault Toxicology Form and only use the tubes provided. This is not applicable for Just In Case.

- For blood tests, take 5ml blood and place in the small blood tube. Write the complainant's name, date of birth, time and date as well as collector's name on tube. Affix barcode label from the kit to "barcode" space on Sexual Assault Toxicology Form. Sign the seal and attach to lid of blood tube, then place small tube into medium tube, and thence into the large tube.

- Separate kits are used when both blood and urine are collected. The same procedure is adopted for urine tests. Urine is also placed in the small blood tube, and the same packaging procedure followed as for blood. Write the complainant's name, date of birth, time and date as well as collector's name on tube. Affix barcode label from the kit to "barcode" space on Sexual Assault Toxicology Form. Sign the seal and attach to lid of medium tube, then place into the large tube.

- Photocopy the Sexual Assault Toxicology Form and place a copy into each box. Seal the boxes with the Yellow "Infectious Hazard" sticker.

- Write on the outer box "DFSA – Not Traffic".

- The original Sexual Assault Toxicology Form remains in the SAIK with the other specimens and documents. Ensure you take a photocopy yourself for your record.

Other blood tests

This section is not applicable for Just in Case

- A blood sample may be collected specifically for comparative interpretation of DNA profiles rather than a buccal swab, particularly if the complainant has little recollection of events or if oral penetration has occurred. Blood taken is placed into an EDTA specimen container and is used to determine the DNA profile of the victim.

- **FTA Paper** may be "spotted" with blood (two drops from the end of a needle is adequate) in lieu of providing blood in an EDTA specimen container. A finger-prick would suffice. Saliva/mouth swabs may also be placed upon FTA paper.

- If any concerns, instruct QPS to collect a reference sample the following day.

Completing the examination involving the Queensland Police

This section is not applicable for Just in Case – see next section

- At the completion of the examination the specimens are labelled with date, time, examiner and anatomical location of swabs. It is hoped in time there will be unique barcodes available for such labelling purposes. The swabs are then sealed and placed in the tamper-proof evidence bag along with the SAIK and toxicology paperwork (4 pages) and drop sheet if used.

- The SAIK bag is then sealed and handed to police along with any other specimens (toxicology, clothing etc.).

- Use the front page of SAIK kit **(see page 7)** to obtain signature of handover of custody of specimens to police noting the police officer's name and station as well as date and time of handover.

- At the completion of the examination, another clean of the work area should be performed (as in 1 above) to minimize the risk of DNA contamination.

Completing the examination involving a Just In Case.

- At the completion of the examination the specimens are labelled with date, time, examiner and anatomical location of swabs. The swabs are then sealed and placed in the tamper-proof Just In Case evidence bag along with the SAIK and drop sheet if used.

- The SAIK bag is then sealed and the chain of custody process engaged to forward the specimen to QH FSS.

- At the completion of the examination, another clean of the work area should be performed (as in 1 above) to minimize the risk of DNA contamination.

- Use Pathology Queensland Chain of Custody form

After care

- If the complainant has not been taking contraception or if in any doubt, they should be offered a stat dose of Postinor-1.

- Consideration needs to be given to sexually transmitted infection and need for PEP (post-exposure prophylaxis for HIV) and referral to a Sexual Health Clinic for follow up. We recommend discussion with the local HHS Infectious diseases team. Information is also available at: http://www.health.qld.gov.au/sexhealth/

I hereby consent to

- a complete medical examination including a pelvic (internal) examination
- to the recording of the findings
- the collection of all necessary specimens for laboratory tests
- the taking of necessary photographs of injuries related to the reason for this examination.

I understand that I can stop the examination at any time

- I give my permission for information and evidence collected during this examination for forensic purposes to be given to Police and the Office of the Director of Public Prosecutions, to assist an investigation.

PATIENT NAME _____

Date _____

☐ **Patient has chosen NOT to make a formal report to police, at this time**

I hereby consent to

- a complete medical examination including a pelvic (internal) examination
- to the recording of the findings
- the collection of all necessary specimens for laboratory tests
- the taking of necessary photographs of injuries related to the reason for this examination.

I understand that I can stop the examination at any time

I have decided NOT to make a complaint to police at this time and I understand that

- Delaying a report *to Police* may reduce the opportunity to obtain evidence and may reduce the information available to Police in an investigation.
- Only DNA samples will be collected during the examination.
- I can report to police at later date.
- The kit containing samples collected during the examination will only be stored for 12 months
- There is a small chance of deterioration in the sample quality over time

Forensic Examination Consent Process- Explanatory Notes for Examiner

The Forensic examination is distinct from standard medical care. To obtain fully informed consent for the forensic examination, the clinician should convey specific features of the forensic examination process.

1. A forensic examination is for collecting evidence. It includes taking a history of the event, using swabs to collect DNA or other evidence, and documenting injuries. Advise the patient that:
    - A forensic examination is to collect evidence for a police investigation at some point.
    - They can choose not to have a forensic examination.
    - The history-taking is just to inform collection of samples, so they only need to provide information they are comfortable with;
    - They are in control of the process.
    - They can decide at any time to stop the examination
2. The limitations of the examination:
    - A forensic examination may not yield biological or physical findings that could be used in evidence
    - A forensic examination may not contribute to the investigation or subsequent prosecution.
3. For victims who proceed with standard police reporting explain that:
    - The examination findings will be shared with the Police, and possibly with the Office of Public Prosecutions, to further an investigation or subsequent prosecution (this is unlike the normal rules of confidentiality in a standard clinician-patient relationship).
    - The complainant remains in control of the process and can withdraw the consent to share information with police.
4. For victims who proceed with a 'Just in Case' pathway:
    - It may the best option for an individual in his/ her circumstances but there are limitations to this procedure relating to possible loss of evidence.
    - It is important to share the following limitations of the JIC process with the person.
        - possible loss of an opportunity by the police (witnesses, CCTV for example);
        - inability to collect other evidence samples (clothes, photographs, fingernail scrapings, toxicology etc);
        - and a small possibility of deterioration in sample quality.
    - Reinforce that samples will only be kept for 12 months.
    - Inform victims that a counsellor will be in touch in subsequent days, but they may opt out of getting this contact.
    - Inform victims that contact will be attempted during the 12-month period as part of follow up care.

Keep checking if the person has any questions about the information

SEXUAL ASSAULT TOXICOLOGY FORM – not used for JIC

NAME:	DOB:

DIRECTIONS FOR THE COLLECTION OF TOXICOLOGY SPECIMENS

- Collect blood and urine samples ASAP if incident occurred within previous 72 hours.
- Use two separate police traffic (UIL/UID) toxicology kits; one for the blood and one for the urine and CLEARLY mark them 'Crime Scene Sample — not Traffic'
- ALWAYS collect the blood specimen in a Fluoride Oxalate tube. Urine specimens may be collected in a sterile container, a minimum of 20mLs is preferred.
- Complete the questionnaire and place this form inside the kits.

QUESTIONNAIRE

Give details of any alcohol or drugs consumed, periods of altered consciousness and/or memory loss, and signs or symptoms of intoxication reported by the patient/subject:

Alcohol before the	YES	NO	Type/amount/time of last drink before incident?
Alcohol since the	YES	NO	Type/amount/time of last drink prior to sample collection?
Drugs prior to the	YES	NO	Type/amount/how taken/time of last drug ingestion before incident?
Drugs since the inc incident (including those administered by QAS if known)?	YES	NO	Type/amount/how taken/time of any drugs ingested since the incident?
Any prescription medications?	YES	NO	Type/dose/when last taken?
Any 'over the counter'/herbal preparations?	YES	NO	Type/when last taken?
Any history of liver/kidney	YES	NO	
Weight of patient (kg)			Time and details of last meal?

General examination

SURNAME	OTHER NAMES

FOR FORENSIC PURPOSES WEAR GLOVES AT ALL TIMES. AS A MINIMUM CHANGE THE GLOVES BETWEEN THE GENERAL EXAMINATION, GENITAL EXAMINATION AND ANAL EXAMINATION (IF PERFORMED)

- Clothing (if still wearing clothing worn during the assault) should be removed on a drop sheet in the presence of the examiner).
- Place each item in a separate identified bag until decision made regarding police action.
- Avoid further damage, if possible, when clothing is removed or during inspection.
- If possible dry wet clothing before bagging and use a paper bag rather than a waterproof bag.

APPEARANCE AND MOOD OF PATIENT
State of dress, hair and emotional state (observation not interpretation)

Clothing: General description of stains or damage.

GENERAL EXAMINATION: Use the diagrams in appendix if required. Detail everything (all bruises, abrasions, lacerations, incised wounds, bites, tenderness, and swelling).

Normal		Abnormal (specify)	Note if not examined.
☐	Mouth	☐	_____
☐	Neck and throat	☐	_____

Queensland Health

Queensland Health Guideline

Document Number: QH-GDL-472:2019

Guideline for the Management of care for people 14 years and over disclosing Sexual Assault

1. Purpose

This guideline provides recommendations regarding best practice to support the management of people 14 years and over who have disclosed Sexual Assault. The guideline recognises that services can be adapted as appropriate to suit local capabilities.

2. Scope

This Guideline applies to all Hospital and Health Services (HHSs).

3. Aboriginal and Torres Strait Islander considerations

Hospital and Health Services should give consideration to providing cultural and gender appropriate services, including practitioners if possible.

4. Related documents

- *Hospital and Health Boards Act 2011* (Qld)
- *Criminal Code Act 1899* (Qld)

Queensland Government

5. Guideline for the management for people 14 years and over disclosing sexual assault

5.1. Principles

Hospital and Health services will have systems in place to offer adults disclosing that they are the victim of a sexual assault with medical care, psychosocial support and if required, access to a forensic examination. It is recognised that there will be local variation in how this is achieved but processes will:

- Maintain the patient's safety, confidentiality and privacy.
- Minimise further impact on a traumatised person by involving the minimum number of personnel possible in the clinical care and forensic examination and where possible offering choice of gender.
- Include support from social workers, sexual assault workers, nursing staff or relevant local non-government support services. Offer interpreter services where required.
- Recognise that investigation of sexual assault, a criminal offence, is a police matter. Patients will be encouraged to report the assault to police. However, where a patient with the capacity to consent is clear that they do not want police involved, they may choose to have a forensic examination. This may include a child aged 14 – 17 years of age who has parental consent for the examination and/or a Gillick-competent[1] child.
- Report all reasonable suspicions of child abuse and neglect in line with the mandatory reporting and duty of care responsibilities of clinicians.
- Commence within two hours of the patient's arrival in the Emergency Department and where possible by a minimum number of clinicians.
- Be based on informed consent for all aspects of the management including treatment and forensic examination. Adhere to defined meanings of consent, accounting for a person's capacity to consent, including that such capacity may require assessment if the adult person has a mental health disability, intellectual impairment or is temporarily affected by substances including alcohol.
- Recognise that a forensic examination is defined as a 'personal matter', in Part 2 of Schedule 2 of the Powers of Attorney Act, that is, not a health care matter.
- Ensure that consent for forensic examination for a person with impaired capacity can only be provided by an authorised power of attorney, (general power of attorney or Enduring power of attorney), appointed Guardian or the Public Guardian. Substituted decision-making by a statutory health attorney is not authorised for forensic examinations.
- Ensure that patients are aware that they may withdraw consent at any time.
- Ensure patients understand what happens to any samples from a forensic examination, including storage, access and destruction processes.

[1] A Gillick-competent child is one who has the capacity to consent despite being under 18 years of age. To be Gillick-competent, the child must have sufficient understanding, intelligence and maturity to appreciate the nature of the care to be provided, the consequences and risks, and the alternatives. This will vary according to the significance of the decision and factors within the child such as their maturity: Gillick v West Norfolk and Wisbech Area Health Authority [1986] 1 AC 112.

5.2. Clinical Care

1. **Nursing triage** on presentation at Emergency Department is as per all presentations including assessment for injuries and vital signs. Clinical interventions will take priority over forensic examination (*See Attachment 1*).
2. Immediately notify the Senior Medical Officer for any significantly injured or potentially unstable patients to arrange **urgent medical assessment**.
3. Offer all patients psychosocial support in a private environment, if available, and discussion of options including information to inform a decision on police involvement and a forensic examination.
4. For patients under 18 years, if a reportable suspicion[2] has been formed about a child, the treating health professional is to report that to Child Safety Services in line with mandatory reporting responsibilities of clinicians.
5. Pending consent of the patient and explanation of options, clinical staff trained in providing Sexual Assault examinations collect evidence using Sexual Assault Investigation Kit. See details in 7.3.
6. Accurate and comprehensive clinical notes should be recorded in the patient's hospital record. All clinical documentation should be made in accordance with QH-POL-280:2014 Clinical Records Management Policy as well as clinical documentation guidelines that are relevant to individual Hospital and Health Services. A forensic examination should be documented using an appropriate proforma. The forensic record is separate to the patient's clinical record. Copies of clinical documentation should only be filed in the forensic record if relevant to the forensic medical examination.
7. It is recommended that all examinations occur in the presence of an appropriate person acting as a chaperone / support person where possible.

5.3. Clinical Interventions

5.3.1. Time-critical interventions include:

- injuries sustained during the assault
- emergency contraception
- Hepatitis B vaccination +/- immunoglobulin
- HIV Post Exposure Prophylaxis (PEP)
- Chlamydia prophylaxis treatment.

5.3.2. Investigations include:

- for injuries as clinically indicated
- Beta-HCG if possibility of pregnancy pre-existing
- Full Blood Count (FBC), Electrolytes and Liver Function Tests (ELFTs) if commencing PEP
- other serology may be deferred until follow-up
- Sexually Transmitted Infection (STI) screening is recommended two weeks post episode by a relevant practitioner—this may be by referral to a general practitioner or sexual health service.

5.3.3. Clinical interventions (details in Attachment 2):

- Treat any injuries identified on assessment as clinically indicated.
- Consider Hepatitis B immunity.

---

[2] 'Reportable suspicion' about a child is defined in section 13E(2) of the Child Protection Act 1999 (Qld) as a reasonable suspicion that the child has suffered, is suffering, or is at unacceptable risk of suffering, significant harm caused by physical or sexual abuse; and, may not have a parent able and willing to protect the child from the harm. If a reportable suspicion has been formed, a written report must be given to the chief executive (section 13E(3)).

- Consider HIV risk: if high or uncertain risk HIV exposure, contact Infectious Disease physician or sexual health clinic for advice regarding PEP and follow up.
- Consider Emergency Contraception: Postinor 1 (levonorgestrel 1.5mg) up to 72 hours after reported assault or if >72hrs -120 hours, consider Ulipristal acetate.
- Consider STI prophylaxis if unreliable follow up or patient concern.
- Consider Tetanus Prophylaxis if indicated.
- Arrange appropriate follow up: this follow up will vary with site, reported events, individual circumstances and background medical issues.

5.4. Psychosocial Interventions:

Where available, the person should be referred to a Sexual Assault support service or Social Work service for post-acute support such as:

- assisting to the person to return to their usual level of functioning
- providing information about options available including their rights as a victim of crime.
- practical support, including contacting family members or support persons. If consent provided, talk to family members or support persons about how best to support the patient
- advice on 'common' responses, symptoms and reactions following a sexual assault
- psychosocial and risk assessment – physical, psychological and/or financial risk to patient and any noted child protection concerns
- information and referral, with consent, to relevant sexual assault support service.

The social worker, or other health professional, should also advise the patient of their right to:

- sexual health medical advice, treatment and follow up
- information about reporting options, including making a formal complaint to the Queensland Police Service
- referral to the Queensland Police Service via PoliceLink on telephone 131 444 to report the matter or attend any police station in their area to discuss their legal options
- Queensland Police Service's alternate reporting options
- referral to the state-wide Sexual Assault Helpline on telephone 1800 010 120.

For those under 18 years, report all suspected sexual assaults in line with mandatory reporting responsibilities of clinicians.

Where the sexual assault has occurred within an intimate personal relationship, family relationship or an informal care relationship, the patient should be informed of their option to seek protection under the Domestic and Family Violence Protection Act 2012. Where appropriate, the patient should also be referred to a specialist domestic violence service for support and assistance.

5.5. Forensic Examinations:

- Wherever possible, the forensic examination should be provided by a suitably trained clinician such as a Forensic Nurse Examiner; Nurse(s) trained in sexual assault examination; Government Medical Officer(s); Forensic Physician; or other Medical Officer(s) who have received training in forensic examinations.
- When there is no trained clinician available, a Senior Medical Officer can complete the examination accessing phone support from the Clinical Forensic Medicine Unit.
- A sexual assault investigation kit (SAIK) should be used, and a sexual assault examination record completed.
- Care should be taken to minimise the risk of DNA contamination from the room's fixtures and facilities.

- If the patient consents to a forensic examination but does not wish to make a formal complaint to police or wishes to defer this decision, then the examination is performed without notification to police. In this case, Queensland Health stores the sample centrally until such a time that the patient decides to report the sexual assault to police, or the sample is destroyed after 12 months. Patients should provide written acknowledgement that the sample will be destroyed after 12 months, unless QPS request the sample following a complaint to QPS by the patient.
- Release of patient information and specimens to police should only occur with the patient's consent.
- Examiners should ensure that chain of custody obligations are rigorously attended to, ensuring that the validity of collected forensic evidence is maintained.
- Forensic examiners with scope of practice in Adult sexual assault must NOT perform forensic examination for patients under the age of 14 years. Forensic examiners with a scope of practice in paediatric sexual assault may attend all patients 18 years and under.

6. Definition of Terms used in the guideline

Term	Definition / Explanation / Details	Source
Hospital and Health Service	Hospital and Health Services are statutory bodies and are the principal providers of public sector health services.	*Hospital and Health Boards Act 2011*
Forensic Examination	The forensic examination consists of obtaining a history as to the nature of the assault to guide the subsequent physical examination. It also includes interpretation of injuries and the collection of forensic samples as it relates to the alleged sexual assault. A Sexual Assault Investigation Kit (SAIK) is used to collect DNA evidence	Queensland Government Interagency Guidelines for Responding to People Who Have Experienced Sexual Assault.
Child	Under the age of 18 years For child victims of sexual assault, under the age of 14 years, sexual assault medical and forensic examinations should be performed by a medical officer with appropriate paediatric skills including child protection and/or sexual assault medical examination training or skills.	Queensland Health Guideline: Conducting Child Sexual Assault Examinations (Document Number # QH-GDL-943:2015
Trained Clinicians	Forensic Examinations can be provided by: • Forensic Physician • Medical Officers who have received training in sexual assault examination • Senior Medical Officers accessing phone support from Clinical Forensic Medicine Unit • Government Medical Officers • Forensic Nurse Examiners (postgraduate qualification in Forensic Medicine) • Sexual Assault Nurse Examiners. Nurses trained in sexual assault examinations having completed a recognised short-course eg SANE 40CPD short course)

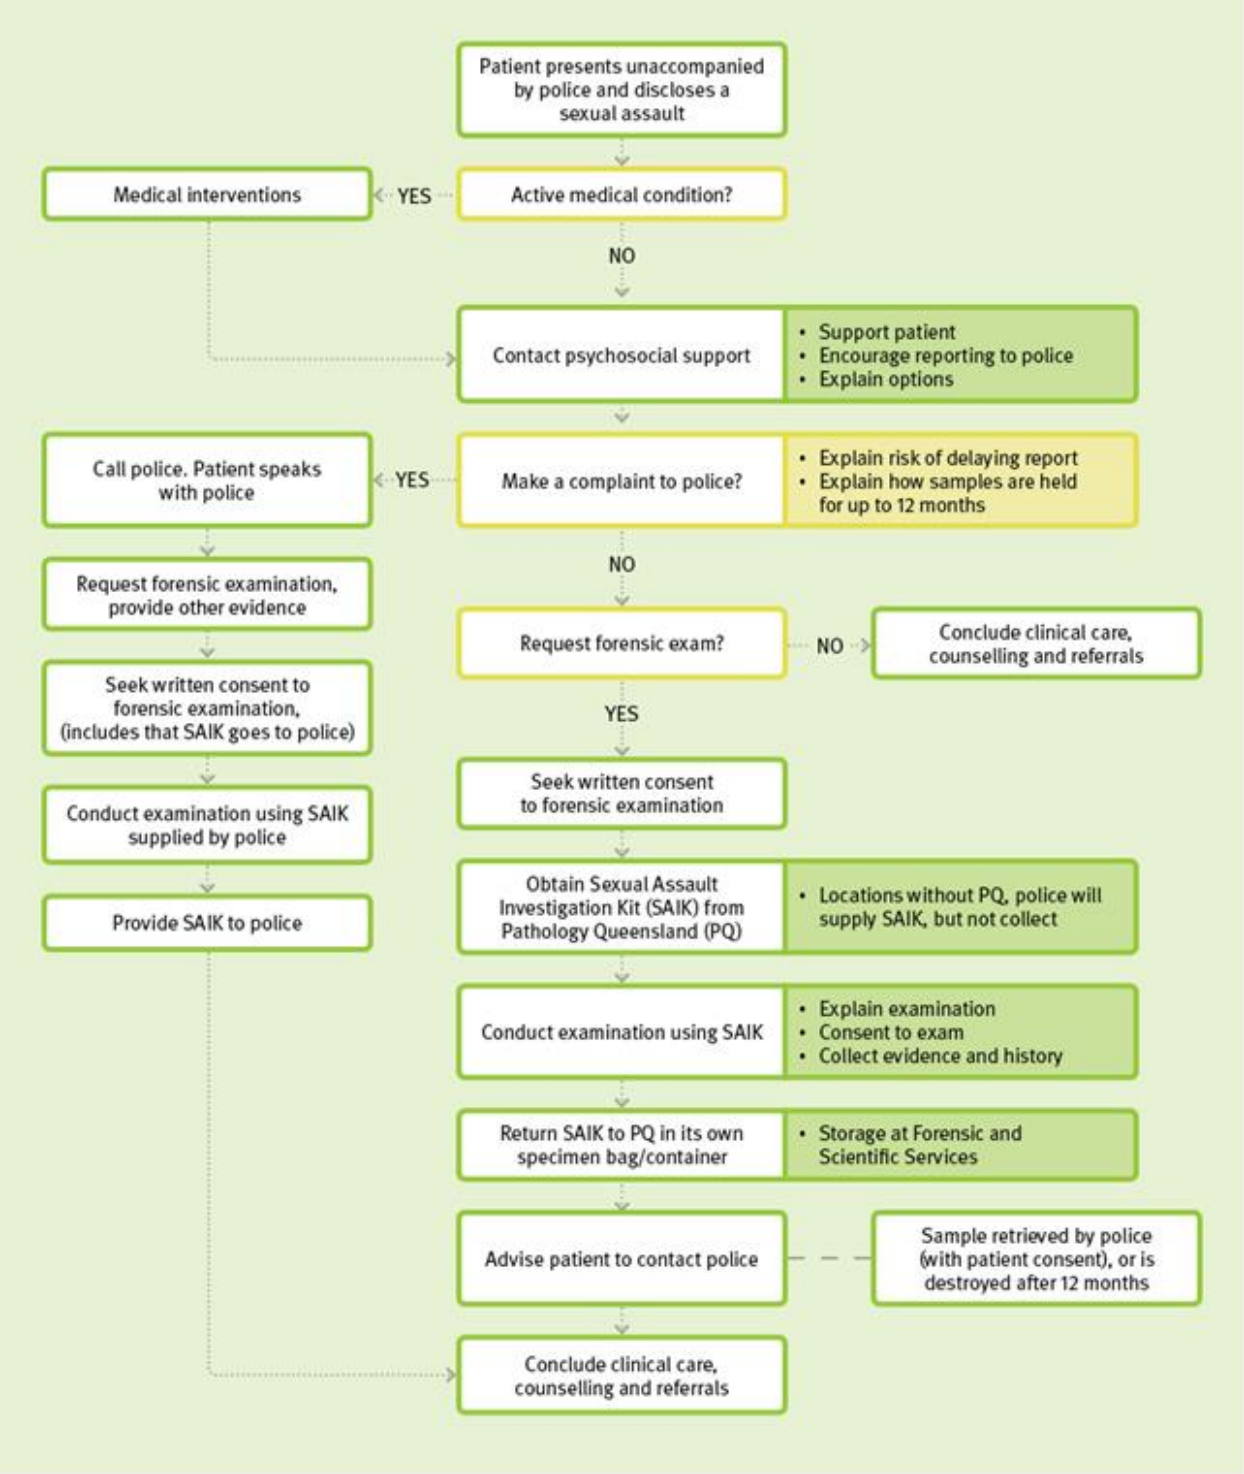
Attachment 1: Emergency Department sexual assault management pathway



Attachment 2: Detailed clinical interventions

Hepatitis B risk assessment and management post sexual assault

If immunised: pathology testing only to confirm immunity and review and follow up of Hepatitis B status. This may be done at follow up.

Hepatitis B Immunoglobulin is not routinely required.

If no previous immunisation, or incomplete immunisation then start the immunisation course or give a booster (i.e. only one or two prior doses).

Consider 400 units IM Hepatitis B IG in a non-immune patient within 72 hours particularly if exposure to member of high-risk group for Hepatitis B (Indigenous, injecting drug user, person from countries where Hepatitis B is endemic) or known hepatitis B. This is most effective administered as soon as possible after exposure, however can be delivered up to 14 days post assault. A repeat Hepatitis B IG is also required at one and six months. This may be provided at a sexual health clinic or via a General Practitioner.

https://immunisationhandbook.health.gov.au/resources/handbook-tables/table-post-exposure-prophylaxis-for-non-immune-people-exposed-to-a-source

Assessing need for HIV prophylaxis post sexual assault

The risk of HIV following sexual assault in Australia is very low. Despite the low likelihood of infection, HIV remains a concern for victims and should be discussed. Giving a realistic estimation of risks may provide reassurance to the victim.

HIV prophylaxis is infrequently required following sexual assault but should be considered if offender was known to be: HIV positive, a male who has sex with males (MSM), an Intravenous Drug User (IVDU) or was from a high HIV risk country such as Sub-Saharan Africa, South East Asia or Papua New Guinea. Transmission risk is also higher if the sexual assault resulted in bleeding from genito-anal injury. *Refer to the Australasian Society for HIV Medicine (ASHM) guidelines for table summarising quantitative risks in different sexual activity scenarios which can be found at:
http://www.pep.guidelines.org.au/index.php/assessment-of-the-risk-of-hiv-transmission/what-is-the-hiv-transmission-risk-exposure#table1

Routine baseline status for HIV should be undertaken. For pre-HIV counselling please refer to the HIV-pre and post-test counselling information and patient brochures located at:

https://www.health.qld.gov.au/clinical-practice/guidelines-procedures/sex-health/hiv-aids

For high-risk cases or any concerns, discuss each case individually with on call Infectious Disease consultant or local Sexual Health Clinic. Many will not be recommended Post Exposure Prophylaxis (PEP). Risk of exposure should be considered depending on sexual assault type and potential sero-prevalence of perpetrator. PEP Guidelines for non-occupational exposure to HIV can be obtained from the ASHM website.

https://www.ashm.org.au/HIV/PEP

Post-exposure prophylaxis starter drug packs should be available for the Emergency Department. These are authorised by the Infectious Disease consultant or Sexual Health Consultant who will advise which

starter pack to use. Most will require Pack A (two drugs) and it is important to follow correct procedures in its administration and documentation. They must be instituted within 72 hours. Follow up of these patients is as an outpatient to Infectious Disease or Sexual Health Clinic or other local arrangement depending on facility location.

Common side effects are nausea, headaches, lethargy (up to 1/3 of patients cease these drugs before completion due to side effects). More serious side effects include liver toxicity. Baseline full blood count (FBC) and electrolytes and liver function tests (ELFT) are required before starting.

Emergency Contraception post sexual assault

If patient has good effective contraception this is not required, e.g. Implanon, Depo provera, Mirena coil in situ, no missed oral contraceptive in last menstrual cycle.

Discuss benefits of “morning after pill”. Generally, this is very safe and should be given if there is any risk of pregnancy.

If indicated, Postinor 1 (Levonorgestrel 1.5mg) up to 72 hours should be taken immediately. It is only effective IF USED WITHIN 72 HOURS OF ALLEGED ASSAULT. It is more effective, the earlier it is used. Consider offering oral maxalon if patient is known to have nausea with the drug. However, very few patients (1.4 – 5.0 per cent) vomit with the progesterone-only emergency contraceptive and antiemetics are not routinely recommended.

If presentation is >72 hours and less than 120 hours, an alternate drug - Ulipristal acetate is likely to be more effective. It is contraindicated in patients with liver disease, asthma requiring steroids, with breast feeding and less-effective if using antacids or Proton Pump inhibitors.

Advise pregnancy test if next period late or different from normal.

Prophylaxis of Sexually Transmitted Infection post sexual assault

Overall risk of STI such as chlamydia, gonorrhea and trichomonas is low. Options of treatment prophylactically in Emergency Department or STI screens in two weeks should be considered depending on patient demographics, likely patient compliance and patient choice.

Chlamydia is the most frequently encountered STI that would be amenable to prophylaxis. After urine PCR (or swabs including throat and rectal if applicable) are collected, Azithromycin 1gm orally stat should be given prophylactically in the Emergency Department if it is difficult to ensure compliance by follow-up of patient.

These patients still require follow up STI screening with a urinary PCR at two weeks post sexual assault as the above does not prevent other infections.

Other bacterial STIs have a very low prevalence in metropolitan Queensland. For high-risk or complex exposures (e.g. multiple perpetrators, perpetrators from population group with high rates of STI), contact Sexual Health Service or Infectious Disease consultant for advice.

If risk is significant, compliance with follow up low or if advice unavailable for such cases give the following two-drug therapy (Please be mindful of Ceftriaxone Resistant Gonorrhoea – if prescribed collect a first pass urine sample for Microscopy, culture and sensitivity (MC&S) and PCR prior to treatment):

1. Ceftriaxone 500mg IM with 2mls 1 per cent lignocaine/Ceftriaxone 500mg IV stat - same if pregnant **AND**
2. Azithromycin 1gm orally stat - same if pregnant.

Follow up after reported sexual assault

All patients should be referred for follow up including pathology results and recommended ongoing testing. Most patients are suitable for medical follow up with their general practitioner, but they should be offered a choice of follow up options.

Patients with more complex or high-risk exposures should be referred to a Sexual Health Clinic or an Infectious Disease specialist for follow-up. A Sexual Health Clinic may also be offered to patients with concerns about confidentiality or those who require access to a free service.

Patients who are commenced on HIV post-exposure prophylaxis should be urgently referred to the Infectious Disease team or the local Sexual Health Service clinic for ongoing supply of medication and specialised management of antiretroviral drugs.

Refer to appropriate Sexual Assault Support Service and/or other psychosocial services such as referral to National Sexual Assault Helpline (NSAH) - 1800 737 732 which operates 24/7 and can provide phone counselling sessions.

Packaging swabs and biological specimens

Queensland Healthcare practitioners collecting swabs and other biological specimens in a 'Just in Case' / Queensland Police Service Sexual Assault Investigation Kit (JIC/QPS SAIK) should be aware of the following information.

A print-friendly SBAR packaging of swabs and other biological specimens (DOCX 87 kB) is available to download and put on notice boards.

SAIK and JIC kit contents

SAIK and JIC kits compiled by FSS contain the following:

- swabs
- a drop sheet in a generic clip seal plastic bag (CSPB)
- paperwork in a generic clip seal plastic bag.

The kits do not contain biohazard bags; however, including clinical consumables, such as biohazard bags, may be considered later.

Biohazard risk

On occasion, sterile swabs and other biological specimens collected during a sexual assault examination are being placed in a CSPB or directly into the tamper-proof evidence bag. The corners of the swab casing are sharp and often result in the generic CSPB being perforated. If a leakage occurs, surfaces that the CSPB comes in to contact with, and the integrity of the documentation, are compromised if they become contaminated by biological material, or wet from fluids. This creates a biohazard risk for people that come into contact with contaminated surfaces and for staff at Forensic and Scientific Services (FSS).

Also, JIC/QPS SAIK documentation is handled outside a laboratory setting by staff not wearing gloves. The documentation comes in to contact with multifunction copying devices and other office equipment, which creates a further biohazard risk.

Process for packaging

Healthcare providers who collect sterile swabs and other specimens while conducting a sexual assault examination **must place items collected into a biohazard bag, and then in to the CSPB**. Fluids should be packaged separately from swabs in separate biohazard bags. Please ensure that the completed documentation is returned to the CSPB prior to placing it in the JIC/QPS SAIK.

Access to biohazard bags: for ease of access and use, it is recommended that biohazard bags are included on all Hospital and Health Service sexual assault trolleys.

Just in case sexual assault investigation kit flow chart

Collector

Collect kit from Pathology Queensland/ local police

Collect dry swab/s

Label swab/s:
Full name
Date of birth
Date and time of collection
Specimen site

Complete request form using **Unique bag ID** as surname, add first name and DOB and place in plastic pocket on **outside** of the **Tamper evident security bag**

Place the swab/s inside the security bag and seal
Complete the receipt, tear off and keep

Keep cool and deliver to PQ laboratory

Complete **Chain of custody form** at each specimen transfer step

PQ laboratory

Register in **AUSLAB**

Send cool in a designated Esky to FSS (QIS 24545) **immediately**
Call TOLL on 1300 108 382
to organise 'Same day courier'

If unable to send same day, store cool for up to 8 hours then specimens must be frozen.

Unique bag ID use as surname

Request from to be placed outside the Tamper evident security bag

Place **Chain of custody form** outside bag

Queensland Government

Sexual assault nurse examiner course

This course has been developed in collaboration with Central Queensland University (CQU). Participants of the course must complete both the online component and the face-to-face workshop to complete the course.

Summary

This short course provides nurses and midwives with the knowledge and skills to provide competent, comprehensive, patient-centred, coordinated care to adult and adolescent (14 years and over) patients disclosing sexual assault.

The course provides an introduction to forensic nursing and sexual violence, as well as informed consent, history taking, forensic sexual assault examinations, describing injuries and documentation.

Upon successful completion of the course (online component and workshop) participants will be issued with a Queensland Health and CQU co-branded digital badge, awarded continuous professional development (CPD) hours, earned the title of sexual assault nurse examiner, and be provided with the opportunity to participate in the SANE-FNE community of practice.

Online learning outcomes

- Gain an understanding of contemporary aspects of forensic nursing and sexual violence
- Develop knowledge and skills in forensic history taking with sexual assault victims
- Interpret requirements of a forensic physical examination within the role of the sexual assault examination nurse
- Interpret requirements of a forensic specimen collection within the role of the sexual assault examination nurse
- Define the role of the nurse in sexually transmitted infection prophylaxis and pregnancy risk assessment
- Define the role of the nurse in documentation

Workshop outcomes

The workshop will review and consolidate the knowledge and skills obtained online, with a focus on the practical application of informed consent, taking a history, performing the physical sexual assault examination, documenting findings, obtaining specimens and preparing a statement for court.

Face-to-face workshops

Workshops are scheduled quarterly and are conducted at 51 Herschel Street, Brisbane.

Workshops will be held in:

- 26 July 2022
- 27 September 2022
- 6 December 2022

Duration

32 hours (online component) plus attendance at one eight-hour, face-to-face workshop.

Study mode

Online and face-to-face workshop

CPD hours

40 hours

Intakes

Enrolments are taken throughout the year on a continuous basis.

Eligibility

Participants enrolling in this course must be:

- experienced nurses or midwives
- registered with the Australian Health Practitioner Regulation Agency
- supported by the Hospital and Health Service Executive Director of Nursing and Midwifery (or equivalent)
- agreeable to completing all course requirements and offering a return of service obligation by participating in an on-duty and/or on-call roster to conduct sexual assault examinations for a 12-month period.

How to enrol

Email [redacted] for a SANE enrolment contact at your Hospital and Health Service (HHS). The local HHS contact will discuss with you enrolment requirements and expectations. They will also be responsible for providing you with the CQU enrolment key. This enrolment key is to be used by staff endorsed by their HHS to complete the SANE course. It **must not** be shared with other colleagues.

CQU will invoice the Clinical Forensic Medicine Unit on a monthly basis. You will not be required to pay for the course.

Workshops

This 90-minute workshop focuses on the primary clinical and forensic consultation when a patient discloses sexual assault.

Attendees will gain:

- an understanding of the forensic examination process
- confidence with collecting evidence as part of patient focussed care
- contacts for additional support from Forensic Physicians when providing a forensic examination.

Sessions are held via Microsoft Teams. To register your interest email CFMU. A Microsoft Teams RSVP/meeting acceptance email will be sent to your inbox.

Next workshop

- Wednesday 17 August 2022 at 12:30 pm via Teams

MEMORANDUM

To: Chief Executives, Hospital and Health Services

Copies to: Deputy Directors-General, Health Service and Clinical Innovation Division and System Support Services

Chief Executive Officer, Health Services Support Agency

From: Philip Davies,
Deputy Director-General
System Policy and Performance Division

Contact No: [redacted]
Fax No:

Subject: Health Service Directive Protocol for conducting child sexual assault examinations

File Ref: PS000402

The Health Service Directive "Protocols Applying to Hospital and Health Services" mandates the application of a number of clinical and non-clinical protocols across all Hospital and Health Services.

The currently published *Protocol for conducting child sexual assault examinations* (Protocol) requires amendment. Please see the attached Protocol including amendments for your consideration and feedback.

Section **3.1.3** of the Protocol for conducting a child sexual assault examination has been amended to include the Forensic Nurse Examiner (FNE) as a person trained to perform a sexual assault medical examination for child victims of sexual assault 14 years of age and over.

An additional amendment to section **3.1.3** provides for the inclusion of medical officers who are appropriately skilled to conduct sexual assault medical examinations for child victims of sexual assault 14 years of age and over.

The Clinical Forensic Medicine Unit provides 24 hour telephone assistance to medical officers and FNE's conducting sexual assault medical examinations.

There will be an abbreviated consultation period commencing Monday 30 September 2013 and concluding **cob Friday 18 October 2013**. Please send any comments or feedback via email to [redacted]

If you have any questions regarding this consultation please contact Joanna Gurd, Manager, Strategic Policy Priority Areas on [redacted]

[redacted]

Response to sexual assault

Queensland Government Interagency Guidelines for Responding to People who have Experienced Sexual Assault

Queensland Government

These guidelines have been developed through a strong collaborative approach by a Government Interagency Working Group including representatives from:

- **Queensland Police Service**
- **Department of Justice and Attorney-General**
  - *Office of the Director of Public Prosecutions*
  - *Queensland Courts*
  - *Victim Assist Queensland*
  - *Youth Justice Conferencing*
- **Department of Communities, Child Safety and Disability Services**
- **Queensland Health**
  - *Aboriginal and Torres Strait Islander Health Unit*
  - *Clinical Forensic Medicine Unit*
  - *Child Advocacy Service*
  - *Royal Brisbane and Women's Hospital Department of Social Work Services (Sexual Assault Service)*

The Strategic Policy Priority Areas, System Policy and Performance Division of Queensland Health were consulted during this process.

The guidelines are intended to outline key principles and a best practice framework for working with people who have experienced sexual assault. This includes children and young people who have been sexually abused or sexually assaulted.

The term victim is used throughout the document where there is reference to specific legislation and where the person is either a male or female who has experienced sexual assault. The term sexual assault is used throughout the document and includes those assaults where rape and/or sexual abuse has taken place or is alleged to have taken place.

Mr Ian Maynard

Conclusion 20

Preface

The guidelines are designed to promote whole-of-government interagency cooperation and service coordination with an aim to improve governmental responses to victims of sexual assault. The need for enhanced coordination and cooperation has long been recognised and resulted in the development of the *2001 Queensland Government Interagency Guidelines for responding to adult victims of sexual assault*.

The 2013 guidelines aim to facilitate best practice, quality service and support to people who have experienced sexual assault.

Legislation relevant to and defining sexual assault includes but is not limited to:

- *Aboriginal and Torres Strait Islander Peoples Recognition Act 2013*
- *Child Protection Act 1999*
- *Criminal Code Act 1899*
- *Criminal Law (Sexual Offences) Act 1978*
- *Domestic and Family Violence Protection Act 2012*
- *Evidence Act 1977*
- *Health Act 1937 & associated regulations*
- *Hospital and Health Boards Act 2011*
- *Mental Health Act 2000*
- *Police Powers and Responsibilities Act 2000*
- *Public Health Act 2005*
- *Victims of Crime Assistance Act 2009*

Policy referred to includes but is not limited to:

- Queensland Government Language Services Policy
- Queensland Health Protocol for conducting child sexual assault examinations

The guidelines should be read in conjunction with internal agency procedures such as the Office of the Director of Public Prosecutions Guidelines and the Queensland Police Service Operational Procedures Manual. In addition to legislation, policies and procedures, the Queensland Government joins with governments around Australia in the implementation of the National Plan to Reduce Violence against Women and their Children 2010-2022.

Each government agency has a complementary and essential role in ensuring that people have access to effective, timely and appropriate information, support, care and treatment following a sexual assault.

Given the nature of the crime, sexual assault is an area of legal and social complexity. The guidelines are designed to help government officers and agencies work together in the best interests of the person who has been sexually assaulted through better understanding one another's roles and responsibilities.

The Queensland Government encourages reporting of criminal activity and prosecution of offender(s) where possible.

Section 1 Introduction

Governance

The government agencies responsible for delivering a service to victims of sexual assault, in accordance with relevant legislation, whole-of-government policy and internal departmental procedures, are responsible for the ongoing governance of this document. The guidelines are underpinned by each government agency's own internal policies and procedures which they are obligated to adhere to. Each government agency has a formal complaints mechanism which is accessible to members of the public.

The Government Interagency Working Group will meet bi-annually to review the guidelines and consider matters of particular concern for people impacted by sexual assault and to consider the impact of any legislative change.

Sexual assault

Sexual assault is a crime of violence. It is a humiliating and degrading experience. It has an emotional, physical, financial and social cost, not only to those directly affected, but also for the community as a whole.

The number of reported sexual offences against women aged 15 or over in Queensland in 2011/2012 was 2035 compared with 227 against males.[1]

Major Australian studies indicate that only 11-25 per cent of sexual assaults are reported to the police and that most offenders are known to the victim.[2] People who experience sexual assault may feel a range of emotions including shock, fear, guilt, shame, depression and an inability to trust others. The social stigma attached to sexual assault can heighten these feelings and increase the trauma experienced. It is imperative that when disclosing or reporting a sexual assault, people receive an effective, professional and appropriate response from the agencies to which they report.

Community education can encourage family and friends to respond supportively and appropriately to a disclosure of sexual assault. However, in order to assist their recovery, victims may also need access to a range of personal support services including counselling, medical services and assistance to report the crime to the police.

The information provided in the guidelines is intended to provide a strategic overview to support the development of policies and procedures at a local level. Local level procedures will differ according to the nature of the service system in each area. It is also intended to contribute to improving service responses to victims.

Responses to victims

Following disclosure of a sexual assault, the following needs of the victim should be addressed:

- immediate safety needs
- immediate health needs
- options for pursuing justice
- ongoing emotional needs for longer term wellbeing.

In order to avoid secondary traumatisation and mitigate the risk of negative, long term outcomes, government responses to sexual assault must be both sensitive and effective. These responses therefore need to take into account the diversity of victims, including their cultural and linguistic background, disability, sexual orientation, age and geographical location. In addition to assisting recovery, more sensitive and effective responses may also lead to an increase in reporting rates.

This, in turn, can lead to a more accurate understanding of the prevalence of sexual assault, inform community education and awareness approaches, and result in improved prevention strategies.

1 Queensland Police Service (2012) Statistical Review 2011-2012 Brisbane
2 Australian Bureau of Statistics (1996) Women's Safety Survey, Cat.no. 4218.0 (unpublished data) as cited in Office of Women's Policy (1999) A Social and Economic Profile of Women in Queensland 1999 Brisbane; Australian Bureau of Statistics (1996) Victims of Crime Survey

Children and young people

It should be noted that the *Child Protection Act 1999* (CPA) is relevant where there are concerns that a child has been sexually abused and where a child does not have a parent able and willing to protect them from the abuse. The main principle for administering the CPA is that the safety, wellbeing and best interests of a child are paramount. Section 159B of the CPA imposes a responsibility on particular service providers to assess and meet the protection and care needs of children and provide collaborative and coordinated support to their families.

The definition of harm in the CPA includes harm resulting from sexual abuse or exploitation. A child is defined in the CPA as an individual less than 18 years of age. Where the child or young person is under the age of 16, their parent or guardian should be consulted where possible and appropriate. Whilst certain circumstances may not make this possible, the child or young person should have access to a support person throughout the response.

The safety and protection of children and young people who are sexually assaulted is a high priority. When disclosing a sexual assault, young people should be encouraged to access services so that they are aware of their options in terms of support, assistance, treatment and prevention.

When working with a young person who reports a sexual assault, personnel from the Queensland Police Service, Department of Communities, Child Safety and Disability Services (DCCSDS) and Queensland Health (QH) are required to follow the statutory requirements under the CPA and the *Public Health Act 2005* relevant to their position.

Where the child or young person is subject to an order granting custody or guardianship of the child, the Chief Executive, Child Safety, DCCSDS, must be notified regarding the report of a sexual assault.

Confidentiality cannot be guaranteed where a child or young person is believed to be in need of protection from harm. To work in the best interest of that child or young person, information may need to be exchanged between departments. It is best practice for the child or young person to be advised that a report to the DCCSDS and the police may take place. Certain circumstances may not make this possible.

Section 2
Principles of the Interagency Guidelines

Government responses to sexual assault are framed by the following overarching principles:

- All agencies will focus on the safety, physical and psychological needs of the victim
- The victim's right to privacy and confidentiality will be respected at all times unless disclosure is required by another law
- Comprehensive information about all processes and options will be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location
- The victim's informed decision will be respected at every stage of the process
- The victim's sense of personal control will be supported and encouraged
- All relevant agencies will work collaboratively to respond to sexual assault, to provide clear, up to date and comprehensive information about other agencies and services and will facilitate access to appropriate agencies and services on request
- All agencies will ensure documentation and records are prepared in accordance with individual agency requirements and respect confidentiality, privacy, security and choice.

Fundamental Principles of Justice for Victims of Crime and Complaints Mechanism

Government responses are also framed by the legislated responsibilities defined in the Fundamental Principles of Justice for Victims of Crime (Principles of Justice) in Queensland, set out in Chapter 2 of the *Victims of Crime Assistance Act 2009*.

If a victim feels they have been treated unfairly or without respect by a Queensland Government officer, they have the right to complain to the government agency responsible for the conduct of the officer or to Victim Assist Queensland (Victim Assist).

As a guide, the following is a summarised version of the Principles of Justice:

Fair and dignified treatment

The victim must be treated fairly and shown dignity, respect, compassion and courtesy. The government entity must take in to account and be responsive to the particular needs of the victim relating to the victim's age, sex, race, cultural identity, impairment, sexuality or religion.

Privacy of victim

A person's personal information, including their address and phone number, can only be disclosed with consent or as authorised by the law.

Information about services

The victim must be given timely information about relevant services available to them, including welfare, health, counselling, legal help and financial assistance.

Information about investigation of the offender

If the victim asks, they should be given information about the investigation of the offender where possible. Information given to a victim may include the progress of the investigation and the name of the person charged.

Information about prosecution of the offender

If asked by the victim, the prosecuting agency is to give the victim details about the crime committed against them, including when the victim may attend a court proceeding, notice of a decision to change a charge, or notice of the outcome of a court proceeding.

Victim to be advised on their role as a witness

A victim, who is to be a witness for the prosecution in the trial for the crime committed against them, is to be informed by the prosecuting agency about the trial process and their role as a witness.

Minimal exposure to and contact with the offender

As much as possible, relevant agencies present at court are to ensure the victim has minimal contact with or exposure to the offender during court proceedings or in the court building.

Victim Impact Statement

During sentencing of the offender, the victim has the right to give details of the impact and harm caused to the victim by the offence, to the prosecutor as an impact statement. Victims can access information about completing a victim impact statement by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Guide to Making a Victim Impact Statement* at *www.justice.qld.gov.au.*

Information about the convicted offender

A victim can apply to be registered on the Victims Register. If the offender is then convicted and imprisoned, the victim will be provided with this information on request. This includes information on the sentence, an escape from custody, or day of release. To be included on the Victims Register call 1800 098 098.

Making a complaint

If a victim of crime feels a government agency, person or persons within the agency have engaged in conduct that is not consistent with the Principles of Justice, they have the right to make a complaint. Victims can access information about making a complaint by calling Victim Assist on 1300 546 587 or by accessing a copy of the *Complaint Form* at *www.justice.qld.gov.au.*

Government agencies are obligated to have a formal complaints management system, and the Queensland Government is committed to having these systems available and acted upon in accordance with the Principles of Justice.

Section 3
The Roles of Key Government Agencies

Queensland Police Service

The Queensland Police Service (QPS) has three main functions in relation to sexual assault cases including:

1. Investigate complaints of sexual assault and establish whether an offence of sexual assault has been committed.
2. Protect victims of sexual assault.
3. Identify, apprehend and prosecute offenders.

In carrying out this role, the police should:

- observe QPS Operational Procedures Manual
- observe QPS local procedures or instructions
- observe legislative requirements
- observe the Fundamental Principles of Justice for Victims of Crime
- provide victims with information regarding the investigation and prosecution
- provide protection to victims at immediate risk of sexual assault
- provide victims with information about support services

Queensland Health

In responding to sexual assault, the role of QH is to provide medical care, forensic medical examinations (FME), sexual health assistance and information and support. These responses are provided by public hospitals, the Clinical Forensic Medicine Unit and may include specialist sexual assault teams. The extent and nature of this care varies across hospital and health services in accordance with local procedures and resources.

Assistance and care in the acute phase includes:

- medical treatment
- collection and documentation of medico-legal evidence where appropriate
- sexual health information and treatment
- information about rights as a victim of crime
- information about reporting to police and legal processes
- support and information extended to support networks.

In addition, QH provides education and training to government and non-government agencies, with an aim to broaden community knowledge, improve responses and prevent sexual violence as outlined in the National Plan to Reduce Violence against Women and their Children 2010 – 2022.

Department of Justice and Attorney-General

The Office of the Director of Public Prosecutions (ODPP), Victim Assist Queensland (Victim Assist), Youth Justice Conferencing (YJC) and the Queensland Courts all fall within the responsibilities of the Department of Justice and Attorney-General. The following provides an overview of each of these separate agencies.

Office of the Director of Public Prosecutions

The ODPP represents the Crown in criminal proceedings against persons accused of committing serious criminal offences including sexual assault. The criminal proceedings include:

- the committal hearing, before a Magistrate in Brisbane Central, Ipswich and Southport Magistrates Courts. In other centres, this hearing is conducted by prosecutors within the police
- trials before a judge alone or a judge and jury
- sentencing hearing before a judge
- any appeals arising from the trial or sentence.

In addition to prosecuting matters in court, the ODPP is responsible for:

- assisting victims by providing information about the progress of a prosecution, the victim's role as a witness, and how the victim can inform the court of the impact of the crime by providing a victim impact statement
- giving victims reasons for decisions made in relation to proceedings which directly affect them
- taking into account the wishes of a victim who does not wish to proceed with a prosecution for any reason
- providing information about the availability of other resources and processes that may assist victims
- requesting that the court give sexual assault matters appropriate priority
- ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building
- liaising with other relevant agencies to ensure that the victim and family members understand the legal and procedural issues which may impact them.

In carrying out the role of the ODPP, all officers are obliged to comply with the Director's Guideline No. 25 as at 2013 http://www.justice.qld.gov.au/__data/assets/pdf_file/0015/16701/Directors-guidelines.pdf. This aims to ensure that the Principles of Justice, as set out in the *Victims of Crime Assistance Act 2009* are complied with.

Victim Assist Queensland

Victim Assist provides access to specialised support services and financial assistance for victims of personal acts of violence including sexual assault.

Financial assistance may be available to victims of sexual assault to help them pay for the cost of goods and services that have arisen, or will arise as a consequence of the assault.

This includes medical and dental expenses, and expenses associated with improving safety or relocation from their current location in order to escape the offender.

Victim Assist also provides information, referrals and support (which may include court support) to victims, and assistance in making a victim impact statement if the victim chooses to make one.

Youth Justice Conferencing

If the offender is a young person, there may be alternative processes to the matter being dealt with by a court. The purpose of YJC is to hold the young offender accountable for their actions and to come to an agreement on what they will do to attempt to make reparation for the harm caused. To safeguard the victim, additional procedures are adopted before a conference for a sexual assault can occur. These include referring the victim to a counselling service as well as compulsory attendance of the juvenile offender in a specialist treatment service.

Queensland Courts

Queensland Courts afford victims of sexual offences, affected child witnesses and special witnesses protections when proceeding through court. These are detailed in the *Evidence Act 1977* (EA) and the *Criminal Law (Sexual Offences) Act 1978*.

Section 21A of the EA provides protections for special witnesses and affected child witnesses. The court can declare a person a special witness by hearing evidence (if the witness does not automatically fall into the special category, such as where the witness is a child or the person has a mental impairment). When the court hears evidence from these special witnesses, there are a range of options to assist the witness. These include ensuring the victim has minimal contact with or exposure to the offender during court proceedings or in the court building. Where the witness is an affected child witness, there are further protections in place.

For further information refer to the Supreme Court Bench Book: *http://www.courts.qld.gov.au/information-for-lawyers/benchbooks-and-ucpr-bulletin/supreme-and-district-courts-benchbook.*

Department of Communities, Child Safety and Disability Services

The Department of Communities, Child Safety and Disability Services allocates funding to non-government organisations to assist people, predominantly women, who have experienced sexual assault, in accessing necessary services and support needed to rebuild their lives as quickly as possible. These sexual assault services offer flexible, holistic and ongoing personal support including advocacy and sexual assault counselling (including crisis counselling), in a culturally appropriate and safe environment.

The range of support provided by these services includes:

- provision of information, advice and referral
- needs assessment and development of case/service plans
- individual advocacy
- sexual assault counselling for victims and survivors of sexual assault
- community education.

For more information about access to sexual assault services in local areas, contact the Sexual Assault Helpline on 1800 010 120.

Child Safety Services is the Queensland Government agency for child protection and adoption services. The department is dedicated to protecting children and young people from harm or who are at risk of harm, and whose parents cannot provide adequate care or protection for them.

Non-government organisations

It is acknowledged that a number of government departments provide grant funding to non-government organisations to deliver a range of specialist sexual assault services. Local procedures and service agreements in relation to services provided by these organisations should be adhered to.

Section 4
Interagency approach

Given the often violent and complex nature of sexual assault, an interagency approach is essential. The Queensland Police Service (QPS), Queensland Health (QH), the Department of Justice and Attorney-General (DJAG) and the Department of Communities, Child Safety and Disability Services (DCCSDS), each have a different but fundamental role in responding to sexual assault. Each of these agencies should assist each other in understanding and supporting their role and be familiar with, and sensitive to, their differing and complementary roles. An interagency approach provides opportunities to discuss and address issues of mutual concern across departments.

Teamwork

Quality of care depends on partnership between these different agencies. Each agency should establish local procedures to facilitate improved liaison and coordination between services. These procedures should include systems for information sharing and conflict resolution.

Confidentiality

Confidentiality, privacy of information and security of records is imperative when working with people who have experienced sexual assault. It is a fundamental principle in treating victims with dignity and respect.

Access to and disclosure of personal information regarding the assault will conform to legal requirements and be limited to people directly involved in the case. Except where legal obligations exist, information will not be released without the prior consent of the person involved. This includes names and identifying information.

Training

Joint training can contribute to achieving interagency objectives and allow those working in the field to understand how best practice is achieved. Training and orientation should be ongoing and could include input from relevant local services.

Information provision

Police officers, doctors, social workers, health workers and legal officers, should provide people with relevant information which may include written material. This information should be offered in a way which is non-judgemental, appropriate, clear and sensitive to the victim in terms of language, culture, age, disability, gender, sexuality and location.

People should be made aware of, and be given an opportunity to discuss and consider the implications of proceeding with medical, investigative and legal processes so that they can make informed decisions. These decisions must be respected. It should be noted however that the decision whether or not an investigation should proceed rests primarily with the police.

Referrals

Relevant referral procedures and guidelines between police and health services should be observed.

Staff of government agencies should be familiar with local specialist services and actively support people who have experienced sexual assault to access appropriate supports available in their community. In addition, relevant health, welfare and legal services likely to be accessed by victims will need to develop local strategies and procedures to ensure that referral processes are appropriate and coordinated. These services should also be aware of the admission procedures and location of the nearest health facility and police station.

Feedback

Quality of care is essential in ensuring that people are referred to the appropriate service. QPS, QH, DJAG and DCCSDS should ensure that local interagency links and procedures operate in a coordinated manner. Mechanisms for giving feedback about service delivery should also be in place and observed.

Access, availability and promotion of services

People who have experienced a sexual assault may need encouragement to use medical, counselling, police and legal services. Local procedures should ensure that services are accessible and coordinated. This includes the use of written information and community education materials.

Gender of service providers

Following a sexual assault, the person may feel uncomfortable talking with personnel of the opposite sex. If a preference for female or male personnel is expressed, all reasonable steps to accommodate this preference should be taken.

Diverse needs

Procedures need to be flexible in order to respond to diverse needs; including culture, language, gender, disability, religion, sexuality and geographical location. Furthermore, it is important to understand how these needs impact access to and utilisation of appropriate services.

All agencies should ensure that procedures and facilities provide access to appropriate services for Aboriginal and Torres Strait Islander people, people of non-English speaking backgrounds, children and young people and people with disabilities, including physical disabilities.

Aboriginal and Torres Strait Islander people

Service provision should reflect the cultural needs of Aboriginal and Torres Strait Islander people. Agencies should have a referral mechanism to facilitate access to culturally appropriate information for Aboriginal and Torres Strait Islander people. Where there is consent and it is appropriate to do so, Aboriginal and Torres Strait Islander liaison workers may be offered to assist people during the process.

Communication

The Queensland Government recognises that a significant number of people may require interpreter services, as well as culturally appropriate support in order to adequately disclose and report a sexual assault, and make informed decisions about the support and options available to them.

People with a disability

Services and agencies should facilitate access to appropriate support workers and interpreters for people with a disability. Disability includes intellectual, physical, sensory, psychiatric or neurological impairment, or a combination of these, resulting in a substantial reduction in the person's capacity to make informed decisions or communicate. With the person's consent, and when it is safe and appropriate to do so, services should also consult with relevant people involved in that person's life such as carers, guardians and specialist agencies or departments.

People from culturally and linguistically diverse backgrounds

Service provision should be responsive to, and respect the cultural, religious and language needs of the person who has experienced sexual assault. Where communication in English is difficult or where requested, accredited interpreters and cultural support workers should be used to assist in both eliciting information from, and providing information to the person who has experienced sexual assault. This supports client safety and enables informed decision making about health care, investigative and legal processes for both the client and agency.

Translating and interpreter services

All reasonable steps will be taken by government agencies and funded non-government organisations providing sexual assault responses, to ensure fair and equitable access to interpreting and translating services that are responsive and high quality.

All reasonable steps should be taken to make an accredited interpreter available in all situations where an interpreter and/or translator is required, unless there are extenuating circumstances that genuinely prevent an interpreter from being used. This may include, for example, a medical emergency or where a language group or community is very small and confidentiality is a concern for the client, or where there is no interpreter available for that language group. All agencies will take into consideration the wishes of the person who have been impacted by the sexual assault in relation to the use of an interpreter.

Each government agency is required to observe its own policies and procedures in relation to the use of interpreters. These internal procedures should align with the *Queensland Government Language Services Policy.*

Section 5
Interagency procedures

Regardless of where sexual assault is first reported, the first priority is to ensure the safety and welfare of the person reporting. Prompt referral to the designated specialist service should take place.

Crisis intervention

The purpose of intervention by a designated sexual assault response worker is to:

- provide immediate assistance, stabilisation and emotional support to assist the person to return to their level of functioning before the crisis
- assist the person to process their perception of the stressor
- provide information about the options available, as well as the procedures of the local health facility
- provide an opportunity for the person to express their concerns and feelings
- offer practical support, including contacting family members or support persons where appropriate
- talk to family members or support persons (if present) about how best to support the victim
- co-ordinate the interagency response and facilitate patient care and treatment along the sexual assault pathway
- provide information in relation to available community support resources.

The sexual assault worker will advise the victim of their right to access medical advice and treatment including sexual health treatment. If information or clarification about police procedures is requested, the sexual assault worker will, with the victim's consent, arrange for police to provide this information.

During any phase of this process, a support person can be present. The support person should not adversely influence the process.

Initial report to police

Police receiving a report of a sexual assault will act on the information received. The police should inform the victim of relevant decisions made and where necessary, obtain the victim's consent.

Initial report to a health facility

Health facilities, such as hospitals, are often the first place where a person will disclose a sexual assault. When this happens, nursing and medical staff will assess the general medical condition of the person and administer immediate medical treatment if required. Assessment of a person's need and urgent medical intervention will always be the first priority.

Medical examination and treatment

A general, non-forensic medical examination may be conducted by a medical professional with the aim to:

- reassure victims about their physical welfare, including giving information on, and providing treatments to reduce the risks of pregnancy and sexually transmitted infections
- assess, treat and document injuries
- provide advice and referral options for follow up medical care.

A medical examination should include sexual health intervention as described in *Queensland Sexual Health Clinical Management Guidelines of 2010 section 6: http://www.health.qld.gov.au/sexhealth/documents/cm_guidelines06.pdf.*

Unconscious patients who are admitted to hospital with a suspicion of sexual assault will be assessed and treated as medical emergencies.

Referral to the local sexual assault team

Health staff must follow local procedures in the management of sexual assault. All efforts should be made to contact the designated sexual assault team and where there is no specialist team, crisis intervention and support will be delivered by health staff present. A referral for follow-up support and care should be made as soon as possible.

Notifying the police

The sexual assault worker should discuss available reporting options with the person. If the victim requests to speak to police, it is the role of the sexual assault team or other designated staff member, to notify the police as soon as possible to ensure all evidence including the crime scene can be secured. Notification and initial reporting to police does not mean an investigation will automatically take place.

Where police are operating under time constraints, they should inform health staff. Working together to meet time constraints will directly impact the quality of the outcome for the victim.

Victim attending with police

Where victims arrive at the health facility with police, procedures outlined in referral to the local sexual assault team above should still be followed by health staff.

Initial contact
