Hi,

Furthermore, the other SAIK swab [REDACTED], (perineum/perianal) gave an even mix with the male as more of a 'major' This one has no diff slide to check as it was processed as cells - was sperm neg and AP neg.

Thanks,

Hi,

Please note a further example of SAIK swabs with suspect sperm grading based on results obtained:

[REDACTED] Endocervix) was sperm neg, AP and p30 pos; gave a quant of 0.3973, full male profile obtained.

[REDACTED] (HVS) was <+1; gave a quant of 2.1598, matching full male profile obtained.

I'm the reporter for this case. I've added them both to 1BT and requested the diff slides be examined.

Thanks,
